  - Baggage on trip passes, 215.
  - Buildings—
    - Leasing, 158, 165, 254, 375, 383, 391, 399.
    - Disposition, 287.
    - Removal, 183.
    - Sale, 7, 70, 296, 306, 375.
  - Bushings, manufacture, 328.
  - Cars, hand and push, 335.
  - Castings—
    - Defective, claims, 78.
- Circulars, official—
    - Patterns, 303.
  - Central Division—
    - Engineer, Acting, 312.
    - General Inspector, appointment, 39.
  - Chairman and Chief Engineer, Acting, 47, 183, 319.
  - Childrens' transportation, 238.
  - Civil Administration, Acting Head, 319.
  - Civil Service examinations, 79.
  - Clearance papers, false, 78.
  - Clerks without knowledge of typewriting, 22.
  - Clubhouses, Superintendent, Acting, 127.
  - Commissary coupon books, 167, 254, 367.
  - Commissary refunds, 191.
  - Coroner's Jury, service on, 16.
  - Costa Rica, vacations, 119.
  - Counsel and Chief Attorney, duties, 62.
  - Criminal Procedure, amendment, 6.
  - Customs duty, forms, 104.
  - Dentists, Commission, 62, 79.
  - Depot Quartermaster, Acting, 55.
  - Docking vessels, charges, 319.
  - Electricity charges, 152, 287, 295.
  - Employes—
    - Designation, 231.
    - Injured, 78, 215, 287, 312.
    - Interchange, 238.
    - Transfer, 391.
    - Transportation, 231, 303.
  - Engineers and conductors—
    - Seniority, 6, 119.
    - Transfer, 95.
  - Envelopes, penalty, misuse, 351.
  - Equipment—
    - Rates for use, 231.
    - Repairs and expenditures, 5, 207, 335.
    - Surveyed and turned in, 78.
    - Transfer, 215, 263.
  - Examiner of Accounts, appointment, 231, 287, 319.
  - Expenditure accounts, classified, 6, 224, 280.
  - Fire Chief, Acting, 55.
  - Floating equipment, inspection, 215.
  - Gravel delivery, 183.
  - Holidays, 6, 78, 104, 136, 207, 254, 312, 319, 343, 415.
  - Hunting on watersheds, 224.
  - Ice for locomotives and steam shovels, 312.
  - Ice orders, 87.
  - Injured employes, 78, 87, 215, 287, 312.
  - Judge, District Court, appointment, 287.
  - Labor and material surcharges, 175.
  - Labor trains—
    - Permits, 328.
    - Warning to passengers, 247.
  - Laborers—
    - Clearance papers, 79.
    - Pay and promotion, 335, 343, 367.
  - Land reservation, 343.
  - Leave, vacation, 95, 127, 175, 179, 183, 287.
    - Injury, 215, 312.
  - Levelman and transitman, examinations, 62.
  - Lidgerwood engineers, rules, 191.
  - Lights in quarters, 191.
  - Local inspectors—
    - Appointments, 70, 111, 359.
    - Inspection of floating equipment, 215.
  - Locomotive engineers and conductors, 6, 119.
  - Locomotives—
    - Flue repairs, 280.
    - French, rate, 391.
  - Lubricants—
    - Issue and use, 127, 152, 191, 351.

- Circulars, official—
  - Lubricants—
    - Monthly report, 139.
  - Machinery and equipment, repair, 5.
  - Manufacturing, monthly reports, 175.
  - Market regulations, 136.
  - Material and supplies, surplus, 62.
  - Mechanical Committee, 280.
  - Mechanical Division—
    - Chief Clerk, Acting, 271.
    - Superintendent, Acting, 62.
  - Mechanics, temporary service, 79.
  - Medical examination, applicants, 328.
  - Money orders for Costa Rica, 247.
  - Organization changes, 254.

CANAL RECORD

Volume IV. ANCON, CANAL ZONE, WEDNESDAY, AUGUST 31, 1910. No. 1.

The Canal Record

Published weekly under the authority and supervision of the Isthmian Canal Commission.

The Canal Record is issued free of charge, one copy each, to all employes of the Commission and Panama Railroad Company whose names are on the gold roll. Extra copies and back numbers can be obtained from the news stands of the Panama Railroad Company for five cents each.

Address all Communications
THE CANAL RECORD
Ancon, Canal Zone,
Isthmus of Panama.

No communication either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.

NOTES OF PROGRESS.

Canal Medals and Service Bars.

Canal medals for American employes of the Isthmian Canal Commission and the Panama Railroad Company who completed two years of service between January 1, 1909, and January 1, 1910, have been received at the office of the Chairman. There are 1,035 medals to be distributed in accordance with the list published in The Canal Record of March 23 and subsequent dates. The service bars to be attached to medals earned prior to January 1, 1910, and representing two years of service, in addition to the two years represented by the medals themselves, have not yet been received but are expected within the next week or two. Employes entitled to the medals should write for information to the head of their respective Department or Division, through whom the distribution will be made. Such inquiries should not be made however, prior to September 15, as the distribution cannot be completed before that time.

Medals for service from 1908 to 1910, and bars for service from 1904 to 1910, and from 1906 to 1910 will be distributed about one year from this date, in accordance with a list that will be compiled and published after January 1, 1911.

Fresh Water for Power Plant Condensers.

Salt water backs up in the French canal from Limon Bay to the unloading slip at Gatun docks, and into the old West Diversion channel from which water for the condensers at the Gatun power plant is taken. While the old channel of the Chagres, north of Gatun Dam, was open the tide water dissipated itself in that channel, and there was always a stream of fresh water flowing from the East Diversion into the French canal. But since the dike from the Dam to Mindi was built the water in the East Diversion has been affected by salt, and the cast iron of the condensers already shows the ill effects. To prevent further corrosion, by insuring a constant supply of fresh water, a pile dam is being built which will keep the salt water out of the West Diversion channel and away from the intake for the condensers. Creosoted round piles have been driven and the gaps between them will be filled by driving creosoted sheet piling. The round piles are creosoted in the States, but the sheet piles will be treated at Gatun. A tank with steam heating apparatus will be constructed near the docks, and in this, creosote oil will be heated. The piles bathed in the hot oil will be dried out and the pores of the wood will open. They will then be placed in a bath of cold creosote oil, with the result that the oil will permeate every part of the wood.

Accumulative Leave.

At a meeting of the Commission held on August 25 it was decided to permit the accumulation of annual leave to an amount not to exceed 84 days, beginning with leave falling due on or after January 1, 1911. The rules for the granting of accumulative leave will be published in a future issue of The Canal Record.

Gatun Locks Pumping Plant.

Two 12-inch centrifugal pumps are being installed in the drainage sump at the north end of Gatun Locks, where the excavation in one shovel cut is already at the final grade, 45 feet below sea level. They will lift 4,200 gallons of water a minute each against a head of 100 feet, and will replace two 12-inch pumps designed to act against a 50-foot head only. They will be mounted on a barge 26 feet long, 16 feet wide, and 2 feet 8 inches deep, which will rest on timbers in the sump during low water, but will rise with the water during heavy rains. A 200-horsepower induction motor, supplied with current from the Gatun power house, will drive each pump.

Villages Exposed to Flood.

Notice to vacate has been given to the occupants of buildings likely to be flooded by freshets in the Chagres River during the present rainy season. All persons occupying buildings below elevation 40 feet above sea level at Tabernilla, 35 feet at Frijoles, 30 feet at Bohio, 28 feet at Ahorca Lagarto, and 25 feet at Gatun have been warned. At Tabernilla there are 10 such buildings, between Tabernilla and Frijoles, 36; at Frijoles, 44; at Bohio, 6; at Ahorca Lagarto, 16; between Ahorca Lagarto and Lion Hill 4; at Lion Hill, 10; island in Gatun Lake immediately north of the spillway, 2; Gatun saddles, west, 6. All the houses in Ahorca Lagarto, all the private houses in Frijoles, and all but five of the buildings at Lion Hill are likely to be flooded.

In the Gatun River valley, several houses between Gatun and Monte Lirio, five miles up the river, are already in the water. Monte Lirio is above the 35-foot contour and not likely to be flooded, but 13 houses on the north bank of the river are below the safety line. In the Trinidad valley, one house between the Chagres and Agua Clara, and 22 houses in Agua Clara, the whole village excepting two houses, are exposed, and several houses along the Trinidad River, both above and below Agua Clara, are already in the water. The houses at Escoval on the Trinidad have been moved to high ground. At Peña Blanca, on the Chagres near the mouth of the Trinidad, the whole hamlet of 23 houses is below the high water mark. The precaution, necessary this year as it has not been in years past, is due to the fact that Gatun Dam has raised the surface of the river above Gatun 10 feet higher at low water than it was before the Dam obstructed the channel.

Heavy Rainfall at Empire and Culebra.

In a shower local to Empire and Culebra on August 27 a total of 2.2 inches fell at Empire between 2 p. m. and 3.05 p. m., and of this amount, 2.16 inches fell in the 40 minutes from 2.20 to 3 p. m. At Culebra, between 1.25 p. m. and 3 p. m., 2.3 inches fell, and of this amount, 2.14 inches fell between 2.05 and 2.45 p. m.

Balboa Harbor Terminal Work.

Preliminary work in connection with the proposed Balboa terminal harbor improvements is in progress. It consists of boring to a depth of about 40 feet at mean tide to ascertain the character of the material to be removed, and in clearing off the heavy swamp growth that covers the harbor area. The clearing operations have been started on the long and narrow mud spit that extends into the present harbor, opposite the Balboa sand dock, separating the Canal channel from that of the Rio Grande. A lot of old French marine equipment had found lodgment on the point, but during the past six months most of it has been removed to the mainland on the west side of the Canal channel. The brush-cutting gang consists of about fifty 10-cent West Indian laborers, who work steadily through the noon hour and quit for the day at 4 p. m.

Building Notes.

Bids for the erection of a type-8 B house at Culebra for the inspector of shops, and of a type-8 C house at Ancon for the counsel of the Isthmian Canal Commission and chief attorney of the Panama Railroad Company, by contract, were opened in the office of the Chief Quartermaster at Culebra on Monday, August 22. There was but one bid for the type-8 B building at Culebra, that of James P. Moore for $2,050, and the contract was awarded to him. The work is to be completed in 60 days. There were two bids for the type-8 C building at Ancon, one from James P. Moore, who offered to complete it in 65 days for $2,150, and the other from E. D. Martin and R. Wilkinson, who offered to build it in 60 days for $1,850. The lowest bid was accepted. The contract covers labor only, the Commission furnishing all material. The house at Culebra will occupy a site on the west side of the hill overlooking the wagon

NOTES OF PROGRESS.

(*Continued.*)

road from the station, and the house at Ancon will be situated on the slope of Ancon Hill on the street west of the Administration Building.

The two type-15 houses taken down at Culebra and removed to Corozal to be reconstructed into type-17 houses will be situated a short distance from the office of the Division Engineer, on the west side of Davis avenue, the main street of the village.

An addition will be made to the boiler shop at the Ancon laundry to be used as a room for receiving soiled linen.

Plans have been completed at the office of the Constructing Quartermaster for a dynamite and detonator house at Toro Point. It will be 36½ by 17 feet in size.

Lumber Shipments.

The steamer *Cuzco* arrived at the port of Balboa on August 24, with a mixed cargo of lumber on board, aggregating 742,000 feet B. M. The steamer *Bramley* is on the way from Puget Sound with another cargo, while the steamer *Hornellen* is now loading, or about to sail, with a third consignment.

Extension of Operations at Miraflores Locks.

Concrete operations at the Miraflores Locks will be considerably increased after September 1, when the two 2-cubic yard mixers installed in the east storage trestle, near the north end of the upper lock, will be ready for service. They will produce concrete for the east side wall. Their output will be carried to the wall in buckets, either on cars which will run over a track extending along the edge of the forebay, thence down an incline track into the lock pit, or by hauling the buckets to a point where the berm crane can handle them.

Seven of the lateral culverts in the east chamber and the floor between them have been completed, and this work will be kept well in advance of the side wall construction. The ⅓-yard auxiliary mixer is now engaged on the floor and culvert work in this chamber, and further south four derricks have been erected for continuing the culvert excavation. The two ½-cubic yard auxiliary mixers are at work placing concrete in the sills of the upper end gates, dumping their output directly into place.

The concrete laid in the locks for each of the 8-hour working days of the week ending August 27, and the total to date, follows:

	AUXILIARY PLANT.			
	½-Cubic yard mixers	⅓-Cubic yard mixer	Large Stone	Total
August 22	152	47	....	199
August 23	201	51	14	266
August 24	203	30	....	233
August 25	163	47	....	210
August 26	143	40	14	197
August 27	165	57	20	242
Total	1,027	272	48	1,347
Previously reported	....	....	205	9,120
Grand total	....	....	253	10,467

Balboa Notes.

Barge *No. 4*, the first of the four dump barges erected at the Balboa shipways over two years ago, is receiving a general overhauling. These barges were built by the Maryland Steel Company, and shipped to the Isthmus in sections to be put together at Balboa. They are giving good service, and this is the first time *No. 4* has been laid up for repairs since it was placed in commission.

The steamer *Cuzco* from Puget Sound, laden with 742,000 feet of mixed lumber, reached the port of Balboa on Wednesday, August 24, with a heavy list to port, caused by the shifting of its deck load. It was met in the channel and towed to the Panama railroad wharf by one of the Pacific Division tugs.

The position of superintendent of subaqueous excavation in the Pacific Division has been abolished. The office was directly under the resident engineer at Balboa, and the work which consisted of drilling, blasting, and operation of the rock breaker *Vulcan* and drill barge *Teredo*, will continue to be in his charge.

The suction dredge *Culebra* broke a blade in its propeller on Saturday, August 20, by striking a log in the channel. A new blade was fitted, and the boat was ready for service again the following tide.

Clapet *No. 10* is on the gridiron at the shipways, where it is being equipped with a sand excluding device designed to prevent sand from cutting the propeller shaft and bushing.

Work on the concrete barge, under erection near the shipways, is advancing steadily. The frame work is in place and the laying of concrete was begun last week. The barge will be used for general purposes about the harbor. The construction of a dump scow of reinforced concrete, which will be larger than any so far built, is contemplated.

Concrete in Gatun Locks.

A statement of the concrete placed in Gatun Locks for the week ending August 27, and the total to that date, follows:

DATE.	Cubic Yards.			
	Construction plant.	Auxiliary plant.	Large stone.	Total.
August 22	1,822	882	330	3,034
August 23	2,182	878	254	3,314
August 24	1,918	932	250	3,100
August 25	1,936	1,018	314¼	3,268½
August 26	1,626	988	326	2,940
August 27	2,134	952	250½	3,336½
Total	11,618	5,650	1,725	18,993
Previously reported	....	....	....	655,083½
Grand total	....	....	....	674,076½

Best Week's Record at Pedro Miguel.

A total of 12,118 cubic yards of concrete was laid in the locks at Pedro Miguel during the week ending August 27, which is 744 cubic yards more than was laid during any one previous week since concrete laying at this point was begun. The record for the six 8-hour working days, and the total to August August 28, follows:

Date	Concrete placed.	Large stone.	Hours worked.	No. of mixers	Total.
August 22.	1,886	51	28:00	4	1,937
August 23.	2,076	50	31:00	4	2,126
August 24.	1,916	20	28:50	4	1,936
August 25.	1,878	29	28:50	4	1,907
August 26.	2,042	12	29:00	4	2,154

Porto Bello Crusher.

A statement of the work done at Porto Bello crusher, by days, for the week ending August 27, follows:

Date.	Hours worked.	Cubic Yards.
August 22	11:41	3,690
August 23	3:52	1,080
August 24	13:38	4,018
August 25	16:57	4,527
August 26	15:10	3,149
August 27	13:43	2,845
Total	75:01	19,309

An additional track shifter for use on the dry fill of Gatun Dam has been ordered at Gorgona shops.

LABOR FORCE AND QUARTERS IN JULY.

On July 27 there were 36,450 employes actually at work on the Canal and the Panama railroad, and of this number, 29,901 were Canal employes. The gold force on the Canal work, composed almost entirely of white Americans, was 4,380. No labor recruiting was necessary during the month.

The report of the Chief Quartermaster for July, shows that the number of family quarters occupied by "gold" employes was 1,683, which is 3 less than in June, and the occupants numbered 5,103, an increase of 55. Of this number, 1,775 were women, and 1,659 children. Bachelor quarters occupied by "gold" employes numbered 1,925 and the occupants numbered 3,576, of whom 133 were women. The family quarters, occupied by European laborers numbered 303, and the occupants, 851; bachelor quarters, 111, and the number of occupants, 5,417. The family quarters occupied by West Indians numbered 1,078, and the occupants, 3,522; bachelor quarters, 258, and the number of occupants, 5,096.

The following statement shows the force actually at work on July 27, 1910:

DEPARTMENT.	Monthly.	Artisans.					European Laborers.		West Indian Laborers.					Total Silver.	Total Gold.	Grand Total.
		44 cents.	32 cents.	25 cents.	20 cents.	16 cents.	20 cents.	16 cents.	20 cents.	16 cents.	13 cents.	10 cents.	7 cents.

Panama railroad force, 3,506; Panama railroad relocation force, 2,064; Panama railroad commissary force, 979. Total, 6,549.

LAND SURVEY.

Work Preparatory to Opening Government Lands to Farmers.

Field work on the survey of the land area of the Canal Zone as it will be after the completion of the Canal has been begun. The survey will be prosecuted for the Canal Zone government by the Third Division of the office of the Chief Engineer, and the expenses will be paid from an appropriation of $75,000 made for this purpose by the Congress at its last session.

It will be based on the triangulation survey of the Zone, which is nearly completed, with the initial point of the system of rectangular coordinates on Balboa Hill, the top of which is visible from hills in all parts of the Zone. A standard meridian and base line will intersect in the triangulation station on that hill, and boundary lines, run parallel with this meridian and base line respectively, will divide the line into quadrilaterals with sides measuring two kilometers, about (1.24 statute miles), and containing 4 square kilometers, equivalent to 400 hectares (988.42 acres). Certain of the boundary lines at a distance of not more than 10 kilometers (6.21 miles) from one another will be run with the utmost care and will be known as "standard guide lines," and all intermediate boundary lines will be carefully adjusted with reference to these guide lines. Field measurements on the guide lines will be as infrequent as possible, intersections from triangulation stations, with short spurs carefully measured and checked, being used to control direction.

It is planned to prosecute the work in the following order, starting from the initial point on Balboa Hill: (1) Southeast quadrant, which includes all Zone lands approximately south and east of Las Cascadas. (2) Northeast quadrant, including all Zone lands approximately north of Las Cascadas and east of Gorgona. (3) Northwest quadrant, including all Zone lands north and west of Balboa Hill. (4) The remaining lands.

During the progress of work on the boundary lines the topographer, in addition to his other work, will carefully note all existing property lines, clearings, trails, streams, and other natural or artificial features. He will also make notes regarding the character of the country passed over, stating fully whether it be swampy or hilly, rocky or fertile, and, where possible, will get information from the natives as to the character of the crops to which the soil is best adapted. Full notes will be made regarding the character and amount of vegetation, whether the trees be of hard or soft wood, and the probable composition of the rocks and soil. Notes will also be made as to the best location for trails for opening up the country.

The purpose of the land survey is to get accurate data on which a system of land leasing may be built up, in accordance with the Act of Congress of February 27, 1909, which provides for 25-year renewable leases of tracts of not over 50 hectares, to persons 21 years of age or over, who satisfy the Government that they expect to settle upon and cultivate the land. This data will be placed on three maps or plans, as follows:

(1) Large scale record plans, 56 by 48 inches, scale 1 to 2,000, or approximately one inch to 167 feet. Each of these plans will cover 4 square kilometers of territory, will be used as a record plan of the allotments in that quadrilateral, and will contain all information regarding the location in detail. It would require 500 of these sheets to cover the Zone, land and water.

(2) Medium scale district plans, scale 1 to 20,000, or approximately one inch to one-third of a mile. These plans will cover the entire Zone, their boundaries being limited by the drainage basins of the principal streams. They will show the general lay of the land, its topography and availability for general development. The principal use of these plans will be in the comprehensive laying out of roads and trails; and the interrelation of villages and plantations, the character of the country and its adaptability for farming, grazing or plantation work will be shown.

(3) Small scale general map of the Zone, including Gatun Lake, scale 1 to 40,000 approximately five-eighths of an inch per mile. This will be the general map of the entire territory and will contain some information in regard to the territory immediately contiguous on either side of the Zone lines.

The sections will be designated or indexed by numbers, beginning with the origin of the system on Balboa Hill and progressing north, south, east, and west, along the axes, the quadrant in which the section is located being shown by the initial letters of the direction words. Thus, a section situated in the southeast quadrant at a point 8 kilometers south and 11 kilometers east of Balboa Hill would be indicated "S. 8; E. 11."

Promotions in Engineering Positions.

In accordance with recommendations of a committee appointed for that purpose, the following rules have been adopted for examinations to procure eligibles for promotion among rodmen and levelmen employed on the Canal or the Panama railroad:

1. First examination to be held on the last Sunday in October and first Sunday in November, 1910. All rodmen and levelmen in the service of the Commission and Panama Railroad Company to be notified that they are expected to enter the examination on one of these dates, provided however, that if possible, arrangements should be made to examine all applicants at the same time, and if this is not practicable, and examinations are held on different dates the problems and engineering questions be changed for the second Sunday's examination.

2. Subject to further consideration, examinations will be held every six months and all rodmen and levelmen who have not been previously examined be required to enter.

3. No employe shall be considered eligible for promotion from rodman to levelman and from levelman to transitman until he has submitted to and passed the required examination. All employes who have passed the examination will be considered equally eligible for promotion under such regulations regarding selection of employes for promotion from the eligible list by the heads of departments and divisions as may be decided upon later.

4. A rodman will be permitted to take the examination for transitman in preference to the examination for levelman if he shall so elect, and in case he passes the examination for transitman he shall be considered eligible for promotion to levelman and from levelman to transitman without further test.

5. No levelman or transitman shall be selected in the United States for service on the Isthmus as long as there are already on the Isthmus men in the lower grades who have passed the requisite examination and are available for promotion or transfer to the vacancies which it is proposed to fill.

6. Examinations will be divided into three parts:

(*a*) Written examination, as per sample submitted with committee's report. Relative weight, 40 per cent.

(*b*) Education, experience and testimonials. Relative weight, 40 per cent. For testimonials applicants will be permitted to submit original, or certified copies of letters from previous employers, which will be returned to them. A blank form should be prepared to be submitted to the head of department or division immediately employing the applicant, who will fill same out and return to the Board stating his opinion of the applicant's conduct, ability and efficiency while under his supervision, using certain specified terms such as "excellent," "very good," "average," "poor."

(*c*) Oral examination. Relative weight, 20 per cent.

PERSONAL.

Mr. H. H. Rousseau, with Mrs. Rousseau, sailed for the States on his annual leave, on the *Ancon* from Cristobal, on August 26.

Mr. W. G. Comber sailed on the United Fruit Company's steamer *Atenas* for New Orleans on Thursday, August 25, on his annual leave of absence.

Building Gatun Spillway.

The amount of concrete placed in the spillway of Gatun Dam in the week ending August 27, with the total to that date, follows:

Date.	Cubic Yards.		
	Concrete	Large rock.	Total.
August 22	100	....	100
August 23	....	....	....
August 24	....	....	....
August 25	74	....	74
August 26	114	15	129
August 27	120	....	120
Total	408	15	423
Previously reported	....	....	89,929
Grand total	....	....	90,352

Ancon Crusher.

A statement of the rock crushed at Ancon quarry for the week ending August 27, follows:

DATE.	Hours worked.	Cubic Yards.
August 22	5:40	1,710
August 23	7:20	1,815
August 24	8:00	2,775
August 25	7:30	2,970
August 26	7:00	2,325
August 27	8:00	2,475
Total	43:30	14,070

University Club Dance.

The special train for the dance of the University Club in Panama on the night of September 3 will leave Empire at eight o'clock for Panama, and returning, will leave Panama at one o'clock the following morning. The train will run only between Panama and Empire.

Authority has been granted for the construction of a rifle range at Corozal between the Commission clubhouse and the foothills. The expense is to be borne by the rifle club asking permission to build the range.

BASEBALL.

Free Transportation Conditionally Granted to Players—A Six-Team League.

Free transportation will be granted to Isthmian baseball players in the regularly organized league during the 1910-11 season, providing certain stipulations are agreed to. These are embodied in the following report recently submitted by Commissioner H. H. Rousseau, President of the Isthmian League:

> Referring to the joint report of June 1 submitting certain recommendations regarding the future conduct of baseball on the Isthmus in which it is stated that definite information in regard to obtaining free transportation for the ball teams was necessary before arriving at a decision, I beg to state for your information and such other action as you may consider proper that the following proposition has been tentatively approved by the Chairman of the Isthmian Canal Commission, which should result in securing the free transportation desired and without expense to the Commission:
>
> The Commission pays the Panama railroad for all free transportation granted Commission employes, a monthly sum agreed upon in advance as measuring the value of services rendered. This contract price is an even thousand dollars, and it is understood that the value of transportation may vary $500 either way from this $1,000, without affecting the contract price. Thus, in other words, it is an average price. It can very well happen then that the Commission could afford to offer to include in its transportation, the ball players, without affecting its contract with the Panama railroad. It is assumed that baseball transportation would never exceed $200 per month, and it will probably be nearer $150 per month. If, however, by including baseball transportation, the Commission would become liable to an increase in its contract price to the Panama railroad—$11,000 per month—it would expect to deduct the cost of baseball transportation from its transportation expense for that month. In such cases the baseball league will have to assume this expense itself for that month, and for every month in which this occurs.
>
> The Commission in granting free transportation on these terms would expect to have the payment of baseball transportation guaranteed, which might be done by the various clubs concerned authorizing any expense for transportation on request of the Commission, to be paid from the $100 cash forfeit put up at the beginning of the season. I have looked over the monthly transportation expenses during the past year, and it does not appear to me that a contingency under these terms, by which the baseball clubs would become liable for passenger transportation, is very certain. I believe that this arrangement is the most favorable one that can be made with the Commission at the present time regarding free transportation for ball players and if the baseball league desires to make a final proposition to the Chairman and Chief Engineer of the Commission along these lines, he has indicated that it will receive his approval.

The above arrangement is looked upon favorably by the officials of both of the old leagues, and a meeting will be called within the next few weeks to act upon the report.

The plans for the coming season contemplate the organization of a six-team league to take the place of the two former leagues, to be composed of clubs from Colon, Cristobal, Gorgona, Camp Elliott, Empire and Ancon. This plan eliminates two of the four teams that composed the Atlantic League last year, but leaves the present Isthmian League circuit intact. There will be three ball parks available, one each at Colon, Empire, and Ancon, the Gorgona grounds having been abandoned last season.

Labor Day Athletic Meet.

A total of 165 entries, representing 70 different individuals, has been received for the athletic meet to be held at the Empire baseball park in the forenoon of Labor Day, September 5. Arrangements for the event are being perfected, and a special train will be run from Colon to Empire leaving Colon at 6.45 a. m., and returning, leave Empire at 5 p. m.

The committee on management consists of W. E. Burrell, chairman; Geo. R. D. Kramer, secretary-treasurer; F. C. Freeman, Culebra, in charge of transportation; W. H. Warr, Gatun, in charge of advertising; A. O. Ludwig, Empire, in charge of equipment; J. T. Hopkins, Gorgona; Wm. H. Geer, Porto Bello.

The officials in charge of the contests are: Referee—J. T. Hopkins. Clerk of Course—W. E. Burrell. Assistant Clerks of Course—James A. Jamison, Martin Schwallenberg, J. P. Mead. Track Judges—W. H. Warr, chairman; W. P. Juley, A. Richards, W. J. Wright. Field Judges—A. O. Ludwig, chairman; H. R. Seaton, G. C. McCullough, F. Summers. Timekeepers—J. T. Hopkins, Everest Dauphine, D. T. Edwards, C. H. Ourand. Scorer—W. E. Burrell, chairman; R. W. Hart. Inspectors—W. H. Warr, chairman; H. O. Hostetter, W. G. Ross. Announcer—E. L. Emery. Marshals—Lieut. W. A. Vickery, Sergts. E. C. Galloway, John Johanna.

Wesleyan Church Missions.

The Wesleyan Methodist church in Panama, referred to in THE CANAL RECORD of August 17, cost 2,000 pounds Sterling, about $10,000, not $2,000, as stated in that issue.

A series of meetings termed the "annual missionary campaign" has just been concluded. Sermons were preached on Sunday, August 14, at Colon, Empire, and Paraiso. The preachers at Colon were the Rev. Carl H. Elliott of the Union Church, Cristobal, and the Rev. Mr. Jarrett of "The Regions Beyond" mission, whose field of work for several years past has been Peru. At Empire, J. T. Barton preached, and at Paraiso the Rev. M. Britton King. On Sunday, August 21, a public meeting was held in Panama at which the Hon. Maurice H. Thatcher of the Isthmian Canal Commission presided, and the preachers were the Revs. C. H. Elliott and E. G. Cooke. Public meetings were held also on week-day evenings. Besides the circuit ministers the following took part: The Revs. Mr. Jarrett, C. H. Elliott, A. A. Nellis, T. H. Thorburne, and E. G. Cooke, and Mr. Kent.

Civil Service Examinations.

Civil service examinations will be held at Culebra as follows:

Clerk	September 18.
Physician	September 18.
Typewriter	September 18.
Civil Engineer and Superintendent of Construction	September 18–19.
Draftsman	October 16.
Postal clerk	October 16.
Trained nurse	October 16.
Stenographer and typewriter	October 30.

All the above are for appointment in the Isthmian Canal Service, with the exception of the examination for civil engineer and superintendent of construction, which is for appointment in the Quartermaster's Department at large.

Applicants should write for information and application blanks as early as practicable to the undersigned. JOHN K. BAXTER,
Secretary, Isthmian Civil Service Board.
Culebra, C. Z., August 29, 1910.

Isthmus to New York via. Cuba.

The Hamburg-American line has put two ships in the service between New York and Jamaica, with calls at Santiago, Cienfuegos, Manzanillo, and Havana in Cuba. Passengers from the Isthmus can connect with these steamers at Kingston, taking the ship that leaves Colon fortnightly on Tuesday and arrives at Kingston on Thursday. Expenses in Kingston during the one-day wait for the Cuba and New York ship must be borne by the passenger.

The regular rate from Colon to New York, via. Cuba is $115; to Santiago, $40; to Cienfuegos, $45; Manzanillo, $55; Havana, $70; and the usual discount will be made to employes of the Commission or Panama railroad.

Premature Explosion at Ancon Quarry.

Four laborers, one Spaniard and three negroes, were killed in a premature blast at Ancon quarry early in the afternoon of August 30. They were Leon Alonzo, Spaniard, check No. 94458; Peter J. O'Gara, Montserrat, check No. 64567; Henry Jerrel, Montserrat, check No. 75797; Nelson Dangloss, St. Vincent, check No. 27638. The men were tamping dynamite in holes at the toe or foot of a mass of rock above the top ledge or bench of the quarry when the explosion occurred. The rock was thrown out of the hill upon the bench where the men were at work burying them. All the force in the quarry was immediately set at relief work and the last body was recovered about midnight Tuesday.

Accident and Suicide.

John Jackson, an American boy, 13 years of age, son of Henry Jackson residing at San Pablo, was run over and killed by a train between Mamei and Juan Grande on Thursday afternoon, August 25. He was employed as a telephone operator in the transportation department of the Central Division. He stepped out of a signal tower in front of a train of empty cars, evidently not hearing its approach on account of the noise made by the passing of a loaded train on the other track. He was born in Plant City, Fla., and had been on the Isthmus about 19 months.

Harry Tafel, an American, residing at Cristobal, employed in the local freight department of the Panama railroad up to August 16, committed suicide in Colon on Wednesday, August 24, by taking hydrocyanic acid. He was about 24 years of age, had been on the Isthmus since March, 1910, and was a native of Pittsburg, Pa., where his father, William Tafel of 472 New York avenue, resides. The body was buried in Mount Hope cemetery.

Central Division Unloaders.

A statement of the Lidgerwood cars unloaded in the Central Division during the months of June and July, 1910 follows:

JUNE.

Location.	No. of unloaders.	No. of trains.	No. of cars.
Balboa	3	895	17,005
Miraflores	3	836	15,884
Gamboa	2	475	8,825
Tabernilla	3	724	13,756
Totals	11	2,930	55,470

JULY.

Location.	No. of unloaders.	No. of trains.	No. of cars.
Balboa	3	864	16,416
Miraflores	3	760	14,440
Gamboa	2	492	9,348
Tabernilla	2	522	9,918
Totals	10	2,638	50,122

Bids will be called for within the next few weeks for furnishing return tracks for the electric towing mules for the locks at Gatun and Pedro Miguel. The plan for towing provides for one return track for the towing machine on each of the side walls, and one track on the middle wall. Only the return tracks are needed immediately, in order that work on the locks may not be retarded.

COMMISSION CLUBHOUSES.

Activities of the Young Men's Christian Association.

CULEBRA.

The bowling game between Gorgona and Culebra on Saturday night, August 27, resulted in the Gorgona team taking three games, the following being the scores:

Gorgona.				Culebra.			
Heim	153	170	156	Hall	145	167	153
Stoehr	194	133	136	Warner	137	107	132
Misal	106	131	129	Fox	143	143	124
Burmaster	123	123	....	Mengel	136	167	127
Wright			159	Herrington	137	126	146
Varenkamp	157	170	125				
Total	733	727	705	Total	698	710	682

The following is the standing of the teams in the local tournaments:

Teams.	Won	Lost	Per cent.
TENPINS.			
Lock and Dam	6	3	666
Quartermaster's	4	4	500
Miscellaneous	3	3	500
Chairman's Office	1	4	200
DUCKPINS			
Miscellaneous	6	0	1000
Lock and Dam	3	3	500
Quartermaster's	2	4	333
Chairman's Office	1	5	166

The smoker on Friday night, August 26, was enjoyed by a large number of men. The following program was rendered: Motion pictures; solo, Mr. Kramer; boys' drill, free hand and dumb bell; selections by the Culebra male quartet; solo, Mr. Ross of Empire.

In order to pick out a team to represent Culebra in the Isthmian Bowling League, scores will be kept and averages taken up to September 8, when the five men who have the highest averages will make the team. The five next highest men will be picked to make up the second team. A large number of men should come out and try for the teams. The alleys will be open at noon and at 5 o'clock for practice.

A pool tournament will begin on September 1, with two classes, "A" and "B," respectively. The man that wins the highest number of games will receive a cue. Handicaps will be given in order that all men may have an equal chance for the finals.

Men interested in the 5.15 gymnasium class that meets Mondays and Wednesdays, are asked to join at their earliest convenience.

EMPIRE.

The meeting of the discussion club held on Wednesday evening, August 31, was led by A. B. Dickson, the subject being "Responsibility."

The second of a series of moving picture entertainments was given on Tuesday, August 30.

About 200 people attended the public debate and entertainment on Friday night, August 26. Mrs. Sommers sang in place of the quartet, which was unable to appear. The Dutch dance, in costume, by eight girls of Empire, was a pleasing novelty.

E. M. Goolsby and C. J. Huson are tied for high score in the monthly bowling tournament, with 246 each.

The Empire boys' team will bowl the Gorgona boys, team on Saturday morning, September 3.

The finals for the monthly pool tournament will be played off this week, E. O. Smith representing class "B" and E. Robertson class "A".

Miss Gay Zenola MacLaren of New York will give her first production of "The Music Master" in Empire next Friday evening, September 2.

Empire took three games from Cristobal on the Empire alleys on Saturday night, August 27. Following: are the scores:

Cristobal.				Empire.			
Barrett	159	123	145	Pearson	161	145	171
Adams	126	148	165	Miller	152	157	98
Blackburn	142	126	191	Giavelli	142	176	166
Read	123	131	114	Sawtelle	162	133	143
Weston	130	140	122	Shau'hn'ssy	175	219	186
Total	680	668	737	Total	792	830	764

The following 200 scores were rolled during the week ending August 27: Yount, 202: Goolsby, 246; Brown, 222, 206,202; Gustavson, 209; Huson, 246; 205, Reed, 204; Potter, 205; Shaughnessy, 219.

GORGONA.

At the monthly song service held on Sunday night, August 28, the Hon. Maurice H. Thatcher gave an address on "Character Building." Geo. R. D. Kramer of Culebra sang two pleasing solos.

On Friday night, August 26, an entertainment for the people in Gorgona was given in the clubhouse. The program consisted of music, readings and a tableau. The tableau was a sketch entitled "Sweetheart Days" in five scenes. The following people took part: W. W. Darling, J. M. Holt, E. M. Volz, J. M. Callopy, Miss Ruth Hackenberg, Miss Margaret Stevens and Miss Edith Stevens. A reading was given by Mr. Earl Buford, a violin solo by Ernest Reinold, and a vocal solo by Mrs. James Murray of Las Cascadas. Refreshments were served.

On Thursday night, August 25, a pleasing moving picture entertainment was given to a good-sized audience.

On Tuesday evening, August 23, the Culebra volleyball team took two out of three games from the Gorgona team on the Gorgona floor.

The standing of the local basketball league is as follows:

Teams.	Won	Lost	Per cent
Miscellaneous	2	0	1000
Nut-splitters	1	1	500
Rivet-busters	1	1	500
Pen-pushers	0	2	000

On Saturday night, August 27, Lyle Kneeland won the class "A" and "B" monthly pool tournament, the prize for which is a pool cue.

The third meeting of the discussion club will be held on Tuesday night, September 6.

GATUN.

The next meeting of the discussion club will be held on Friday night, September 2, with R. G. Goodman of Cristobal as leader. The subject chosen is "What Is Happiness."

Fifteen men have entered in the Labor Day athletic meet to be held at Empire on September 5. A special train leaves Cristobal at 6.45 a. m. Only those having admission and train tickets, which can be secured at the clubhouse, will be allowed on this train. The train leaves Empire on the return trip at 5 p. m.

The present standing of the men in the handicap pool tournament is as follows:

	Won	Lost	Per cent
Bailey	6	2	750
Durand	6	2	750
Eggleston	5	2	714
Kenney	5	3	625
Ourand	3	2	600

The bowling match between the Gatun first and second teams on August 25 resulted in the second team winning two out of three games, the following being the scores:

First team				Second team			
Barte	166	145	173	Hodges	167	219	184
Louner	124	165	165	Dalton	157	157	155
DeMoll	156	153	166	Myers	161	164	187
Duryea	127	167	155	C.R.H'r'g'n	204	148	148
Durand	159	187	144	Wilson	127	135	113
Total	732	817	803	Total	816	823	787

On Saturday, August 27, Gorgona's first and second teams bowled Gatun's first and second teams. The first team from Gorgona won two out of three games from the Gatun first team, and the Gatun second team won two out of three games from,the Gorgona second team, the scores being as follows:

Gorgona first team.				Gatun first team.			
Roper	146	170	171	Barte	180	164	158
Barlow	145	158	169	C.A.H'r'g'n	166	125	157
White	146	163	208	Severn	147	157	126

CRISTOBAL.

A preliminary track meet was held on Friday night, August 26, as a "try-out" to pick men for the Labor Day athletic meet at Empire. Fourteen men are entered from the Cristobal Y. M. C. A.

Gorgona won the chess match played Saturday night, August 27, by a score of five to three games. The following men played:

Gorgona.	Won	Lost	Cristobal.	Won	Lost
Taylor	2	0	Shaff	0	2
Strong	1	1	Alper	1	1
Bowell	1	1	Pack	1	1
Nagle	1	1	Cleall	1	1

Cristobal defeated Gorgona in a game of basketball on Saturday night, August 27, by a score of 63 to 15.

The following men bowled 200 scores during the week ending August 27: Hess, Thomas, and B. Adams. The high score for the month is held by Mr. Grover with 213.

The meeting of the discussion club held on Thursday evening, August 25, was led by Wm. E. Burrell, the subject being "Physical Efficiency." A new series will begin with the meeting on Thursday night, September 1 to be led by E. A. Putnam of Culebra. The subject will be "What Is Failure."

On Monday night, August 22, a moving picture entertainment was given before a large audience.

The membership campaign will begin on September 1 and will be continued for one month.

LOST—On Saturday, August 27, between the industrial railway and the commissary at Gatun, one pair of eye glasses in a case. Reward for return to E. L. Cheek, Gatun.

OFFICIAL CIRCULARS.

Manufacture, Alteration and Repair of Machinery and Equipment.

CULEBRA, C. Z., August 25, 1910.

CIRCULAR No. 343:

The following rules, governing the manufacture of new material on the Isthmus, and the making of alterations in and repairs to all kinds of machinery, mechanical appliances, marine equipment and rolling stock of the Isthmian Canal Commission and the Panama Railroad Company, are established to take effect September 1, 1910:

1. Mechanical work will be divided into the following three classes, viz:

(*a*) Manufacture of new material, which includes the making of all spare parts for use in future repairs.

(*b*) Alteration of existing material.

(*c*) Repair of material, which will be limited to the putting into serviceable condition of broken and worn parts that admit of such action; to the replacing of irreparably broken and worn-out parts by spare parts taken from store, and to the making of new parts required to replace such parts only as may actually be broken and worn-out, but which cannot be put into serviceable condition and for which spare parts are not in store.

2. Request for the manufacture of new material and apparatus of any kind, and for alterations in existing material and apparatus, will be submitted by the division engineers, the General Superintendent of the Panama Railroad Company and the heads of other departments to the Chief Engineer on form 159 C. E. Requests for castings will indicate the shop in which it is suggested they should be machine finished. If it should be necessary to manufacture new material or to alter existing material before the written approval of the Chief Engineer can be obtained on form 159 C. E., either oral or telephonic request may be made to the office of the Chief Engineer. Written request will be submitted on form 159 C. E. in all such cases, with the name of the official who approved it and the cause of the urgency noted thereon.

3. All repairs and alterations to locomotives, Lidgerwood plows, spreaders, track shifters, pile drivers, traveling steam cranes, and orange peel and clam shell buckets, for which the estimated cost of labor exceeds $50 per unit, will be made at the Gorgona shops, except that at Porto Bello, Nombre de Dios and Toro Point the limit on cost per unit will be $300. Circular No. 300, dated January 5, 1910, is rescinded.

4. All repairs and alterations to steam shovels and rock drilling machines, for which it is necessary to send the shovels and drilling machines to a machine shop, will be made at the Empire shops, except that repairs to the extent permitted by the facilities of the shops at Porto Bello, Nombre de Dios and Toro Point may be made at those places.

5. All repairs and alterations to dippers for steam shovels, and to dippers, buckets and sister links for dredges, that involve the removal of parts assembled to the body by rivets, will be made at Empire shops, except that at Porto Bello, Nombre de Dios and Toro Point the limit will be the replacing of any part of the body. The replacing of bushings in sister links will be considered to be light running repairs.

6. All repairs to air pumps that require machine work, and all except light running repairs to concrete mixers and spare parts therefor, will be made at the Gorgona shops.

7. All repairs to steel and wood standard gage cars, except light running repairs, will be made at Gorgona shops.

8. Castings for repair work only, including such machine work thereon as may be requested, will be made at the Gorgona shops.

9. Division engineers, the General Superintendent of the Panama Railroad Company and the heads of other departments should make request on the Chief Engineer not later than June 15 of each year for annual blanket work orders on the Mechanical Division and Central Division for such repair work under paragraphs 3 to 8, both inclusive, as may be required during the succeeding fiscal year. Requests should indicate each of the six classes of repairs for which blanket orders are desired. Division engineers, the General Superintendent of the Panama Railroad Company and the heads of other departments are authorized to empower such of their subordinates as they may desire to call directly upon shops for repair work under annual blanket work orders. The names and positions of such subordinates should be furnished direct to each shop.

10. Whenever any article is sent to a shop for repair, a careful examination of its general condition will be made, and if the estimated cost of repairs constitutes an appreciable percentage of the value of the article, the condition thereof and the estimated cost of repairs will be submitted to the division engineer, General Superintendent of the Panama Railroad Company, or

other head of department concerned, with request for instructions in the case.

11. The replacing of a part before its usable life has been exhausted is not economical, except under extraordinary circumstances. Construction and shop officials will cooperate to limit each repair, in both extent and character, to that necessary to keep the equipment in such condition as will permit it to produce the maximum service with the minimum cost of maintenance.

12. New marine constructions and alterations in existing marine equipment will be undertaken only after approval by the Chief Engineer, and the necessary work will be done in such shop or shops as may be indicated in each case by him.

13. All doors, window sashes, panel work, furniture of any kind not purchased under contract, and all light wood work required to be mortised and tenoned, will be made at the Lirio shops upon request on form 159 C. E

14. Jack blocks for steam shovels will be made at Empire shops.

15. All new material, including spare parts for future repairs, will be turned over to the Quartermaster's Department as soon as completed for issue on foremen's requisitions.

16. It is the policy that all manufacturing work, including the making of reserve supplies of spare parts for future repairs, shall be made at the Gorgona and Empire shops, except that new marine constructions and alterations therein may be made at Cristobal (dry dock) and Balboa shops, and that light running repairs only shall be made at all other shops. The observance of this policy is enjoined.

Geo. W. Goethals,
Chairman, Isthmian Canal Commission.
President, Panama Railroad Company.

Seniority of Locomotive Engineers and Conductors.

Culebra, C. Z., August 27, 1910.

Circular No. 348:

The seniority of locomotive engineers and conductors of the Isthmian Canal Commission and Panama railroad relocation will be governed by the following rules, effective September 1, 1910:

1. The seniority of qualified engineers and conductors will be governed by the date they are qualified. If two or more are qualified on the same date, the total length of service (qualified and unqualified) as engineer or conductor will govern. Increase to qualified pay will depend on the date started on main line work.

2. The seniority of unqualified engineers and conductors will be determined by the date they entered the service as engineers or conductors, regardless of transfers from one division to another.

3. When additional qualified men are needed, the senior unqualified man in the service (all Divisions) will be given an opportunity to qualify, provided he has the requisite railroad experience.

4. If it becomes necessary to qualify a man, and the employe entitled to promotion is sick or on leave of absence, a temporary promotion of the man next on the list may be made with the understanding that the senior man will supersede him on his return to duty. In such case, the date the temporary man qualifies will also be given the senior.

5. Seniority will not hereafter be affected by absence from duty so long as the employe's service is continuous.

6. In case of reduction of force, discharges will be made as follows, all divisions being considered as one service:

A. Aliens.

B. Men who have been reported for being in the hospital for alcoholism.

C. Men habitually sick, or physically unfit for Isthmian service, as shown by repeated absence from duty.

D. Men with unsatisfactory records (to be determined by the division engineer).

E. Men at the foot of seniority list; the junior qualified man shall be given the right to remain as senior unqualified man and the junior unqualified man, except as provided above, will be discharged if there is no vacancy.

7. If it becomes necessary to readjust the force by reducing the number of qualified men and increasing the number of unqualified men without decreasing the total force, the qualified men in the division affected will be given the opportunity, according to seniority, to transfer to any qualified positions vacant, they being replaced by junior unqualified men who can be spared from the division to which they transfer. In the event there are no vacancies in the qualified grade, the youngest qualified men in the service will be rerated as unqualified and any necessary transfers made to readjust the force.

8. The seniority of a qualified man transferred to the Panama railroad will date from his transfer.

9. The conductors and engineers on the Panama railroad relocation work will be included in the Isthmian Canal Commission seniority lists and will be subject to these rules the same as though they were employes of the Commission.

10. If a qualified man refuses an offer to transfer to the Panama railroad operating department, he will thereafter have no right to such a transfer and his name will be marked on the seniority list as having refused transfer.

11. In case of reduction of Panama railroad force, qualified men may be transferred to vacancies in the Isthmian Canal Commission force, but the Isthmian Canal Commission men will not be displaced to provide vacancies.

12. Personnel of crews in charge of existing runs will not be changed by this seniority order except as vacancies occur.

Geo. W. Goethals,
Chairman and Chief Engineer.
President, Panama Railroad Company.

Labor Day a Holiday.

Culebra, C. Z., August 26, 1910.

Circular No. 345:

Labor Day, Monday, September 5, 1910, will be observed as a holiday throughout the Canal Zone, and, as far as possible, all work will be suspended on that day.

Geo. W. Goethals, *Chairman.*

Amendment to Criminal Procedure.

Culebra, C. Z., August 26, 1910.

Circular No. 276-a:

When an employe of the Isthmian Canal Commission, the Government of the Canal Zone, or the Panama Railroad Company, is required to sit in the trial of a criminal case as an associate of the Circuit Judge, as provided in Section 171 of the Code of Criminal Procedure of the Canal Zone, he shall be allowed his usual compensation for the time lost from work on his regular pay roll in the same manner as if present and performing his duty; he shall be furnished with transportation to and from the place of holding court, and his actual and necessary expenses at court will be provided for by the court, but he shall not be entitled to the $10 per day provided in Section 171 of Act No. 15 of the Laws of the Canal Zone.

Clerks of courts will issue a certificate showing the time employe is engaged as an associate to the Circuit Judge, and timekeepers will file such certificates with the time rolls.

Geo. W. Goethals,
Chairman, Isthmian Canal Commission.
President, Panama Railroad Company.

Tool Rooms in Machine Shops.

Culebra, C. Z., August 26, 1910.

Circular No. 344:

The tool rooms in the Gorgona, Empire, Dry Dock, Balboa and Pedro Miguel machine shops will be fitted up for containing, in a systematic and orderly manner, drills, reamers, counterbores, taps, dies, milling cutters, lathe, planer, and shaper tools, and all other machine tools.

All tools will thereafter be kept in the tool room except when in use by workmen. Every tool issued to a workman will be charged to him during the time it is in his possession.

Upon the return of each tool to the tool room it will be ground and repaired, if necessary, in order that every tool issued will be sharp and ready for use.

Each of the above five shops is authorized to employ at not more than 10 cents per hour, one or more boys as messengers for drawing tools from the tool room and returning them for workmen.

Geo. W. Goethals, *Chairman.*

Classified Expenditure Accounts.

Empire C. Z., August 25, 1910.

Circular No. 27:

The following changes in classified expenditure accounts are hereby authorized effective July 1, 1910:

373. *Transportation on the Isthmus.*

A. Passenger Transportation.

To this account will be charged the monthly payment for transportation of employes over the rail lines of the Panama Railroad Company, and animal transportation to and from trains.

B. Freight.

To this account will be charged the payments for transportation of freight over the rail lines of the Panama Railroad Company.

386. *Freight, Advertising, and Miscellaneous Items.*

This account is abolished. See new account No. 392. Advertising and miscellaneous items formerly charged to account No. 386 will be charged to account No. 385.

389. *Corrals.*

A. Equipment.

B. Operation.

The balances remaining in the two subdivisions of this account will be absorbed monthly on the Chief Quartermaster's abstract of expenditures by charging accounts 385 and 388 on a basis of services rendered, and crediting account No. 389 A and B with the same amounts.

The following new accounts are authorized:

390. *Construction of Buildings, Department of Construction and Engineering.*

To this account will be charged expenses incurred in the construction of buildings for the Departments of Construction and Engineering, Quartermaster's, Subsistence, Examination of Accounts and Disbursements. It does not include "Division Structures," the expense of which should be charged directly against the construction work benefited. This account will include all other buildings of the departments named above not provided for under account No. 408. Commissary buildings will be charged to the Panama Railroad Company.

391. *Alteration and Repair of Buildings, Department of Construction and Engineering.*

To this account will be charged expenses incurred in the alteration and repair of buildings for the departments of Construction and Engineering, Quartermaster's, Subsistence, Examination of Accounts and Disbursements. It does not include alterations and repairs of "Division Structures," the expense of which should be charged to the construction work benefited; nor alterations and repairs provided for under accounts Nos. 381 and 409, nor alterations and repairs of Panama railroad commissary buildings.

392. *Operation of Docks and Wharves.*

A. By the Panama Railroad Company.

To this account will be charged services rendered by the Panama Railroad Company for stevedoring cargo.

B. By the Isthmian Canal Commission.

To this account will be charged all expenses incurred by the Isthmian Canal Commission in connection with the operation of docks and wharves, and credited with the revenues derived therefrom.

The following accounts are revised to read as follows:

408. *Construction of Buildings, Department of Construction and Engineering.*

To this account will be charged expenses incurred in the construction of the following buildings only: Gold and silver quarters, including baths, water closets and wash houses used in connection therewith; construction of clubhouses, lodge halls, churches, bandstands, and other buildings used for purposes of a general nature not directly connected with construction work. Commissary buildings will be billed against the Panama Railroad Company.

409. *Alterations and Repairs of Buildings, Department of Construction and Engineering.*

To this account will be charged all expenses of alteration and repair of the following buildings only: Gold and silver quarters, including baths, water closets and wash houses used in connection therewith; clubhouses, lodge halls, churches, bandstands, and any other buildings used for purposes of a general nature not directly connected with construction work. The ordinary alterations and repair of mess, kitchen and hotel buildings, including Hotel Tivoli, will be charged to this account. Alteration and repair of commissary buildings will be billed against the Panama Railroad Company.

W. W. Warwick,
Examiner of Accounts.

Approved: Geo. W. Goethals,
Chairman and Chief Engineer.

Empire, C. Z., August 25, 1910

Circular No. 28:

The following new classified expenditure account is authorized effective July 1, 1910:

423. *Permanent Plant.*

To this account will be charged the cost or proper proportion of the cost of plant which, though purchased for use in the construction of the Canal, will be used in its operation and maintenance after completion. No charge or credit will be made to this account except by direction of the Chief Engineer. The Examiner of Accounts will keep a detail of this account by units.

W. W. Warwick,
Examiner of Accounts.

Approved: Geo. W. Goethals,
Chairman and Chief Engineer.

At the Porto Bello Clubhouse.

The entertainment given on Saturday night, August 20, was thoroughly enjoyed. Mr. Sweet and Mr. Washburn, as blind and dumb colored musicians, gave an interesting sketch. Two three-minute boxing bouts were put on by Bowen and Sweeney, and Morales and Fleckstein. The mock wedding was voted as the best thing that has been given this season. Invitations had been issued and the people came well supplied with rice and "presents for the bride." The characters were as follows: Bride, Mr. Westervelt; groom, Mr. Washburn; bridesmaid, Mr. Cavanagh; best man, Mr. Geer; flower girls, Elizabeth Cornelison and Eva Sweet; pastor, Mr. Bucklin.

The Sunday schedule of trains on the Panama railroad will be in effect on Labor Day, Monday, September 5.

COMMISSARY DEPARTMENT.

The hours during which commissaries are open are as follows:

Cristobal and Culebra, 8 a. m. to 12.30 p. m.; 2 p. m. to 7 p. m.

All other commissaries, 8 a. m. to 1 p. m.; 3 p. m. to 7 p. m.

Retail prices of cold storage provisions for the week beginning September 1:

Supplies for Canal Work.

The following steamers with supplies for the Isthmian Canal Commission arrived at the ports of Cristobal, Colon and Balboa, during the week ending August 27, 1910:

Prinz Joachim, August 22, from New York, with 293 cases valve oil, 60 bundles bolts, 16 cases bolts for stock.

Carham, August 22, from Jacksonville, with 290 pieces piling for stock; 1,452,531 feet B. M. yellow pine lumber for Mechanical Division.

Allianca, August 23, from New York, with 26 cases electrical material, 2 pumps, motors and parts, 15 reels cable, 15 cases rubber boots for Atlantic Division; 24 pieces castings for Central Division; 8 cases rubber boots, 7 cases valves, 6 crates concrete machinery for Pacific Division; 1,620 pieces castings, 190 bundles castings, for Mechanical Division; 267 bundles cross bars, 28 cases picks, 21 barrels glassware, 15 rolls leather, 525 kegs bolts, 20 kegs screws, 313 cases valve oil, 25 barrels iron pipe-fittings, 82 pieces iron pipe-fittings for stock; and a miscellaneous cargo, the whole consisting of 3,656 packages, weighing 325 tons.

Cuzco, August 23, from Tacoma, with 120,013 feet B. M. fir lumber for Atlantic Division; 591,876 feet B. M. fir lumber and 597 cross-ties for stock.

Turrialba, August 25, from New Orleans, with 319 tons dump car parts for Cristobal shops (for erection); 87 pieces piling for Atlantic Division; 252,612 feet B. M. yellow pine lumber, 110,022 feet B. M. oak lumber, 792 pieces car stakes, 534 crates fire brick for stock.

Zacapa, August 26, from New York, with 14 kegs wrought iron spikes, 14 cases pump parts for Atlantic Division; 73 cases tape fuse, 11 barrels drift bolts, 6 half barrels drift bolts for stock.

Misdirected Letters.

Band Concert.

The Isthmian Canal Commission Band will give a concert at Gatun, C. Z., on Sunday, September 4, 1910, at 2 p. m. The program follows:

1 March—*The Annihilator*..........Clement
2 Selection—*A Trip to Japan*..........Klein
3 Waltz—*Love Sparks*..........Holzman
4 Overture—*Amazon*..........Kiesler
5 Barn Dance—*By the Light of the Silvery Moon*..........Edwards
6 Patrol—*American*..........Meacham
7 Medley Selection—*Mills'* 1910..........Schultz
Introducing "Lily of the Prairie," "I'd Like to be the Fellow That Girl Is Waiting For," "Highland Mary," "Everybody's Happy When the Moon Shines," "You For Me When You're Sweet Sixteen," "Comical Eyes," "Sicilian Chimes," "My Friend Jim-a-da-Jeff," and "Margarita."
8 Intermezzo—*The Flower Girl*..........Wenrich
9 Oriental Rag—*Turkish Trophies*..........Egan
10 March—*Put On Your Old Gray Bonnet*..........Wenrich

CHAS. E. JENNINGS, *Musical Director.*

The next concert will be given at Hotel Tivoli, Ancon, September 11, at 7.30 p. m.

Sale of Buildings at Cunette.

There will be sold at public auction by the District Quartermaster at Empire, C. Z., on the premises, at 3 p. m., Wednesday, September 7, 1910, to the highest bidder for cash, the following Isthmian Canal Commission property:

Buildings Nos. 243 and 244, laborers' barracks, at Cunette (Empire).

These buildings will be removed from the premises by the successful bidder, within sixty (60) days from date of sale. The Government reserves the right to accept or reject any or all bids. For further information apply to the District Quartermaster, Empire, C. Z.

R. E Wood, *Acting Chief Quartermaster.*

The following vessels arrived at and departed from the port of Balboa during the week ending August 27:

Arrivals—August 20, *Arica*, from Guayaquil; August 21, *Ucayali*, from south ports; August 22, *Peru*, from south ports, *Acapulco*, from San Francisco, *Chiriqui*, from Buenaventura and Tumaco; August 23, *Cuzco*, from Seattle with lumber.

Departures—August 21, *Trinculo*, to Port Harford; August 23, *Limari*, to south ports; August 24, *Pennsylvania*, to San Francisco, *Arica*, to Guayaquil; August 27, *Ucayali*, to south ports.

CANAL DIRECTORY.

ISTHMIAN CANAL COMMISSION.

Col. Geo. W. Goethals, U. S. A., Chairman, Culebra.
Lieut.-Col. H. F. Hodges, U. S. A., Culebra.

CANAL RECORD

Volume IV. ANCON, CANAL ZONE, WEDNESDAY, SEPTEMBER 7, 1910. No. 2.

The Canal Record

Published weekly under the authority and supervision of the Isthmian Canal Commission.

The Canal Record is issued free of charge, one copy each, to all employes of the Commission and Panama Railroad Company whose names are on the gold roll. Extra copies and back numbers can be obtained from the news stands of the Panama Railroad Company for five cents each.

Address all Communications

THE CANAL RECORD

Ancon, Canal Zone,

Isthmus of Panama.

No communication either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.

NOTES OF PROGRESS.

Empire-Paraiso Highway Open.

The section of the transisthmian highway between Paraiso and Empire has been completed and is open to traffic. It is 18,302 feet long, 18 feet wide on the sub-grade, and has a metaled surface 12 feet wide. It runs along the east side of Culebra Cut from the suspension bridge at Empire to a point opposite Culebra, where it turns eastward in order to run back of Gold Hill into Paraiso. Work on the section to join Paraiso with Corozal has been resumed, and when this link is completed there will be a wagon road from Panama to Gorgona, nearly half-way across the Isthmus.

The Empire-Paraiso road was built by penitentiary convicts under the direction of the municipal engineering section of the Central Division. They excavated 17,457 cubic yards of material for the sub-grade and placed all the metal, 8,650 feet of the length being covered with 2,563 cubic yards of gravel, and 9,652 feet with 2,860 cubic yards of stone. The prisoners were 53 days in preparing the sub-grade, collecting from the sides of the road, breaking, and spreading the stone.

Rainy Season Excavation Record.

All previous records for excavation in the rainy season were broken in the Central Division and in Culebra Cut during the month of August, when 1,377,992 cubic yards of rock and earth were taken out of the Cut and 234,404 cubic yards from the Chagres section. A comparison of the work in August of previous years, with the previous high record for the rainy season, that of October, 1908, and the high record for the dry season, that of March, 1910, follows:

Month.	Culebra Cut.	Chagres Section.	Total.
	Cu. Yds.	*Cu. Yds.*	*Cu. Yds.*
August, 1907...	786,866	2,900	789,766
August, 1908...	1,173,800	366,810	1,540,610
August, 1909...	1,113,370	231,543	1,404,913
August, 1910...	1,377,992	234,404	1,612,396
October, 1908...	1,160,101	424,911	1,585,012
March, 1910....	1,509,728	484,846	1,994,574

The rainfall at four stations in the Central Division during each of the months referred to above was as follows:

Month.	Bohio	Gamboa	Empire	Rio Grande
	Ins.	*Ins.*	*Ins.*	*Ins.*
August, 1907...	9.10	12.69	11.24	11.41
August, 1908...	20.50	11.84	8.11	7.65
August, 1909...	10.01	7.03	7.20	9.12
October, 1908..	14.25	8 90	8.87	8.59
March, 1910...	6.60	3.12	1.60	1.69
August, 1910...	14.84	10.66	10.08	8.98

The August record was made with a reduction in transportation cost of over $11,000, due to the fact that more cars were handled in each train than in August of previous years. Of the total, 147,420 cubic yards of rock and earth were hauled from Culebra Cut to Gatun Dam, a distance of 26 miles.

In Culebra Cut, all previous records for the rainy season were also broken, and in only two dry season months, March, 1909 and 1910, has the excavation accomplished in August been surpassed. A statement of the months in which the excavation from the Cut has amounted to more than 1,300,000 cubic yards, and the rainfall at Empire, follows:

Months.	Excavation.	Rainfall at Empire.
	Cubic Yards.	*Inches.*
March, 1909............	1,434,597	0.21
October, 1909...........	1,302,901	21.14
January, 1910...........	1,323,693	0.70
March, 1910............	1,509,728	1.60
June, 1910..............	1,305,141	10.14
August, 1910............	1,377,992	10.08

The amount of material excavated and the amount remaining to be excavated on September 1, are as follows:

	Culebra Cut.	Chagres Section.	Total.
	Cu. Yds.	*Cu. Yds.*	*Cu. Yds.*
Excavated...	51,826,868	9,920,987	61,747,855
Remaining...	32,359,856	3,017,307	35,377,163

First Year of Lock Building at Pedro Miguel.

The first concrete was laid in the Pedro Miguel Locks on September 1, 1909, one year ago last Thursday, and in the year a total of 261,964 cubic yards had been placed, leaving about 575,500 remaining to be laid. Concrete operations at these locks were begun with the small mixers now in use at Miraflores Locks. Later, two stationary auxiliary mixers were installed, one on the east, and the other on the west bank, and were kept in operation until the permanent handling plant was erected and placed in service. All the concrete in the south guide wall, a large section of the floor and culverts in the west chamber, and a part of the west side and center walls were produced by the auxiliary mixing plant. On July 6, 1910, the two berm cranes, each containing two 2-cubic yard mixers, and three of the four chamber cranes were placed in operation, and about a week later the fourth chamber crane was ready for service. During the latter part of July, construction of the east side wall was commenced, and since that time considerable progress on the two side walls and the center wall has been made, a part of the west side wall being up to its permanent height.

The record for each of the 8-hour working days of the week ending September 3, and the total laid to that date, follow:

Date	Concrete placed.	Large stone.	Hours worked.	No. of mixers	Total.
August 29.	1,576	28	24.00	4	1,604
August 30.	2,030	48	34.00	4	2,078
August 31.	2,150	......	32.00	4	2,150
Sept. 1...	1,928	30	26.00	4	1,958
Sept. 2...	2,018	40	28.00	4	2,058
Sept. 3...	2,208	20	33.50	4	2,228
Total...	11,910	166	177.50	4	12,076
Previously reported.	....	2,759	....	......	256,132
Total...		2,925			268,208

Concrete Mixers for Culebra Cut.

The work of placing concrete in the sides of Culebra Cut will be begun as soon as mixing plants, for which the Central Division has placed a requisition, can be delivered from the States. The first concrete placed will be in retaining walls on the east side of the Cut at both ends, Bas Obispo and Paraiso, where the excavation has advanced far enough to permit the construction of the walls. These walls will be built on the berm at 95 feet above sea level, and will keep material from sliding down the bank into the channel of the Canal. In the plant on requisition, two one-yard mixers are specified, one to dump into a portable placing tower, and the other to dump into buckets which will be handled by crane. The work at Paraiso and Bas Obispo will give an opportunity to test the efficiency of the two methods of placing concrete.

Both plants will consist of three units—the mixers, the placers, and the storage bins. The mixers will be rotary, discharge by tilting while running, equipped with automatic water tank with a gage so set as to measure a uniform quantity of water into each batch of concrete, capacity 27 to 31 cubic feet per batch, and from 30 to 35 cubic yards of concrete an hour, to be run by steam power, soft coal burner.

In the portable tower plant the mixer and tower will be mounted on a specially constructed flat car, 10 or 12-foot gage, constructed with necessary end timbers, so that couplers can be attached to allow the hauling or pushing of the car along the retaining wall by a switch engine. The mixer will be equipped with power charging attachment, or side loader, with frame extended so as to allow the skip to be dropped to the ground level for a low-feed level. The elevator will be run on a steel tower so constructed that it can be shipped in several parts and assembled on the Isthmus. The mixer will discharge into a bucket which can be raised to any height up to 55 feet and tipped, so as to deposit the concrete in the wall at any point. The elevator

NOTES OF PROGRESS.

(Continued.)

will be operated by a hoisting engine, and both it and the mixer will be supplied with steam from the same boiler.

The mixing plant with side discharge, so as to dump into a bucket to be handled by a locomotive crane, will be mounted on a standard Canal flat car. On one side will be a side loader, with frame extended downward to permit the assembling of the batch of rock, sand and cement in the skip on the track level. The mixer and side loader will be operated by the same engine. The mixer will discharge on the opposite side of the flat car into a receiving hopper or temporary chute, with a capacity of two batches of concrete. This hopper will be so attached that it can be taken off in case it is desired to discharge direct into the footings of the retaining wall through a wooden chute, to be supplied by the Commission.

High grade material must be used in both plants, and the equipment must be made strong enough to stand hard, continuous usage for three or four years. The steel must be well cleaned by sandblast and given a coat of red lead before shipment. The contractor will furnish instructions for erecting the plant and keeping the equipment in order.

The material bins for sand, rock and cement will be constructed by the Commission. They will be portable, built upon a Canal flat car, and will spout the materials to the side loader skip by which they will be conveyed to the mixers.

Ancon Crusher.

A statement of the rock crushed at Ancon quarry during the week ending September 3 follows:

Date.	Hours worked.	Cubic Yards.
August 29	7:55	2,760
August 30	6:50	2,250
August 31	7:40	2,550
September 1	8:15	2,925
September 2	8:15	2,580
September 3	8:05	2,745
Total	47:00	15,810

Part of Relocated Line in Use.

That part of the relocated line of the Panama railroad, between the south end of Culebra Cut and Corozal, was opened to regular traffic on September 4, and henceforth the old line of the railroad betwen those points will be used principally by construction trains. New stations have been erected on the new line at Pedro Miguel and Miraflores. The relocation in this section is necessary because the old line between the south end of Culebra Cut and Miraflores Locks will be covered by water upon the completion of the Canal, when the surface of the lake at Miraflores will be 55 feet above sea level. The new line is practically parallel with the old. It runs on an embankment through the lake territory, passes through Miraflores ridge in a tunnel 736 feet long, and then crosses the Canal dump between Miraflores and Corozal, joining the old line at Corozal. It is about 4½ miles long. Upon the completion of the Canal, the locks at Pedro Miguel and Miraflores, Miraflores Lake, and part of the channel, between Miraflores Locks and the Pacific entrance, can be seen from trains passing over this section of the railroad.

Lock Work at Gatun.

The construction plant at Gatun Locks was shut down at 1.35 o'clock in the afternoon of August 31, on account of lack of water, due to a break in the main. Work was resumed at the usual hour the following morning. A statement of the concrete laid in the locks during the week ending September 3, and the total to that date, follows:

Date.	Cubic Yards.			
	Construction plant.	Auxiliary plant.	Large stone.	Total.
August 29	2,244	900	381	3,525
August 30	2,182	912	276	3,370
August 31	1,190	964	183	2,337
September 1	2,082	908	239	3,229
September 2	2,030	962	319	3,311
September 3	1,978	966	305½	3,249½
Total	11,706	5,612	1,703½	19,021½
Previously reported	....	....	....	674,076½
Grand total	....	....	....	693,098

Miraflores Locks.

The two 2-cubic yard concrete mixers in the west storage trestle at Miraflores Locks were placed in service on Friday, September 2, and on Saturday their combined output was 206 cubic yards, an average of over 100 cubic yards to each mixer. The record for the six 8-hour working days of the week ending September 3 at these locks, and the total laid to date, follows:

Date	Auxiliary Plant.				
	½-Cubic yard mixers.	⅓-Cubic yard mixer.	2-Cubic yard mixers.	Large stone.	Total.
Aug. 29.	207	55	....	12	274

H. S. Farish, surveying officer of the Commission, has been appointed surveying officer for the Panama railroad.

STATEMENT OF CLASSIFIED EXPENDITURES TO JULY 31, 1910.

	Department of Civil Administration.	Department of Sanitation.	Department of Construction and Engineering.	General Items.	Total.
Total to June 30, 1909	$3,427,090.29	$9,673,539.28	$69,622,561.42	$78,022,606.10	$160,745,797.09
Total, fiscal year 1910	709,351.37	1,803,040.95	26,300,167.05	2,863,088.83	31,675,648.20
July, 1910	58,474.88	156,006.64	2,216,849.78	280,015.85	2,711,347.15
Total	$4,194,916.54	$11,632,586.87	$98,139,578.25	$81,165,710.78	$195,132,792.44

P. R. R. STEAM SHOVELS.

High Records by 70-ton Shovels on Relocation Work.

A statement is appended showing the excavation accomplished by steam shovels on the relocation of the Panama railroad each month since January, 1910. All these shovels are of the 70-ton class, and their average output is very high for work on the Isthmus. The August record was made in one of the wettest months of the rainy season.

Month	Output.	Average No of shovels	No. of working days.	Output per shovel.	
				Per day.	Per month.
	Cu. Yds.			*Cu. Yds.*	*Cu. Yds.*
January	206,334	8.24	25	1,002	25,040
Feb.	214,411	7.91	23	1,179	27,106
March	234,571	7.31	26	1,234	32,089
April	212,097	7.15	26	1,140	29,648
May	212,135	7.88	25	1,077	26,921
June	236,689	8.00	26	1,138	29,586
July	197,069	7.44	25	1,060	26,488
August	250,341	7.04	27	1,318	35,575

In the month of August the following records were made:

Shovel No.	Cubic Yards.		
	Earth.	Rock.	Total.
105	33,940	4,090	38,030
110	34,205	13,200	47,405
121	40,380	3,850	44,230
123	36,030	....	36,030

These records are among the best ever made on the Canal on railroad work.

The best record for one day was 2,890 cubic yards made by shovel No. 110.

Rock Output at Porto Bello.

A statement of the work done at Porto Bello crusher, by days, for the week ending September 3, follows:

Date.	Hours worked.	Cubic Yards.
August 29	11:47	2,077
August 30	12:35	3,045
August 31	10:20	2,641
September 1	15:55	3,749
September 2	8:40	2,055
September 3	15:05	3,705
Total	74:22	17,272

Concrete Laying in Gatun Spillway.

The amount of concrete placed in the spillway of Gatun Dam in the week ending September 3, with the total to that date, follows:

Date.	Cubic Yards.		
	Concrete	Large rock.	Total.
August 29	122	6	128
August 30	122	15	137
August 31	88	18	106
September 1	146	15	161
September 2	128	....	128
September 3	150	....	150
Total	756	54	810
Previously reported	....	....	90,352
Grand total	....	....	91,162

The regulations for the construction of buildings by private persons have been submitted for revision to a committee composed of a representative from each of the three construction divisions, the Department of Civil Administration, the Department of Sanitation, and the Quartermaster's Department.

GARBAGE DISPOSAL.

Method of Collection and Disposal in Canal Zone, Panama and Colon.

The disposal of the garbage that is collected daily in the Canal Zone settlements and the cities of Panama and Colon is accomplished in several ways. The method used in the two Panamanian cities is to dump it in a waste place, where it is burned, leaving piles of ashes, and other refuse which serve to build up and reclaim the land. The plan largely obtaining in the Canal Zone towns is to reduce the garbage as far as posssible to char and ashes by means of incinerators. In some of the villages the garbage is hauled to out-of-the-way spots and there burned and buried: and in the towns bordering on the Chagres River, the disposition is easily made by dumping all refuse into that stream. At one point, Porto Bello, it is taken out to sea and dumped.

When measures for taking care of the garbage were first instituted, they were entirely in the hands of the Department of Sanitation. On September 1, 1908, the work was taken over by the Quartermaster's Department, excepting in the cities of Panama and Colon, but the cost continues to be paid from the appropriation for sanitation. Up to January 1, 1907, street sweeping and garbage collecting in the city of Panama were handled by the Sanitary Department forces, but on that date according to mutual agreement the work was turned over to the Panama Government. Under this arrangement the Department of Sanitation pays to the Panama Government the sum of $10,000 annually, which, it is estimated, represents about one-half of the yearly cost of garbage collecting and street sweeping. In Colon one-half of the cost of collecting the garbage is borne by the Panama Government, and bills for the service are presented quarterly. The work there, and in Cristobal, is under the supervision of the local health office.

Garbage cans in two sizes, one 25 inches high and 18 inches in diameter, and the other 19 inches high and 15 inches in diameter, costing on an average about $2.28 and $1.49 each, respectively, are furnished to all business places and dwellings in Colon, and all native houses, stores and employes' quarters in the Canal Zone settlements. In Panama, where the street cleaning and garbage collecting are in the hands of the municipal authorities, containers are provided by the city. These cans are strongly made, the body of 22 gage steel, and the lids and bottoms of 20 gage steel. In addition, they are strengthened with bands around the top and bottom.

East of Panama, forming a part of the outlying district of Trujillo, is a large tract of swampy ground where all the garbage collected in Panama and Ancon is dumped, the fires in the slowly burning heaps continuing day and night. As time passes the land is gradually reclaimed and when a certain height is reached the dump is extended eastwardly into the swamp. Practically the same method of handling prevails in Colon, as in Panama, the site of the dumping ground, known as the Ninth street dump, lying to the east of the city, adjacent to the section shortly to be filled in and improved. At this point also, much land has been reclaimed.

All the larger towns in the Zone are provided with incinerating plants, some purchased in the States, others built on the Isthmus from old material. The imported incinerators are nearly all of a uniform type, but of varying capacity, and most of them were made by the Morse-Bulger Destructor Company of New York City. The towns of Miraflores, Paraiso, Culebra, Empire, Las Cascadas, Gorgona, Tabernilla and Gatun have plants of this type, while those at Balboa, Corozal and Pedro Miguel have been erected on the spot from ready-to-hand materials. The incinerator at Empire, installed about a year ago, offers the best type on the Isthmus of a small, modern plant. The original plant, which it replaced, was the first one in use on the Isthmus and had a capacity of 60 cubic yards daily, as compared with 480 cubic yards daily, the capacity of the new outfit. It is now doing duty at Miraflores. At the time the Empire plant became inadequate to take care of all the garbage, the plan was tried of carrying it away in railroad dump cars. The method worked successfully and shipments were made at the rate of about one car a day at a cost no higher than that of incineration. The location of the dumping ground, was between Golden Green and West Culebra, but as the Central Division decided to stop dumping there this plan of disposing of the garbage had to be abandoned and the purchase of a new and much larger incinerator was made necessary.

The rapid growth of Gatun has necessitated better facilities for the disposal of garbage, and a new incinerator has recently been received to replace the small one now in use. At present some of the garbage collected in the vicinity of the spillway is thrown into the river.

The plant at Corozal, designed by the local sanitary inspector, and the one at old Balboa, are representative of the locally constructed type. Their cost was small and they have given excellent results. The Corozal plant is built largely of discarded iron plates and old French rails imbedded in concrete, with a brick base for the smokestack. The interior is divided into three compartments, an ash box, a fire box and a receptacle for the garbage which is supplied from the top by removing a loose iron plate. The method ordinarily employed in operating the incinerators is to build a wood fire to assist in drying out the garbage, which is usually in a sodden state when first received. As fast as the garbage dries it is raked over and made to fall into the furnace, where it furnishes fuel to continue the process. The gas from the garbage accumulates in another part of the furnace and also assists in the general work of reduction. The ashes and noncombustible articles fall into the ash box and from there are carried away in wheelbarrows.

At Camp Elliott, there is an incinerator operated by the camp authorities. At Bas Obispo village, the garbage is carted away, burned and then buried. At Gorgona, much of the refuse was formerly disposed of by dumping it into the Chagres River from a platform built out into the stream. The platform was washed away during the flood of last year and refuse is now destroyed in an incinerator. At San Pablo, Frijoles and Bohio, the Chagres River acts as scavenger. Bohio, the largest of the three settlements, is provided with a chute down which the garbage is thrown. At Porto Bello, the plan was adopted of taking the garbage out to sea. It is carried to a small dock on the water front built for the purpose and there dumped into barrels for conveyance by boat to deep water.

Garbage collections from dwellings in the Zone are made each morning, but the hotels require two and three collections daily. In the larger settlements, specially built wagons, both of the wooden and iron box types, are used in this work. The main expense in connection with garbage disposal is its collection and transportation, and it has been customary to locate dumping grounds and incinerating plants as near a common center between the American and native sections of the towns, as possible, to save haulage. The refuse from the Zone slaughter houses, which are under the control of the Department of Public Works, is taken care of by its own employes.

In Colon, all garbage is careuflly examined before it is burned, and lumber, well-built barrels or casks, bottles and other articles having a commercial value are saved. The money realized from this source amounts in some months to several hundred dollars and reverts to the Department of Construction and Engineering. Three of the employes on the garbage force in Colon are paid by the Atlantic Division. In the Zone, practically the same salvage methods are employed and a large amount of copper wire screening has been realized on in this way. A lot of cast-off clothing is destroyed in the incinerators, but owing to the distance from a market and to the necessity of a thorough disinfection before shipment, there would be little or no profit in handling it. In Panama, the task of sorting over the garbage is undertaken by the local authorities, and the moneys derived therefrom revert to the municipality.

A statement of the number of garbage cans emptied daily in the different settlements during the month of July, 1910, follows:

Ancon	226	Matachin	210
Balboa	256	Gorgona	518
Corozal	151	San Pablo	199
Miraflores	96	Tabernilla	235
Pedro Miguel	307	Bohio	86
Paraiso	398	Gatun	1,338
Culebra	739	Mount Hope	112
Empire	1,571	Cristobal	479
Las Cascadas	329	Porto Bello	140
Bas Obispo	224		
		Total	7,614

During the fiscal year ending June 30, 1910, there were removed from the city of Panama 6,600 cart loads of refuse, and from Colon, Cristobal and Mount Hope, 2,434 cart loads.

Ptomaine Poisoning at Gatun.

The case of supposed ptomaine poisoning at the European laborers' mess in Gatun on the night of August 5 has been investigated by the health authorities and no light has been thrown on the probable cause of the poisoning. Seventy-four laborers were taken ill soon after the evening meal, and it was believed that they had been poisoned by some bad food. Samples of the meat, soup, and wine used at the mess were examined chemically for metallic and organic poisons with negative results. Traces were found of a substance that in its general reactions resembled a ptomaine, but when the hydrochloride of this substance was injected into a guinea pig there was no perceptible effect. A bacteriological examination was made of the drinking water used in the mess, a sample of old and new wine, and portions of the tea, meat and soup, but no microorganisms of the food-poisoning group were detected. Two patients were seen in the hospital at Gatun who were still ill, and vomitus from one and a stool from the other were examined for representatives of the food-poisoning group, but none was found.

HYDRAULIC EXCAVATION.

New Plant in the Pacific Division Nearly Ready for Service—Method of Operation.

The hydraulic and dredging machinery for excavating the lower lock at Miraflores and a section of the Canal prism in the valley of the Rio Grande below the lock, a total distance of about 9,000 feet, will be placed in operation very shortly. The work will be handled as two separate operations, the first covering the excavation in the lower lock, and the second, the removing of material from the channel section. The lock excavation will be accomplished first.

It is estimated that in the total area there are about 7,800,000 cubic yards that can be excavated by the hydraulic method. The material consists of a dark loam, containing about 15 per cent of sand and some deposits of gravel in the old bed of the Rio Grande. The general elevation of the area is eight feet above sea level, and the average depth to be excavated is 35 feet. About 1,000,000 cubic yards of the material will be required for the core of the west dam at Miraflores; the remainder will be discharged behind dikes to the east of the Canal, thereby reclaiming four hundred and fifty acres of land in the vicinity of Corozal. It is estimated that a fill of 15 feet or more will be made in this manner. The amount of rock in the section to be excavated is placed at 1,602,000 cubic yards. When the hydraulic operations are concluded, the pits that are opened up will be pumped dry and the rock taken out by steam shovels.

The old bed of the Rio Grande crosses the area of hydraulic excavation in three places. To keep the river water out, a diversion channel, with a bottom width of 60 feet and a grade of two-tenths per cent, was completed over a year ago. It parallels the Canal at a distance of about 300 feet from the mouth of Cardenas River to about opposite where the Rio Grande again enters the old French channel, near Station 2190. The diversion left the prism practically free of surface water, but during the rise of the tides, salt water from the sea backed up regularly as far as the basin at the lock site, which was formed by the removal of material by the suction dredge *Sandpiper* a year or more ago. As a preliminary step in the hydraulic work at this point, a coffer dam has been constructed below the lock site, where the spur line from the Balboa sand track to the pumping station crosses the channel, thus preventing further entrance of sea water from below it. At the north end of the basin, a section of the original earth will be allowed to remain separating the upper from the lower locks. It was found that the water left above this coffer dam was 25 feet deep in places, and to bring the level down to 10 feet, at which depth the dredging units will be able to operate to the best advantage, one of the barge pumps has been set at work unwatering the submerged area to the desired level. This is done by pumping the water through a 20-inch discharge pipe over the dike east of the prism into the Rio Grande diversion.

When the second operation, that below the lower lock, is begun, two more coffer dams will be built, one across the old Rio Grande channel just north of the pumping station, and the other across the Canal channel at the southern limit of the section to be excavated, near where the old channel of the Rio Grande crosses the prism for the third time. This will effectually shut off the entrance of water from any direction, but water will continue to back up from the Canal via. the Rio Grande channel to the coffer dam north of the pumping station, thereby furnishing a steady supply for the pumps.

The hydraulic plan involves two methods, as follows:

(*a*) The disentegrating and sluicing of the material into sumps, and

(*b*) The lifting and conveying of this disintegrated material to the place of deposit with dredging machinery mounted on concrete barges.

The central pumping station, called "Agua Dulce" from its proximity to Agua Dulce Hill, lies west of the Canal, not far from the middle of the territory to be excavated. The machinery is inclosed in a temporary superstructure, divided into an engine room 50 by 100 feet on the east side, and a boiler room 40 by 100 feet on the west side. The station floor is 12 feet above sea level. The machinery equipment consists of four 1,000-horsepower horizontal direct-connected triple expansion pumping engines, built by Henry R. Worthington, with 19, 30 and 50-inch steam, and 24½-inch water cylinders, and a 24-inch stroke. The four units are lined up parallel to each other at a distance of 25 feet from center to center. Each pump is provided with a cast-iron 36-inch suction pipe reaching, with the foot valves, into a sump near by, excavated to five feet below extreme low water. Each engine has its own surface condenser, built into the discharge pipe, and each condenser has a combination dry and wet vacuum pump. At elevation plus 20, the pumps discharge into a common delivery pipe from which they are separated by a 24-inch check valve and a 24-inch gate valve. The delivery pipe has two branches, which begin at the outside, with a diameter of 24 inches, and increase in size toward the center line of the building, where they unite in a "Y" and connect with the 40-inch discharge main. Each unit is guaranteed to supply 7,500 gallons of salt water per minute at 150 pounds pressure.

The boiler room equipment consists of four Babcock & Wilcox water tube boilers of the cross-drum, semimarine type, and each one has 4,500 square feet of heating surface. They are designed for 150 pounds pressure per square inch without superheat and are set in units of one each. The steam piping is so arranged that any pump can be operated by any boiler. On one side, the boilers have oil furnaces; on the other side, fire doors, grates and ash pits, so that coal can be used if deemed expedient. The boilers are encased in steel plates, instead of brick, protected by magnesia and tile insulation. The steel stack is 9 feet 6 inches in diameter and rises to a height of 150 feet above the boilers. The guaranteed efficiency from furnace to output of the boilers is 95 million foot-pounds per million B. t. u.[1]

Fuel oil is stored in two steel tanks situated on the side of the hill back of the station, each tank having a capacity of 2,000 barrels. They are directly connected with the Union Oil Company's main, and the oil is fed through a 4-inch pipe, reaching the burners at a 50-pound pressure.

The discharge main is 3,600 feet in length and consists of 2,000 feet of 40-inch, 800 feet of 32-inch, and 800 feet of 24-inch pipe. The first 2,800 feet are lock-bar pipe, and the remainder, spiral riveted pipe. The lock-bar pipe, the product of the East Jersey Pipe Company, was manufactured in 30-foot lengths which are joined together by ¾-inch forged steel flanges. Five air valves are mounted at equal distances apart to prevent rupture of the pipe and to allow the escape of air while the pipe is being filled. The pipe line is provided with 12 openings, in groups of three, for the branch line connections. The main extends nearly horizontally alongside the approach track to the pumping station at the foot of the Agua Dulce and Cocoli hills. To prevent any upward movement it is weighted down at regular stages by several tons of rock. Where bends in the pipe occur the latter is firmly anchored in place by cables held taut by rings set in concrete. In one place the pipe line crosses a wooden trestle to which it is fastened by iron belt rods. Corrosion is guarded against by the application of an asphalt compound.

The branch lines, or "take-offs," are made of 16-inch spiral riveted steel, the whole of this class of steel pipe used on the works, having been furnished by the Abendroth & Root Manufacturing Company of Newburgh, N. Y. Each branch line consists of a section of twin pipe 800 feet long extending to the monitors or giants, the four double lengths thus employed aggregating 6,400 feet. They are situated 800 feet apart, the first one branching off at a point 1,200 feet from the central pumping station. The arrangement is such that one of the branch lines can be made to serve, if necessary, as an addition to any one of the others, thereby extending the immediate zone of operations.

The hydraulic giants or monitors were made by the Joshua Hendy Company of San Francisco and are of the latest type used in mining operations in California and other parts of the West. Each of the eight giants weighs 1,500 pounds and consists of a base for attachment to a 16-inch gate valve at the terminus of the pipe line, a horizontal and vertical joint, and a long conical reducing piece. The frictional resistance is decreased by a ball-bearing, and a weighted lever is attached to control the direction of the jet. A deflecting nozzle is fitted to the discharge end of the giant, which permits deflections through a small angle without changing the position of the main body. The tapering piece of the giant is fitted on the inner side with two sets of guide vanes which prevent a scattering or rotary motion of the water after it has issued from the nozzle. The nozzles used will vary from four to six inches in diameter according to the character of the material in which they are working, and at full head the water coming through them will exert a pressure of 130 pounds to the square inch, the equivalent of a ton and one-half of pressure against a bank 100 feet away within range of the deflectors. As it is expected that the positions of the monitors will be shifted frequently their bases are of temporary construction. The giants will operate from eight feet above to 45 feet below mean tide, and will be made to wash down the material in sluices which will carry the water containing earth in suspension to the sump where the barge pumps are at work. When it becomes necessary to move a barge the giants will cut a new sump with a channel leading into it through which one or more units of the fleet may be floated. The banks will be excavated as nearly perpendicularly as possible, in order that trenches may be cut in them and the banks undermined so as to cause the material to fall by gravity.

The centrifugal dredging pumps correspond in total capacity to that of the steam reciprocating pumps, and are mounted on barges built of concrete, one unit or pump to each of the three barges. A description of these barges was published in THE CANAL RECORD of February 9, 1910. Each unit consists of an 18-inch single suction dredge pump direct-connected to a Westinghouse 655-horsepower induction motor. The runners for the pumps are overhung and are especially long. The manganese steel impeller on each pump has five blades and is designed to handle 10,000 gallons of salt water per minute and 300 cubic yards of solid matter per hour, or, in other words, 110 cubic feet of water to one cubic foot of sedimentary material against a varying actual head up to 60 feet while running at 480 r. p. m. Each pump, including base plate elbow and valve, weighs approximately 30,000 pounds. The suction pipe on each pump is 12 feet long and 20 inches in diameter. The motors are of the 3-phase, 25-cycle type, 2,080-volt, with automatic starting equipment. On the switchboard panels are mounted indicating and integrating wattmeters, oil-circuit breakers and the time limit switches. Power will be supplied by the Miraflores central station, and armored submarine cables connect the motors to the pole lines. For priming the pumps, a small motor-driven vacuum pump will be installed on each barge.

The crest of the dam at Miraflores will be 70 feet above sea level, making the total lift for the hydraulic fill, 110 feet. The dredging pumps will accomplish the lift to 60 feet, and to secure the additional lift of 50 feet, an 18-inch motor-driven relay pump, identical in type to the centrifugal dredging pumps, has been installed in a small pumping station on the west bank about midway between the dam and the central pumping station, and will be attached to one of the dredging units, being so arranged that the 20-inch suction pipe may be directly connected to the discharge pipe of the dredging pump. The discharge pipe to the core of the dam has been completed, with the exception of a small gap which can be closed in a few hours.

Clerk and Typewriter Examinations.

It is desired to direct attention to the fact that typewriting is no longer given as an optional subject in connection with the examination for clerk, Isthmian Canal Service. Optional subjects which may be taken in connection with that examination are stenography and typewriting, bookkeeping, railroad experience, general business experience, and timekeeping experience.

A separate examination will be held for typewriter, Isthmian Canal Service, which will comprise the following subjects, with relative weights on a scale of 100 as indicated: Copying from rough draft, 20; copying and spacing, 30; copying from plain copy, 20; penmanship, 5; report writing, 10; arithmetic (first grade), 5; general business experience, 10. The last subject will be rated on the statements made in application and testimonials, corroborated, if necessary, by persons named as references. It is expected to secure from this examination eligibles qualified in typewriting and having a general business experience. Appointments will be made to the position of clerk at $1,200 per annum.

Examinations for clerk and for typewriter, both for the Isthmian Canal Service, will be held on Sunday, September 18, as announced in last week's CANAL RECORD. Information and application blanks may be secured by addressing the undersigned.

JOHN K. BAXTER,
Secretary, Isthmian Civil Service Board.

Culebra, C. Z., August 30, 1910.

PERSONAL.

Mr. Sydney B. Williamson sailed for the States on the steamship *Colon* from Cristobal on Monday, September 5, on his annual leave of absence.

Mr. James C. Courts, clerk of the Committee on Appropriations of the House of Representatives, with Mrs. Courts and their son, is on the Isthmus supervising the work of compiling the estimates for Canal appropriations for the fiscal year 1912.

Mr. George A. Greenslade, General Superintendent of Construction of the Central Division, has resigned, effective September 24, to accept a position with the Madeira and Mamoré Railroad in Brazil. In view of the fact that within one year all the excavation in the Central Division will be confined to Culebra Cut the position he vacates will not be filled.

Mr. F. A. Gause returned from his annual leave in the States on September 5.

Red Cross Finances.

The financial statement for August of Lieut.-Col. John L. Phillips, treasurer, in account with Canal Zone Chapter, American National Red Cross, follows:

RECEIPTS.		
August 1. Balance on hand.....	$1,963.07	
August 4. Proceeds of Pedro Miguel Roundhouse Ball.....	27.50	
August 1–31. Membership dues.	7.00	
		$1,997.57
DISBURSEMENTS.		
August 4. Relief of American at Cristobal....................	$10.00	
August. 17. Relief of American negro at Colon Hospital being deported on account of pulmonary tuberculosis.........	25.00	
		$35.00
August 31, Balance on hand..............		$1,962.57

JOHN L. PHILLIPS,
Treasurer.

Approved: WM. L. SIBERT,
Chairman.

Charity Ball at Hotel Tivoli.

The Knights of Pythias on the Isthmus have been granted the use of the Hotel Tivoli on the night of December 3 for a ball in aid of the National Pythian sanitarium at East Las Vegas, New Mexico. A special train will be run to carry people from along the line of the Canal to Panama and return. It is expected that the supreme chancellor and the supreme keeper of records and seals of the Knights of Pythias will be present.

The crew of the labor train, which runs between Gatun and Culebra, have been authorized to collect five cents fare for one trip from employes riding on annual passes, official trip tickets, and permits issued by the division engineer of the Atlantic Division. No other persons are allowed to use this train.

A float for the use of canoeists has been authorized for the clubhouse at Porto Bello. As this clubhouse has no bowling alleys, the cost of the float, about $100, will be borne by the Commission.

Y. M. C. A. FIELD MEET.

Results of Labor Day Field Sports at Empire.

The Y. M. C. A. athletic meet held at Empire on Labor Day, September 5, was a success. A special train from Colon brought a large number of contestants and spectators, and in addition to these, there were people from Ancon and intermediate points. Music was furnished by the I. C. C. Band. Seventy-one different men entered the meet, totaling 171 entries. The committee of management was made up of the following men, physical directors of the Zone associations: Wm. E. Burrell, Geo. R. D. Kramer, W. H. Warr, A. O. Ludwig, J. T. Hopkins, and Wm. H. Geer.

Following is the order of events, with the names of the men making places and record made:

100-yard dash—1st, J. K. Munroe, Ancon; 2nd. J. W. Tannehill, Ancon; 3rd, Geo. Lyons, Empire. Time, 11 seconds.

Shot put(12 lb.)—1st, C. H. Herring, Gorgona; 2nd, J. H. Weller, Cristobal; 3rd, J. W. Tannehill, Ancon. Distance, 45 feet 2 inches.

220-yard dash—1st, J. K. Munroe, Ancon; 2nd, G. B. Fitts, Cristobal; 3rd, Wm. Kenealy, Ancon. Time, 24 4-5 seconds.

Hammer throw (12 lb. hammer)— 1st, J. H. Weller, Cristobal; 2nd, H. Cooling, Porto Bello; 3rd, H. Bartholomew, Empire. Distance, 129 feet 7 inches.

120-yard hurdle—1st, J. W. Tannehill, Ancon; 2nd, E. Koperski, Culebra; 3rd, C. C. Bailey, Gatun. Time, 18 seconds.

High jump—1st, R. Koperski, Culebra; 2nd, A. Sherrard, Gatun; 3rd, J. W. Tannehill, Ancon. Height, 5 feet 2 inches.

Running broad jump—1st, C. H. Herring, Gorgona; 2nd, H. LaCroix, Cristobal; 3rd, D. E. Mullane, Empire. Distance, 19 feet 4 inches.

440-yard run—1st, J. W. Tannehill, Ancon; 2nd, J. H. Weller, Cristobal; 3rd, Geo. Lyon, Empire. Time, 58 4-5 seconds.

Pole vault—1st, J. T. Luttrell, Empire; 2nd, J. G. DeCora, Cristobal; 3rd, H. Cooling, Porto Bello. Height, 9 feet.

Mile run—1st, A. A. Simka, Cristobal; 2nd, C. E. Mengel, Culebra; 3rd, R. Koperski, Culebra. Time, 5 minutes 35 3-5 seconds.

Two mile walk—1st, J. J. Cavanaugh, Porto Bello; 2nd, J. P. L. Taylor, Empire; 3rd, S. C. Russell, Ancon. Time, 19 minutes 23 seconds.

Relay race, 4 laps, 4 men, one lap one-sixth of a mile—Won by team from Ancon Athletic Club, which was run under protest, Cristobal winning second place. A decision as to the winner of this event will be rendered at a later date by the Rules Committee of the New York A. A. U. The points which this event represents are not included in the following standing of teams:

	Points.
Ancon A. C.....................	29
Cristobal Y. M. C. A.............	26
Empire Y. M. C. A................	12
Gorgona Y. M. C. A...............	10
Porto Bello Y. M. C. A...........	9
Culebra Y. M. C. A...............	9
Gatun Y. M. C. A.................	4

A chemical solution, similar to a "weed-killer" used successfully on the Northern Railway of Costa Rica, will be tested by the Panama railroad, as a means of killing weeds on its right-of-way.

EXECUTIVE ORDER.

Conveyance of Real Estate by Married Women.

By virtue of the authority vested in me I hereby establish the following Order for the Canal Zone:

Article 1. Any deed or other instrument in writing relative to or affecting real estate the separate property of a married woman, or any mortgage or other lien on such property, shall be sufficient if the husband of the married woman joins with her in the execution of the instrument and the same is acknowledged by them before an officer authorized to take acknowledgments hereunder, in conformity with the provisions hereof.

Article 2. Any deed or other instrument in writing heretofore executed by a married woman joined by her husband and otherwise in conformity to law, conveying lands or interests therein belonging to her separate estate, or creating a mortgage or other lien thereon, shall be held to be valid and effective to pass such title to or interest in such land, or to create such mortgage or other lien thereon, from the date of the execution of the deed or other instrument, although no order may have been obtained as required by the Civil Code from a court or judge to authorize such conveyance, mortgage or other lien.

Article 3. In order to acknowledge the execution of an instrument in writing under the provisions hereof the parties shall appear in person before the officer authorized to take the same and acknowledge to him that they have executed the same for the purposes and considerations expressed in the instrument. If the parties making the acknowledgment or either of them is not personally known to the officer taking the acknowledgment, their identity must be established on the oath of a credible witness; and, in addition, the married woman making the acknowledgment must be examined privily and apart from her husband by the officer taking her acknowldgment, and the contents of the instrument in writing must be fully explained to her by him, and he shall not accept her acknowledgment unless she declares to him that she has willingly signed the instrument, without fear or compulsion on the part of her husband, and that she does not wish to retract it.

The certificate of acknowledgment of the husband shall be sufficient if it is substantially in the following form:

The.................Judicial Circuit, }
Canal Zone. }

Before me, ..., in and for ...., in the Canal Zone, on this day personally appeared ...., known to me (or proven to me on the oath of........................, a credible witness) to be the person whose name is subscribed to the foregoing instrument, and acknowledged to me that he executed the same, for the purposes and consideration therein expressed.

Given under my hand and seal of office this ...... day of .... A. D. ......

....

....

The certificate of acknowledgment of a married woman shall be sufficient if it is substantially in the following form:

The .... Judicial Circuit, }
Canal Zone. }

Before me, ..., in and for ...., in the Canal Zone, on this day personally appeared ...., known to me (or proven to me on the oath of ...., a credible witness) to be the person whose name is subscribed to the foregoing instrument, and the said ...., being examined by me privily and apart from her husband ...., and having had said instrument fully explained to her by me, acknowledged the same to be her act and deed, and declared that she had willingly signed the same for the purposes and consideration therein expressed, without fear or compulsion on the part of her husband, the said ...., and that she did not wish to retract it.

Given under my hand and seal of office this .... day of .... A. D. ....

....

....

Article 4. Any instrument in writing required to be acknowledged by the provisions of this Order, or by any other law or order of the Canal Zone, shall be acknowledged before a judge of any court of the Canal Zone, the clerk thereof, or before any notary public of said Canal Zone, and may also be acknowledged before the judge of any court of record or the clerk thereof or before any notary public within any state, territory, district or possession of the United States.

If the instrument is one executed in a foreign country the same may be acknowledged before any diplomatic or consular officer or commercial agent of the United States, accredited to such country.

The officers authorized to take acknowledgments hereunder are also empowered to issue proper certificates of the same.

Article 5. Articles 189 and 1810 of the Civil Code, and all laws, orders, and decrees and parts thereof, in conflict with this Order are hereby repealed; provided, however, that this Order shall not affect any deed or other instrument executed pursuant to the laws in force prior to the date upon which this Order shall take effect.

Wm. H. Taft.

The White House,
August 20, 1910.
[No. 1239.]

Printing Plant Monotype.

A monotype equipment, consisting of a casting machine, No. 2751, and a keyboard, No. 3808, manufactured by the Lanston Monotype Machine Company of Philadelphia, has been installed in the Commission printing plant at Mount Hope. It does the work of several compositors and will compose type from 5 to 12-point any width up to 60 picas, and will cast type from 5 to 36-point. The Commission equipment contains two 8-point molds, one each, 6, 10 and 12-point molds, with the same number of matrix cases containing matrices for 225 different characters, two adjustable molds to cast from 14 to 36-point type, inclusive, and a number of sort matrices.

The keyboard which is independent of the casting machine, has 276 keys, so arranged that they will punch holes, at the touch of the operator, in a paper roll, each hole representing a letter, figure or other character in the type it is desired to use. When a job has been completed, the paper roll is removed and put on the casting machine. As the roll revolves in its new position, the characters thereon are cast into type from molten metal, by means of an intricate but nicely adjusted automatically operated mechanism. Each type is cast separately and carried automatically into a line, thence to its proper position on a "galley." Extra fonts of type, or "sorts" of the styles adapted to the machine can be manufactured at any time. The Canal Record and most of the job work in the Commission printing plant are set on this machine.

Balboa Sand Shipments.

A total of 32,506 cubic yards of sand was was shipped from Balboa during the month of August, which is a little less than the total for July. Most of the sand was delivered to the storage trestles at Pedro Miguel and Miraflores Locks, only a small amount going to Gatun. The distribution in detail follows:

Destination.	Number of Cars.	Cubic Yards.
Pacific Division	2,565	30,829
Atlantic Division	42	800
Central Division	26	312
Department of Sanitation	1	25
Quartermaster's Department	1	6
Panama railroad	2	50
Balboa shipways	5	59
Miscellaneous	18	425
Total	2,660	32,506

Fatal Accident at Porto Bello Quarry.

Joseph Hobart, alias Joseph Rodgers, alias John J. Moran, an American employed at the Porto Bello quarry, was struck by a 500-pound boulder as it rolled from the top of a loaded car about 7.30 o'clock on Wednesday morning, August 31, causing injuries from which he died while enroute to Colon Hospital on the tug *Empire*. He was 42 years of age, unmarried, and came to the Isthmus in 1905. He had served in the United States Army, and entered the service of the Isthmian Canal Commission under the name of Joseph Rodgers, although information received from his cousin, Anna Clark of Scranton, Pa., gives his right name as John J. Moran. At Porto Bello, he went by the name of Joseph Hobart.

A launch of the Atlantic Division fleet has been placed at the disposal of the police for patrolling Gatun Lake with special reference to warning people on the lower levels of the watershed of the approach of floods, and for rescue work, should occasion arise.

Resolutions of sympathy for Henry Jackson, on the death of his son John Jackson, were passed by Empire Court of the Independent Order of Panamanian Kangaroos at a meeting held on August 27.

The steamship *Massachusetts* has been chartered to carry two loads of cement to the Isthmus during September and October.

Tide Table.

The following table shows the time of low and high tides at Panama for the week ending September 14, 1910 (75th meridian time):

Date.	Low.	High.	Low.	High.
	A. M.	A. M.	P. M.	P. M.
September 8	12.29	6.33	12.52	6.51
September 9	1.01	7.03	1.29	7.23
September 10	1.40	7.36	2.10	7.57
September 11	2.18	8.10	2.50	8.38
September 12	3.02	8.52	3.42	9.32
September 13	4.02	9.52	4.47	10.45
September 14	5.18	11.10	5.57	......

Launch Service to Taboga.

The steamer *Sanidad* leaves the dredge landing at Balboa at 9 o'clock Tuesday, Thursday and Saturday mornings. On the return trip it arrives at Balboa about 4.30 p. m. in time to make connections for the 5.30 train at Panama.

COMMISSION CLUBHOUSES.

Activities of the Young Men's Christian Association.

CULEBRA.

The local bowling tournaments have closed and the following are the final standings:

Teams.	Won.	Lost.	Per cent
TENPINS.			
Lock and Dam	6	3	666
Quartermaster's	4	4	500
Chairman's Office	3	4	428
Miscellaneous	3	5	375
DUCKPINS.			
Miscellaneous	7	2	777
Lock and Dam	3	3	500
Quartermaster's	2	4	333
Chairman's Office	3	6	333

Culebra took three games from the Empire bowling team on September 2, 1910, by the following scores:

Empire.				Culebra.			
Gustavson	151	152	169	Hall	150	168	163
Shaughnessy	162	202	166	Herrington	211	145	189
Giavelli	152	194	118	Case	124	148	153
Reed	142	113	174	Cohen	165	169	160
Nicodemus	141	148	146	Dougherty	121	199	171
Total	748	809	773	Total	771	829	836

The entertainment given by Miss Gay Zenola MacLaren on Thursday night, September 1, was enjoyed by a large audience and was one of the best entertainments ever given here. Miss MacLaren will give a return engagement reciting "The Man from Home," on Tuesday evening, September 20. On Sunday evening, September 11, she will recite "The Sign of the Cross." There will be no charge for this recital and everyone is cordially invited to attend.

The meeting of the discussion club on Wednesday evening, August 31, was led by J. D. Safford of Camp Elliott, the subject being "Leadership."

The bowling averages for July for ten games or more are as follows:

	No. of Games.	Average.
Cohen	11	164
Coppin	10	156½
Cornthwaite	12	144½
Fleischman	15	139
Fox	35	140½
Hall	24	152⅔
Herrington	29	148
Hostetter	16	142½
Mengel	22	140½

High score for the month was made by Cushing with 212. The men rolling 200 or over for the week ending September 3, are: Hall, 216; and Herrington, 211.

EMPIRE.

The literary and debating society will hold a "County Convention" at its next meeting.

The leader of the discussion club meeting held on Wednesday night, September 7, was Geo. R. D. Kramer of Culebra. The subject was "Exercise."

A large audience attended Miss MacLaren's recital of "The Music Master" on September 2. She will give "The Man from Home" as a return engagement at the clubhouse on Friday night, September 16.

The final scores for the "Rag Time" tournament were as follows: Potter-Huson, 1,215; Huson-Gorham, 1,096; Edwards-Potter, 1,092; the teams mentioned winning first, second and third prizes, respectively.

The "Boys' Gymnasium Club" for boys from 10 to 15 years of age, held a track meet on Saturday, September 3, with the following results:

Running high jump—1st, Leon Hartman, 3 feet 10 inches; 2nd, Samuel West, 3 feet 9 inches; 3rd, Perry Payne, 3 feet 4 inches.

100-yard dash—1st, William Skinner, 2nd, Samuel West, 3rd, Wallace Catto. Time, 13 seconds.

220-yard dash—1st, Wm. Skinner, 2nd, John King, 3rd, Babe Payne. Time, 32 seconds.

Running broad jump—1st, Clifford Hartman, 14 feet; 2nd, Wm. Skinner, 13 feet 4 inches; 3rd, Geo. Cochez, 12 feet 2 inches.

12-lb. shot—1st, C. Hartman, 26 feet; 2nd, John King, 25 feet 8 inches; 3rd, Wm. Skinner, 23 feet 8 inches.

One mile run—1st, Joe Fein, 6 minutes 30 seconds; 2nd, Wm. Skinner, 6 minutes 45 seconds; 3rd, Wallace Catto, 7 minutes.

GORGONA.

The pennant which was the prize for the high bowling score in August was won by Fred King with 230. Other 200 scores were made as follows: Stoehr, 211; Wright, 201; King, 211; 230, 200, 201, 211, 204, 230, 205; White, 203, 201; Stewart, 200; R. Varenkamp, 203; Roper, 213; Otis, 218, and Hopkins, 206.

The second meeting of the discussion club was held on Tuesday evening, August 30, with F. C. Freeman as leader. The subject was "Our Thoughts." These meetings will be held every Tuesday night at 7.15 o'clock for the next eight weeks. They are held informally in the game room. Every one is urged to come and participate in the discussions.

The second series of moving pictures from the States was exhibited to a large audience on Thursday night, September 1. There will be two moving picture entertainments during the month of September at dates to be announced later.

Miss Gay Zenola MacLaren will give an imitative recital of "The Music Master" on Thursday night, September 8, at the clubhouse.

The Isthmian bowling tournament opens on Saturday night, September 10, with Culebra second team playing at Gorgona and the Gorgona first team playing at Culebra. Admission free for the game.

GATUN.

The next meeting of the discussion club will be held on Friday night, September 9, the subject being "Our Thoughts."

The recital of "The Music Master" by Miss Gay Zenola MacLaren on Wednesday evening, August 31, was well attended. A return engagement has been arranged for Thursday evening, September 15, when she will give "The Man from Home."

On Saturday evening, September 10, the Empire and Gatun basketball teams will meet on the Gatun floor.

The interassociation bowling league games start on Saturday night, September 10, when Cristobal's first team will play Gatun's first team at Gatun, and the Gatun second team will play the Cristobal second team at Cristobal.

The match game rolled on Monday evening, August 29, between the "Myrtars" and the "Y. M. C. A. Pickers," resulted in the Pickers winning three games, the following being the scores:

Pickers.				Myrtars.			
DeMoll	168	150	138	Soule	159	131	122
Hodges	159	146	163	Kiernan	139	135	157
C.R.H'r'g'n.	132	181	163	Meyer	152	121	119
Warr	176	125	158	Myers	195	108	136
C.A.H'r'g'n.	190	151	155	Durand	155	164	183
Total	825	753	777	Total	800	659	717

On Thursday evening, September 8, the first team will play the second team.

The prizes given for the high score in duck and tenpins for the month of August were won by W. L. Dalton in duckpins with 123, and H. Hodge in tenpins with 225.

CRISTOBAL.

Miss Gay Zenola MacLaren read "The Music Master" before a large and enthusiastic audience, Tuesday night, August 30. Friday night, September 9, Miss MacLaren will read "The Man from Home" and on Wednesday, Sept 21, she will give "The Man of the Hour."

The local membership campaign is going on and indications point to a very large increase in membership. The three teams captained by Chambers, Farrell and Goddard, respectively, are hard at work.

The discussion club this week had for its topic "What is Failure?" Next week, J. D. Safford from Camp Elliott will lead. Subject, "Leadership."

The second of the series of moving picture entertainments was held Friday night, September 2, before a large audience.

Local bowling teams, first and second, rolled a match last week with the following result:

First Team.				Second Team.			
Louch	164	167	169	Barrett	148	156	170
Adams, D.	168	177	161	Adams, H.	131	152	180
Collins	158	123	141	Schofield	150	139	186
Rabbitt	164	137	193	Blackburn	212	208	164
Bullard	176	169	138	Burns	145	131	155
Totals	830	773	802	Totals	786	786	855

Grover won the pennant prize for the month of August with the high score of 213. Rabbitt won the high average.

The "Employed Boys" played the Y. M. C. A. gymnasium at basketball, Wednesday night.

C. A. Bullard has been elected captain of the first Y. M. C. A. bowling team and Dr. W. A. Blackburn, captain of the second team.

J. W. Debrill, office assistant at the clubhouse, has been ill at Colon Hospital for the past two weeks. C. E. Yeiser has been taking his place.

The office men's gymnasium class is becoming very popular and many are availing themselves of the chance to get into it.

Married.

ROSE-BROWNING—At 7.30 p. m., September 3, at the home of the bride's parents in Empire, the Rev. A. A. Nellis officiating, Eunice Ripley Browning to Paul C. Rose of Detroit, Mich. Residence, house No. 67, Empire, C. Z.

The following vessels arrived at and departed from the port of Balboa during the week ending September 3:

Arrivals—August 28, *Quito*, from intermediate ports; August 31, *San Juan*, from San Francisco, *Ecuador*, from Guayaquil; September 1, *Huasco*, from south ports.

Departures—August 27, *Ucayali*, to south ports; August 28, *Peru*, to south ports; August 30, *Cuzco*, to Valparaiso; August 31, *Acapulco*, to San Francisco, *Chiriqui*, to Buenaventura and Tumaco; September 2, *Quito*, to intermediate ports.

Rainfall from July 31 to August 31, Inclusive.

OFFICIAL CIRCULARS.

Occupation of Family Quarters.

CULEBRA, C. Z., August 29, 1910.

CIRCULAR No. 346:

The following resolution, adopted by the Commission at its one hundred and fifty-eighth meeting, held August 25, 1910, is published for the information and guidance of all concerned:

WHEREAS, It is at times necessary for employes, in order to hasten recovery from injury or disease contracted in line of duty on the Isthmus, to temporarily return to the United States; and

WHEREAS, By reason of such absence they are required to surrender family quarters;

Resolved, That the applications of such employes may be placed at the head of the list for assignment to the first quarters vacated after their return to duty, provided their sojourn in the United States was upon the recommendation of the Medical Examining Board.

GEO. W. GOETHALS,
Chairman and Chief Engineer.

CULEBRA, C. Z., August 30, 1910.

CIRCULAR No. 347:

The following resolution, adopted by the Commission at its one hundred and fifty-eighth meeting, held August 25, 1910, is published for the information and guidance of all concerned:

Attention was called to the fact that family quarters in some instances have been held unoccupied longer than fifty-six days by being reassigned to the same employe upon a new application, thus depriving the Commission of the quarters for assignment to other employes. This practice being deemed an evasion of the regulations governing the assignment of family quarters, upon motion it was

Resolved, That no new assignment of family quarters shall be made to an employe within fifteen days after the quarters previously assigned are forfeited or released.

GEO. W. GOETHALS.
Chairman and Chief Engineer.

Service on Coroner's Jury.

CULEBRA C. Z., September 1, 1910.

CIRCULAR No. 276-B:

Employes of the Isthmian Canal Commission or of the Panama Railroad Company who are duly summoned to testify before a coroner's jury in the Canal Zone will be compensated for time lost in the same manner as employes selected for jury duty or summoned as witnesses in criminal cases. Certificates showing the time the employe is actually in attendance will be issued by the coroner or his deputy. In other respects the same procedure will be followed as is prescribed in Circular No. 276.

GEO. W. GOETHALS,
Chairman, Isthmian Canal Commission.
President, Panama Railroad Company.

Closing of Cocoli Shop.

CULEBRA, C. Z., August 31, 1910.

CIRCULAR No. 349:

1. Effective September 1, 1910, the Cocoli shop of the Pacific Division will be closed and all mechanical work now being done there will be transferred to the Pedro Miguel shop of the Mechanical Division.

2. On and after September 1, 1910, the Mechanical Division will hostle all locomotives and will perform all mechanical work at Pedro Miguel shop, and make all repairs to the stationary plants at Pedro Miguel, Miraflores, and other places in the Pacific Division, both day and night, as may be called for by the Division Engineer of the Pacific Division or such of his assistants as may be authorized to direct the performance of such work.

3. The Division Engineer of the Pacific Division, and his authorized representatives, may call direct upon the foreman of the Pedro Miguel shop for mechanical work, which will be promptly preformed in the manner indicated, provided that the manufacture of new material and the making of alterations will be done as provided for in Circular No. 343.

4. The Pacific Division repair shop for narrow gage locomotives near the Pedro Miguel Locks is to remain under the jurisdiction of the Pacific Division. However, the Division Engineer of the Pacific Division is authorized to require the services therein of mechanics from the Pedro Miguel shop when so desired.

5. The Cocoli shop will remain intact until further orders, all machines and tools therein to be protected against deterioration and injury by the Pacific Division.

6. The Division Engineer of the Pacific Division will furnish the Superintendent of the Mechanical Division and the foreman of the Pedro Miguel shop direct with the names and positions of, or otherwise designate, the representatives of the Pacific Division whom he authorizes to call upon the Pedro Miguel shop for mechanical work.

GEO. W. GOETHALS,
Chairman and Chief Engineer.

Supplies for Canal Work.

The following steamers with supplies for the Isthmian Canal Commission arrived at the ports of Cristobal and Colon during the week ending September 3, 1910:

Oruba, August 28, from New York, with 300 bales iron bolts for Atlantic Division; 8 cases paper, 175 cases tie plugs for stock.

Colon, August 29, from New York, with 6,300 barrels cement, 26 crates boiler tubes for Atlantic Division; 10 packages crane machinery for Pacific Division; 27 bundles castings, 913 pieces castings for Mechanical Division; 6 cases electrical equipment for Fire Department; 35 cases ink and mucilage, 14 bundles steel, 188 kegs nuts, 12 cases asbestos material, 55 cases steel shafting, 150 cases varnish for stock; and a miscellaneous cargo, the whole consisting of 7,852 packages, weighing 1,404 tons.

Sibiria, August 29, from New York, with 260 pieces steel bars, 212 cases electric fuses for stock.

Otta, August 30, from Baltimore, with 578 tons lock construction material for Atlantic and Pacific Divisions; 2 Porter locomotives, 50,028 feet B. M. spruce lumber for Atlantic Division; 4,400 corrugated steel bars for Pacific Division; 1,000 car wheels for Mechanical Division; 826 tons steel plates, bars, etc., 20,224 cases dynamite, 145 tons foundry coke, 2,500 kegs railroad spikes, 4,051 bundles splice bars, 70 cases steel shafting, 1,109 pieces wrought steel galvanized pipe for stock.

Cristobal, August 30, from New York, with 31,670 barrels cement for Atlantic Division; 83,320 bags cement for Pacific Division.

Abangarez, September 1, from New Orleans, with 324 tons dump car parts for Cristobal shops (for erection); 164 barrels paving brick for Civil Administration; 4,108 pieces yellow pine car stakes, 80,708 feet B. M. yellow pine lumber, 630 sacks cottonseed meal and hulls, 40 bundles turnbuckles, 2,436 bales hay for stock.

Almirante, September 2, from New York, with 126 bundles wheelbarrow parts, 22 barrels drift bolts, 22 half-barrels drift bolts, 58 bundles scythe handles, 18 bundles scythe snaths, 60 bundles rail braces for stock.

Stages of the Chagres.

Maximum heights of the Chagres River for the week ending midnight, Saturday, September 3, 1910. All heights are in feet above mean sea level.

MOVEMENT OF OCEAN VESSELS.

The following is a list of the sailings of the Panama Railroad Steamship Company, of the Royal Mail Steam Packet Company, of the Hamburg-American Line, and of the United Fruit Company's Line, the Panama Railroad Company's dates being subject to change:

NEW YORK TO CRISTOBAL.

Panama	P. R. R.	Saturday	Sept. 3
Allianca	P. R. R.	Saturday	Sept. 10
Colon	P. R. R.	Saturday	Sept. 17
Advance	P. R. R.	Friday	Sept. 23
Panama	P. R. R.	Thursday	Sept. 29
Allianca	P. R. R.	Wednesday	Oct. 5
Colon	P. R. R.	Tuesday	Oct. 11
Advance	P. R. R.	Monday	Oct. 17
Panama	P. R. R.	Saturday	Oct. 22
Allianca	P. R. R.	Friday	Oct. 28
Colon	P. R. R.	Friday	Nov. 4

CRISTOBAL TO NEW YORK.

Cristobal	P. R. R.	Thursday	Sept. 8
Advance	P. R. R.	Saturday	Sept. 10
Panama	P. R. R.	Friday	Sept. 16
Allianca	P. R. R.	Thursday	Sept. 22
Colon	P. R. R.	Thursday	Sept. 29
Advance	P. R. R.	Wednesday	Oct. 5
Panama	P. R. R.	Tuesday	Oct. 11
Allianca	P. R. R.	Monday	Oct. 17
Colon	P. R. R.	Sunday	Oct. 23
Advance	P. R. R.	Saturday	Oct. 29
Panama	P. R. R.	Friday	Nov. 4

A fortnightly service of the *Cristobal* and *Ancon* will be maintained as nearly as possible, leaving Cristobal on or about the 4th and 25th of each month. Due notice of the sailings of these ships from the Isthmus will be given. On the outward voyage these ships sail from the pier at the foot of 12th street, Hoboken, N. J.

NEW YORK TO COLON.

Turrialba	U. F. C.	Thursday	Sept. 22
Abangarez	U. F. C.	Thursday	Sept. 29
Atenas	U. F. C.	Thursday	Oct. 6
Abangarez	U. F. C.	Thursday	Oct. 13

COLON TO BARBADOS, CALLING AT TRINIDAD.

Magdalena	R.-M.	Tuesday	Sept. 13
Clyde	R.-M.	Tuesday	Sept. 27

The next sailing of the Leyland Line will be as follows: *Memphian*, on or about September 11 for Brunswick, Ga., via Kingston, Ja.

Hamburg-American steamers leave for New York at 10 a. m., and for Port Limon every Tuesday or Wednesday.

Royal Mail steamers leave for New York on alternate Wednesdays at 10 a. m.; for Southampton on alternate Tuesdays at 10 a. m.

United Fruit Company's ships for New Orleans leave on Thursday at 3 p. m., and for New York on Friday at 10 a. m.

Sailings of the French Line (Cie Generale Transatlantique) for Venezuelan ports, Martinique and Guadeloupe on the 3d and 20th of each month.

CANAL RECORD

Volume IV. ANCON, CANAL ZONE, WEDNESDAY, SEPTEMBER 14, 1910. No. 3.

The Canal Record

Published weekly under the authority and supervision of the Isthmian Canal Commission.

The Canal Record is issued free of charge, one copy each, to all employes of the Commission and Panama Railroad Company whose names are on the gold roll. Extra copies and back numbers can be obtained from the news stands of the Panama Railroad Company for five cents each.

Address all Communications
THE CANAL RECORD
Ancon, Canal Zone,
Isthmus of Panama.

No communication either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.

NOTES OF PROGRESS.

Side Walls of Second Pair of Locks at Gatun Begun.

The building of the side walls of the second pair of locks at Gatun was begun on September 9, when one cableway, which had been moved into position over the second chamber, began delivering concrete into one of the movable steel wall forms, which had been lowered from the upper locks. Work in the upper locks is now confined almost entirely to placing concrete in complicated forms around steel work for the upper and intermediate gates.

Backfilling behind the outer walls of the first or upper locks is being pushed, in order that all the work may be completed by January 1, 1911, to the point where the gate contractors can begin their work without interference from lock construction.

Concrete work for week ending September 10:

Date.	Cubic Yards.			
	Construction plant.	Auxiliary plant.	Large stone.	Total.

Previously reported...	....	....	....	693,098
Grand total..	....	....	....	708,666½

Canal Work in August.

The grand total of Canal excavation in August was 2,813,462 cubic yards, of which 2,757,990 cubic yards were charged to "work excavation" and 55,472 cubic yards to "plant." The dry excavation amounted to 1,775,072 cubic yards and was principally by steam shovels. The dredges removed 1,038,390 cubic yards in addition to the amount pumped into Gatun Dam by suction dredges. The progress on the locks at Gatun and Pedro Miguel is referred to elsewhere in this issue.

In the Atlantic Division, the total excavation was 645,760 cubic yards. Of this total, 132,339 cubic yards were dry excavation and the remainder was removed by the dredges in the Atlantic entrance.

The total excavation in the Central Division was 1,612,396 cubic yards, all but 278 cubic yards of which was chargeable to work excavation. All records for excavation in a rainy season month, both in this division and Culebra Cut, were surpassed in August.

In the Pacific Division the total excavation was 555,306 cubic yards, all but 30,337 cubic yards of which was taken out by dredges at the Pacific entrance.

A detailed statement of the excavation and a summary of the work on the locks and dams follow:

Locality.	"Work." Excavation.	"Plant." Excavation.	Total excavation

Total....	2,757,990	55,472	2,813,462

Mean rainfall along Canal (eleven stations) 11.61 inches.

By "Work" Excavation is meant excavation actually made for one of the constituent parts of the Canal, such as Prism, Diversions, or Locks, etc.; that is, it represents material taken from the area to be occupied by the Canal, and constitutes excavation useful for the completed Canal.

By "Plant" Excavation is meant excavation outside of any of the constituent parts of the Canal, such as Prism, Diversions, or Locks, etc. It includes material necessary to be excavated for construction purposes only and is chargeable against the particular plant item for which it is performed, such as Prism, Diversions, Locks, etc.

DAM AND LOCK CONSTRUCTION.

Concentration of Useless Materials.

A warehouse for condemned stores is to be built near the Depot Quartermaster's storehouse at Mount Hope where all surplus, obsolete and unserviceable material which has been used in the construction of the Canal will be kept until final disposition is made of it. The plan of procedure in connection with the turning in of this stock is set forth in the Chairman and Chief Engineer's Circular No. 323-Revised, dated August 3, 1910, published in The Canal Record of August 10, and is in line with the recommendations contained in the report of the committee appointed on June 23, 1910, to consider the matter in its various phases.

The amount of dead stock on the Isthmus is constantly increasing and it is estimated that the quantity held by the Depot Quartermaster alone now amounts to between $200,000 and $300,000 in value. Occasionally small lots of surplus or unserviceable material are disposed of on the Isthmus by advertisement and sale, but in the case of heavy machinery there is little or no local demand, and possible buyers from abroad object to making purchase until they have seen it. An instance of the latter kind occurred not long ago. The Central Division had among its surplus stock three Lidgerwood unloaders. The matter was referred to the General Purchasing Officer of the Commission in Washington to see if a purchaser for them could be found. He advised some time afterward that it was impossible to secure a satisfactory proposition without first arranging for an inspection of the machines.

The majority of the committee agreed that it would be better to allow the plant to accumulate on the Isthmus until there is a sufficient quantity to warrant prospective purchasers coming here to look it over, than to establish a place of storage in the United States. It is believed that much of the material may be sold to buyers in Central and South America, and in that case, the transportation of it to New York would be a useless expense.

The steady accumulation of dead stock has occupied space that could be utilized for storing live material, and for that reason, and in order to assemble it in one place, the plan of putting up a small building, which may be enlarged as the occasion arises, was recommended. It was first arranged to establish

NOTES OF PROGRESS

(*Continued.*)

this depot for condemned stores at Paraiso, but the plan was abandoned later in view of the fact that there is no storekeeper or force of clerks at that point to look after it.

The building at Mount Hope will be 40 by 150 feet in size, constructed principally of old materials, and will be situated alongside a spur track extending through the storehouse yard. It will rest on concrete footings and will be floored with old French iron plates. The dead stock will be properly cared for, and machinery parts will be given a coat of lead as a protection against rust.

The committee recommended that Congress be petitioned to enact legislation to govern the sale of these articles, similar to the law in force which permits the sale of condemned articles by the Engineering Corps of the Army.

Pedro Miguel Lock Work.

Work on the east side wall at the Pedro Miguel Locks is advancing, and in sections where slides from the east bank have given some trouble since the advent of the rainy season, it has reached a point where it will serve as a retaining wall. Operations in the center wall have been extended to the end of the core, and in one or two places it has been constructed to its ultimate height. Excavation for the floor and culvert section in the south part of the west chamber is practically completed and most of the culverts and about half of the lily forms in the east chamber are in.

The record of concrete laying in the locks for the five 8-hour working days of the week ending September 10, and the total to that date, follows:

Date	Concrete placed.	Large stone.	Hours worked.	No. of mixers	Total.
Sept. 5	Holiday				
Sept. 6	2,162	69	33:16	4	2,231
Sept. 7	1,906	20	27:00	4	1,926
Sept. 8	2,130	16	30:50	4	2,146
Sept. 9	1,880	8	20:00	4	1,888
Sept. 10	1,498	12	10:50	4	1,510
Total	9,576	125	121:16	4	9,701
Previously reported		2,925			268,208
Grand total		3,050			277,909

Alterations to Schoolbuildings.

The building of a second story four-room addition to the new Canal Zone high school at Gatun was begun on Friday, September 9, with a force of thirty men under the Constructing Quartermaster. The work will be advanced as rapidly as possible in order to complete it by the time school opens on October 3. The addition of a four-room second story to the Ancon school was started about three weeks ago and is nearing completion.

The enlargement of the Empire school by the construction of a two-story addition, containing eight rooms, to the front of the present building, is yet to be made. The plans have been finished, and the carpenter work will probably be commenced this week. The addition will be practically a duplicate of the old building. The front veranda will be left intact, forming an open space between the old and new parts, but the entrances will be changed. Instead of two doors in front of the school, which faces the east, there will be only one, with a doorway on the north side and an emergency doorway on the south side. The 8-foot veranda extending around the old part, both upstairs and down, will be continued in the addition. There will four stairways to the upper floor, two in each part. The office will occupy a corner room on the lower floor of the addition. In the event the improvements are not completed before the beginning of school, temporary arrangements for holding school elsewhere will be made.

Lock Building at Miraflores.

A statement of the concrete laid in the locks at Miraflores for the five 8-hour working days of the week ending September 10, and the total to that date, follows:

Date	Auxiliary Plant.				
	½-Cubic yard mixers.	⅓-Cubic yard mixer.	2-Cubic yard mixers.	Large stone.	Total.
Sept. 5	Holiday				
Sept. 6	220	62	238	8	528
Sept. 7	306	66	274	21	667
Sept. 8	286	44	380	20	730
Sept. 9	269	59	314	15	657
Sept. 10	273	48	402	5	728
Total.	1,354	279	1,608	69	3,310
Previously reported				275	12,144
Grand total.				344	15,454

Lumber and Tie Shipments.

The sailing of the steamer *Bramley* from Puget Sound, with a cargo of lumber for the Commission has been cancelled, and the shipment has been added to that of the steamer *Hornellen* which sailed for the port of Balboa a few days ago. Other shipments of Puget Sound lumber to be made before the existing contracts are filled include a quantity of fir ties.

Gatun Spillway.

The amount of concrete placed in the spillway of Gatun Dam in the week ending September 10, with the total to that date, follows:

Date.	Cubic Yards.		
	Concrete	Large rock.	Total.
September 5	Holiday		
September 6	140	12	152
September 7	138		138
September 8	122	14	136
September 9	154	10	164
September 10	102	12	114
Total	656	48	704
Previously reported			91,162
Grand total			91,876

Transportation Record on South End of Central Division.

On August 1 and 2, the following trains loaded with spoil from Culebra Cut were run out from the Canal at Pedro Miguel and transported to either Miraflores or Balboa dumps:

August 1—78 19-yard 19-car Lidgerwood trains and 4 10-yard 35-car Western dump trains. August 2—78 19-yard 19-car Lidgerwood trains and 3 10-yard 35-car Western dump trains.

On the above dates, the following empty trains were run into the Canal from the above-mentioned dumps:

August 1—76 19-car Lidgerwood trains and 2 35-car Western dump trains. August 2—74 19-car Lidgerwood trains and 4 35-car Western dump trains.

This breaks all previous transportation records on the south end of the Canal for one day.

Money Orders in August.

The money orders issued by the Canal Zone post-offices in August represented $424,465.96 in value, as compared with $409,481.22 in August, 1909. The number issued was 16,176, as compared with 15,466 in the same month last year. Orders payable in the United States amounted to $324,925.11, as compared with $309,540.07 in August, 1909.

Ancon Crusher.

A statement of the rock crushed at Ancon quarry during the week ending September 10 follows:

DATE.	Hours worked.	Cubic Yards.
September 5	Holiday	
September 6	7:25	2,735
September 7	8:10	2,055
September 8	7:20	3,180
September 9	1:30	825
September 10	8:50	2,520
Total	33:15	11,315

Opening of Public Schools.

The Canal Zone public schools will open on Monday, October 3. The preliminary teachers' meetings will be held on Saturday, October 1, in the assembly room of the Ancon schoolbuilding. The white teachers will meet in the morning at 8.30. The colored section will meet in the afternoon at 1 o'clock.

FRANK A. GAUSE,
Superintendent of Schools.

Ancon, September 8, 1910.

Porto Bello Crusher.

A statement of the work done at Porto Bello crusher, by days, for the week ending September 10 follows:

Date.	Hours worked.	Cubic Yards.
September 5	Holiday	
September 6	11:50	2,843
September 7	11:58	3,349
September 8	10:20	2,787
September 9	11:20	3,187
September 10	10:50	2,996
Total	56:18	15,162

Record Month at Miraflores Dumps and Vicinity.

August was the record month at Miraflores dumps and vicinity, when the largest number of trains ever unloaded there—844—was handled. A statement follows:

Location.	Class of cars.	No. of cars.	Cubic yards.
Miraflores Dumps	Lidgerwood flats.	15,637	297,103
Miraflores Dumps	Western dumps	140	1,400
P. R. R. relocation	Lidgerwood flats.	399	7,581
P. R. R. relocation	Western dumps	210	2,100
New Incline	Western dumps	910	9,100
Total		17,296	317,284

Steam Shovel and Dredge Men.

The I. B. of S. S. and D. M. will hold a special meeting on Sunday, September 18, at the I. C. C. lodge hall, Empire, C. Z., at 2. 30 p. m. All members are requested to be present.

WALTER P. TUDOR,
Secretary and Treasurer.

Empire, September 12, 1910.

BALBOA TERMINAL FACILITIES.

Steel Pier to be Remodeled and New Dock of Reinforced Concrete to be Built.

Terminal facilities at Balboa, the Pacific entrance to the Canal, will be increased by (1) remodeling the steel pier now in use, and (2) by constructing a concrete dock along the proposed anchorage basin north of the dock, now used in sand unloading. This decision has been reached after investigations conducted by two committees appointed for that purpose. The intent of the work is to relieve the congestion in handling freight on the present docks, but it will be carried on in such a way, that the improvements made will be useful in the permanent terminal that will be provided, upon the completion of the Canal, for the interchange of cargo. No plans for permanent terminals have been adopted as yet, but investigations are under way at both the Atlantic and Pacific ends of the Canal preparatory to the construction of "safe and commodious harbors," as provided for by the Act of June 28, 1902.

The steel pier which is to be remodeled was built for the Panama railroad and was first used in 1899. It is supported on large caissons spaced on 93-foot centers; longitudinally, is 940 feet long, and will accommodate three 3,000-ton ships at all stages of the tide. It is provided with ten A-frame, swing boom, traveling cranes of 1½ tons capacity. In 1907, this pier was increased from its original width of 50 feet to 80 feet, to provide space for two railroad tracks, supported by piles, running the full length of the pier. The floor was lowered, but the crane runway along the front of the pier was not changed, so that all cargo must now be lifted over the runway or platform in and out of the ships. The cranes on this pier are light, not in good condition, and will not reach far enough over the ships to take cargo from the middle hatches.

At the time the steel pier was enlarged two wooden docks were erected immediately north of it and joined to it. One of these is 320 feet long and is known as dock A. On it are two 4-ton traveling cranes. The other dock, known as dock B, is 658 feet long and has six 4-ton traveling cranes, duplicates of those on dock A. The total length of the three docks is 1,910 feet. These cranes are designed to take cargo from the middle hatches of ships and deliver it under cover of the wharf. The total length of the steel pier, and docks A and B, is 1,910 feet, but there is no connection between them, such as makes it possible to use the cranes interchangeably. A 15-ton pillar crane at the sea end of the steel pier handles heavy cargo. Five ships can be berthed at the united docks at one time, and in 1909, an average of 1,000 tons of cargo a day was handled.

The roof of the steel pier will be raised to accommodate cranes of the type now in use on docks A and B; the steel trusses will be so reinforced as to make them capable of carrying 8 cranes and a concrete slab floor under the crane runways level with the present floor. Eight new cranes of the 4-ton type will be installed in place of the 1½-ton cranes. The 4-ton cranes on docks A and B will be remodeled so as to permit a more rapid handling of cargo between the legs than is now possible. Work on the steel pier will be permanent in character.

The reinforced concrete dock will be 700 feet long and 57½ feet wide. It is estimated that it will cost about $130,000, and that the dredging necessary to make a 300-foot channel to the dock will cost about $200,000. This channel will be enlarged as the construction of the harbor at the Pacific entrance to the Canal advances. Preliminary plans provide for 8,200 cubic yards of excavation for the piers for the dock, 7,000 cubic yards of concrete in the piers, 2,100 cubic yards of concrete in the floor, 624,000 pounds of steel reinforcement, and 25,000 cubic yards of backfilling. The estimate of dredging necessary in front of the dock and leading to it is 2,385,000 cubic yards, but all of this will not be undertaken at the present time. The character of the new dock and the location proposed for it will make it part of the permanent harbor improvements. The construction of the dock and the dredging of its approach will be done by the Pacific Division, and the cost of the work will be charged to the appropriation now available for reconstruction and reequipment of the Panama railroad.

Central Division Unloaders.

A statement of Lidgerwood cars unloaded in the Central Division during the month of August follows:

Location.	No. of unloaders.	No. of trains.	No. of cars.
Balboa	3	1,004	19,076
Miraflores	3	844	16,036
Gamboa	2	641	12,179
Tabernilla	2	596	11,324
Totals	10	3,085	58,615

This record breaks all records with 10 unloaders.

Day's Work of 17 Steam Shovels.

On September 2d, 17 steam shovels, working in the Culebra construction district of the Central Division, excavated 29,335 cubic yards during the working day of eight hours, an average of 1,726 cubic yards per shovel for the day. During this time the shovels were under steam 136 hours and were actually working 90 hours and 55 minutes and were waiting for cars 29 hours and 30 minutes. The other delays were due to mining, cleaning track after blasts, repairing shovels, moving shovels back, slides and similar causes.

Examination for Colored Teachers.

An examination for eligibility to appointment as teacher in the colored schools will be held on Thursday, September 22, at the Ancon schoolbuilding. Sessions from 8 to 12 and 1 to 5; subjects, arithmetic, American history, grammar, hygiene, geography, reading, writing, spelling, and method. Spelling and writing will be graded on the manuscript in other subjects. The examination is open to all.

FRANK A. GAUSE,
Superintendent of Schools.

Ancon, September 8, 1910.

Missing Man.

Information is wanted concerning the whereabouts of Jay Winans of Oakland, Cal. Any one having knowledge of him is requested to address W. C. Winans, General Delivery, Oakland, Cal.

Three hydraulic elevators, one situated in the bakery and two in the commissary storehouse at Cristobal, have recently been installed. They are used for transporting supplies between the first and second floors, and are operated by small electric pumps.

STEAM SHOVEL RECORDS.

Work of Central Division Shovels in August.

During the month of August the total amount of material excavated in the Central Division was 1,612,396 cubic yards, of which 434,775 cubic yards were classified as earth and 1,177,621 cubic yards as rock. Of this quantity, 1,602,738 cubic yards were removed by steam shovels; 4,844 cubic yards were blasted and washed out by high water; 278 cubic yards were removed by hand, and 4,536 cubic yards were pick and shovel excavation by contract.

The high record of the month was made by shovel No. 208, working 27 days in the Culebra District, which excavated 57,292 cubic yards of rock and earth. The second best record was made by shovel 223, working 26 days in the Culebra District ,which excavated 49,739 cubic yards of rock.

The best record for a shovel of the 70-ton class was made by shovel No. 108, working 27 days in the Chagres District, which excavated 41,928 cubic yards of earth.

Shovel No. 202, working in the Culebra District, made the high record for one day by excavating 3,553 cubic yards of earth on August 16. Shovel No. 108, working in the Chagres District, excavated 1,640 cubic yards of earth on August 8 and 18, the high records for one day for a 70-ton shovel during the month.

Except where noted, monthly records are computed by place measurement, while the daily records are based on car measurement. The best records for the month and for one day in each district are shown below:

The sailings of the Royal Mail Steam Packet Company from Colon for New York, have been changed from Wednesdays to Mondays, effective with the sailing of the *Tagus* on October 3.

The following vessels arrived at and departed from the port of Balboa during the week ending September 10:

Arrivals—September 5, *Guatemala*, from south ports, *City of Sydney*, from San Francisco; September 8, Arica, from Guayaquil, *Manavi*, from intermediate ports; September 10, *Yorktown*, from San Juan del Sur.

Departures—September 3, *Ecuador*, to Guayaquil; September 6, *Huasco*, to south ports; September 7, *Son Juon*, to San Francisco.

ROOSEVELT ON THE CANAL.

Extract from Speech at Omaha on September 2.

In a speech at Omaha on September 2, ex-President Roosevelt spoke of the Panama Canal as follows:

"As regards the Panama Canal, I really think that outside nations have a juster idea than our people of the magnitude and success of the work. I wish our people realized what is being done on the Isthmus. If a man of intelligence who had never left this country asked me whether I would advise him to make a short trip to Europe or a trip to the Panama Canal, I would, without hesitation, advise him to go to the Panama Canal. He would there see in operation the completing of one of the great feats of modern times. Col. Goethals and the men working under him are rendering a service to this country which can only be paralleled in our past history by some of the services rendered in certain wars.

"Six years ago last spring the American Government took possession of the Isthmus. The first two years were devoted to the sanitation of the Isthmus, to assembling the plant and the working force, and providing quarters, food, and water supplies. In all these points the success was extraordinary. From one of the plague spots of the globe, one of the most unhealthy regions in the entire world, the Isthmus has been turned into a singularly healthy place of abode, where the death rate is small and where hundreds of children are now being raised under as favorable conditions as in most parts of the United States. The quarters, food, and water supply are excellent, and the plant the best ever gathered for such a purpose. Active excavation on a large scale did not begin until January, 1907. Three years and a half have gone by since then, and three-fifths of the total excavation has already been accomplished.

"The amount taken out has passed anything which previous experience warranted us in believing to be possible. In 1908 and 1909 the monthly average of earth and rock removed was 3,000,000 cubic yards, notwithstanding the fact that nine months of each year constituted a season of very heavy rainfall. There remains to be excavated only about 60,000,000 cubic yards. If we could keep up the past average of excavation, this should be done in twenty months, but it is impossible to maintain such a ratio as the depth increases, for the output necessarily diminishes as the field of operation narrows. Still, it is certain that such a rate can be maintained as will enable the workers to finish the excavation considerably in advance of the date fixed for the opening of the Canal—January 1, 1915. Indeed, I shall be surprised if the Canal cannot be opened six months or even a year in advance of the time set.

"The work has two great features: The Culebra Cut, which I have been considering, and the great Dam at Gatun. The latter is to imprison the waters of the Chagres and other streams into a lake with an area of 164 square miles. This work is advancing steadily, and just as successfully as the work on the Culebra Cut. The water which is ultimately to fill the lock is now flowing through the concrete spillway in the center of the Dam, the Chagres having been diverted from its bed and placed under complete control. The construction of the Dam has advanced sufficiently to convince the engineers in charge of the work of its absolute stability and imperviousness. The concrete work on the lock is advancing so rapidly that the first double set at Gatun will be completed this coming November, and the engineer in charge has announced that all the concrete in the locks will be in place two years hence.

"The date of the final completion and formal opening of the Canal to the commerce of the world will be determined by the time consumed in placing the great steel gates, emergency dams and all appliances for operating the locks. But those in charge of the work announce without hesitation that everything will be finished well in advance of January 1, 1915.

"We now have a further duty to perform in connection with it, and that is to fortify it. We are in honor bound to fortify it ourselves, and only by so doing can we effectively guarantee its neutrality, and, moreover, effectively guarantee that it shall not be used against us. The chief material advantage—certainly one of the chief material advantages—which we shall gain by its construction is the way in which it will, for defensive purposes, double the power of the United States Navy. To refuse to fortify it, and, above all, to consider for a moment such an act of utter weakness and folly as to invite other nations to step in and guarantee the neutrality of this purely American work (and thereby really to make it certain that in the event of war we should find the Canal used against us, as our fleets would be forbidden to pass through it, or else our opponents' fleets permitted to), would be to incur, and quite rightfully, the contempt of the world. It would mean the complete abandonment of the Monroe doctrine. It would be a wicked blow to our prestige on the Pacific, and, moreover, it would be in its essence treason to the destiny of the republic."

Bible Societies.

The American Bible Society and the British and Foreign Bible Society have been active on the Isthmus for many years, operating through their general agencies for South America and the West Indies located in Guatemala.

The American Society established a branch in Guatemala in 1895 and a subagency at Panama in January, 1910, with the Rev. Charles W. Ports, of the Methodist Episcopal Church, as its representative. Mr. Ports employs two colporteurs, one a Chilean, to work among the Spanish-speaking people, and the other, a West Indian, for work among the negroes. The territory covered by the former lies along the coast on the Pacific side as far as Chamé, and to Nombre de Dios on the Atlantic side. The West Indian sells on the street, usually following the pay car each month, stopping at the villages in the Canal Zone. At other times in the month, he visits the negro quarters and the outlying settlements and villages in the bush. A conservative estimate places the number of Bibles sold annually in this way at 4,000. The books are brought into the country duty free, through the courtesy of the Panamanian government. The society has presented Bibles to Ancon Hospital, and to several of the hospitals and sick camps along the line of the Canal, and to the penitentiary.

The work of the British and Foreign Bible Society is at present directed by the Rev. Ernest G. Cooke, pastor of the Wesleyan Methodist Mission in Colon, who acts as volunteer agent. Mr. Cooke selects his helpers from men in charge of missions in the Zone villages. The territorial agent from Guatemala recently paid a visit to the Isthmus for the purpose of perfecting plans for the establishment of a regular agency in Colon, and as a result of his visit, Mr. M. P. Kennedy is expected to arrive from England to take charge of the work which will be extended to the white population in the Canal Zone within a short time. A room has been secured for a general storehouse and headquarters. This society pays a duty of ten per cent ad valorem on all Bibles imported.

Masonic Affairs.

An all-day session of the recently instituted lodge of Royal Arch Masons at Las Cascadas was held on Labor Day, when a number of degrees were conferred. The lodge holds meetings every other Saturday night and a special train is run between Panama and Las Cascadas to accommodate members living in Ancon, Corozal, Pedro Miguel, Culebra and Empire who desire to attend the meetings. The train is manned by members of the lodge who furnish their services free of charge, and alternate with each other in making the runs.

Preparations are being made for a banquet to be held at Colon on October 15, by the Masonic Clubs of the Isthmus. It will take place at the Washington Hotel and a program of music, addresses, etc., is being arranged.

Obituary.

William T. Harrington of San Francisco died at Ancon Hospital on September 5 after an illness of about three months. He was 42 years of age and came to the Isthmus from San Francisco in March of this year, and for a few weeks was employed at the Cristobal marine shops.

Gerhard Lentin, a sailor on the steamer *Kyleakin*, which arrived at Cristobal from Mobile on August 18, with supplies for the Commission, died at Colon Hospital on September 8, from typhoid fever complicated by intestinal hemorrhage. He was a native of Germany, 18 years of age, and unmarried. He was buried in Mount Hope cemetery.

Band Concert.

The Isthmian Canal Commission Band will give a concert at Gorgona, C. Z., on Sunday, September 18, 1910, at 6 p. m. The program follows:

1	March—*Calvary Commandery*	Clarke
2	Selection—*The Dollar Princess*	Fall
3	Oriental Rag—*Turkish Trophies*	Egan
4	Overture—*Poet and Peasant*	Suppe
5	*a* Barn Dance—*By the Light of the Silvery Moon*	Edwards
	b Medley March—*Has Anybody Here Seen Kelly*	Murphy
6	Waltz—*Cupid Astray*	Rolfe
7	Concert Piece—*Among the Lilies*	Frey
8	El Gitanillo—*Tango*	Franco
9	Medley Selection—*Mills'* 1910 Introducing "Lily of the Prairie," "I'd Like to be the Fellow That Girl Is Waiting For," "Highland Mary," "Everybody's Happy When the Moon Shines," "You For Me When You're Sweet Sixteen," "Comical Eyes," "Sicilian Chimes," "My Friend Jim-a-da-Jeff," and "Margarita."	Schuls
10	March—*Put On Your Old Gray Bonnet*	Wenrich

Chas. E. Jennings, *Musical Director.*

The next concert will be given at Empire on September 25, at 6 p. m.

License at Empire.

ANCON, C. Z., September 12. 1910.

In accordance with a resolution of the Isthmian Canal Commission, adopted September 1, 1910, Mr. C. P. Gibson has been granted a license for the retail sale of intoxicating liquors at Empire for the year July 1, 1910 to June 30, 1911.

A. MCGOWN, *Acting Collector of Revenues.*

LIQUIDATED DAMAGES.

Comptroller of Currency Holds Clause in Contracts Null.

The Comptroller of the Treasury has rendered a decision to the effect that the form of contract which has been in use by the Commission since 1907 does not provide for liquidated damages, but that the clause supposed to cover this subject is in fact a penalty clause and permits of charging only actual damages against the contractor. The question was raised by J. H. Leonard & Co. to whom a contract for plumbers' supplies was let, and who were assessed $150.93 liquidated damages for failure to deliver on time. The clause in the form of contract referred to provides:

"Article II. The above materials and supplies properly packed at the contractor's expense shall be delivered as above on or before (date). If not delivered on or before the said date one-tenth of one per cent of the total cost of the undelivered materials and supplies shall be deducted for each day's delay, as liquidated damages for the delay, until satisfactory delivery or performance shall have been made, or until such time as the Commission may reasonably procure similar materials or articles elsewhere ******** Provided, however, that delays caused by strikes, acts of God, or public enemies, to the extent to which the same in the judgment of the Commission may justify the delay, or delays which cause no damage or inconvenience to the Government, when expressly waived by the Commission, shall not be charged against the contractor hereunder."

The Comptroller decided on June 6, 1910, that the clause printed above does not provide for liquidated damages, and on appeal from this decision reaffirmed his decision of the previous date, holding:

"Either Article II provides for liquidated damages or it does not. If it does not, then it is a stipulation for a penalty under which only the actual provable damages are recoverable, but if it be in fact a valid provision for liquidated damages, then it should be enforced as written, upon proof of the violation of the contract and without proof of the damages actually sustained. Whether or not said provision is one for liquidated damages, as expressed, and what is the intent of the parties with respect thereto, must be determined by a proper legal construction of the language used by them in expressing that intention.

"The proviso that 'delays which cause no inconvenience or damage to the Government, when expressly waived by the Commission, shall not be charged against the contractor,' is diametrically opposed to one of the basic principles underlying the liquidation of damages, viz., that the parties by their action in agreeing upon a measure of damages in liquidation of the uncertain damages, have settled in advance the charge to be made on account of such damages arising from delays for which the contractor is chargeable, and thereby have closed the door to the admission of evidence as to whether or not said damages were actually sustained. As said in the decision sought to be reconsidered and revised, such a clause is utterly antagonistic to a liquidated damage clause. The damages are liquidated or not liquidated upon the facts and probabilities in the minds of the parties at the time the contract is executed, and do not depend upon the happening of such a future fact as whether the Government needs the things contracted for or does not need them at the time specified for them to be furnished. The facts, supposed to exist at the time the contract is made, govern. I am of the opinion that the clause "or delays which cause no damage or inconvenience to the Government, when expressly waived by the Commission," effectually nullifies the provision for per diem deductions on account of the contractor's delays in deliveries, said to be as 'liquidated damages.' * * * * *"

It is estimated that from $100,000 to $150,000 have been deducted from contractors' bills in accordance with the "liquidated damages" clause of the contract, which is now declared ineffective.

PERSONAL.

The Right Hon. James Bryce, British Ambassador to the United States, and Mrs. Bryce, arrived on the Isthmus September 9, and remained here for two days visiting all parts of the Canal work. They were the guests of Col. and Mrs. W. C. Gorgas during their stay. They sailed from Balboa on September 11 for a tour through South America, during which they will visit Lima, Lake Titicaca, Valparaiso, and pass through the Strait of Magellan to Buenos Aires, whence they will sail for England.

Maj. Chester Harding, and Maj. Edgar Jadwin sailed for the States on their annual leave, on the *Cristobal*, on September 8.

Maj. Henry A. Brown, chaplain, U. S. A., and Archdeacon Henry B. Bryan sailed for the States on the *Cristobal*, on September 8.

Mr. A. B. Nichols sailed for the States on his annual leave of absence, on the *Colon*, on September 5.

A. V. D. Candler, who has been designated to take charge of the inspection of the new ladder dredge to be built at Renfrew, Scotland, for use at the Pacific entrance, sailed from New York for his destination on August 31. He is connected with the Purchasing Department, and while on the Isthmus some time ago had an opportunity to familiarize himself with the type of dredge to be constructed under the recent award.

Fancy Dress Ball at Colon.

A fancy dress ball will be held at the Lincoln House on the evening of October 15, under the auspices of the Philanthropy Department of the Woman's Club of Cristobal for the benefit of the Salvation Army. Tickets may be obtained from any member of the club at $1 each.

At a recent meeting of the board of governors of the Colon Club it was decided to dispense with the regular dance on Saturday evening, October 15, because on that evening the floor will be given over to the Philanthropy Department of the Woman's Club for the annual fancy dress ball.

Church Notes.

The corner stone of the United Methodist church at Pedro Miguel will be laid at 3 o'clock on the afternoon of September 18, by Dr. J. Thomas of Panama, assisted by representatives of the Christian Mission church and members of negro fraternal societies. A procession will be made from the Baptist Mission house to the site of the new church.

The ceremony of laying the corner stone of the new Episcopal church for West Indians in Gatun will take place at 3.30 p. m., on Sunday, September 18. Four principal stones will be laid, one by Mrs. W. L. Sibert, one by Judge Gudger, one by W. H. Carrington, and one by the Amalgamated Friendly Societies. Addresses will be made by Judge Gudger, and Judge Thomas E. Brown, jr.

OFFICIAL CIRCULARS.

Transfer of Transportation Men—Moving Locomotives from Gorgona Shops—Safeguarding Labor Trains.

Culebra, C. Z., September 7, 1910.

Heads of Departments and Divisions:

The following recommendations submitted by the Transportation Committee are approved:

"The committee recommends that in case of transfer of transportation men between divisions of the Isthmian Canal Commission or between the Isthmian Canal Commission and the Panama railroad, a transcript of the service record of the man transferred accompany the regular transfer slip, this transcript to contain a brief outline of each offense and a statement of the discipline applied in each case.

"On account of the heavy work on all locomotives having been centered at Gorgona, it becomes necessary almost daily for the Panama railroad, or one or more divisions of the Isthmian Canal Commission, to move engines between Gorgona shops and some other point on the Isthmus. In the interests of economy it is recommended that a crew be assigned to this service, such crew to be carried by the Central Division and charge to be made against other divisions or the Panama railroad for services performed.

"With a view to safeguarding employes riding on labor trains, it is the recommendation of the committee that all trains following labor trains be held five minutes before following such labor train unless the latter has passed into the next block ahead."

Geo. W. Goethals,
Chairman and Chief Engineer.

Steerage Rate on P. R. R. Vessels.

Culbbra, C. Z., September 9, 1910.

Circular No. 175-D:

Effective September 15, 1910, the reduced steerage rate of $10 heretofore allowed on Panama railroad steamships will be increased to $15.

Geo. W. Goethals,
Chairman, Isthmian Canal Commission.
President, Panama Railroad Company.

Acting Division Engineer.

Culebra, C. Z., September 3, 1910.

Circular No. 350:

Effective September 5, 1910, Mr. John M. G. Watt will act as Division Engineer of the Pacific Division during the absence of Mr. S. B. Williamson, on leave.

Geo. W. Goethals,
Chairman and Chief Engineer.

Clerks Without Knowledge of Typewriting.

Culebra, C. Z., September 10, 1910.

Heads of Departments and Divisions:

It has been the practice of the United States Civil Service Commission to maintain five registers of clerks for appointment to apply on requisitions from the Isthmus, as follows: Clerks with knowledge of typewriting; clerks with business experience; clerks with railroad experience; clerks with timekeeping experience; clerks with bookkeeping experience. In connection with the majority of requisitions forwarded for clerks during the past year, knowledge of typewriting has been specified. As the result, this particular register has been exhausted, and difficulty has been experienced in filling requisitions, while eligibles with other qualifications have had little chance of appointment. It is requested that in filling future vacancies, requisitions be made for clerks without knowledge of typewriting whenever the interests of the service will permit.

Geo. W. Goethals, *Chairman.*

Chief Dispatcher, P. R. R.

Colon, R. P., September 8, 1910.

Circular No. 188:

Effective Sunday, September 11, L. B. Maggard is appointed Chief Dispatcher, reporting to this office. See rules 722, 723, and 724, Book of Rules. At the same time all agents heretofore reporting to the Master of Transportation will report to this office direct.

J. A. Smith, *General Superintendent.*

Auction of Unclaimed Goods.

Colon, September 10, 1910.

In order to recover freight and storage charges, the Panama railroad will dispose of the accumulation of over and unclaimed shipments now in its possession, by public auction Wednesday, October 5, 1910, at 9 a. m., sale to be held on dock 11, Cristobal, C. Z.

The items to be sold consist of a miscellaneous assortment of wines, liquors, household goods, building material, stationery, groceries, dry goods, machinery and merchandise in general, all of which has been held six months and over in an effort to locate owner.

J. A. Smith, *General Superintendent.*

COMMISSION CLUBHOUSES.

Activities of the Young Men's Christian Association.

STATISTICAL REPORT FOR AUGUST.

Total membership	1,791
Total number of bowling games	6,985

BOYS' DEPARTMENT.

Number of members	82
Number of afternoons for boys	59
Average attendance per afternoon	35
Total attendance in systematic gymnasium work	555
Outings and other special features	2

GENERAL.

The interassociation tenpin tournament was started Saturday night, September 10, with two teams entered from each of the five Zone associations. These teams known as first and second teams will bowl for ten weeks for an association trophy prize; then, beginning November 19, a picked team representing each association, whose members will be chosen from teams one and two, will bowl ten weeks for individual team prizes. The results of the games will be published each week in THE CANAL RECORD.

Miss Gay Zenola MacLaren will fill the following return engagements at the clubhouses: September 15, Gatun; September 20, Culebra.

CULEBRA.

The discussion club meeting on September 7 was led by E. A. Putnam; subject, "What Is Failure?" This club meets every Wednesday evening at 7.30. The next meeting will be led by F. C. Freeman; subject, 'Our Thoughts."

The pool and billiard tournament begins on Monday, September 19. The prize is a pennant.

The bowling committee has arranged a bowling tournament to begin this week. Three prizes are offered, one for high average, one for second, and one for the highest pin fall. This tournament will be a handicap tournament based on the scores of the last two months.

Saturday, Cristobal's second team will play at Culebra, and Culebra's first team will go to Cristobal.

The high score last week for bowling was rolled by E. P. Case on Saturday night; score, 205.

The Gorgona first team took three straight games from the Culebra first team on the Culebra alleys on Saturday night, September 10. Following is the score:

Culebra First Team.				Gorgona First Team.			
Herrington	165	181	163	Roper	192	181	158
Case	141	205	138	King	164	170	142
Cohen	196	129	169	White	199	196	188
Hayes	127	176	149	Sexton	144	163	201
Dougherty	176	156	125	Otis	164	162	176
Total	805	847	744	Total	863	872	865

EMPIRE.

The Empire clubhouse posts every night the total number of cars and engines used, and the total yardage for the day of the Central Division.

C. J. Huson has been elected captain of the first Y. M. C. A. bowling team, and Samuel Bardelson captain of the second team.

There were 37 certified delegates to the literary society's "county convention" last Friday night. Mr. Porter was elected temporary chairman, Mr. Warwick, permanent chairman, and Mr. Sawtelle, permanent secretary. The following candidates were nominated for the coming "election:" For sheriff, J. H. McLean; county judge, Judge Mark A. Hall; county solicitor, Cap. McNiel; county commissioners, Messrs. Ross, Harlan and Simpson; county treasurer, Philip Kelley; clerk of court, H. W. Sawtelle; coroner, Dr. Erdman.

The following high scores were made on the bowling alleys during the week ending September 10: Pearson, 204; Potter, 223; Shaughnessy, 201, 219; Goolsby, 215; Nicodemus, 206.

The match between Empire and Cristobal on September 5, resulted in favor of Cristobal. Following is the score:

Cristobal.				Empire.			
Louch	180	168	176	Goolsby	128	163	139
Collins	165	174	168	Nicodemus	134	130	167
Adams	158	151	172	Bardelson	156	163	150
Rabbitt	141	155	165	Sawtelle	122	164	132
Bullard	173	151	168	Gustavson	160	178	122
Total	817	799	849	Total	700	798	710

The match between Empire and Culebra on September 7, resulted in favor of Empire. Following is the score:

Culebra.				Empire.			
Hall	155	149	143	Nicodemus	206	173	198
Herrington	175	129	94	Goolsby	150	215	175
Case	132	182	155	Sawtelle	185	177	125
Cohen	152	161	185	Leon	163	190	....
Dougherty	193	162	133	Gustavson			162
				Bardelson	163	185	152
Total	807	783	710	Total	867	940	812

GORGONA.

The Cristobal basketball team defeated the Gorgona team on Saturday night, September 10, by a score of 30 to 20.

Moving pictures recently received from the States will be shown at the clubhouse on Friday night, September 16.

A shop league basketball game will be played on Thursday, September 15, at 8 p. m.

Gorgona second team defeated Culebra second team at bowling on the Gorgona alleys Saturday night, September 10, as follows:

Culebra Second Team.				Gorgona Second Team			
Koperski	131	....	157	Stoehr	150	124	108
Baumer	161	146	127	Stewart	163	183	179
Huttlemeier	142	190	129	Haldeman	142	142	173
Hostetter	171	145	157	Varenkamp	128	193	146
Mengel	142	119	161	Bordt	143	166	151
Fox		123	....				
Total	747	723	731	Total	726	808	757

CRISTOBAL.

The Interassociation bowling tournament began Saturday night with the Gatun second team at Cristobal; the score follows:

Gatun.				Cristobal			
Myers	181	154	175	Adams, D.	175	156	....
C.R.H'r'g'n.	149	156	187	Grover	136	135	136
Dalton	121	146	154	Blackburn	146	179	140
Wilson	137	149	152	Burns	190	156	181
Hodges	157	182	145	Claherty	151	130	....
				Barrett			203
				O'Meara			111
Total	745	787	813	Total	798	756	771

Cristobal played an exhibition game of basketball with the men from the U. S. S. *Tacoma* Saturday night and won by the score of 37 to 13. The following is the line-up of the teams:

U. S. S. Tacoma.	*Baskets thrown*	*Fouls thrown*	Cristobal.	*Baskets thrown*	*Fouls thrown*
Ford	4	3	Russell	11	3
Strohmann	1	......	Simms	4	2
Potter			Jaap	1	......
Kriskie			McSparren		
Owen			Martin		
Goetz			Schwal'n'g		
Cavvell					
Score		13	Score		37

A moving picture entertainment was given on Monday, September 12, and will be repeated on Monday, September 26.

The membership at Cristobal has passed the 400 mark. A large clock, marking the membership campaign, illuminated at night, has been installed in front of the clubhouse. It can be seen for some distance, both in the day time and at night.

Miss Gay Zenola McLaren read "The Man from Home" Friday night and will return on September 21 with the play "The Man of the Hour." Seats will be on sale for this entertainment Saturday, September 17.

The pool tournament has been decided with Wehmeier in first place, Louch second, and Thomas third.

The discussion club discussed "Leadership" this week led by Mr. Safford of Camp Elliott. Next week Mr. Kramer from Culebra will be here taking for his subject "Exercise."

The men from the U. S. S. *Tacoma* have been constant visitors at the clubhouse and are welcomed in all departments of the work.

GATUN.

The next meeting of the discussion club will be held on Friday night, September 16; subject, "What Shall We Read?"

The opening game in the Isthmian Bowling League was played on Saturday evening, September 10, on the Gatun alleys, when Gatun's first team took three games from Cristobal's first team, as follows:

Gatun First Team.				Cristobal First Team.			
Barte	179	181	181	Louch	149	130	149
C.A.H'r'g'n.	129	156	158	Collins	155	168	155
Ponton	162	160	177	Rabbitt	135	160	120
De Moll	126	187	128	Thomas	129	151	151
Durand	177	161	155	Bullard	135	140	168
Total	773	845	799	Total	703	749	743

The basketball game played on Saturday evening between Empire and Gatun at Gatun was fast and interesting; the score, 38 to 30 in favor of Empire.

The schedules for the bowling teams for September 17, will be Gatun's first team at Empire, and Empire's second team at Gatun.

Rainfall from September 1 to 10, Inclusive.

MIDNIGHT TO MIDNIGHT.

COMMISSARY DEPARTMENT.

The hours during which commissaries are open are as follows:

Cristobal and Culebra, 8 a. m. to 12.30 p. m.; 2 p. m. to 7 p. m.

All other commissaries, 8 a. m. to 1 p. m.; 3 p. m. to 7 p. m.

Retail prices of cold storage provisions for the week beginning September 13:

FRESH MEATS.

	Price.
Mutton—Stewing, per pound	7
Shoulder, neck trimmed off, (4 lbs. and over), per pound	10
Entire forequarters (not trimmed) 10 pounds and over, per pound	9
Legs, (8 to 10 pounds), per pound	19
Cutlets, per pound	20
Short cut chops, per pound	22
Lamb—Stewing, per pound	7
Entire forequarters, neck trimmed off, per pound	10
Legs (5 to 8 pounds), per pound	24
Chops, per pound	26
Cutlets per pound	26
Veal—Stewing, per pound	10
Shoulder for roasting (not under 4 pounds), per pound	15
Loin for roasting, per pound	19
Chops, per pound	22
Cutlets, per pound	26
Pork cuts, per pound	22
Beef—Suet, per pound	2
Soup, per pound	5
Stew, per pound	9
Corned, per pound	12, 14, 16
Chuck roast, (3 pounds and over), per pound	13
Pot roast, per pound	15
Rib-roast, second cut (not under 3½ pounds), per pound	18
Rib roast, first cut (not under 3 pounds), per pound	20
Sirloin roast, per pound	21
Rump roast, per pound	21
Porterhouse roast, per pound	21
Steak, Chuck, per pound	14
Round, per pound	15
Rib, per pound	20
Sirloin, per pound	21
Porterhouse, per pound	21
Rump, per pound	21
Tenderloin, per pound	24

MISCELLANEOUS.

Livers—Beef, per pound	10
Calf, each	60
Half, each	30
Sausage—Pork, per pound	17
Bologna, per pound	14
Frankfurter, per pound	14
Leberwurst, per pound	14
Sweet bread—Veal, per pound	1.20
Beef, per pound	25
Eggs, fresh, dozen	†31
Eggs, fresh, ½ dozen only	†17

POULTRY AND GAME.

Chickens—Fancy Roasting, large, each	1.50
medium, each	1.30
Fowls, each	70, 82, 93, 1.04, 1.15
Ducks, large, each	1.50
medium, each	1.30
Broilers, each	75
Turkeys, per pound	30
Squahs, each	35
Capons, each	2.50
Pheasants, each	70, 1.00
Partridges, each	50
Grouse, each	85

CURED AND PICKLED MEATS.

Ham—English York Cut, per pound	30
German, Westphalia, per pound	36
Sugar cured, per pound	24
Sugar cured, sliced, per pound	27
Half, for boiling, per pound	25
Boiled, per pound	32
Hocks, per pound	‡8
Bacon—Breakfast, whole piece, per pound	30
Breakfast, sliced, per pound	31
Beef, salt, family, per pound	12
Pork, salt, family, per pound	*16
Ox tongues, each	80
Pigs' feet, per pound	10
tongues, per pound	16
Mutton, mess, per pound	7

DAIRY PRODUCTS.

Supplies for Canal Work.

The following steamers with supplies for the Isthmian Canal Commission arrived at the ports of Cristobal and Colon during theweek ending September 10, 1910:

Advance, September 5, from New York, with 51 cases rubber boots for Atlantic Division; 12 crates concrete machinery for Pacific Division; 14 cases drugs, etc., for Sanitary Department; 705 bags bran for Ancon dairy; 14 cases enamel ware, 200 cases washing powder, 1,000 pieces steel bars, 50 pieces switches, 40 cases lanterns, 36 barrels iron pipe-fittings, 10 cases copper tubing, 25 coils drill hose for stock; and a miscellaneous cargo, the whole consisting of 2,296 packages, weighing 186 tons.

Atenas, September 8, from New Orleans, with 405 tons dump car parts for Cristobal shops (for erection); 1,250 crates fire brick, 10 cases valves, 648 bales hay, 2,601 pieces yellow pine car stakes for stock.

Santa Marta, September 9, from New York, with 84 tons lock construction material for Atlantic and Pacific Divisions; 13 cases electrical material, 7 barrels electrical material 18 packages car parts for Atlantic Division; 13 cases electrical material for Mechanical Division; 171 crates wooden handles, 119 bundles wooden handles for stock.

Panama, September 9, from New York, with 12 iron brackets for Atlantic Division; 148 pieces maple lumber, 27 cases iron bolts, 120 tons castings, 392 kegs rivets for Mechanical Division; 80 cases bolts and nuts, 34 barrels rosin, 40 cases headlights, 14 cases paint composition, 159 cases insect exterminator for stock; and a miscellaneous cargo, the whole consisting of 3,239 packages, weighing 508 tons.

Tide Table.

The following table shows the time of high and low tides at Panama for the week ending September 21 1910, (75th meridian time):

Date.	High.	Low.	High.	Low.
	A. M.	A. M.	P. M.	P. M.
September 15	12.07	6.28	12.30	7.00
September 16	1.14	7.30	1.33	7.54
September 17	2.07	8.20	2.26	8.42
September 18	2.52	9.07	3.12	9.26
September 19	3.35	9.50	3.55	10.10
September 20	4.15	10.32	4.36	10.50
September 21	4.55	11.13	5.17	11.32

Stages of the Chagres.

Maximum heights of the Chagres River for the week ending midnight, Saturday, September 10, 1910. All heights are in feet above mean sea level.

DAY AND DATE	STATION.				
	Vigia	Alhajuela	Gamboa.	Bohio.	Gatun Lake.
Sun. Sept. 4	130.6	96.3	50.3	21.0	18.4

COLON TO BARBADOS, CALLING AT TRINIDAD.

Clyde	R.-M.	Tuesday	Sept. 27
Atrato	R.-M.	Tuesday	Oct. 11

The next sailing of the Leyland Line will be as follows: *Barbadian*, on or about September 23, for New Orleans, via Kingston, Ja.

Hamburg-American steamers leave for New York at 10 a. m., and for Port Limon every Tuesday or Wednesday.

Royal Mail steamers leave for New York on alternate Wednesdays at 10 a. m.; for Southampton on alternate Tuesdays at 10 a. m.

United Fruit Company's ships for New Orleans leave on Thursday at 3 p. m., and for New York on Friday at 10 a. m.

Sailings of the French Line (Cie Generale Transatlantique) for Venezuelan ports, Martinique and Guadeloupe on the 3d and 20th of each month.

CANAL RECORD

Volume IV. ANCON, CANAL ZONE, WEDNESDAY, SEPTEMBER 21, 1910. No. 4.

The Canal Record

Published weekly under the authority and supervision of the Isthmian Canal Commission.

The Canal Record is issued free of charge, one copy each, to all employes of the Commission and Panama Railroad Company whose names are on the gold roll. Extra copies and back numbers can be obtained from the news stands of the Panama Railroad Company for five cents each.

Isthmus of Panama.

No communication, either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.

NOTES OF PROGRESS.

Chairman's Monthly Report.

The report of the Chairman of the Isthmian Canal Commission for the month of August is published in full in other columns of this issue of THE CANAL RECORD. It gives a detailed account of the progress of Canal work in all departments and divisions.

Cucuracha Slide Again Active.

The mass of rock and earth that is sliding gradually but surely into Culebra Cut from the east bank of the Canal at Cucuracha received a new impetus on the night of September 16, and when the men went to work on the morning of the 17th all the railroad tracks on the east side of the drainage ditch had been covered or pushed out of place, and the material had filled the ditch itself and covered one track on the west side. On the following day one track had been opened on the east side of the center line and all west side tracks were in operation. The inconvenience caused by the new movement will continue for ten days or more.

No new material broke from the bank; the movement was merely that of the old slide, estimated as containing 500,000 cubic yards, described in THE CANAL RECORD of May 25. A steam shovel had been excavating at the toe of the slope several days prior to the movement and had removed earth and rock in sufficient quantity to give the slide a new start. The policy in regard to these slides is to continue excavating them as they move into the Canal, and steam shovels are constantly at work to that end. The amount of material in motion at Cucuracha is nearly one-half the total excavation in Culebra Cut in August, and represents a little more than one-half of one per cent of the total excavation in Culebra Cut.

River Diversion.

The plan of diverting the water from the Rio Grande and the Cardenas River into the Canal at Station 2100, a point near the Agua Dulce pumping station, opposite Corozal, has been approved, and the change will probably be made when the Canal is completed below Miraflores Locks. At present, the flow from these streams is carried off by the Rio Grande diversion, which parallels the Canal from Miraflores to a point between Corozal and Balboa, where the water wastes into the swamps inundated by the tides. The principal purpose to be served in changing the diversion is to remove the point of discharge outside the area of the proposed terminal harbor operations at Balboa.

Steam Shovel Record in Culebra District.

On September 15th, 16 shovels of the 200-class, working in the Culebra construction district of the Central Division, excavated 27,797 cubic yards in an 8-hour day, an average of 1,737 cubic yards for every shovel in the district on the date in question. During this period, the shovels were under steam 128 hours; were actually at work 100 hours and 10 minutes; were waiting for cars 25 hours and 10 minutes, the rest of the time being lost in moving back, repairing shovels, cleaning track, mining, etc.

Disposing of Wet Clay Excavation.

Excavation in the Chagres section of the Central Division is almost entirely confined to earth, and much of the material is clay. Wasting material on a clay dump is expensive during the wet season, because under pressure it slides from under the tracks. Throwing the tracks is also difficult. Three plans have been adopted to dispose of the spoil economically, and all are possible because of the proximity of the excavation to the Chagres River, which carries the clay down stream.

At Gorgona, a high trestle has been built on the bank of the river back of the shops and the spoil is dumped from this trestle along the edge of the stream. Water drawn from the river is turned on it through hose and the clay is thus sluiced into the stream or wetted sufficiently to make it move slowly into the current from its own weight. The pumps for this dump have been run by compressed air, but an old French locomotive has been installed and steam will be used henceforth. The pump discharges through a 6-inch main laid along the bank beneath the trestle, from which at regular intervals there are branches to which the sluicing hose may be attached.

At San Pablo and Juan Grande, the method of wetting the clay so that it will slide out into the stream is used. The dumping trestles are built at points where the current in the river is especially strong, so that the clay, when it strikes the stream, is carried rapidly away.

At East Mamei, a low trestle has been built out into the stream, and the plan of cleaning the spoil away from this trestle by sluicing is being tried. This is in the experimental stage and it is not believed it will be so economical as the two plans outlined above, unless the portable sluicing plant can be used at several dumps. The portable sluicing plant is erected on two standard flat cars, and is shifted from place to place by a locomotive which also furnishes steam to run the pumps. On one car are mounted two pumps 14 by 10 by 8 inches, and a boom by which the suction pipe is let into the river. These pumps are old stock and, being of the reciprocating type, cannot handle muddy water so advantageously as centrifugal pumps. From the pumps the water is forced through a pipe to a second car on which the sluicing monitors are mounted. A 3-inch nozzle directed over the end of the car can throw a stream directly down and on either side. A 2½-inch nozzle carried over each side by a flexible hose can throw a stream in any direction, even so as to wash out under the car itself. A third 2½-inch nozzle is used to wash out the dump cars.

Pedro Miguel-Miraflores Highway.

The laying of a spur track from the Panama railroad relocation, for use as a dump track in connection with the building of the highway between Pedro Miguel and Miraflores, has been begun. The construction of a section of this road involves the crossing of the valleys of the Caimitillo and Camaron Rivers, near Miraflores. It is proposed to construct a trestle across these two valleys, extend the construction track along it, and make the fills with spoil from the Canal prism. The material will be supplied by the Central Division, but the dirt trains, which will have to be run over the relocated line from Paraiso, will be handled by the Panama railroad.

The section of the trestle over the Caimitillo River valley will be about 500 feet long, and that over the Camaron River valley, between 250 and 300 feet. The height of the embankment will be about 60 feet above sea level, and its width across the top will be either 16 or 24 feet. If the width is fixed at 16 feet, guard rails will probably be erected along the sides for protection. The culverts, through which the water from the streams will be diverted, will consist of old French iron pipe, nine feet in diameter. Two lines of this pipe, running parallel, will be placed at the Caimitillo River crossing, and one at the Camaron River, which is a small stream emptying into the Caimitillo. In order to procure a solid bed for these culverts, they will be located on natural benches at one side of the streams, about 20 feet above the present channels, and a special fill will be made around them. This will cause the water to back up into the valleys for some distance, and possibly may necessitate the removal of a few native houses from the area that will be submerged.

From the Pedro Miguel station to the river valleys the land is favorable for road building, and this section is now under construction with prison labor. South of the Caimitillo River, the road passes through a cut in the hill east of the railroad tunnel, which is already finished. From this point it will continue over the Miraflores dumps to the

NOTES OF PROGRESS.

(Continued.)

crossing of the Cardenas River, but no work can be done on this stretch until the Central Division abandons these dumps. South of the Cardenas River, the road is completed into Corozal, and thence into Panama.

Testing the Hydraulic Plant.

The new hydraulic plant of the Pacific Division is in partial operation, but the work so far has been principally in the nature of tests. The dredging pump on one of the barges has been excavating a sump in which the barge can settle down, the material being forced through the pipe into the core of the west dam at Miraflores. One of the monitors has also been in service washing down the bank at this point. The dredging equipment on the second barge is nearly ready for duty.

Concrete in Gatun Locks.

The placing of concrete in Gatun Locks is advancing in the upper or lake-level locks, and in the east side wall, center wall and floor of the middle locks. A statement of the concrete laid during the week ending September 17, and of the total to that date, follows:

Date.	Concrete placed.	Large stone.	Hours worked.	No. of mixers	Total.
Sept. 12	2,980	365	92:00	8	3,345
Sept. 13	2,894	311½	89:00	10	3,205½
Sept. 14	2,790	357½	102:40	10	3,147½
Sept. 15	3,026	357½	87:00	8	3,383½
Sept. 16	2,512	349¼	80:30	8	2,861¼
Sept. 17	2,530	274	92:00	8	2,804
Total..	16,732	2,014¾	543:10	......	18,746¾
Previously reported	....	....	....	......	708,666½
Grand total.	....	....	....	......	727,413¼

The construction plant at Gatun was shut down from 12.25 to 2.15 o'clock on the afternoon of September 16, on account of a lack of water due to a break in the water main.

Concrete Work in Gatun Spillway.

The amount of concrete placed in the Spillway of Gatun Dam in the week ending September 17, with the total placed to that date, is shown in the following statement:

Date.	Cubic Yards.		
	Concrete	Large rock.	Total.
September 12...........	162	8	170
September 13...........	186	....	186
September 14...........	190	10	200
September 15...........	124	12	136

New P. R. R. Time Table.

Time table No. 7, which appears on another page of this issue of THE CANAL RECORD, goes into effect on the Panama railroad on Sunday, September 25. The cutting off of the stops at Lion Hill and Ahorca Lagarto, and the use of the new line between Paraiso Junction and Corozal Junction has enabled a shortening of the schedule in the case of the weekday trains, Nos. 2, 4, 5, 6 and 7. No change is made, however, in the time of trains Nos. 3 and 5, or of any of the Sunday trains.

Train No. 2 leaving Panama at 6.30 a.m. will be due to arrive in Colon at 8.45, twenty minutes earlier than usual. Train No. 4 leaving Panama at 10.45 a.m., is due at Colon at 1 p.m., instead of 1.15. Train No. 5 leaving Colon at 10.30 a.m., is scheduled to reach Panama at 12.45 p.m., instead of 1 o'clock, as at present. Train No. 6 leaving Panama at 1.30 p.m., will be due in Colon at 3.45, five minutes earlier. Train No. 7 leaving Colon at 4.35 p.m., will reach Panama at 6.50 p.m., shortening the time by 10 minutes.

New Gatun has been added to the list of stations and a new depot for that point has just been completed. The regular daily passenger trains will not stop there, but provision has been made for running a shuttle train five times each way daily, except Sunday, when two of the south bound trains, one leaving Colon at 10 a. m., and the other at 7 p. m. will stop on flag. The time of the shuttle train has been made a part of the regular train schedule.

Pedro Miguel Concrete Laying.

A statement of the concrete laid in the locks at Pedro Miguel for the six 8-hour working days of the week ending September 17, and the total to that date, follows:

Date	Concrete placed.	Large stone.	Hours worked.	No. of mixers	Total.
Sept. 12..	1,960	17	24:50	4	1,977
Sept. 13..	1,966	3	25:00	4	1,969
Sept. 14..	1,858	19	24:25	4	1,877
Sept. 15..	2,080	12	28:42	4	2,092
Sept. 16..	1,988	5	28:00	4	1,993
Sept. 17..	1,936	62	28:00	4	1,998
Total...	11,788	118	158:17	4	11,906

Total......................	51:00	15,644

Sailing of the Ancon.

The steamship *Ancon* will sail from dock No. 11, Cristobal, on Monday, September 26, at 3 p. m.

LOST—A Kappa Alpha Theta fraternity pin, inscribed "Camilla Stewart, April, 1909, A. Z." Return to Paymaster, Ancon.

OPENING OF SCHOOL.

Children Entitled to Free Tuition—Assignment of Teachers.

The public schools of the Canal Zone will open on Monday, October 3, at 9 a. m.

All children of the Canal Zone, whether of employes or nonemployes, and all nonresident children of employes of the Isthmian Canal Commission are entitled to free school privileges. Patrons desiring railroad passes for their children should apply at this office immediately.

For further particulars call on, or address

FRANK A. GAUSE,
Superintendent of Schools.

Ancon, C. Z., September 13, 1910.

Teachers of the Canal Zone schools are assigned as follows for the school year beginning October 3, 1910:

Ancon—Miss Jessie E. Daniels, principal; Miss Emma Cobban, Miss Clara L. Voyles, Miss Georgia T. Munroe, Miss Mildred O. Bates, Miss Jessie S. Wilson.

Pedro Miguel—Mrs. Gertrude Hoffman, principal; Miss Florence A. Schofield.

Paraiso—Unassigned.

Culebra—Mrs. Mamie Miracle, principal; Miss Lina Tozer, Mrs. Cornelia H. Ellsworth.

Empire—Mrs. Jesse J. White, principal; Miss Alberta Hawley, Miss Mary M. Shea, Miss Helen Daniels, Miss Grace Yarborough.

Gorgona—Miss Annie Irvin, principal; Miss Marion Patterson, Miss Elise Cage; unassigned.

Tabernilla—Miss Jessie Pontius.

Gatun—Carl C. Carr, principal; Miss Ida Boles, Miss Jennie Bogner, E. D. Christopherson; Miss Ena Robb, Miss Hattie Hawley, Miss Elise Stone, Miss Wenonah Whiting.

Cristobal—Miss Odina J. L. Frost, principal; Miss Edith Anderson, Miss Natalie Hine, Miss Edith McIntyre, Miss Jean McGill.

Substitutes—Miss Ida Keys, Miss Grace McCray.

As stated in the manual, all assignments are subject to change when the good of the service requires.

Panama Canal Service Medal Association.

THE CANAL RECORD:

A general meeting of the above association will be held at the hall over the I. C. C. hotel at Gorgona on Sunday, September 25, at 2.15 p. m., for the discussion of matters pertaining to the welfare of the association.

All members and persons entitled to become members are cordially invited to attend. Attention is again called to the fact that the charter membership period closes on October 1, after which an initiation fee of $5 will be collected.

E. F. J. GOLDSMITH, *Secretary.*
P. O. Box 115, Ancon, C. Z.

Ancon, September 19, 1910.

Missing Man.

The American Legation in Panama is in receipt of a letter from Mrs. John Donnley, of 89 Fitzgerald street, Buffalo, N. Y., requesting information as to the whereabouts of her son, John Donnley, who has been away from home eight years. According to the last information to his mother, he was employed by the Isthmian Canal Commission. His mother states that she is old and feeble, and requests that her son write to her.

CHANGES IN SHOPS.

Increase of Work at Gorgona—Cocoli Shop of the Pacific Division Closed.

The effect of Circular No. 343 published in THE CANAL RECORD of August 31, and of Circular No. 349 published on September 7, is to concentrate all manufacture of material for mechanical equipment in the shops of the Mechanical Division at Gorgona and Pedro Miguel. The concentration is made in the interest of economy during the construction of the Canal, and is only temporary, because the water of Gatun Lake will cover the site of Gorgona shops by January, 1914, and the shops at that place will therefore be abandoned before that time. The site for a central machine shop, to be used after the completion of the Canal in making repairs to marine and railroad equipment and to lock operating machinery, will be determined later. Cocoli shop at Miraflores Locks has been closed, but field repair shops will not be abandoned. Steam shovel repairs will continue at Empire shop, as heretofore, and repairs to marine equipment will be made at the Mount Hope and Balboa shops.

The work done at Cocoli shop has been the hostling of locomotives, and light running repairing to Pacific Division equipment in use at Pedro Miguel and Miraflores Locks. The transfer of this work to Pedro Miguel will not necessitate the employment of additional foremen at Pedro Miguel, and it will effect an appreciable saving in the cost of superintendence, because it will make possible the abolition of the Cocoli shop positions of master mechanic, shop foreman, carpenter foreman, and car repair foreman. It is believed that it will also effect a saving in cost of labor, power, lighting, maintenance, and transportation of employes to and from Cocoli. No machinery will be taken out of the Cocoli shop, however, until it is certain that the new plan is more economical. The changes outlined in Circular No. 349, do not involve the abandoning of steam shovel repairs in the field at Miraflores and Pedro Miguel, nor closing the small repair shop at Ancon quarry.

Gray iron castings to the amount of 607,725 pounds were made at Gorgona foundry in August, the largest output for one month since the foundry was opened. The castings included all kinds of work, but the largest orders were caisson seats, culvert liners, and semi-steel washers for anchorage bolts for the locks, and propellers for marine equipment. In the brass foundry also, all records for output were broken in August, the total weight of the castings being 64,691 pounds.

The concentration of mechanical work has already begun to affect the output of Gorgona shops and foundry. In the first ten days of September, 300 manufacturing orders were received. The force has been increased about ten per cent, the number now being 846 white men, including skilled artisans and administrative force, and 1,320 laborers of all kinds, a total of 2,166. Since the first of the month, a night force of 200 men has been kept at work in the machine shop, blacksmith, boiler, and erecting shops, and by this arrangement it is possible to work 16 hours a day on important rush orders without working any artisans overtime.

Death of Col. J. R. Shaler.

Col. James R. Shaler, formerly General Superintendent of the Panama railroad, died at the home of his brother in Ocean City, N. J., on September 7, in the eightieth year of his age. He was appointed Superintendent on the Isthmus in November, 1895, was promoted to General Superintendent in 1898, and left the service in May, 1904. During this period he was in direct charge of all the company's interests on the Isthmus, both railroad and steamship.

Request for Special Trains.

As requests for permission to run Commission equipment over the main line of the Panama railroad are occasionally submitted to the office of the Chairman in incomplete form or too late for action, the following circular is republished for the information of all concerned:

CULEBRA, C. Z., October 9, 1909.

CIRCULAR No. 286:

Employes will hereafter be governed by the following regulations in submitting requests for permission to run Commission equipment over the main line of the Panama railroad:

Requests for permission to run Commission equipment over the main line of the Panama railroad must be submitted in writing to the office of the Chairman at least three days prior to the date on which the train is desired. This is necessary in order to allow sufficient time for forwarding the request to the Panama railroad and receiving reply as to whether it is practicable to grant the permission for the date specified.

Requests should state:

Whether permission has been secured for the use of Commission equipment.

Whether a qualified crew will man the train.

The points between which the train is to be run.

Time of leaving and arriving at terminals, and intermediate points at which train will stop, in order that the despatcher of the Panama railroad may arrange a schedule accordingly.

In all cases qualified crews must be used, and train equipped with flags, markers, torpedoes and fusees.

H. F. HODGES,
Acting Chairman, Isthmian Canal Commission.
Second Vice-President, Panama Railroad Company.

Pistol Championship Matches.

As announced in THE CANAL RECORD of August 17, matches A and B are open only to residents of the Canal Zone, while match P is open to residents of the Republic of Panama also.

Matches A and B will be shot September 18 to 25, inclusive, as annnounced, but match P is extended so that entries may be received if postmarked not later than September 28. Entries should be sent to T. E. L. Lipsey, acting governor, official representative of the U. S. R. A. during the absence of L. D. Cornish, and with them should be enclosed the entrance fee (see below), and it should be stated on what date and at what time contestant desires to shoot.

Match P for the championship of Panama to be shot on any day between October 1 and 8, inclusive, will be shot under the same rules as match A; 50 shots at 50 yards on the standard American target, 8-inch bullseye, 10-ring, 3.36 inches; arm, any revolver within the rules; ammunition, any; the score must be completed within one hour from the time of firing the first shot. No reentries.

Prizes: First—A Colt, 38 cal. New Army revolver, value, $25 U. S. C., which will be given to the winner, has been offered by a Panama hardware company. It will be suitably inscribed if the winner so wishes.

Second—A silver medal suitably inscribed.

Third—A bronze medal suitably inscribed.

The entrance fee has been reduced to $1.50 U. S. currency, and it is hoped that a large number of entries will be received.

The rules referred to above state that the revolver may be of any calibre, with a maximum length of barrel, including cylinder, of 10 inches. Minimum trigger pull 2½ pounds, to be measured just prior to firing, with the barrel held vertically and the pull exerted ⅜ of an inch from the tip of trigger. Sights may be adjustable, but must be strictly open, in front of the hammer and not over 10 inches apart. The position of the contestant shall be standing, free from any support, the revolver being held in one hand with arm extended to be free from body. A new target is supplied for each string of 10 shots and cost is covered by entrance fee. Cost of medals and inscription will be defrayed from balance of entrance fees. Further printed information will be on hand at the range, near the Culebra incinerator.

Fatal Accident on Gatun Labor Train.

John J. Coit, a white American, was killed, and a West Indian negro was seriously injured in an accident to the Gatun-Culebra labor train, near Mamei, on the morning of September 21. About 200 feet from Bridge 47 on the main line of the Panama railroad, engine No. 500, hauling the labor train, ran into a cow. The locomotive left the track and turned over on the south bound main line track. The engineer, John J. Coit, was killed instantly, and the negro fireman sustained serious injuries. The south bound track was clear by 8.45 o'clock in the forenoon.

John J. Coit was 35 years of age, a resident of Los Angeles, Cal., and had been on the Isthmus since July, 1908. He was a locomotive engineer in the employ of the Atlantic Division, and his residence in the Canal Zone was at Culebra. He was unmarried. A sister, Mrs. C. J. Stanton, 418 Solano avenue, Los Angeles, Cal., survives him.

Canal Zone Rifle Club.

THE CANAL RECORD:

All persons interested in military rifle shooting and desirous of becoming members of the Canal Zone Rifle Club, are requested to correspond with the Secretary, Pedro Miguel, C. Z. This club is affiliated with the National Rifle Association of America and purchases its arms and ammunition from the Government. The club holds four shoots annually for members to qualify as marksmen, sharpshooters and experts, as provided for under the rules and regulations of the National Rifle Association. Lapel buttons are furnished members by the association, showing the class in which they qualify. An order for arms and ammunition will be placed in the near future, so send for an application blank for membership as soon as possible.

H. L. BRIDGES, *Secretary.*

Pedro Miguel, September 18, 1910.

Masonic Temple in Colon.

The Panama Railroad Company has been authorized to lease to Sojourners Lodge, No. 874, F. and A. M. of Colon, the lots in that city bounded on the east by Bolivar street, on the north by 11th street, and on the west by Bottle alley, to be used as a site for a Masonic temple. Tentative plans for the building provide for a fireproof structure of concrete, 120 feet long, 90 feet wide, three stories high, at a cost of about $50,000.

Culebra Cut construction trains, running into the Cut north of the summit, began using the incline at Whitehouse on September 16, after several months during which the tracks were not considered safe. A pocket of earth and rock had given way in the incline and it was necessary to dump hundreds of carloads of rock before a stable roadbed could be procured.

CANAL WORK IN AUGUST.

Monthly Report of the Chairman to the Secretary of War.

CULEBRA, C. Z., September 15, 1910.

The Honorable the Secretary of War,
Washington, D. C.

Sir: I have the honor to submit the following report of operations on the Isthmus for the month of August, 1910:

Department of Construction and Engineering.

The following table summarizes the principal items of construction work accomplished by the Atlantic, Central and Pacific Divisions during the month:

Item.	Unit.	Atlantic.	Central.	Pacific.	Total.
Work excavation, dry	Cubic yards	99,737	1,612,118	30,337	1,742,192
Work excavation, wet	Cubic yards	508,829	....	506,969	1,015,798
Total work excavation	Cubic yards	608,566	1,612,118	537,306	2,757,990
Plant excavation, dry	Cubic yards	32,602	278	....	32,880
Plant excavation, wet	Cubic yards	4,592	....	18,000	22,592
Total plant excavation	Cubic yards	37,194	278	18,000	55,472
Total Canal excavation	Cubic yards	645,760	1,612,396	555,306	2,813,462
Material placed in dams	Cubic yards	641,616	....	10,898	652,514
Concrete laid	Cubic yards	89,259	....	57,294	146,553
Explosives used	Tons (Gross)	97.02	191.30	27.82	316.14
Rock drilling	Feet	96,122	394,916	34,371	525,409
Track removed	Miles	....	9.60	....	9.60
New tracks laid	Miles	3.62	16.92	2.54	23.08
Rock crushed	Cubic yards	74,925	279	61,092	136,296
Cement used	Barrels	87,046	90	59,409	146,545
New roads built	Miles	....	....	....	....
Water mains laid	Feet	14,392	2,121	751	17,264
Sewers laid	Feet	....	258	1,714	1,972
New drains and ditches dug	Feet	....	362	450	812
Average daily force	....	8,541	9,448	4,006	21,995
Average rainfall	Inches	16.13	10.08	10.95	11.61

Atlantic Division.

GATUN LOCKS.

Concrete Work—The concrete work for August showed an increase of 1,685 cubic yards over the output for July. The bucket measurement exceeded the place measurement by 52½ cubic yards. The total amount of concrete placed was 85,686 cubic yards, of which 73,105.5 cubic yards were laid in the upper lock, and 12,580.5 cubic yards in the middle lock. The total amount of concrete placed to September 1, 1910, was 683,251.5 cubic yards, of which 652,513.5 cubic yards were laid in the upper lock, and 30,738 cubic yards in the middle lock. The concrete work was 33.4 per cent completed.

OPERATION OF THE PERMANENT AND AUXILIARY CONCRETE CONSTRUCTION PLANTS.

	Permanent Plant.	Auxiliary Plant.
Average number of bours per day worked, per strand of cableway or per derrick, laying concrete and large stone (actual working time)	9.20	7.55
Average number of mixers per day	6.00	2.00
	Cu. Yds.	*Cu. Yds.*
Average hourly output per mixer (actual working time)	28.01	50.00
Average amount of concrete and large stone laid per hour per strand of cableway or per derrick (actual working time)	27.93	....
	Cu. Yds.	*Cu. Yds.*
Large rock laid	5,234.5	2,817
Concrete laid	54,964.0	22,723
Total	60,198.5	25,540

Excavation—Shovel excavation during the month was carried on in the lower chamber only, 89,146 cubic yards of material being removed, increasing the total to 5,212,896 cubic yards. The excavation, including excavation for the approach walls, was 90 per cent completed, and the culvert excavation in the middle chamber was 85 per cent completed.

Receiving and Issuing Material—The receipts of material during the month were satisfactory, except in the case of sand, where the consumption exceeded the receipts by 3,090 cubic yards.

Power Plant—The operation of the power plant during the month was satisfactory.

Iron and Steel Work—The setting of the quoin posts and anchorages in the intermediate gates of the upper lock was continued, and the setting of the cylindrical valves in the upper lock was completed.

Back Fill—The back filling was continued during the month, 18,918 cubic yards being placed, increasing the total to 22,376 cubic yards.

GATUN DAM.

Construction during the month increased the total fill by 641,616 cubic yards, making the total amount in place 9,765,400 cubic yards.

Hydraulic Fill—The dredges increased the hydraulic fill by 406,606 cubic yards, which made the total hydraulic fill in place at the close of the month 4,521,820 cubic yards.

Dry Fill—The material received from the Central Division, the Locks, the Spillway and the plant excavation, amounting to 235,010 cubic yards, was placed on the north and south toes of the Dam east and west of the Spillway, making the total dry fill in place 5,243,580 cubic yards.

GATUN SPILLWAY.

Concrete—The construction of the east and west approach walls was continued, 3,573 cubic yards of concrete being placed, which increased the total to 90,184 cubic yards.

Excavation—Excavation during the month for the forebay and for the foundations to the approach walls amounting to 12,481 cubic yards, increased the total Spillway excavation to 1,457,963 cubic yards.

Cut-off Levee—The construction of the levee from Spillway Hill to Mindi Hill was continued, 17,591 cubic yards being placed, making the total at the end of the month 163,212 cubic yards.

HARBOR AND CHANNEL SECTION.

Dredging from the Ocean to Mindi—Six dredges removed from the Canal prism 464,265 cubic yards of earth, and 44,564 cubic yards of rock. In addition, the dredge *Chagres* removed 1,104 cubic yards of earth and 833 cubic yards of rock at Pier 11, and pipe line dredge *No. 4* removed 4,592 cubic yards of earth from the French canal. On August 31st, 38 feet of water could be carried from zero to mile 4 plus 2,000 feet; 26 feet to mile 4 plus 2,300 feet; 30 feet to mile 5 plus 00 feet; 20 feet to mile 5 plus 1,000 feet, and 15 feet to mile 5 plus 2,550 feet, the end of the cut.

PORTO BELLO.

Performance of rock crusher plant:

	Hours.
Length of working day	16.00
Average number of hours per day (actual working time)	11.18
	Cu. Yds.
Average number of cubic yards crushed per hour of working day	173.44
Average number of cubic yards crushed per working hour	248.25
Total output for the month	74,925.00

SAND, STONE AND CEMENT SERVICE.

In connection with this service, plant steamed about 10,518 miles, handled 692 barges, and carried about 2,359 passengers.

COLON BREAKWATERS.

Trestle work on the breakwater was commenced August 9, and at the end of the month 754 linear feet had been completed. Survey work was continued, and a large amount of material unloaded. The pipe line was extended to Toro Point, and the distribution system begun.

NOMBRE DE DIOS.

During the month 53 barge loads, containing 29,022 cubic yards of sand were shipped to Gatun.

MUNICIPAL ENGINEERING.

The usual work of maintenance of roads, waterworks and sewers, pumping stations, etc., was satisfactorily performed.

Central Division.

During the month of August the total amount of material excavated in the Central Division was 1,612,396 cubic yards, of which 434,775 cubic yards were classified as earth, and 1,177,621 cubic yards as rock. Of this quantity, 1,602,738 cubic yards were removed by steam shovels, 4,536 cubic yards by contract, 278 cubic yards by hand, and 4,844 cubic yards were blasted and washed out by high water. Of the total, 1,607,738 cubic yards consisted of primary excavation for the Canal prism, 4,380 cubic yards for the Obispo Diversion, and 278 cubic yards for tracks and work not useful to the completed Canal.

The daily average number of steam shovels at work during the month was 44.63, and the total number of shovel days was 1,205, as compared with 42.84 shovels at work during the month of July, with 1,071 shovel days.

For comparison with the work done by steam shovels during the corresponding month of the previous year, the following table has been prepared:

Period.	Excavated by shovels.	Classification of material.		Av. No. of shovels at work.	W'kg days.	Av. yards per shovel day.
		Rock.	Earth.			
	Cu. Yds.	*Cu. Yds.*	*Cu. Yds.*			*C. Y.*
1909: Aug.	1,376,386	1,035,515	340,871	46.73	26	1,132.9
1910: Aug.	1,602,738	1,174,446	428,292	44.63	27	1,330.1

Rainfall at Empire: 1909, 7.20 ins.; 1910, 10.08 ins.

The above table shows the average output per shovel day to be 17.41 per cent greater in

August, 1910, than in the corresponding month of the previous year.

The total amount of material excavated from the prism in the Culebra section of the Central Division in August, 1910, was 1,377,714 cubic yards, being the highest record in that section for the month of August, the previous high record having been in August, 1908, when 1,173,800 cubic yards were removed.

The total estimated amount of material to be removed in the Central Division is 97,125,018 cubic yards, and up to September 1, 1910, 61,747,577 cubic yards had been removed, leaving 35,377,441 cubic yards to be removed in order to complete all excavation in the Central Division. From these figures it will be seen that 63.58 per cent of all excavation in the Central Division had been completed up to the close of the month of August, and 36.42 per cent remained unfinished. Considering the two sections which compose the Central Division, the excavation completed and that to be completed at the close of August operations were as follows:

CULEBRA SECTION.	*Cubic Yards.*
Completed	51,826,590
To be completed	32,360,134
CHAGRES SECTION.	
Completed	9,920,987
To be completed	3,017,307

From the above figures it will be seen that the Culebra section, locally known as Culebra Cut, was 61.57 per cent completed, with 38.43 per cent to be completed; the Chagres section was 76.65 per cent completed, with 23.35 per cent to be completed.

During the month the following quantities of material were hauled from the Canal prism and dumped in the embankment for the new roadbed for the relocation of the Panama railroad: 7,841 cubic yards in the vicinity of Pedro Miguel; 10,392 cubic yards between Caimito and Gamboa. The total at the close of the month used for this purpose was 3,713,268 cubic yards. During the month, 147,420 cubic yards of rock and earth from the Culebra Cut were transported to Gatun for use in the construction of the Dam, making the total at the close of the month for this purpose 1,831,617 cubic yards.

The daily average number of laborers at work on the whole division during the month was 8,562, the average number of gold men being 886.

Pacific Division.

DISTRICT NO. 1—LOCKS AND DAMS.

The total excavation during the month amounted to 30,337 cubic yards. During August no dry filling was added to the prism of the west dam at Pedro Miguel, leaving the total amount in place at the end of the month 260,852 cubic yards, as previously reported; 2,360 cubic yards of dry filling were placed in back fill, increasing the total to 15,943 cubic yards. At Miraflores, 10,898 cubic yards of dry filling were added to the toe; no hydraulic filling was added to the core of the west dam, making the total at the close of the month 536,089 cubic yards, and 138,587 cubic yards, respectively. During the month, 6,355 cubic yards of dry filling were placed in back fill, increasing the total to 133,545 cubic yards.

PEDRO MIGUEL HANDLING PLANT.

The operation of the handling plant at Pedro Miguel continued with few interruptions during the month. The output from the plant was increased 20 per cent. One temporary mixer at the south end of the west storage trestle, in the forebay, was installed, and work was commenced on the temporary mixing plant at the south end of the east storage trestle.

Concrete Work—The concrete work for August showed an increase of 9,800 cubic yards over the output for July. The total amount of concrete placed during the month was 51,264 cubic yards; 28,579 cubic yards being laid in the center wall, 559 cubic yards in the head wall, 17,555 cubic yards in the side walls, and 4,571 cubic yards in the floors.

CHAMÉ SAND EXCAVATION.

During the month approximately 45,600 cubic yards of sand were obtained.

HYDRAULIC EXCAVATION PLANT.

The erection of the Agua Dulce pumping station for the hydraulic excavation was continued, and was 98 per cent completed at the close of the month.

BALBOA TERMINAL HARBOR.

Boring on the site of the proposed terminal harbor at Balboa was continued during the month.

DISTRICT NO. 3—MUNICIPAL AND SANITARY ENGINEERING.

The maintenance and operation of the various municipal plants was continued satisfactorily.

Rio Grande Reservoir—The Venturi meter at the Rio Grande reservoir registered an outflow of 105,942,000 gallons of water during the month, or a daily average of 3,417,484 gallons. The elevation of the water in the reservoir on August 31 was 235.99 feet.

Cocoli Pumping and Filtration Plant—During the month, 19,076,000 gallons of water were delivered to the Rio Grande main.

Panama Improvements—During the month, the work on the new improvements in the city of Panama progressed satisfactorily.

Pedro Miguel Suspension Bridge—The suspension bridge over the Pedro Miguel River was completed.

DISTRICT NO. 4—ANCON QUARRY.

Performance of rock crusher plant:

	Hours.
Length of working day	9.00
Average number of hours per day (actual working time)	6.80
	Cu. Yds.
Average number of cubic yards crushed per hour of working day	251.40
Average number of cubic yards crushed per working hour	332.67
Total output for the month	61,092.00

Relocation of Panama Railroad.

During the month, 247,582 cubic yards of material were excavated, making the total excavation at the close of the month 4,342,328 cubic yards, and 313,675 cubic yards of material were placed in embankment, making the total at the close of the month 9,457,865 cubic yards.

During the month, 838 linear feet of temporary trestle were driven, and the work of constructing bridges and culverts was continued. One thousand linear feet of 90-pound permanent track were laid during August, making the totals at the close of the month, 158,458 linear feet of 70-pound track and 18,997 linear feet of 90-pound track.

The total force averaged 1,924 men during the month.

Quartermaster's Department.

Labor—The labor situation continued satisfactory.

Sanitation—The force on grass cutting was reduced during the month, and a further reduction will be made during September.

Material and Supplies—During the month, 38,953 tons of material were received, of which 32,930 tons were transported on Panama railroad steamers. More than three million board measure feet of yellow pine and Douglas fir lumber, 1,358 cross-ties, and 2,847 piles were received. The total value of the material received during the month was $862,833.62.

Subsistence Department.

The operation of the European laborers' messes, the colored laborers' kitchens, and the line hotels showed a net profit of $2,915.89; the operation of the Hotel Tivoli showed a net loss of $1,188.03, and there was a net profit on restaurants and penitentiary of $172.30. The net profit on subsistence operations was $1,360.33.

Department of Civil Administration.

COURTS.

Twenty-three civil and 36 criminal cases were disposed of in the Circuit Courts of the Canal Zone, and 168 civil and 626 criminal cases in the District Courts.

DIVISION OF POSTS, CUSTOMS AND REVENUES.

Money order sales for August amounted to $424,465.86, and the fees to $1,836.25. Receipts from stamp and card sales and newspaper postage aggregated $6,399.25. The total collections of the division were $15,857.79, and the collections on account of court fines, costs and fees, $3,593.89.

During the month, 21 vessels entered at and 21 vessels cleared from the port of Ancon, and 24 vessels entered at and 23 vessels cleared from the port of Cristobal.

DIVISION OF POLICE AND PRISONS.

The number of arrests during the month was 618, of whom 579 were men and 39 women, 47 nationalities being represented.

Eleven convicts were committed to the penitentiary, and 8 were discharged, and on August 31st, 143 convicts were confined in the penitentiary. The cost of guarding and subsisting the convicts was $2,618.41, and the value of the work performed by them was $2,231.45. Their services were utilized in the construction of the Corozal-Pedro Miguel road.

DIVISION OF FIRE PROTECTION.

Nine fires were reported in the Canal Zone during the month. The estimated value of property involved in the Zone was $45,000, and the damage was $5 to Government property, and $15 to private property.

DIVISION OF PUBLIC WORKS.

In the city of Panama the average daily consumption of water was 1,157,795 gallons, and in Colon 857,857 gallons.

The usual inspection and maintenance work of this division was performed during the month.

Department of Sanitation.

The total number of deaths from all causes among employes during August was 55, thirty-one being from disease and 24 from external causes. The annual average per thousand from all causes was 13.04; from diseases 7.35; external causes 5.69. The death rate among employes for the month of August of previous years since American occupation was as follows:

1904	13.93
1905	19.97
1906	62.12
1907	27.59
1908	11.39
1909	10.28

The annual average per thousand of deaths in the cities of Panama and Colon, and in the Canal Zone, was 19.85, as compared with 16.20 for August, 1909; 26.65 for August, 1908; 33.75 for August, 1907; and 64.12 for August, 1906.

For diseases, the annual average per thousand of employes for the month was as follows: White, 5.28; colored, 8.11. For August, 1909, the average was: White, 6.19; colored, 6.10.

Among employes there were 4 deaths from malarial fever; 7 from lobar pneumonia; 2 from tuberculosis of the lungs; 2 from other forms of tuberculosis; 1 from tetanus, and 15 from other diseases.

No cases of yellow fever, smallpox or plague originated on or were brought to the Isthmus during the month.

Respectfully,
GEO. W. GOETHALS, *Chairman.*

PERSONAL.

COMMISSARY DEPARTMENT.

The hours during which commissaries are open are as follows:

Cristobal and Culebra, 8 a. m. to 12.30 p. m.; 2 p. m. to 7 p. m.

All other commissaries, 8 a. m. to 1 p. m.; 3 p. m. to 7 p. m.

Retail prices of cold storage provisions for the week beginning September 20:

FRESH MEATS.

	Price.
Mutton—Stewing, per pound	7
Shoulder, neck trimmed off, (4 lbs. and over), per pound	10
Entire forequarters (not trimmed) 10 pounds and over, per pound	9
Legs, (8 to 10 pounds), per pound	19
Cutlets, per pound	20
Short cut chops, per pound	22
Lamb—Stewing, per pound	7
Entire forequarters, neck trimmed off, per pound	10
Legs (5 to 8 pounds), per pound	24
Chops, per pound	26
Cutlets, per pound	26
Veal—Stewing, per pound	10
Shoulder for roasting (not under 4 pounds), per pound	15
Loin for roasting, per pound	19
Chops, per pound	22
Cutlets, per pound	26
Pork cuts, per pound	22
Beef—Suet, per pound	2
Soup, per pound	5
Stew, per pound	9
Corned, per pound	12, 14, 16
Chuck roast, (3 pounds and over), per pound	13
Pot roast, per pound	15
Rib-roast, second cut (not under 3½ pounds), per pound	18
Rib roast, first cut (not under 3 pounds), per pound	20
Sirloin roast, per pound	21
Rump roast, per pound	21
Porterhouse roast, per pound	21
Steak, Chuck, per pound	14
Round, per pound	15
Rib, per pound	20
Sirloin, per pound	21
Porterhouse, per pound	21
Rump, per pound	21
Tenderloin, per pound	24

MISCELLANEOUS.

	Price.
Livers—Beef, per pound	10
Calf, each	60
Half, each	30
Sausage—Pork, per pound	17
Bologna, per pound	14
Frankfurter, per pound	14
Leberwurst, per pound	14
Sweet bread—Veal, per pound	1.20
Beef, per pound	25
Eggs, fresh, dozen	31
Eggs, fresh, ½ dozen only	17
Bluefish, fresh, per pound	16
Cod, fresh, per pound	10
Halibut, fresh, per pound	13

POULTRY AND GAME.

	Price.
Chickens—Fancy Roasting, large, each	1.50
medium, each	1.30
Fowls, each	70, 82, 93, 1.04, 1.15
Ducks, large, each	1.50
medium, each	1.30
Broilers, each	75
Turkeys, per pound	30
Squabs, each	35
Capons, each	2.50
Geese, fatted, each	2.60
Pheasants, each	70, 1.00
Partridges, each	50
Grouse, each	85

CURED AND PICKLED MEATS.

	Price.
Ham—English York Cut, per pound	30
German, Westphalia, per pound	36
Sugar cured, per pound	24
Sugar cured, sliced, per pound	27
Half, for boiling, per pound	25
Boiled, per pound	32
Hocks, per pound	‡18
Bacon—Breakfast, whole piece, per pound	30
Breakfast, sliced, per pound	31
Beef, salt, family, per pound	12
Pork, salt, family, per pound	16
Ox tongues, each	80
Pigs' feet, per pound	10
tongues, per pound	16
Mutton, mess, per pound	7

DAIRY PRODUCTS.

	Price.
Butter—Creamery special, per pound	40
Cheese—Roquefort, per pound	38
Philadelphia Cream, cake	10
Young America, per pound	22
Swiss, per pound	26
Edam, each	1.00
Camembert, in 2-pound tins, tin	38
Camembert, in ½-pound tins, tin	14
Neufchatel, each	6
Gouda, per pound	34
Parmesan, per pound	35
Milk, Briarcliff, bottle	**25
Buttermilk, bottle	**15

VEGETABLES AND FRUITS.

	Price.
Beets, per pound	3½
Celery, per head	6
Carrots, per pound	3½
Cabbage, per pound	3½
Cucumbers, per pound	5
Lettuce, per head	5, 7, 10
Onions, per pound	3½
Potatoes, white, per pound	3½
sweet, per pound	2½
Rhubarb, per pound	6
Squash, per pound	4
Tomatoes, per pound	8
Turnips, per pound	3
Yams, per pound	3½
Apples, per pound	5
Canteloupes, each	*7
Grapes, per pound	8
Lemons, dozen	24
Limes, per 100	80
Oranges, per dozen	12
Peaches, per pound	8, 10
Pears, per pound	*8
Plums, per pound	10
Watermelons, each	40

Supplies for Canal Work.

The following steamers with supplies for the Isthmian Canal Commission arrived at the ports of Cristobal and Colon during the week ending September 17, 1910:

Massachusetts, September 11, from New York, with 27,346 barrels cement for Atlantic Division; 114,610 bags cement for Pacific Division.

Sarnia, September 15, from New York, with one 75-ton wrecking crane for Atlantic Division; 200 barrels crude carbolic acid for manufacture of larvacide.

Turrialba, September 15, from New Orleans, with 295 pieces oak lumber, 4,800 pieces car stakes, 3,800 bales hay, 275 pieces switch stands, 275 pieces switch rods, 22 pieces castings, 2,138 pieces yellow pine lumber, 274 barrels bricks for stock; 155 tons dump car parts for Cristobal shops (for erection).

Metapan, September 16, from New York, with 13 cases files, 3,510 bags oats, 15 cases rubber hose for stock; 15 pieces casting for Central Division; 74 cases triple tape fuse for stock.

Allianca, September 16, from New York, with 15 barrels starch for Ancon hospital; 10 cases books for Department of Civil Administration; 237 pieces car couplers for Mechanical Division; 27 pieces casting for Central Division; 23 barrels fire brick, 2 cases fire brick, 12 cases electrical material for Pacific Division; 40 cases springs, 100 bundles brake shoes for Mechanical Division; 9 barrels brick for Atlantic Division; 22 barrels sea coal facing, 75 cases soap, 13 cases machinery, 100 bundles clothes hampers, 1,835 pieces steel castings, 36 cases tin plate, 31 cases rubber boots, 40 cases metal polish for stock; and a miscellaneous cargo, the whole consisting of 2,733 pieces, weighing 258 tons.

Stages of the Chagres.

Maximum heights of the Chagres River for the week ending midnight, Saturday, September 17, 1910. All heights are in feet above mean sea level.

Ancon, Canal Zone,
Isthmus of Panama.

No communication, either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.

NOTES OF PROGRESS.

Testing Stoney Gate Valves.

Tests of the Stoney gate valves that will control the flow of water through the culverts of the locks will be made at Gatun. Two concrete piers have been erected on the floor of the west chamber of the upper locks on which the valves will be erected in horizontal position for the first four tests. The piers are about six feet high permitting free access for the inspection of the roller trains. The gates are of steel and are 10 feet 8 inches wide by 18 feet 10 inches high, made to close a hole 8 by 18 feet. The points to be determined by the first four tests are:

(1) The friction developed by the roller trains when the valve is moved under a superimposed load equivalent to the water pressure against the valve under operating conditions. (2) The deflection of the valves under loads equivalent to operating pressures and the effect of the deflection upon the rollers to determine whether it will be necessary to provide rocker bearings on ends of valves. (3) The effect of an eccentric pull on the gates to simulate the conditions if the valve stem is not attached to the gate on the axis through the center of gravity. (4) The effect of wear on the rollers and roller train tracks for continuous operation under a working load.

Points 1 to 4 will be determined by assembling the valve and roller trains in a horizontal position and loading the valve with pig iron or rails in increasing amounts to equal the pressure due to varying water heads up to 60 feet. A wire rope run through each end of the gates through snatch blocks to a hoisting engine will permit of the valve being operated at will. After points Nos. 1, 2 and 3 are determined the valve will be moved backward and forward through the full range of 36 feet at the rate of 10 feet per second for several days, the valve to be loaded with 270 tons, the equivalent of a 60-foot water head on a surface 8 by 18 feet.

Three other tests will be made to determine: (5) The efficacy of the sealing devices, particularly the spring side seals, under water pressure, and the water tightness of the uncaulked skin plates and rivets. (6) The effect on the spring side seals when gate is operated. (7) The initial force required to break the water seals and open the valves about one foot. In test No. 5 it is proposed to install the two sets of valves in the two upper valve chambers in the center wall culvert and to fill the culvert between the valves with water and observe the leakage under varying heads. After the valves have been installed, and prior to filling the culvert with water, point 6 can be determined by raising and lowering the valve a few times. Test 7 will be deferred until the operating machinery has been installed.

Excavation in Central Division.

On September 23rd, 49 shovels in the Central Division excavated 68,878 cubic yards of rock and earth in a working day of eight hours, an average per shovel of 1,406 cubic yards for the day. During this time the shovels were under steam 392 hours and were actually at work 276 hours and 20 minutes, and waiting for cars 83 hours and 45 minutes, the rest of the time being lost in mining, cleaning track, repairing shovels, cleaning dippers, etc. The number of shovels working and the amount of material excavated in the different construction districts on this date were as follows:

	Shovels	*Cu. Yds.*
Empire construction district.......	20	26,548
Culebra construction district.......	18	28,918
Chagres construction district.......	9	11,100
Pedro Miguel construction district..	2	2,312

This material was loaded on 2,494 Lidgerwood flats, 326 large Western and Oliver dump cars, and 1,595 small Western and Oliver dump cars.

The amount of material disposed of at the principal dumps on this day was as follows:

	Cu. Yds.
Tabernilla........................	7,980
P. R. R. relocation...............	9,550
Miraflores........................	12,540
Balboa............................	16,530
Gatun.............................	6,816

The remainder of the material was mostly disposed of in small dumps bordering the Chagres River.

On September 17th, 21 shovels in the Empire construction district of the Central Division excavated 26,611 cubic yards, principally rock, in the working day of eight hours, an average per shovel of 1,267 cubic yards. During this period, the shovels were under steam 168 hours and were actually at work 129 hours and 15 minutes, and waiting for cars 18 hours. The other delays were due to mining, cleaning track, repairing shovel, moving back, etc.

Feeding Calfalfa at the Corrals.

A shipment of nine tons of calfalfa for feeding in the Commission corrals at Ancon and Culebra was received from San Francisco on the steamer *City of Para*, which arrived at the port of Balboa on September 18. Calfalfa is a meal made of finely ground alfalfa and is used as a feed for horses and cattle. A trial shipment was received at the Ancon corral some time ago and gave satisfactory results. It is exceedingly nutritive, and is fed to the animals in the corral by wetting and mixing it with the regular feed of oats. Its cost is about $19 per ton.

Boiler Efficiency With Oil As Fuel.

Tests have been made recently at the Las Cascadas air compressor plant and at the Mount Hope pumping station to determine the economy and efficiency of the boilers, with California crude oil as fuel. These tests are similar to those made at all the large boiler plants in the Canal Zone, a summary of which was published in THE CANAL RECORD of June 8, 1910.

At Las Cascadas, the test was made on six return fire-tube boilers, and consisted of two trials of 7½ and 9 hours, respectively. The first trial was made while the plant was operating under normal running conditions, while during the second, an attempt was made to increase the economy and efficiency by decreasing the amount of air supplied to the furnace for combustion, closer regulation of the oil and steam used by the burners, and by operating the boilers at their full rated horsepower. The second trial showed an economical adjustment of the burners (two to each boiler), which was verified by the high evaporation of water per pound of combustible, and very little improvement could therefore be made in this respect. The increase in economy was obtained by decreasing the amount of air supplied to the furnace for combustion, by closing the ash pit doors and dampers, and by operating the feed water pump at a constant speed, keeping about one and one-half gages of water in the boilers throughout the test. Some results of the test are as follows:

	Trial 1.	Trial 2.
Horsepower developed.........	1,442.58	1,507.82
Equivalent evaporation from and at 212 degrees F. per pound of oil, ...lbs.	13.931	14.404
Equivalent evaporation from and at 212 degrees F. per pound of combustible,..............lbs.	14.154	14.635
Cost of fuel for evaporating 1,000 pounds of water under observed conditions............	$0.2528	$0.2437
Cost of fuel for evaporating 1,000 pounds of water from and at 212 degrees F...............	$0.2365	$0.2287

At Mount Hope the test was made on one locomotive type boiler, the first trial being to determine the economy and efficiency under normal running conditions. A comparative trial was then made for the same length of time (16 hours), to see if an increase in economy could be obtained by decreasing the amount of air supplied to the furnace for combustion, carrying a boiler pressure of about 80 pounds gage, 1½ gages of water, and by closer regulation of the oil and steam used by the oil burners. The results of the

NOTES OF PROGRESS.

(*Continued.*)

second test show that a considerable increase over the first test, both in efficiency and economy, was obtained, principally by decreasing the supply of air to the furnace, close regulation of the oil burners, and carrying a higher boiler pressure. The results for the test were as follows:

	Trial 1.	Trial 2.
Horsepower developed.........	77.96	86.87
Equivalent evaporation, from and at 212 degrees F., per pounds of fuel, as fired, ...lbs.	10.75	13.11
Equivalent evaporation, from and at 212 degrees F., per pound of combustible,.....lbs.	10.99	13.40
Cost of fuel for evaporating 1,000 pounds of water under observed conditions............	$0.3365	$0.2759
Cost of fuel for evaporating 1,000 pounds of water from and at 212 degrees F...............	$0.3064	$0.2513

Building Improvements.

The addition to the Empire schoolbuilding was begun on Friday, September 23, and the work will be advanced as rapidly as possible. The improvements will not be completed prior to the opening of school on October 3, but the plans for beginning school work on that date will be carried out. It is proposed to use the old part while building operations are going on.

The work of converting building No. 2 at Miraflores, formerly a French labor barrack, 34 by 50 feet in size, into a commissary building is in progress. It will be ready for occupancy in about three weeks.

The construction of an extension to the car repair shed at Pedro Miguel was begun this week. It will be 286 feet long by 36 feet wide.

Lock Building in Pacific Section.

A new record was established in the locks of the Pacific Division last week, when 13,390 cubic yards were laid at Pedro Miguel and 5,048 cubic yards at Miraflores, a total of 18,438.

The auxiliary plant at Miraflores consists of eight concrete mixers, two 2-cubic yard, five ½-cubic yard, three of which were recently received from the States, and one ⅓-cubic yard. Two of the ½-yard mixers are now in the shop undergoing repairs. A part of the output of the 2-cubic yard mixers is used in the center wall construction and is carried into the lock in a Western dump car, eight yards at a time. The remainder of the concrete from these mixers is carried in buckets to where the east berm crane can dump it into the east side wall. Two of the small auxiliary mixers are situated near the east side of the forebay, close enough to the edge of the lock to permit the output being sent down a chute into the head wall. As soon as the work at that point is completed they will be removed to a similar position near the west side of the forebay to build the head wall of the west chamber. The other small mixers are employed in extending the floor and culvert section in the east chamber.

The east head wall is nearly finished; a section of the east side wall is ready for the culvert forms, and a piece of the batter or foundation section of the center wall is in place. Before operations on the west side wall can be begun, a sloping ledge of rock and earth extending along the west chamber will have to be removed, and steam shovels will be set at this work some time during the coming month. This will necessitate taking up the construction track that now extends along this ledge down into the lock, but a new track into the lock directly out of the north forebay, will be laid.

The record of concrete laid at the Miraflores Locks for each of the six 8-hour working days in the week ending September 24, and the total to that date inclusive, follows:

Date	Auxiliary Plant.				
	½-Cubic yard mixers.	⅓-Cubic yard mixer.	2-Cubic yard mixers.	Large stone.	Total.
	Cu. Yds.	Cu. Yds.	Cu. Yds.	Cu Yds	Cu. Yds.

Concrete in Gatun Locks.

The record of concrete laid in Gatun Locks by the construction plant of eight mixers and four cableways, and the auxiliary plant of two mixers, during the week ending September 24, and the grand total to that date, follow:

Date.	Concrete placed.	Large stone.	Hours worked.	No. of mixers	Total.
	Cu. Yds.	Cu. Yds.			Cu. Yds.
Sept. 19	2,798	333	90:30	8	3,131
Sept. 20	2,572	267¾	88:00	8	2,839¾
Sept. 21	2,706	303	96:00	10	3,009
Sept. 22	2,754	370½	96:20	8	3,124½
Sept. 23	2,976	323¾	98:00	8	3,299¾
Sept. 24	2,186	232¼	74:40	8	2,418¼
Total.	15,992	1,830¼	543:30	......	17,822¼
Previously reported	....	....	....	......	727,413¾
Grand total..	....	....	....	......	745,235½

The construction plant was shut down on September 24, from 7.18 to 9.44 a. m., and the auxiliary plant from 7.05 to 9.45 a. m., on account of a lack of water due to a break in the main.

No more assignments will be made to the bachelor quarters in the Tivoli section, Ancon, known as house No. 70, in view of the proposed conversion of the building into family quarters.

NEW STEAMSHIP SERVICES.

New Line Between San Francisco and Balboa, and New Service of Old Line.

A new line of steamers will begin a fortnightly service between San Francisco and Balboa (Panama), with San Pedro (Los Angeles) as a port of call, on October 1, when the first vessel will sail from San Francisco. This is due at Balboa on October 15. The ships will be operated by the California and Atlantic Steamship Company, Bates and Chesebrough' agents, San Francisco.

The Panama Railroad Company has granted to the new line regular through billing privileges on coastwise traffic on the same terms and conditions as those held by the Pacific Mail Steamship Company. The principal concessions thus made are 70 per cent of the through freight rate on coastwise traffic, and the waiving of wharfage, craneage, lighterage, and basin charges at Balboa on such traffic. Coal will be sold the ships at Balboa at the cost price delivered in Colon, plus $2.25 freight charge per ton for haulage across the Isthmus.

The steamships chartered for the Pacific service are the *Mackinaw*, *George W. Fenwick*, and *Stanley Dollar*, all steel, single screw steamers. The *Mackinaw* will be equipped with cold storage space for 200 tons, with the expectation that arrangements may be made to supply California fruits and vegetables to the Isthmian Canal Commission.

In order that the ships on the Pacific may not have to depend entirely on the Panama railroad ships for carrying freight from the States to Colon, the steamer *San Mateo* has been chartered by the new company to carry freight from Philadelphia and New York to Colon, and returning, to take and deliver freight at New Orleans and Charleston. The itinerary will take 45 days.

The Pacific Mail Steamship Company will establish a direct freight service between San Francisco and Balboa with sailings from both ports every 15 days. The first ship in this new service will leave San Francisco on September 30, and leave Balboa on October 23. The present service, with calls in Central America and Mexico, will be continued with ships sailing every ten days.

An article outlining an improvement in terminal facilities at Balboa was published in THE CANAL RECORD of September 14. These improvements will be hastened as much as possible in order that the increased business at Balboa may be handled expeditiously. The remodeling of the steel pier and the installation on it of better cranes will be begun at once, and the new cranes will be contracted for in such time that they may be installed as the work on the pier advances. Work on the concrete dock that is to be constructed south of the present sand dock will be pushed as much as possible, but it is not likely that it can be completed within nine months.

Porto Bello Rock Crusher.

A statement of the work done at Porto Bello crusher, by days, for the week ending September 24, follows:

Date.	Hours worked.	Cubic Yards.
September 19..................	6:45	2,091

September 22..................	8:02	2,976
September 23..................	9:35	2,843
September 24..................	8:37	3,508
Total........................	51:32	16,819

ARREST AND BAIL.

Uniform Practice Adopted by the District Courts.

A uniform practice in the issuance of warrants of arrest and in the admission of defendants to bail was agreed upon by the district judges in conference with the Head of the Department of Civil Administration on September 10. In order that the rules may be carried out expeditiously telephones have been placed in the houses and offices of the district judges giving direct communication with the police stations. The rules follow:

(1) In all misdemeanor cases in which the district courts have original jurisdiction, when the arrest is by warrant, said warrant shall state the bail which may be given by defendant, or the cash deposit in lieu thereof which he may make to secure his appearance.

(2) In misdemeanor cases in which the district courts have original jurisdiction, when the arrest is without a warrant, between the hours of 6 a. m. and 10 p. m., if the defendant expresses a desire to be admitted to bail, the police officer responsible for his detention shall immediately communicate with the district judge of the district giving the nature of the alleged offense, and the district judge shall immediately thereupon fix the amount of the defendant's bail, and direct in what manner same may be taken. If upon any arrest without a warrant on a misdemeanor charge between the hours of 6 a. m. and 10 p. m., the district judge cannot be located, and upon any arrest upon a misdemeanor charge without a warrant between the hours of 10 p. m. and 6 a. m., the bonded police officer in charge of the station where the defendant is held is authorized to accept from the defendant cash deposit in lieu of bail in said case, to insure defendant's appearance before the proper district judge at the next sitting of the district court, according to the classification of misdemeanor offenses and bail thereon as follows:

Misdemeanor.	*Bail may be taken in sum not exceeding.*
Assault	$ 25
Assault and battery	125
Carrying concealed weapons	50
Cruelty to animals	50
Disorderly conduct	50
Disturbing the peace	50
Intoxication	25
Intoxication and disorderly conduct	125
Petit larceny	125
Lewd and lascivious cohabitation	25
Loitering	10
Malicious mischief	125
Selling liquor without a license	125
Unlawful possession of weapons	10
Carrying abroad weapons without permit	10
Vagrancy	15
Violating license regulations other than liquor	10
Violating sanitary regulations	25
Minor misdemeanors not herein enumerated	25

(3) In the more serious cases of misdemeanor arrests where defendants desire to give bail, and the sum is not provided for in the above classification, the arresting or commanding officer of police shall communicate with the district judge of his district at the first possible moment after the arrest is made and said judge shall thereupon fix the amount of bail and direct in what manner same may be taken.

(4) In all bailable felony cases where the defendant desires to give bail, the arresting or commanding police officer shall, at the earliest practicable moment, communicate with the district judge of the district wherein the arrest is made, advising said judge of the arrest and character of the offense, and said judge will thereupon fix the amount of bail the defendant may give, if any, and direct how the same shall be taken, or shall direct such other action as may seem to him proper.

(5) Every cash deposit taken by any police officer in lieu of bail must be promptly delivered to the district judge having jurisdiction of the offense for which such cash deposit was taken to insure the defendant's appearance.

Obituary.

Fred B. Haven died at Colon Hospital on September 22, 1910. He was 33 years of age, a widower, and had lived on the Isthmus five years, residing at Empire. His father, C. C. Haven, lives at Port Orange, Fla.

William Siegle, an employe of the Atlantic Division, died at Colon Hospital on September 23, 1910. He was 27 years of age, and had lived on the Isthmus, at Colon, for seven months. His wife, living at Colon, survives him. Death was caused by an accident while he was at his work at Cristobal dry dock. He was cutting wedges at a saw and a piece of wood flying from the saw struck him on the chest directly over the heart. He died within three hours after the accident.

White Slave Law in Canal Zone.

The Act of June 25, 1910, forbidding the transportation in interstate commerce of women and girls for immoral purposes, known as the White Slave Traffic Act, applies to the Canal Zone by special provision of Section 7 which says—"The term 'Territory' as used in this Act, shall include the district of Alaska, the insular possessions of the United States, and the Canal Zone."

The law provides in part as follows:

That the term "interstate commerce," as used in this Act, shall include transportation from any State or Territory or the District of Columbia to any other State or Territory or the District of Columbia, and the term "foreign commerce," as used in this Act, shall include transportation from any State or Territory or the District of Columbia to any foreign country and from any foreign country to any State or Territory or the District of Columbia.

Section 2. That any person who shall knowingly transport or cause to be transported, or aid or assist in obtaining transportation for, or in transporting, in interstate or foreign commerce, or in any Territory or in the District of Columbia, any woman or girl for the purpose of prostitution or debauchery, or for any other immoral purpose, or with the intent and purpose to induce, entice, or compel such woman or girl to become a prostitute or to give herself up to debauchery, or to engage in any other immoral practice; or who shall knowingly procure or obtain, or cause to be procured or obtained, or aid or assist in procuring or obtaining, any ticket or tickets, or any form of transportation or evidence of the right thereto, to be used by any woman or girl in interstate or foreign commerce, or in any Territory or the District of Columbia, in going to any place for the purpose of prostitution or debauchery, or for any other immoral purpose, or with the intent or purpose on the part of such person to induce, entice, or compel her to give herself up to the practice of prostitution, or to give herself up to debauchery, or any other immoral practice, whereby any such woman or girl shall be transported in interstate or foreign commerce, or in any Territory or the District of Columbia, shall be deemed guilty of a felony, and upon conviction thereof shall be punished by a fine not exceeding five thousand dollars, or by imprisonment of not more than five years, or by both such fine and imprisonment, in the discretion of the court.

Section 3. That any person who shall knowingly persuade, induce, entice, or coerce, or cause to be persuaded, induced, enticed, or coerced, or aid or assist in persuading, inducing, enticing, or coercing any woman or girl to go from one place to another in interstate or foreign commerce, or in any territory or the District of Columbia, for the purpose of prostitution or debauchery, or for any other immoral purpose, or with the intent and purpose on the part of such person that such woman or girl shall engage in the practice of prostitution or debauchery, or any other immoral practice, whether with or without her consent, and who shall thereby knowingly cause or aid or assist in causing such woman or girl to go and to be carried or transported as a passenger upon the line or route of any common carrier or carriers in interstate or foreign commerce, or any Territory or the District of Columbia, shall be deemed guilty of a felony and on conviction thereof shall be punished by a fine of not more than five thousand dollars, or by imprisonment for a term not exceeding five years, or by both such fine and imprisonment, in the discretion of the court.

Section 4. That any person who shall knowingly persuade, induce, entice, or coerce any woman or girl under the age of eighteen years from any State or Territory or the District of Columbia to any other State or Territory or the District of Columbia with the purpose and intent to induce or coerce her, or that she shall be induced or coerced to engage in prostitution or debauchery, or any other immoral practice, and shall in furtherance of such purpose knowingly induce or cause her to go and to be carried or transported as a passenger in interstate commerce upon the line or route of any common carrier or carriers, shall be deemed guilty of a felony and on conviction thereof shall be punished by a fine of not more than ten thousand dollars, or by imprisonment for a term not exceeding ten years, or by both such fine and imprisonment, in the discretion of the court.

Sections 5 and 6 provide for procedure in prosecutions under the Act, and place upon the Commissioner General of Immigration the duty of receiving and centralizing information concerning the procuring of women for purposes of prostitution.

Missing Man.

Any one having information regarding the whereabouts of Haymond Brice Collins, 18 years of age, who is supposed to have left his home in Pennsboro, West Va., three years ago to come to Panama, is requested to communicate with the American Legation, Panama.

Cold Storage Prices.

There are no changes in the prices of cold storage articles from those quoted in last week's isssue of THE CANAL RECORD.

LABOR FORCE AND QUARTERS IN AUGUST.

On August 31, there were 35,867 employes actually at work on the Canal and the Panama railroad, and of this number, 29,950 were Canal employes. The gold force on the Canal work, composed almost entirely of white Americans, was 4,445. No labor recruiting was necessary during the month.

The report of the Chief Quartermaster for August shows that the number of family quarters occupied by "gold" employes was 1,708, which is 25 more than in July, and the occupants numbered 5,180, an increase of 77. Of this number, 1,756 were women, and 1,718 children. Bachelor quarters occupied by "gold" employes numbered 1,878 and the occupants numbered 3,282, of whom 121 were women. The family quarters, occupied by European laborers numbered 281, and the occupants, 903; bachelor quarters, 116, and the number of occupants, 5,610. The family quarters occupied by West Indians numbered 1,075, and the occupants, 3,564; bachelor quarters, 260, and the number of occupants, 5,077.

A statement of the force actually at work on August 31, follows:

DEPARTMENT.	Monthly.	Artisans.					European Laborers.		West Indian Laborers.					Total Silver.	Total Gold.	Grand Total.
		44 cents.	32 cents.	25 cents.	20 cents.	16 cents.	20 cents.	16 cents.	20 cents.	16 cents.	13 cents.	10 cents.	7 cents.

Panama railroad force, 3,298; Panama railroad relocation force, 1,603; Panama railroad commissary force, 1,016. Total, 5,917. I. C. C. force, 29,950. Grand total, 35,867.

COMMISSION HOTELS.

A Year at the Hotels and Labor Messes.

The annual report of the Subsistence Department of the Isthmian Canal Commission for the fiscal year ending June 30, 1910, shows that 18 hotels, in addition to the Hotel Tivoli, 19 European laborers' messes, and 20 common laborers' kitchens were in operation, an increase of one hotel, and a decrease of one kitchen, as compared with the previous fiscal year.

The total revenue derived from the line hotels, messes and kitchens during 1909-10 was $1,350,658.05, a decrease of $168,620.08, as compared with the preceding year. The total expenses were $248,313.71, a decrease of $46,602.18 from the year 1908-09. The revenues fell off 11 per cent, but the expenses fell off 15.7 per cent, the percentage of expense to revenue being one per cent less for 1909-10 than for the previous year. The expense for salaries and wages was $191,438.11, as compared with $236,955.52 for 1908-09, a decrease of 19.5 per cent. The proportion of pay roll to revenue was 14.1 per cent, as compared with 15.5 per cent for the year before a decrease of 1.4 per cent.

The total number of meals served at Commission hotels was 2,176,451. The cost of supplies was 24.87 cents and the expense was 6.23 cents a meal, an increase in cost of supplies of 1.33 cents a meal, and a decrease in expense of 0.69 cents a meal, making a total increase of 2.02 cents a meal, which has gone into food, and represents a total increase of $43,964.31 in food supplies, as compared with the preceding year.

The total number of rations furnished in European laborers' messes was 1,092,487, which cost 30.18 cents a ration for food, and 6.66 a ration for expense. The number of rations served decreased by 78,690; the food cost decreased 0.77 cents a ration, and the expense decreased 0.60 cents a ration. The number of rations served in the common laborers' kitchens was 781,746 at a cost of 22.66 cents each for food, and 4.63 cents each for expense. The number of rations showed a decrease of 616,746, as compared with the previous year. The cost of supplies was 0.14 cents a ration greater, but the cost of service was 0.09 cents a ration less. There has been a constant decrease in the number of laborers taking their meals in Commission kitchens, the attendance in June, 1910, being about 50 per cent less than for the corresponding month in 1909. The average daily attendance during June, 1910 in the line hotels was 1,915; in messes, 3,178, and in kitchens, 1,496.

The following table shows the relative value of food consumed each day by each person in the Commission hotels, the costs being computed by taking periods in each month and averaging them. The actual cost would be about six per cent less.

Article.	*Cost—Cents.*
Meats, fresh	25.92
Fruits and vegetables, fresh	10.66
Miscellaneous supplies	6.93
Butter	6.18
Eggs	5.91
Fruits and vegetables, canned	5.40
Meats, cured	4.47
Bread	2.73
Milk	2.37
Ice Cream	2.25
Sugar	2.19
Tea, coffee and cocoa	1.71
Flour	1.71
Meats, canned	1.05

In addition to the foregoing, the consumption of ice amounted to 3.45 pounds each day.

The average weight of the ration supplied each person daily in the European laborers' messes was found to be approximately 4.91 pounds, and the average value 29.58 cents. This does not include 1.38 pounds of ice consumed per capita each day, which cost 0.56 cents. The average weight of the ration supplied each person daily in the laborers' kitchens was found to be approximately 4.41 pounds, with a value of 22.26 cents. It is a coincidence that the net weight of the ration furnished the European laborer is exactly equal to the gross weight of the United States Army garrison ration, and the net weight of the ration furnished the negro laborer is exactly equal to the gross weight of the United States Army field ration.

The year's operations showed a loss on hotels of $22,168.71, a profit on the European laborers' messes of $34,504.86, and a profit on the laborers' kitchens of $21,211.97. The operation of the Hotel Tivoli showed a profit for the year of $4,574.23.

Concrete in Gatun Spillway.

The amount of concrete placed in the Spillway of Gatun Dam during the week ending September 24, and the total placed to that date, are shown in the following statement:

Date.	Cubic Yards.		
	Concrete	Large rock.	Total.
September 19	254	....	254
September 20	250	....	250
September 21	260	....	260
September 22	222	....	222
September 23	104	....	104
September 24	150	....	150
Total	1,240	....	1,240
Previously reported	....	....	92,990
Grand total	....	....	94,230

The plant used one mixer and worked 46 hours.

Ancon Rock Crusher.

A statement of the rock crushed at Ancon quarry during the weeks ending September 17, and September 24, respectively, follows:

Date.	Hours worked.	Cubic Yards.
September 12	8.45	2,730
September 13	7:30	3,305
September 14	6:55	2,055
September 15	5:10	1,785
September 16	8:00	2,280
September 17	7:45	2,695
Total	44:05	14,850

Date.	Hours worked.	Cubic Yards
September 19	8:00	2,790
September 20	8:25	2,545
September 21	7:15	2,815
September 22	8:25	3,015
September 23	7:30	2,970
September 24	8:00	2,805
Total	47:35	16,940

No action has yet been taken on the report of the committee appointed to consider the advisability of requesting the Y. M. C. A. to take over the Washington reading room in the Lincoln House at Colon. The committee reported favorably, but additional information bearing on the subject has been asked for by the superintendent of the Panama railroad, under whose management the room is conducted.

Launch Service to Taboga.

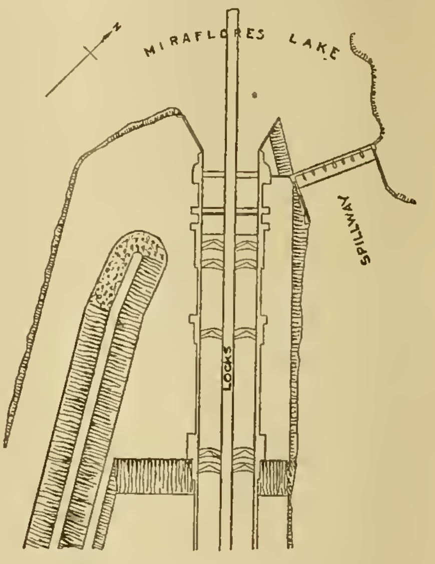
The steamer *Sanidad* leaves the dredge landing at Balboa at 9 o'clock Tuesday, Thursday and Saturday mornings. On the return trip it arrives at Balboa about 4.30 p.m. in time to make connections for the 5.30 train at Panama.

MIRAFLORES SPILLWAY.

Plans for Controlling the Water Level of Miraflores Lake.

Plans have been approved for the spillway by means of which the water in Miraflores Lake, between the locks at Pedro Miguel and Miraflores, will be regulated. The spillway will consist of a straight concrete dam connecting the east wall of Miraflores Locks with the side hill, as indicated in the location plan on this page, with regulating gates of steel mounted on the crest of the dam. The dam will be 432 feet long on the crest and will contain approximately 75,000 cubic yards of concrete. Further details are contained in the drawings reproduced herewith, and in the following abstract of the report accompanying the approved plans:

Proper control of Miraflores Lake involves not only passing the insignificant flow of the tributary streams—Rio Grande, Rio Pedro Miguel, Rio Cocoli, and Rio Caimitillo—but the disposal of the large amount of water which would reach the lake from the higher level of Gatun Lake through Culebra Cut, should an accident permit an unobstructed flow to take place through one of the twin locks at Pedro Miguel.



Location Plan

OF MIRAFLORES SPILLWAY.

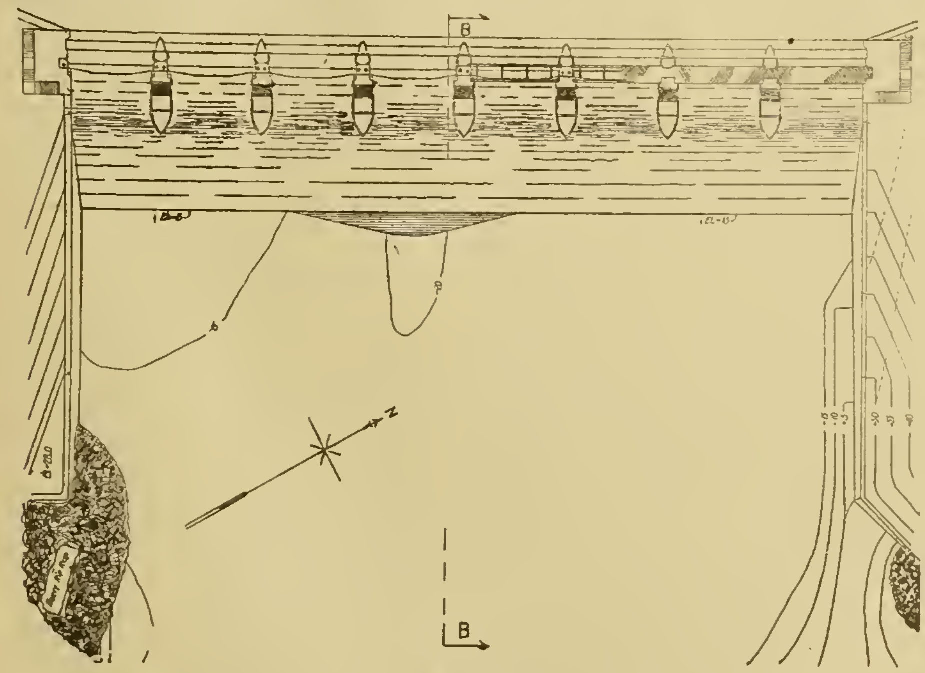
SCALE 1 : 12000

Careful studies have been made of the quantity which may reasonable be expected to flow into Miraflores Lake if this contingency should arise, and the spillway proposed, with a capacity at maximum permissible lake level of about 92,000 second feet will dispose of the probable discharge without damage to the earth dams. The quantity flowing into the lake is not susceptible to precise determination, results ranging from 75,000 second feet to 116,000 second feet being obtained, with the true value probably between 90,000 and 100,000 second feet, but if it is found that the flow is greater than can be passed by the spillway without raising the lake to an undesirable level, the culverts of the Miraflores Locks can be utilized. As it is improbable that they would be called on to carry more than 8,000 second feet, and as their capacity will be about 25,000 second feet, no damage should result from such emergency use. The discharge would have to pass the spillway for only the short time occupied in closing the emergency dam at Pedro Miguel. The flow would begin to diminish as soon as the first wicket of the dam should be dropped, and would cease when the closure should be completed.

The maximum level to which Miraflores Lake may be permitted to rise is determined by the lock walls with copings at elevation 58.67 feet above sea level. Allowing a freeboard of 1.5 feet gives a maximum lake level at elevation 57.17.

The spillway consists of approach walls, connecting the dam with the lock on one side and the natural rock hill on the other, the spillway dam, and the discharge channel. The spillway dam will be a straight concrete dam of ogee section with its crest at elevation 38.67 feet above mean sea level, 16 feet below the ordinary level of Miraflores Lake. The crest will be divided into eight bays, each 45 feet wide, by the end abutments and seven intermediate piers and the bays will be closed by rising gates of the Stoney type, in all respects like those designed for the spillway at Gatun. The piers will be so designed that the caissons for closing of gate openings may be used interchangeably at both spillways.

The downstream or ogee face of the dam will be formed by a parabolic curve convex upward, and a circular arc concave upward. The parabolic part is exactly like the corresponding part of the Gatun spillway dam except that the curve is carried a little further. (An article on the dam of the Gatun spillway was published in The Canal Record of September 8, 1909) The overflowing water, will, therefore, adhere whenever the gates are opened six feet or more. The circular part forming the toe, which turns the overfalling stream back to horizontal direction, is of shorter radius than that at Gatun, since this dam is of less height and the presence of a deep pool of water eliminates the necessity of the more gradual return adopted in the former design.

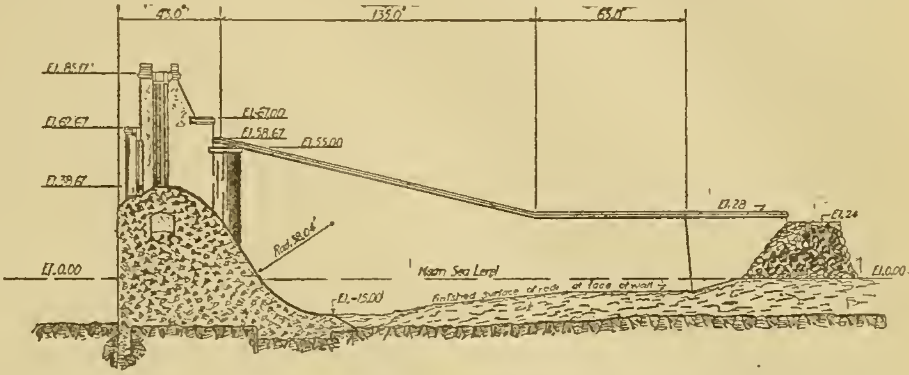


GENERAL PLAN—MIRAFLORES SPILLWAY.
Scale 1 : 125.

It is proposed to install the machinery for operating the crest gates within a tunnel running through the dam from end to end, the machines and the tunnel to be like those in Gatun spillway dam, and the water which may seep in, or leak in at the ends, to be drained out on the downstream side. The best location for the controlling devices has not been determined but can be left for future study.

It is believed that it will be better to regulate the lake ordinarily by means of the crest gates on the spillway dam, either by opening several gates for only a few inches so as to discharge thin streams, which can do no harm even though they do not adhere to the masonry, or by opening a single gate wide at such intervals and for such lengths of time as may be necessary to hold the lake within the permissible limits. The latter method is perhaps to be preferred as it gives the operators experience in working and caring for their machinery and furnishes an opportunity to examine the upstream faces of the gates.

As the flood which would be thrown into Miraflores Lake by the breaking down of a lock at Pedro Miguel would raise the lake level at the rate of about 0.1 foot per minute, it is evident that the spillway gates must be opened promptly after the occurrence of such an accident in order to prevent damage to the earth dam. Automatic self-starters, actuated by float switches, giving thoroughly dependable automatic control, are recommended to be installed at the Miraflores spillway to operate the gates in the event of such a flood. Such apparatus is not, however, to interfere with the ordinary manual control of the motors by which the gates may be moved separately.



SECTION B-B
SHOWING OGEE DAM, WITH PIER AND CHANNEL WALL IN DISTANCE.
Scale 1 : 1000.

Death of a French Canal Chaplain.

The Rev. Father Pius Massi, a Jesuit priest, who was a chaplain in the service of the first French canal company, died at St. Francis Hospital in New York on September 8, at the age of 77. He was born in the Vatican, his father having been chamberlain at the papal court during the incumbency of Pope Gregory XVI, and received his early education at the Roman College. His first mission was in Quito, Ecuador, and from there he came to Panama. During the ensuing four years he acted as a nurse in yellow fever cases among French canal employes, and officiated at funerals. He was a close friend of Count DeLesseps. In 1883, he went to the United States and after a year of teaching in Boston, joined the Jesuit College at Georgetown University, remaining there until 1890, when he became identified with the work of the church of St. Ignatius Loyola in New York City.

Hebrew Benevolent Society—New Year 5671.

The Canal Record:

Divine service will be conducted at the Sojourners' lodge room, Colon, on Monday evening, October 3, at 6.30 o'clock, and on Tuesday morning, October 4, beginning at 8.30. All Jewish residents of the Canal Zone are cordially invited.

By order,
J. Julius Sasso, *Secretary.*

The use of old cross-ties will be resorted to by the Quartermaster's Department in Ancon for maintaining the supply of kindling to married quarters. Up to recently there had been enough old boxes, and odds and ends from building operations to fill the demand. The ties to be cut up are brought in from the line, and are worthless, having been relaid several times until they have become full of spike holes.

ROMAN CATHOLIC CHURCHES.

Religious Work by Commission Chaplains and Other Priests.

The Roman Catholic churches in the Canal Zone are in the diocese of Panama, and all the property owned by the church is held in the name of the Right Rev. Bishop Junguito. There are seven churches, situated at Ancon, Balboa, Culebra, Empire, Las Cascadas, Gorgona, and Gatun. Although not in the Canal Zone, Colon Hospital is under the Isthmian Canal Commission, and a place has been assigned there for services to be conducted by the Catholic priest who is one of the chaplains. Of the 15 chaplains in the employ of the Commission, three are Roman Catholic priests and a fourth, who works among the Spanish laborers in all parts of the Zone, is an interpreter in the Quartermaster's Department. A general article on church work under the Commission and in the Canal Zone was published in The Canal Record of July 27, 1910, and articles detailing the work of various church organizations were published in subsequent issues.

The first services held by the Roman Catholics under the American régime were conducted in one of the buildings of Ancon Hospital, at present used as a storehouse. In November, 1906, work was begun on the chapel and mass was first celebrated there early in 1907. It is in the hospital grounds near the gate. It will seat 150 people, but the average attendance at the two masses on Sunday is not over eighty. The congregation is largely transient, and no Sunday school is maintained because there are so few children. The Rev. Daniel Quijano is pastor, and in addition has regular work as chaplain at the hospital.

St. Mary's Star of the Sea is the name of the church recently organized at Balboa by the Rev. Henry C. Pouget, formerly a missionary among the Indians of New Mexico. He came to the Isthmus late in 1909, and began organizing the Catholics of Balboa and Corozal into a regular congregation. On January 1, 1910, a plot of land 250 by 150 feet was assigned by the Commission for a church building, and work was immediately begun on a temporary meeting house. The main church is now nearing completion. It is a wood structure 66 feet 8 inches by 26 feet, and although not entirely finished, was opened to the public on July 10. The Sunday masses are attended by about 100 people, and arrangements are in progress to hold evening services. The men of the parish have been organized under the name of St. Mary's Club, and the women have formed an altar society, which is active socially. A Sunday school has been organized, but its sessions were suspended recently to be resumed this fall. This church numbers among its congregation residents of Miraflores, Corozal, and new and old Balboa.

The energies of the congregation of the Church of the Holy Redeemer at Culebra and of the pastor, the Rev. Henry Collins, are centered at the present on the construction of a reinforced concrete church on the edge of Culebra Cut. The building was described in The Canal Record of August 3. Mass is celebrated in the apse of the building, which was completed first and given a temporary roof in order to accommodate the congregation. It is estimated that the building will cost $30,000 and of this amount, $10,000 have already been expended.

St. Ferdinand's Church at Empire was established in December, 1908, at which time the number of persons attending the services each Sunday averaged 80, and the Sunday school had a membership of 15. The removal of the priest in charge, the Rev. Ferdinand Allot, from residence in Panama to Empire has enabled him to extend the work, so that the average congregation on Sunday mornings is between four and five hundred. This is composed of residents of Empire, Pedro Miguel, and Paraiso, more than 100 Americans among the number, and West Indians from Culebra and Las Cascadas. The Sunday school is in charge of three Sisters of Charity, who come from Panama. The school is divided into three sections, the English Sister having 45 pupils, among them 10 Americans; a Colombian Sister teaches 35 native children, and a French Sister has a class of 20 French children. There is an altar society, divided into two sections; one being composed of American women, which has 30 members, and a West Indian section of 50 members. Sermons are preached in English, French and Spanish. The choir is composed of West Indians. Baptisms in the church average 20 a month. The pastor holds classes for instruction in church doctrine. The average attendance at daily mass, said at 6.15 a. m., is 310. In addition to his duties in connection with the pastorate of St. Ferdinand's Church, Father Allot is visiting chaplain at large for the Commission, and is charged with making visits to the leper asylum at Palo Seco, three days in each month being spent with the patients in that institution. The church building is owned by the Isthmian Canal Commission.

The Commission chaplain at Colon Hospital, the Rev. P. José Volk, has charge of services in three churches, in addition to his duties as chaplain. St. Joseph's Church in Cristobal was organized about a year ago, and has a membership of about 250. Opposite this church is a day and boarding school conducted by the Christian Brothers with an attendance of about forty boys. The instruction is principally in English, but there are also classes in Spanish and other languages. The Church of the Immaculate Conception in Colon has witnessed two thousand baptisms and two hundred marriages in the past five years. In connection with this parish, the Christian Brothers, with a teaching staff of eight, conduct a school which is attended by three hundred boys between the ages of six and fourteen years. Six members of the Sisters of Charity conduct a similar school for girls at which the attendance is about two hundred. At Majagual, near Cristobal, a frame church building has recently been erected and a school has been organized.

Baseball Plans for 1910–11.

The baseball committee, consisting of representatives of the Atlantic and Isthmian Leagues, appointed to consider plans for the coming season, have accepted the conditions attached to the granting of free transportation to players, tentatively approved by the Chairman and Chief Engineer, in accordance with the arrangement published in The Canal Record of August 31. This insures a one-league association, instead of two, and the conduct of organized baseball on the Isthmus strictly in keeping with National League rules.

There will be six teams in the new league, viz., Ancon, Empire, Camp Elliott, Gorgona, Commissary-Subsistence, and Cristobal-Colon. The two latter teams will represent the Atlantic coast, and will utilize the best of the talent comprised in the four-team Atlantic League of last season. It has been decided that all of last year's players must report back to their respective clubs, until regularly released.

The new circuit will have three parks, one each at Ancon, Empire and Colon, and a game will be played at each park on each scheduled date, weather permitting. The season will consist of a series of 25 Sunday and holiday games, beginning with December 18, the first Sunday before Christmas.

A meeting of the representatives of the old leagues will be held at Ancon on November 6, when the new league will be formally organized, officers elected, a constitution adopted, and arrangements made for the season's schedule of games.

A picked team from Ancon played a game of baseball with a picked team from Balboa at the Ancon park on Sunday afternoon, September 25, resulting in a score of 6 to 5 in favor of Ancon.

PERSONAL.

The Hon. Thomas C. Dawson, American Minister to Panama, accompanied by Mrs. Dawson and three children, and Mr. Charles Campbell, Jr., secretary of legation, arrived at Colon on the *Zacapa* on September 23. Mr. Dawson presented his credentials to President Mendoza on Saturday, September 24, and was formally received as Minister.

Mr. R. O. Marsh, secretary of the American legation in Panama and charge d'affaires since the departure of the former Minister, the Hon. R. S. Reynolds Hitt, sailed for New York on the *Ancon* on September 26, accompanied by Mrs. Marsh.

Mr. Thomas L. Clear, accompanied by Mrs. Clear, returned from his vacation in the States on the *Colon*, arriving at Cristobal on September 23.

Family Quarters.

Applications for married quarters on file on September 1, were as follows:

	No. 1* List.	No. 2 List.
Ancon	2	14
Ancon Hospital	....	3
Balboa	....	47 (8)
Corozal	1	25
Cristobal	5	160
Culebra	3	1
Empire	4	3
Gatun	3	133 (54)
Gorgona	5	74 (29)
Las Cascadas-Bas Obispo	4	9 (5)
Miraflores	....	1
Pedro Miguel-Paraiso	5	41 (5)
Porto Bello	1	27
Tabernilla	....	....
Total	33	538 (101)
August 1	30	493 (81)
July 1	19 (2)	525 (84)
June 1	37 (3)	516 (89)

*Persons employed prior to January 1, 1908.

The figures in parentheses show the number of applicants already occupying regular or nonhousekeeping family quarters at stations, other than those at which applications are filed.

Married.

JAMES-RENSHAW—On Saturday evening, September 10, at the home of the bride at the University of Virginia, Julia Wickham Renshaw, daughter of Mrs. Robert Henry Renshaw, to Alfred Randolph James. Canal Zone residence at Corozal.

OFFICIAL CIRCULARS.

Central Division Organization.

OFFICE OF THE DIVISION ENGINEER,
EMPIRE, September 24, 1910.

CENTRAL DIVISION CIRCULAR No. 161:

By authority of the Chairman and Chief Engineer, the following changes in the organization of the Central Division are made, effective September 25, 1910.

Mr. G. A. Greenslade having tendered his resignation, the position of General Superintendent of Construction is abolished. Mr. A. E. Bronk is appointed General Inspector. Mr. W. I. Beam is appointed Chief Clerk.

D. D. GAILLARD, *Division Engineer.*

Railroad Station at New Gatun.

PANAMA RAILROAD COMPANY
OFFICE OF GENERAL SUPERINTENDENT
COLON, R. P., September 23, 1910.

CIRCULAR No. 206:

To All Concerned: Effective with our new time table, September 25, 1910, New Gatun will be opened as a freight and passenger station, and all rates, both freight and passenger, now in effect from Gatun to other stations and vice versa, will also apply to New Gatun, until further notice.

All agents will see that this circular is posted on their bulletin boards for the information of the public.

F. MEARS, *Acting General Superintendent.*

Sale of Building Material.

CULEBRA, C. Z., September 24, 1910.

Sealed proposals will be received at this office until 3 p. m., Saturday, October 1, 1910, and then opened, for the purchase of a miscellaneous lot of building material, viz: Sash, doors, blinds, etc. A list of these articles, showing sizes, etc., can be obtained from this office, or at the offices of the District Quartermasters in the Zone. The material is now stored at the Empire storehouse and is open for inspection. Proposals must cover the entire lot and must be accompanied by a deposit of $50.

Proposals should be mailed to the office of the undersigned in sealed envelope, marked "Proposal for the purchase of miscellaneous lot of building material." The Government reserves the right to accept or reject any or all bids or any part thereof.

R. E. WOOD, *Acting Chief Quartermaster.*

Tide Table.

The following table shows the time of high and low tides at Panama for the week ending October 5, 1910, (75th meridian time):

Date.	Higb.	Low.	High.	Low.
	A. M.	A. M.	P. M.	A. M.
September 29	12.15	6.31	12.45	7.00
September 30	1.28	7.38	1.53	7.00
October 1	2.23	8.32	2.46	8.50
October 2	3.08	9.17	3.30	9.34
October 3	3.48	9.57	4.09	10.13
October 4	4.23	10.35	4.45	10.50
October 5	4.56	11.10	5.17	11.24

Auction of Unclaimed Goods.

PANAMA RAILROAD COMPANY,
OFFICE OF GENERAL SUPERINTENDENT,
COLON, R. P., September 10, 1910.

In order to recover freight and storage charges, the Panama railroad will dispose of the accumulation of over and unclaimed shipments now in its possession, by public auction Wednesday, October 5, 1910, at 9 a. m., sale to be held on dock 11, Cristobal C. Z.

The items to be sold consist of a miscellaneous assortment of wines, liquors, household goods, building material, stationery, groceries, dry goods, machinery and merchandise in general, all of which has been held six months and over in an effort to locate owner.

J. A. SMITH, *General Superintendent.*

Band Concert.

The Isthmian Canal Commission Band will give a concert at Balboa, C. Z., on Sunday, October 2, 1910, at 2 p. m. The program follows:

1 March—*La Guardia Real*.................Alvarez
2 Selection—*A Trip to Japan*.................Klein
3 Concert Number—*Among the Lilies*.........Frey
4 Waltz—*Cupid Astray*.......................Rolfe
5 Overture—*Amazon*.......................Kiesler
6 Medley March—*Put On Your Old Gray Bonnet*.......................Wenrich
7 Sextet from Lucia.......................Donizetti
8 Medley Selection—*Amina*..............La Farge
9 March—*The Annihilator*................Clement

Chas. E. Jennings, *Musical Director.*

The next concert will be given at the Hotel Tivoli, Ancon, on Sunday, October 9, at 7.30 p. m.

Opening of School.

The public schools will open on October 3, at 9 a. m.

At Colon beach brake service will be furnished all children in the first to fourth grades, inclusive. Children above these grades, as heretofore, will furnish their own means of conveyance. The brake will leave Colon Beach schoolbuilding at 8.20 o'clock on the first morning, and thereafter at 8. In the afternoon the brake will leave the Colon Beach building at 12.50.

White children at Mount Hope will attend school at Cristobal. Children living at points between Tabernilla and Gatun, will attend at Gatun. Children above the fifth grade at Tabernilla, and all children at other points between Gorgona and Gatun will attend at Gatun.

School will be held at Las Cascadas until the Empire addition is completed. Children above the fifth grade at Las Cascadas will attend at Empire from the opening. Children at points between Gorgona and Empire will attend at Empire pending decision as to the establishment of a school at Bas Obispo.

Owing to the fact that the Paraiso-Pedro Miguel road cannot be used, school will be opened at Paraiso for grades 1 to 5, inclusive. Children above these grades will be accommodated at either Culebra or Ancon. Grades 1 to 5, inclusive, will be given instruction at Pedro Miguel. Children in grades higher than grade 5 will be accommodated at Ancon. Corozal children will be carried by brake to Ancon. The brake will leave the schoolbuilding at Corozal at 8 o'clock sharp. A teacher will be in charge of this brake.

All high school children living at Culebra and Colon and intermediate points will attend at Gatun. Those living at points between Ancon and Culebra, and those above the first year at Ancon, may elect between Gatun and Ancon. All first year pupils living at Ancon will be accommodated at Ancon. Children attending the Gatun high school will leave their homes on the train arriving at Gatun at 12.40 p. m. All others should leave their homes in time to arrive at school for the opening of the morning session.

The Ancon-Balboa brake service will be continued. The brake will leave Balboa at 8.15.

Where children cannot be provided with school privileges in the grades to which they belong at their own stations, free transportation will furnished on application to the office of the Superintendent of Schools at Ancon.

MEETINGS OF TEACHERS.

White teachers of the public schools will meet at Ancon schoolbuilding on Saturday, October 1, at 3 p. m. Colored teachers will meet at 9 a. m.

Balboa Notes.

Dredging operations are in progress in the channel in front of the sand dock at Balboa. The bottom at this point was originally 25 feet below mean tide, but it has gradually filled with silt until dredging is necessary in order that a tug with its tows may come up to the dock at low water without danger of grounding.

The tug *La Boca* which tows the sand barges between Point Chamé and the Balboa sand dock is uninterruptedly in the service night and day, its stay at the sand bed, or at the unloading dock being limited to the time it takes to connect with the barges. The tug will probably be relieved by the *Miraflores*, when that vessel, now rounding South America, reaches port.

The supply boat *Chamé* is being equipped with a new steam steering gear to take the place of the hand gear formerly in use.

The position of master mechanic at the marine shops has been abolished.

Clapet *No. 1* is on the gridiron at the shipways for a general overhauling. Its steering shafts will be equipped with a sand excluding device.

Civil Service Examinations.

Examinations for the position of civil engineer and superintendent of construction in the Quartermaster's Department at large and typewriter in the Isthmian Canal Service, which were postponed from September 18, will be held on October 2. The civil engineer and superintendent of construction examination will require two days, October 2 and 3. Application blanks for either examination may still be procured by addressing the undersigned.

JOHN K. BAXTER,
Secretary, Isthmian Civil Service Board.

Culebra, C. Z., September 24, 1910.

The following vessels arrived at and departed from the port of Balboa during the week ending September 24:

Arrivals—September 17, *Ecuador*, from Guayaquil; September 18, *City of Para*, from San Francisco; September 19, *Mexico*, from south ports.

Departures—September 20, *City of Panama*, to San Francisco; *Loa* to south ports.

COMMISSION CLUBHOUSES.

Activities of the Young Men's Christian Association.

CULEBRA.

The meeting of the discussion club held on Wednesday evening, September 21, was led by Geo. R. D. Kramer, the subject being "Exercise." At the meeting of the club to be held on Wednesday evening, September 28, the Rev. A. A. Nellis will lead the discussion on "What Shall We Read?"

The informal "social" held on Thursday evening, September 22, was well attended. The program included piano solos by Mr. Richardson, Arthur Howard, and Mrs. C. O. Carlson; vocal solo by Mr. Kramer; violin duet by Messrs. Demetrio Brid and E. Dow Gilman, with Mrs. E. E. Lee at the piano. Lieut. M. C. Hargraves of London told some incidents in connection with his walk around the world. Ice cream and cake were served. The "social" closed with singing of popular songs, after which Lieut. Hargraves gave several recitations.

Following are the 200 scores bowled thus far during September: Hostetter, 246, 204; Dougherty, 221; Herrington, 211; G. Hayes, 203,213; Cohen, 201; Mengel, 200; Hall, 216,204, 203; Case, 205, 206, 204.

On Saturday evening, September 24, Empire's first team took three games from Culebra's first team by the following scores:

Empire.				Culebra.			
Brown......	167	155	212	Cohen....	199	167	176
Potter......	167	208	185	Herrington	167	167	142
Shaugnessy..	158	161	172	Hostetter..	140	141	159
Pearson.....	176	191	185	Case......	131	138	162
Huson......	175	136	173	Dougherty	180	190	165
Total.....	843	851	927	Total...	817	803	804

EMPIRE.

The meeting of the discussion club held on September 21, was led by A. B. Dickson, the subject being "Our Thoughts."

The following 200 scores were rolled during the week ending September 24: Reed, 205; Brown, 206; Johnson, 208; Gustavson, 205, 201; Potter, 207; McLeod, 214.

Messrs. Pearson, Rouneswell and Smallwood, respectively, are the winners of the class A, B, and C pool tournaments for the month of September. The finals will be played this week.

Empire's second team took two out of three games from Culebra's second team on Saturday night, September 24, by the following scores:

Culebra.				Empire.			
Hall........	135	134	....	Nicodemus	132	146	128
Fleischman..	171	164	116	Goolsby...	152	149	153
Huttlemeier.	139	206	203	Sawtelle...	179	127	203
Hayes......	114	170	167	Giavelli...	139	167	153
Mengel.....	139	145	210	Gustavson.	165	179	152
Koperski............			121				
Total.....	698	749	817	Total...	767	768	789

Cristobal defeated Empire in a game of basketball on Saturday night, September 24; score 31 to 22. Following is the line up: Cristobal—Seaton, Prather, Vifquain, Schwallenberg and Pring. Empire—Leylander, King, Lyon, Seaton, McCullough.

The literary and debating society rendered the following program Friday evening, September 23: Selection, Empire male quartet; reading, "Henry Clay," J. R. McNeil; vocal solo, Miss Roche; address, "The Perfect Tribute," Rev. A. A. Nellis; dance, Miss Roche; vocal solo, Mr. King.

GORGONA.

Gorgona's first team took two out of three games from Cristobal's first team on Saturday night, September 24, following being the scores:

Cristobal.				Gorgona.			
Louch......	204	143	163	Roper.....	172	196	179
Rabbitt.....	159	138	167	Gaedkie...	233	211	127
Collins......	215	160	172	White.....	168	160	138
Thomas.....	131	140	146	Otis......	161	184	179
Bullard.....	179	157	163	Sexton....	245	187	177
Total.....	888	738	811	Total...	979	938	800

A very entertaining moving picture show was given on Friday evening, September 23.

The meeting of the discussion club last week was led by E. A. Putnam of Culebra, his subject being, "What Is Failure?" Twenty men were present.

Monday and Thursday are practice nights for basketball, and a game between miscellaneous teams will be played each Wednesday night.

GATUN.

The next meeting of the discussion club will be held on Friday night, September 30, under the leadership of Mr. Smith. The subject to be discussed is "Fellowship."

The gymnasium classes will meet each week on Monday and Wednesday evenings starting September 26 The work will be corrective and recreative, and all are invited to attend.

The bowling match between the "Martyrs of the Time Office" and the "Y. M. C. A. Pickers" resulted in the latter team taking three straight games, the scores being as follows:

"Martyrs."				"Pickers."			
Kiernan....	158	168	150	Hodges....	186	151	136
Meyers.....	104	94	136	Wolf......	167	176	166
Dalton.....	157	147	140	Teimer....	151	133	156
Tulley......	168	135	132	Warr.....	158	144	134
Durand.....	181	201	174	DeMoll...	156	185	162
Total.....	768	745	732	Total...	818	789	754

On Saturday night, October 1, Gatun's second team will bowl at Culebra, and Culebra's first team will bowl at Gatun.

CRISTOBAL.

The moving picture entertainment on Monday evening, September 19, was attended by a large audience. The pictures of the Wright aeroplane were especially appreciated. Another entertainment of the same character was given on Monday evening, September 26.

The meeting of the discussion club was postponed last week. This week, F. C. Freeman of Culebra will be the leader, taking for his topic "Our Thoughts." All are welcome to attend these informal gatherings.

The membership is advancing favorably in spite of the reduction of force at the P. R. R. shops and dry dock. The membership clock now stands at 424. The I. C. C. team captained by Chambers is in the lead.

The second team from Gorgona took two out of three games from the local second team on Saturday evening, September 24. Following are the scores:

Gorgona.				Cristobal.			
Stoehr......	139	152	153	Barrett....	154	157	158
Stewart.....	152	160	190	Grover.. .	180	162	154
Bordh......	157	166	145	Weston...	157	176	158
Varenkamp..	160	165	162	T. Burns..	177	197	173
Haldeman...	212	156	170	Blackburn.	208	162	135
Total.....	820	799	820	Total...	876	854	778

On Saturday night of this week the Marine Band from Camp Elliott will play at the Cristobal clubhouse. On the same night the Gatun basketball team will play the Cristobal team at Cristobal.

Supplies for Canal Work.

The following steamers with supplies for the Isthmian Canal Commission arrived at the ports of Cristobal, Colon and Balboa during the week ending September 24, 1910:

Ancon, September 19, from New York, with 28,680 barrels cement for Atlantic Division; 85,520 bags cement for Pacific Division.

City of Para, September 20, from San Francisco, with 5 tons calfalfa meal for stock.

Abangarez, September 22, from New Orleans, with 146 rolls cotton duck, 2,582 bales hay, 2,747 pieces yellow pine lumber, 38 pieces oak lumber for stock; 44 pieces oak lumber for Mechanical Division; 20 sacks corn, 13 sacks wheat for Superintendent, Ancon Hospital; 348 tons dump car parts for Cristobal shops (for erection).

Zacapa, September 23, from New York, with 11 bundles wire for stock; 1 locomotive crane for Atlantic Division.

Colon, September 23, from New York, with 11 cases injectors, 25 cases paper napkins, 15 bundles wire, 50 cases paint, 12 kegs hardware, 30 bundles strawboard 27 barrels rock salt, 50 pieces switches, 12 rolls leather, 435 pieces steel castings, 9 barrels cable grease, 17 barrels non-fluid oil, 85 cases lanterns, 10 coils lead pipe, 11 cases torpedoes for stock; 12 cases stoves, 7 cases electrical material, 1 earth spreader for Atlantic Division; 13 pieces machinery, 7 cases machinery for Pacific Division; 29 bundles castings, 791 pieces castings, 150 pieces car springs for Mechanical Division; 10 pieces iron forgings, 63 pieces steel castings for Central Division; and a miscellaneous cargo, the whole consisting of 2,127 packages, weighing 285 tons.

Stages of the Chagres.

Maximum heights of the Chagres River for the week ending midnight, Saturday, September 24, 1910. All heights are in feet above mean sea level.

The next sailing of the Leyland Line will be as follows: *Jamaican* on or about October 14, for New Orleans, via Kingston, Ja.

Hamburg-American steamers leave for New York at 10 a. m., and for Port Limon every Tuesday or Wednesday.

Royal Mail steamers leave for New York on alternate Wednesdays at 10 a. m.; for Southampton on alternate Tuesdays at 10 a. m.

United Fruit Company's ships for New Orleans leave on Thursday at 3 p. m., and for New York on Friday at 10 a. m.

Sailings of the French Line (Cie Generale Transatlantique) for Venezuelan ports, Martinique and Guadeloupe on the 3d and 20th of each month.

CANAL RECORD

Volume IV. ANCON, CANAL ZONE, WEDNESDAY, OCTOBER 5, 1910. No. 6.

The Canal Record

Published weekly under the authority and supervision of the Isthmian Canal Commission.

The Canal Record is issued free of charge, one copy each, to all employes of the Commission and Panama Railroad Company whose names are on the gold roll. Extra copies and back numbers can be obtained from the news stands of the Panama Railroad Company for five cents each.

Address all Communications
THE CANAL RECORD
Ancon, Canal Zone,
Isthmus of Panama.

No communication, either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.

NOTES OF PROGRESS.

Central Division Excavation in September.

The cross section estimate of excavation in the Central Division for the month of September is as follows:

	Cubic Yards.
Chagres district	234,290
Empire district	612,904
Culebra district	665,032
Pedro Miguel district	62,012
Total	1,574,238

All of this material was removed from the Canal prism, no excavation having been done outside of the prism during the month. With the exception of August, 1910, the preceding month, this is the largest aggregate amount of material removed from the Canal prism within the limits of the Central Division during any month of the rainy season. The average amount excavated per day (62,969 cubic yards) during the entire month of September, 1910, is the greatest daily average ever made in the Central Division during an entire month in the rainy season. The next highest daily average for an entire month during the rainy season was that made in August, 1910—59,718 cubic yards. There were 25 working days in September, 1910, as against 27 in August, 1910.

Of the total shown above there was excavated in Culebra Cut, 1,339,948 cubic yards, and in the Gatun Lake region, or Chagres district, 234,290 cubic yards. The total excavation in the Central Division to October 1, and remaining to be accomplished on that date, are as follows:

	Accomplished. *Cu. Yds.*	Remaining. *Cu. Yds.*
Culebra Cut	53,166,538	31,020,186
Chagres district	10,155,277	2,783,017
Total	63,321,815	33,803,203

Footbridges Across Spillway Dams.

Plans for the footbridges across the tops of the concrete dams of Gatun and Miraflores spillways have been approved. These bridges will be built of steel girders and will weigh about 215 tons. The largest pieces will weigh about 4,300 pounds and will therefore be easily removable. The purpose of the bridges is to give easy access to the regulating gates and the piers which support them, and to provide a convenient means of crossing the spillways.

Vacation in Guatemala.

Guatemala City has been included in the places where employes of the Commission and Panama Railroad Company may spend their annual leave. The city is 4,878 feet above sea level, and no quarantine exists against any of the ports in Guatemala.

Panama Street Work Nearly Completed.

Street improvements in Panama, authorized under the Congressional appropriation of $800,000 for sanitary improvements in the cities of Panama and Colon, are approaching completion. A small amount of work remains to be done on Lyons street, along which the new intercepting sewer extends, and also on Thirty-second and Thirty-fourth streets. The short street, known as La Neveria, branching off from Caledonia road to the left just before the road turns toward the Sabanas, will be improved for a distance of about 450 feet, which will bring it to the end of the built-up section. La Independencia street, which parallels the Panama railroad in the district of Santa Cruz, will be joined to the Caledonia road near the viaduct. This is closed territory at present, and to open a road through it will necessitate the removal of a two-story wooden tenement.

Excavation for the new storm sewer crossing Central avenue at Lyons street has been completed, and concreting around the sewer is well advanced. It will form a junction near the railroad yard with an old masonry sewer extending to the sea. The walls of the old sewer were found to be in good condition, but it has been necessary to deepen the opening all the way through to conform with the size of the new sewer. On account of the close quarters, only five or six men can be employed on this work at one time.

An application has been made, by a local real estate firm, for the opening of two additional streets in that section of Panama lying near Nineteenth street, west of Ancon boulevard.

Concrete in Culebra Cut.

Before the work of placing concrete in the sides of Culebra Cut is begun the question of what parts, if any, should be so protected will be investigated. A board consisting of Commissioners Hodges, Gaillard and Rousseau has been appointed for this purpose.

Culvert Forms at Miraflores Locks.

Steel forms of a different type from those used in the side wall culverts at Pedro Miguel Locks, will be employed in the construction of the side culverts at Miraflores Locks. They will be a modification of the type successfully used at Gatun, and will resemble a horseshoe when in position. At Miraflores, the forms will be moved entire as the work proceeds, two sections at a time, by means of a traveler operated on the inside. The upper sections of the forms employed in the Pedro Miguel operations can be utilized for the new ones at Miraflores, but the lower sections were constructed for the purpose at Gorgona shops.

Rock Slide at Bas Obispo.

A slide has developed in the east bank of Culebra Cut at Bas Obispo, where a quantity of rock estimated at 75,000 cubic yards is moving towards the Canal prism. This slide is on the berm at 95 feet above sea level, and the break follows the lines of a fault in the rock.

Zone Roads Aid Agricultural Development.

There has been considerable increase in the agricultural development of the Canal Zone, wherever roads have been built giving accessibility to a market. This development is especially marked in the vicinity of Empire, where several modern roads converge. In the valley of the Masambi River, through which a macadamized road has been built as far as the Las Cascadas plantation, a number of West Indians have begun farming in a small way. Their principal crops are yucca, yams and yampe, the latter a vegetable of a reddish color resembling the yucca root in appearance, and all three articles are said to yield well in this section, when under proper cultivation. The land in the valley appears to be especially suited to the raising of yucca and many flourishing patches of this tuber may be seen along the road.

A small quantity of sugar cane, together with bananas, papayas and other fruits, is grown, and in common with the other products, finds ready sale at Empire and Culebra, the nearest markets. Practically all the produce raised in this section is brought to town on pack animals, which cross the Cut at Empire on the suspension bridge. As showing the extent of this traffic, in one hour on a recent weekday morning, 29 pack animals passed over the bridge into Empire.

West of Empire and in its immediate vicinity the country is being settled rapidly. There is a fairly good road as far as the rock quarry, and two or three short roads running in other directions. The roads from Chorrera join the macadamized highway near the rock quarry, but it is a mere trail and of little value as a means of communication during the rainy season, and on this account the development along it is proceeding slowly.

The Panama-Corozal road has aided to a large degree the development of the land near by. When the road was first completed there were only a few scattered houses along the route. Today, 25 or 30 may be counted. The most of them are tenanted by West Indians who cultivate small patches of ground on which they grow sugar cane, corn and yams for their own use, and also for sale in the Pan-

NOTES OF PROGRESS.

(*Continued.*)

ama market. Here and there will be found a European laborer from Spain who has settled down to farming on his own account, but the greater part of those who are living on bush clearings in the Zone are West Indians, principally Jamaicans, Barbadians and Martiniquans.

A similar development has taken place along the Mount Hope-Gatun road, small tracts of land having been cleared and put under cultivation since the highway was built.

Fish Survey of Canal Zone Waters.

A letter from the Field Museum of Natural History at Chicago announces the intention of that institution to make a study of the fresh water, brackish, and salt water shore fish of the Canal Zone during the coming dry season. The study will be made before the completion of the Canal, in order that the fish may be taken before they have had a chance to cross the divide and undergo the changes incident to a new environment.

Concrete in Gatun Locks.

The record of concrete laid in Gatun Locks by the construction plant of eight mixers and four cableways, and the auxiliary plant of two mixers, during the week ending October 1, and the grand total to that date, follow:

Date.	Concrete placed.	Large stone.	Hours worked.	No. of mixers	Total.
	Cu. Yds.	*Cu. Yds.*			*Cu. Yds.*

Canal Zone Rifles.

The Canal Zone Rifle Club will hold a meeting at Pedro Miguel on Sunday, October 9, at 2.30 p. m. All members and others interested are requested to attend.

H. L. BRIDGES,
Secretary, C. Z. R. C.

Pedro Miguel, C. Z., October 2, 1910.

Emanuel Estiva, a Panamanian employed on the Canal work, check No. 80375, stepped in front of a spoil train at San Pablo on the morning of October 3, and was instantly killed.

ESTIMATES FOR 1912.

Summary of Appropriations Needed in 1912—Comparison With Previous Years.

The estimates of appropriations necessary to continue the construction of the Canal in the fiscal year ending June 30, 1912, have been sent to the Secretary of War for transmission to Congress. They call for an appropriation of $47,920,847.69, classified as follows:

1. Salaries of officers and employes in the United States..................	$157,576.66
2. Incidental expenses, rents, supplies, etc. in the United States...........	70,000.00
3. Pay of members of the Commission, and officers and employes other than skilled and unskilled labor, all on the Isthmus, in the Departments of Construction and Engineering, Quartermaster, Subsistence, Disbursements, and Examination of Accounts......	4,580,669.00
4. Skilled and unskilled labor on the Isthmus in the Departments of Construction and Engineering, Quartermaster, Subsistence, Disbursements, and Examination of Accounts......	19,211,305.70
5. Purchase and delivery of materials, supplies, and equipment for the Departments of Construction and Engineering, Quartermaster, Subsistence, Disbursements, and Examination of Accounts..........................	19,186,751.22
6. Miscellaneous expenditures, supplies, labor recruiting, and all incidental expenses not otherwise provided for in the Departments of Construction and Engineering, Quartermaster, Subsistence, Disbursements, and Examination of Accounts................	1,015,300.00
7. Salaries, officers and employes, Department of Civil Administration...	594,892.00
8. Skilled and unskilled labor, Department of Civil Administration.......	22,831.20
9. Materials, supplies, and contingent expenses, Department of Civil Administration.....................	140,230.00
10. Salaries, officers and employes, Department of Sanitation............	758,710.00
11. Skilled and unskilled labor, Department of Sanitation................	231,008.00
12. Materials, supplies, and equipment, buildings, contingent expenses, Department of Sanitation, and medical aid and care of insane and indigent persons permanently disabled in the line of duty.....................	951,573.91
13. Relocation of Panama railroad, salaries, wages, materials, and all other expenses..................	1,000,000.00
Total.........................	$47,920,847.69

Classified by divisions and the purposes for which the amounts estimated are to be expended, the estimates are as follows:

Department of Construction and Engineering:

Office of Chairman and Chief Engineer—	
Officers and employes...........	$376,650.00
Skilled and unskilled labor.......	67,407.60
Materials, supplies, equipment and plant.......................	43,135.00
Total......................	$487,192.60
Atlantic Division—	
Officers and employes...........	$1,374,680.00
Skilled and unskilled labor.......	6,377,907.02
Materials, supplies, equipment and plant.......................	7,548,085.22
Total......................	$15,300,672.24
Central Division—	
Officers and employes..........	$942,010.00
Skilled and unskilled labor.......	5,115,945.76
Materials, supplies, etc.........	3,430,794.00
Total......................	$9,488,749.76
Pacific Division—	
Officers and employes...........	$963,725.00
Skilled and unskilled labor.......	5,535,126.00
Materials, supplies, etc..........	6,149,847.00
Total......................	$12,648,698.00
Mechanical Division—	
Officers and employes..........	$200,520.00
Skilled and unskilled labor......	1,480,155.32
Materials, supplies, etc.........	1,464,380.00
Total......................	$3,145,055.32
Quartermaster's Department—	
Officers and employes...........	$461,554.00
Skilled and unskilled labor.......	633,924.00
Materials, supplies, etc..........	475,000.00
Total......................	$1,570,478.00
Subsistence Department—	
Materials, supplies, etc..........	$62,000.00
Total......................	$62,000.00
Examination of Accounts— .	
Officers and employes...........	$193,560.00
Skilled and unskilled labor......	840.00
Materials, supplies, etc..........	6,650.00
Total......................	$201,050.00
Disbursements—	
Officers and employes...........	$67,770.00
Materials, supplies, etc..........	6,860.00
Total......................	$74,630.00
Department of Sanitation—	
Officers and employes...........	$758,710.00
Skilled and unskilled labor.......	231,008.00
Materials and expenses..........	951,573.91
Total......................	$1,941,291.91
Department of Civil Administration—	
Officers and employes...........	$594,892.00
Skilled and unskilled labor.......	22,831.20
Materials and expenses..........	140,230.00
Total......................	$757,953.20
Relocation of Panama railroad—	
Officers and employes...........	$144,450.00
Skilled and Unkilled labor.......	428,250.00
Materials, supplies, etc..........	427,300.00
Total......................	$1,000,000.00
Incidental expenses on the Isthmus.	$1,015,300.00
Washington office	$227,576.66
Total......................	$1,242,876.66
Grand total..................	$47,920,847.69

A comparison with the estimates and appropriations for previous years follows:

	Estimates.	*Appropriations.*
1902........................		$10,000,000.00
1904........................		(*a*)40,000,000.00

Electrical Workers.

THE CANAL RECORD:

A general meeting of all electrical workers on the Isthmus is called for Sunday, October 9, at 9.30 a.m., at the Ancon lodge hall for the purpose of installing Local Lodge No. 214 of the International Brotherhood of Electrical Workers. This local holds jurisdiction over the Canal Zone.

It is desired that all electrical workers attend this meeting as all are eligible to become charter members. The charter will close very shortly. All the charter members must attend in order to be obligated, and immediately after the open meeting election of officers will take place.

H. C. MARTELL, *Secretary, pro tem.*

Balboa, C. Z., September 30, 1910.

A negro laborer was killed in a premature explosion of dynamite on the relocation of the Panama railroad between Monte Lirio and Camp Totten on the afternoon of October 3.

CANAL ZONE REVENUES.

Increases Shown in Various Departments of Postal and Customs Service During 1909-10.

The revenue derived from the sale of postage stamps and postal cards at the seventeen post-offices in the Canal Zone during the fiscal year ending June 30, 1910 amounted to $83,475.60. In addition, the sum of $92.13 was collected for second class mail matter, making the total income from this source $83,567.73, as compared with $74,241.87 for the preceding fiscal year, an increase of $9,325.86.

Registered letters and parcels to the number of 151,622 were handled, consisting of 29,082 domestic letters, 5,766 domestic parcels, 41,114 foreign letters, 1,598 foreign parcels, 71,971 official letters and parcels registered free, and 2,091 letters and parcels reregistered free. Approximately 45 per cent of the registered matter went under official frank. In the post-offices at Ancon and Cristobal 113,429 pieces of foreign registered mail were handled. Of this number, 8,778 pieces passed through the Ancon post-office for Panama and Central and South American points, and 104,651 pieces through the Cristobal post-office for points in the United States, the West Indies and Europe. There were 1,009 despatches of mail from the Cristobal post-office during the year, including several despatches of bullion direct to England, and 72,670 pouches, sacks, and registered sacks of mail were handled by the railway mail messengers.

There were 207,220 money orders issued during the year, representing a value of $5,228,562.15, and the fees aggregated $22,980.96. The number of money orders sold exceeded the sales of the previous fiscal year by 26,831, and the amount by $61,812.69. The average amount of each order was lower, however, being $25.23, as compared with $28.84 for the previous year. Orders drawn payable in the United States and foreign countries, except Martinique, amounted to $3,976,891.63. Orders drawn payable in the Canal Zone aggregated $1,247,610.22 in value, and in Martinique, where a postal convention was concluded on August 1, 1909, the value of orders drawn amounted to $4,060.30. Under this convention the settlement of accounts is made directly between the respective postal administrations. Zone post-offices are extensively used as depositories and the amount of money orders drawn in favor of the remitter and made payable at the office of issue on June 30, 1910, was $323,311.15.

There were handled during the year 1,023 pieces of unclaimed registered matter, and 32,397 pieces of unclaimed mail matter. Of the latter class, 10,798 were domestic letters and parcels, and 21,599 were foreign letters and parcels. A total of 1,801 misdirected letters was advertised in THE CANAL RECORD, and about 60 per cent of this number were delivered or forwarded to the addressees.

CUSTOMS SERVICE.

During the year, 237 vessels, with a total tonnage of 400,910, entered at the port of Ancon, and 238 vessels, with a total tonnage of 399,690, cleared. At Cristobal, 235 vessels, with a total tonnage of 636,191 entered, and 232 vessels, with a total tonnage of 625,958, cleared.

REVENUES FROM ZONE LANDS.

On June 30, 1910, there were 2,783 leases in force in the Canal Zone, 1,892 of which were for building lots and 884 for agricultural lands, an increase of 686, as compared with the preceding fiscal year. The area of agricultural land under lease was 1,545 hectares, or approximately 3,682 acres. Rents collected from leases amounted to $27,282.29, as compared with $26,969.88 for 1908-09; $17,436.76 for 1907-08, and $7,974.78 for 1906-07.

TAXES FOR LICENSE FEES.

The total collections on account of general taxes and licenses aggregated $107,642.58, as compared with $98,970.86 for the previous fiscal year. The distillation tax produced a revenue of $3,158.67, as compared with $2,209 for 1908-09, and $3,814.94 for 1907-08. The liquor license collections amounted to $65,400, as compared with $72,600 for the preceding fiscal year. Insurance companies paid $234.34 as fees for transacting their business in the Zone.

ADMINISTRATION OF ESTATES.

The estates of 38 American employes of the Canal Commission or the Panama railroad were settled during the year, and there were 17 estates still under adjustment on June 30, 1910. The moneys handled,during the year on account of this work amounted to $6,531.24. Twelve estates escheated to the Government of the Canal Zone in accordance with the provisions of Sections 779 and 780 of the Code of Civil Procedure. The value of these estates was $552.25.

MISCELLANEOUS COLLECTIONS.

In addition to the collection of Zone revenues, bills against employes and others are collected on account of hospital fees, quarantine charges, subsistence, sales of material, etc. The total of such collections for the year amounted to $31,373.03.

The grand total of revenues collected during the fiscal year by the department was $310,279.57, as compared with $297,541.60 for 1908-09, and the total of all moneys handled was $5,577,285.24, as compared with $5,491,566.48 for the previous year.

Pedro Miguel Locks.

Preparations are under way at the Pedro Miguel Locks for continuing the construction of the side and center walls from the head wall north to the forebay wall. The side walls will extend back from the head wall for a distance of about 700 feet, and the center wall for a distance of about 1,700 feet, or nearly to the site of the No. 1 berm crane. Before concrete can be laid in this section, however, considerable material, principally rock, will have to be removed. A steam shovel is already at work excavating for the extension of the east side wall; drilling operations, preparatory to blasting in the section where the center wall extension will be, are in progress, and grading for a construction track, over which the spoil from the west wall excavation will be carried, has been begun. This track will run on a berm along the edge of the west bank, extending to a dump a short distance away, where the material will be wasted. The spoil from the center wall excavation will be carried on dirt trains over a track which will be laid from the forebay to the present end of the center wall, thence through the center wall culvert to its lower outlet and on out of the lock at the south end. The height of the center wall culvert is 16 feet 8 inches; it is larger than some of the East River tubes in New York City, and the construction trains can be operated through it easily.

The work of installing the two new 2-cubic yard mixers, one in the east and the other in the west storage trestle, for producing concrete with which to build the wall extensions, is well advanced. The west mixer is completed, and the east mixer lacks only its electrical equipment.

The construction of the side and center walls toward the south end of the lock has been advanced. A section of the east side wall, in which the greatest amount of concrete remains to be laid, is built to its permanent height, and its foundation has been completed nearly to the lower gate sill. The culvert section in the center wall is finished to within about 100 feet of the sill.

Concreting around the T culvert and the lower gate sills is in progress. As this work is out of the reach of the chamber cranes, the concrete for it is produced by the mixer situated on the east bank, which formed a part of the auxiliary equipment before the installation of the permanent handling plant. The mixer was placed in operation on September 20, and is delivering an average of 100 cubic yards a day. The concrete is carried from the mixer in buckets, thence raised by a locomotive crane into hoppers, and from there allowed to fall into Decauville cars to be transferred to the point desired.

Considerable back filling with rock from Ancon quarry has been accomplished along the west wall of the lock.

The record of concrete laid for the six 8-hour working days of the week ending October 1, and the total to that date, follows:

Date.	Cubic Yards.			
	Construction plant.	Auxiliary plant.	Large stone.	Total.

Steamship Announcements.

The sailing of the *Cristobal* from pier No. 11, Cristobal, has been fixed for 3 p. m., Monday, October 10.

United Fruit Company ships between Colon and New York will sail on Thursday, instead of Friday, beginning November 17.

Modesto Huete of Panama has been appointed consul of Costa Rica in Panama.

MUNICIPAL IMPROVEMENTS.

New Contract for Payment of Improvements in Colon and Panama.

A new contract has been entered between the United States and the Republic of Panama providing the manner in which payment shall be made for the sewers, waterworks, and pavements installed in the cities of Colon and Panama under Article VII of the Treaty of November 18, 1903. The contract was signed on September 30, but is in force as of July 1, 1910. The chief points in which it differs from the old, contract signed on October 14, 1907, are: (1) The amount estimated to be raised in fifty years for the cost of installing, operating, and maintaining for fifty years the waterworks and sewers, and construction, maintenance and repair of pavements for ten years was estimated under the old contract as $3,276,250, or $65,525 per year for the city of Panama, and $3,492,500, or $69,850 per year for Colon. In the new contract the amounts due on July 1, 1910 are specified and a quarterly adjustment is agreed upon to meet interest and the cost of maintenance. (2) "Replacements" are defined in the new contract, and were not in the old. (3) Provision is made in the new contract for extensions, and no such provision was made in the old contract.

Under the old contract there had been paid up to July 1, 1910, for public works in Panama, $228,833.40, and in Colon, $220,028.74.

The new contract provides:

The United States hereby agrees that it will maintain and operate for fifty years from July 1, 1907, the waterworks and sewerage systems installed by it in the city of Panama, and that it will maintain and repair for ten years from said last named date the pavements constructed by it in the city of Panama.

It is agreed that the cost of the works referred to, less the amounts paid as water rates by consumers in the city of Panama and the amounts paid to the United States by the Republic of Panama, was one million, one hundred, thirty-eight thousand four hundred thirty-eight and 8/100 dollars on July 1, 1910 (Colon $775,245.18); and in order to provide for the payment of the said principal sum, with interest thereon at the rate of two (2) per cent per annum, and to pay for the cost of the new work, and the cost of maintenance, operation, repair, and replacement of the water-works system and pavements as the work may be done from time to time, the Republic of Panama agrees that the United States may collect the water rates from private consumers in the city of Panama, in the amount and subject to the conditions provided for by the regulations, which are made part of this agreement, respecting the use of water from the public mains and the collection of water rates approved by competent authority of the Republic of Panama and by the Isthmian Canal Commision, effective on and after July 1, 1907.

(The odd provision for a rate of 30 cents per thousand gallons for all water used in Colon by the Panama railroad and the Isthmian Canal Commission is inserted here in the contract referring to Colon.)

It is agreed that on September 30, December 31, March 31 and June 30, yearly, during the period of forty-seven years beginning July 1, 1910, the United States shall receive from the Republic of Panama, and the Republic of Panama agrees to pay to the United States such amount in money, in addition to the water rates collected, hereinbefore referred to as will equal during each quarter of the first year, one-fourth of one-forty-seventh of the sum of $1,138,438.08 (Colon $775,245.18) referred to as the total amount due July 1,1910, after the United States has deducted from the sum of the water rates received for the quarter the expense of operation, maintenance, and repairs, as well as a proportionate part of the cost of maintenance, operation, and repair of the reservoir and pipe lines outside of the municipal limits, and the proper proportion of the two per cent of the capital cost of said reservoir and pipe lines, and interest at the rate of two per cent per annum for the quarter on the principal sum due at the end of said quarter; the balance remaining of the principal sum shall be increased by the cost of extensions and replacements in the water-works and sewerage systems and pavements during the quarter, and the balance so increased shall be the principal sum due at the beginning of the next quarter. If at the end of the quarter there should result a surplus in the sum of the water rents collected, such surplus shall be applied, in addition to the one-quarter of one-forty-seventh of the principal sum, to the reduction of the principal then due, and the same computation and the same payments shall be made quarterly for each succeeding quarter, until the expiration of forty-seven years from July 1, 1910.

The total payments quarterly in the second year shall be based on one-fourth of one-forty-sixth of the principal sum due at the end of that quarter, and in the third year one-fourth of one-forty-fifth of the same principal sum at the end of each quarter, and so on during the succeeding years with the same ratio of reduction, until the full period of forty-seven years shall have expired.

If at any time it shall appear that the United States can reimburse itself in forty-seven years for the cost of the works heretofore done and those anticipated to be necessary by the collection of lower water rates than are provided for by the regulations hereinbefore referred to, or that it would be necessary to increase the rates in order to reimburse the United States within the period stated, for the cost of such works, this agreement shall be modified or amended so as to increase or decrease the rates accordingly.

It is further agreed that at the end of seven years from July 1, 1910, the Republic of Panama shall have the right to take over from the United States, and the United States shall have the right to turn over to the Republic of Panama the maintenance of the pavements heretofore or hereafter installed by the United States in the city of Panama (Colon).

It is further agreed that the purpose of this agreement is to enable the United States to reimburse itself for the actual amount expended, or to be expended, by it for the installation of the water-works and sewerage systems in the city of Panama (Colon), and the operation and maintaining of such systems for the period of forty-seven years from July 1, 1910; for street pavements constructed by the United States in the city of Panama (Colon) and the maintaining, repairs, and replacements and extensions of pavements for a period of seven years from July 1, 1910, together with interest at two per cent per annum on the amount expended or to be expended by the United States for such water-works, and sewerage systems, and paving; and if at the end of forty-seven years from July 1, 1910, it shall appear that the United States has collected from the water rates established by this agreement and any amendments and modifications thereto, more than such actual cost with interest, such excess shall be returned to the Republic of Panama; and if it shall appear at the end of such period that the United States has collected less than such actual cost, with interest, the Republic of Panama shall pay to the United States the full amount of the deficit.

It is agreed that "replacements" within the intent of this agreement shall be understood to mean repairs or renewals of the work costing more than $1,000; those costing less than that amount shall be considered repairs. (Here is inserted a proviso that the books of the Isthmian Canal Commission shall be open to agents and officers of the Republic of Panama.)

In addition to the provisions hereinbefore in this contract made which relate to the improved sections of said city of Panama (Colon) as they now exist, it is agreed that all extensions of the water and sewer systems and of street paving and construction of said city, to sections or portions of said city which are now or may hereafter be unimproved—that is to say, without houses or buildings thereon—shall be made by the Isthmian Canal Commission, or by such other agency as the United States Government may select. Before any such unimproved sections or portions of said city shall be opened up for the erection of houses or other buildings thereon, same must be plotted and laid out systematically and in proper municipal order to admit of and provide for, therein, the systematic and sanitary opening and paving of streets, and the orderly and sanitary construction of water mains and sewers to be connected with the present water and sewer systems of said city; and before any houses or other structures are erected on any unimproved sections or portions of said city, such sections or portions, in addition to being properly plotted and laid out as aforesaid, must in a sufficient and sanitary manner be paved, and water mains and sewers must be constructed and extended throughout the same. Such plotting and laying out of such unimproved sections of said city, and the work of paving therein the streets, and the construction and extension of the aforesaid sewers and water mains therein, shall be performed by and under the plans of the Isthmian Canal Commission, or such other agency as the United States Government may designate. For all the improvements and works in and about such unimproved sections of said city named and provided for in this clause the United-States Government, or its properly designated agent, shall be paid by the Republic of Panama, in cash, or in such other manner as the United States or its said agent may require; and thereupon the municipal improvements constructed agreeably to the provisions of this clause shall become the property of the Republic of Panama.

When the sewerage and water systems and the street paving and construction are extended to any unimproved sections or portions of said city, as in this clause provided, and are paid for as in this clause provided, rentals for the use of such water and sewerage and street improvements shall be fixed, collected and applied in the same manner as are fixed, collected and apolied similar rentals provided for in this contract; unless, in the meantime, the Republic of Panama shall have duly acquired full right and title to such other municipal improvements, agreeably to the Treaty between the Republic of Panama and the United States, signed November 18,1903, or agreeably to this contract, or any other contracts made in accordance with said Treaty; in which case, whatever rentals may be derived from the municipal improvements provided for in this clause shall be and remain the revenue of said Republic of Panama.

The cost of maintaining and operating the municipal improvements provided for in this clause shall be borne and taken care of in the same manner as is the cost of maintaining and operating the other municipal improvements named in this contract and agreement.

The provisions of this clause in respect to the erection of buildings on the aforesaid unimproved sections of said city shall be made effective by proper presidential decree, to be immediately promulgated, which decree shall thereupon become a part of the sanitary rules and regulations of said city.

Ancon Rock Crusher.

A statement of the rock crushed at Ancon quarry during the week ending October 1, follows:

Date.	Hours worked.	Cubic Yards.
September 26	7:35	2,830
September 27	7:35	3,135
September 28	1:00	240
September 29	....	*465
September 30	....	*225
October 1	....	....
Total	16:10	6,895

*These figures refer to rock shipped from the bins as none was crushed on these dates.

The shaft of the main crusher broke down shortly after the day's work had begun on Wednesday, September 28, compelling a suspension of operations during the remainder of the week. Repairs were completed and the plant was started up again on Monday morning, October 3.

Porto Bello Crusher.

A statement of the work done at Porto Bello crusher, by days, for the week ending October 1, follows:

DATE.	Hours worked.	Cubic Yards.
September 26	8:40	3,101
September 27	7:25	2,445
September 28	9:18	2,891
September 29	6:30	2,433
September 30	6:05	1,729
October 1	9:30	3,149
Total	47:28	15,748

Fatal Accident Near Paraiso.

Preston Douglas, a Barbadian, check No. 93530, was fatally injured, and Charles Green, a Panamanian, check No. 21215, sustained the fracture of a leg in an accident near Paraiso at 6.45 a. m., on Thursday, September 29. The men were employed as brakemen and were standing on the footboard of the tender of locomotive No. 298 as it backed down an incline track just north of bridge No. 57 to couple on to a train of dirt cars. The engine wheels slid as the air was applied to them and the foremost car was struck with considerable force, pinning the two men between the car and tender. Douglas lived in Panama and was removed to Ancon Hospital, where he died a few hours later.

LAKE REGION EXCAVATION.

Work Between Gatun Dam and Culebra Cut.

Excavation in the channel through the Gatun Lake region is both retarded and assisted by freshets in the Chagres River. Within the past ten days the shovels at work at 40 feet above sea level have been flooded twice and have been obliged to suspend for a day each time to allow the water to subside. Yet each of these freshets carried away thousands of cubic yards of material from the dumps along the river, and thus were of assistance in that part of the work.

The river dumps are proving very economical for clay in the wet season, as compared with dumps on which the tracks must be shifted continually. Before they were opened the cost of dumping at Gorgona and Mamei was from seven to 15 cents a cubic yard, and on the river dumps this has been reduced to four cents a yard, and some material is wasted at as low a cost as one cent a yard. On the dump at Gorgona, both the plan of casting the earth into the river from a high trestle, and the regular dry dump are in use, the latter because it is desirable to make a fill on which the yards at Gorgona shops may be extended, if desired. On the trestle dump the clay is sluiced into the river, and two water cranes have been erected to wash out mud that sticks in the cars. It was here that the invention of a Spanish subforeman was first used in dumping and "righting" the cars. It consists in placing a piece of pipe under the box of the car at a slight angle with the track, with one end touching the box and the other resting on a tie. The locomotive draws the car slowly forward and, as the pipe approaches the vertical, the body is dumped. The same plan is used in "righting" the body, this operation being accomplished without the train coming to a stop. Five men can do the work previously requiring 20 by use of the "pipe tilter." The pay of the subforeman was increased when the effectiveness of his method was demonstrated.

At Point 5, near Mamei, the dump is on a trestle alongside the river, and the material is sluiced into the stream. In spite of the sluicing, however, the bank grows slowly to the level of the track, and at regular intervals, the clay is dislodged by small charges of dynamite. From 2,000 to 3,500 yards of spoil are disposed of daily at this dump, and only 15 laborers are employed in keeping it in condition. The cars are so loaded by the shovels as to make it unnecessary to hook the chains, and they are dumped by the "tilting pipe." They are hauled back to the shovel without being "righted," and the shovel pushes each body into position with the first dipperful of earth. There is a dump on a bend in the river at San Pablo, in which 50,000 carloads of earth have been wasted, two loads at a time. The river is forced by a bar on the west side to flow sheer against the east bank, and the current thus carries away the spoil as rapidly as it is dumped.

At present, excavation in the lake region is confined to steam shovel between Gorgona and Mamei, and to hydraulic work by a contractor, opposite Tabernilla. At Gorgona, three shovels are digging at 50 feet above sea level, 11 feet above the bottom of the channel. One of these has made a cut so close to the California Hotel that the foundations of this big frame building are right on the edge of the ditch. The next cut would include part of the building, if it were not that the Commission has agreed to tear it down and reerect it at New Gatun.

Four French dredges lie in the channel, two at Gorgona and two at Mamei, and the digging is carried on around them. They were erected and had been in use by the French. Three of them are of the Belgian ladder type, which makes its own flotation; and one is a small suction. Those at Gorgona have been stripped of all valuable machinery and most of the parts have been put to use in the dredges at the Pacific entrance. Only a few parts have been taken from the ladder dredge and the suction dredge at Mamei. Inasmuch as these old dredges are not greatly in the way of the excavation, it is likely that they will be allowed to remain in their present positions until the lake is formed, when they can be floated out of the channel at much less cost than would be incurred by wrecking and removing them now.

The shovels at Gorgona have already cut away a small portion of the cane plantation of Antonio Andrade, who ran a rum distillery there for many years and is believed to have made a fortune from the business. The whole plantation will be covered by the lake in a few years. He has been paid $90,000 by the Government for damages sustained, and is merely occupying the place until the Canal work causes him to move.

Nine shovels are now at work in the lake region, three at 50 feet above sea level at Gorgona, and two at Point 5, three at east Mamei, and one at Point 6, on the 40-foot level. The excavation between Gatun Dam and Culebra Cut, 23 miles, is 78 per cent completed.

Central Division Dumps in September.

The six unloaders in the Pedro Miguel district of the Central Division during the month of September, 1910, unloaded 1,750 Lidgerwood trains, an average of 70 trains per day for the month. The three unloaders at Balboa averaged 40 trains per day and the three at Miraflores 30 trains per day.

In addition to the Lidgerwood trains above enumerated, 62 Western dump trains were unloaded at Balboa and five at Miraflores, making a grand total of 1,817 trains unloaded in the district during the month of September. This is the greatest number of trains unloaded with six unloaders in a single month in the Central Division, the best previous record having been made in August, 1910, when an average of 67½ trains were handled per day.

There was a delay of 91 hours and 21 minutes at Balboa waiting for trains. In addition, there were other delays on account of derailments, breaking down of unloaders, etc. At Miraflores, the delay due to waiting for trains was 38 hours and 15 minutes.

From September 1 to 15, the Lidgerwood trains averaged 19 cars to the train, after which date an additional car was added, giving an average of 20 cars per train.

A statement of the Lidgerwood cars unloaded in the Central Division during the month of September, follows:

Location.	No. of unloaders.	No. of trains.	No. of cars.
Balboa	3	1,000	19,544
Miraflores	3	750	14,618
Gamboa	2	604	11,476
Tabernilla	2	518	10,054
Total	10	2,872	55,692

EXECUTIVE ORDER.

Transfers from Isthmian Canal Service to Service in the United States.

Civil Service Rule X, paragraph 8, clause (a), is hereby amended by inserting in the tenth line after the word "requirement" the following words:

"in cases of transfer from the Isthmus of Panama or ——"

As amended clause (a) will read as follows

He must have served three years in or under the department or independent office from which transfer is proposed; but the Commission may waive this requirement, when it deems such action necessary in the interest of the service. in cases of transfer other than from one executive department to another at Washington, D. C. In any case he must have received absolute appointment and have actually served at least six months next preceding the transfer; but the Commission may waive this latter requirement in cases of transfer from the Isthmus of Panama or where the person has been separated within a year from a competitive position after six months' service therein, upon the certificate of the proper officer that the separation was caused by necessary reduction of force and not by inefficiency, and may allow transfer to any other department or office upon his passing an examination prescribed by the Commission testing his efficiency for the position to which his transfer is proposed, subject to the other provisions of this rule.

The purpose of this order is to give to employes in the Canal Service who are otherwise eligible the same consideration as is accorded to employes in the classified Philippine Service who have rendered at least three years of meritorious service in the tropics.

Wm. H. Taft.

The White House,
September 16, 1910.
[No. 1246.]

The term "Commission" as used above, refers to the Civil Service Commission.

The effect of this amendment is to provide for the nominal reinstatement within one year from date of separation of persons with a clear record who have become separated from the Isthmian Canal service, for the purpose of securing transfer to the service in the United States. Ordinarily, such transfers will not be approved by the Civil Service Commission until after three years' service on the Isthmus, but in meritorious cases they may be approved after two years of service. This paragraph as amended, and the other provisions of Civil Service Rule X, apply only to those persons appointed to the service on the Isthmus of Panama through competitive examination, or by transfer or promotion from a competitive position.

Civil Service Examinations.

Civil service examinations are scheduled to be held at Culebra as follows:

Postal clerk	October 16
Trained nurse	October 16
Mechanical draftsman	October 16–17
Topographic draftsman	October 16–17

All of the above examinations are for appointment in the Isthmian Canal service. Application blanks for any of them may still be secured from the undersigned.

John K. Baxter,
Secretary, Isthmian Civil Service Board.

Culebra, C. Z., September 28, 1910.

SOCIAL LIFE OF THE ZONE.

Women's Clubs and Other Features.

The October meeting of the Canal Zone Federation of Women's Clubs will be held in Gorgona on Thursday, October 13. The meeting will convene at the Commission clubhouse at 1.30 p. m. The plan of the program is to emphasize the practical working of the Federation committees by papers and reports from the various chairmen. A short musical program will be provided. Delegates and alternates will take the trains which meet at Gorgona at 11.40, and the Federation lunch will be served at the Commission hotel at 12.30. By courtesy of the Panama railroad transportation will be furnished the delegates and alternates. The transportation cards must be filled out and signed in order to be valid. Credentials should be duly filled out and signed and handed to the members of the credentials committee on the train. All reports and resolutions must be presented in writing.

The Cristobal Woman's Club gave a reception to the outgoing and incoming presidents on Wednesday, September 28. A program was rendered consisting of a piano solo by Mrs. F. C. Stratton; trio by Mrs. J. A. Smith, Miss Margaret Smith and Mrs. J. C. Biers; accompanist, Mrs. Carl Hoit. About fifty members and their friends were present. The outgoing president was Mrs. Thomas E. Brown and the new president is Mrs. E. H. Colip.

At the next meeting of the club, on October 12, Dr. C. C. Pierce will speak on "Sanitation." The club will hold a fancy dress ball in aid of the Salvation Army at the Lincoln House, Colon, on Saturday evening, October 15. Tickets will be on sale as advertised in Cristobal and Colon, and at the Hotel Tivoli, Ancon.

The weekly meetings of the Paraiso Woman's Club were resumed on Wednesday afternoon, September 29. The proceeds of the cake sale held in August amounted to nearly $30. The club will hold a similar entertainment on Wednesday evening, October 12. It is proposed, if sufficient interest is manifested by the residents of Paraiso, to hold a social entertainment one evening each month. A committee with R. C. Smith as chairman is arranging for a Hallowe'en ball to be held on Saturday evening, October 29, for the benefit of the Woman's Club, the proceeds of which will be devoted to the establishment of a playground for the children of the village. A Christmas bazaar is also contemplated.

An election of officers was held in the Pedro Miguel Woman's Club in August, when Mrs. George Brown was again chosen president and Mrs. W. S. Jennings, vice-president. Mrs. E.J. Brown was elected secretary and Mrs. Ernest Bitely, treasurer. Meetings have been held semimonthly through the summer at the homes of the members, recent hostesses having been Mrs. F. R. Roberts of Empire, and Mrs. John Walker of Pedro Miguel.

On Thursday and Friday afternoons the clubhouse is open to women, and considerable interest is taken in bowling, the number of women in the alleys having increased from three to nineteen during the past few weeks. As many as forty games are played in one afternoon.

The Daughters of Rebekah, Isthmian Lodge No. 1, Gorgona, held a special meeting on Friday, September 23, the occasion being the fifty-ninth anniversary of the founding of the order. There was a program consisting of piano and vocal solos, recitations, and an address by each of the officers on special features of the work of the order. Refreshments were served.

Social activities of an informal, cooperative nature have sprung up in Culebra in the past month. An open evening, held at the Commission clubhouse once a month, brings together a large number of residents in informal intercourse. A program of varied character is provided and refreshments are served. The entertainments are open to any resident of the village, with their friends, irrespective of membership in the Y. M. C. A.

The formal opening of the Hotel Tivoli tea room took place on Saturday afternoon, October 1, when there was a large attendance. The tables were decorated and tea was served from 3 to 6 o'clock. A part of the south veranda, with the view of the Pacific, has been suitably furnished and will be open every afternoon, including Sundays.

The Ladies' Aid Society of the Methodist Episcopal church, Panama, will hold an "ice cream social" in Ancon hall on Wednesday evening, October 12. Admission will be free and a cordial invitation is extended to the general public to attend.

Canal Zone Humane Society.

The Ancon Dramatic Club will repeat the performance of Charles Hawtrey's comedy, "The Private Secretary" at the National Theatre, Panama, for the benefit of the Canal Zone Humane Society on Friday evening, October 14. A special train will be run according to the schedule given below. Ticket holders will be entitled to free transportation on this train. Tickets may be secured at the Commission clubhouses, the Camp Elliott Y. M. C. A., the Las Cascadas and Pedro Miguel post-offices, the Corozal, Balboa and Ancon dispensaries, the Tivoli Hotel, and the news agency of Vibert and Dixon, Panama. The number of tickets sold will be limited to the seating capacity of the theatre and the advance sale will be closed on Thursday evening, October 11. The schedule for the special train follows:

Leave Colon, 5.45 p. m.; Gatun, 6.03 p. m.; Gorgona, 6.58 p. m.; Bas Obispo, 7.08 p. m ; Las Cascadas, 7.16 p. m.; Empire 7.21 p. m.; Culebra, 7.26 p. m.; Paraiso, 7.35 p. m.; Pedro Miguel, 7.40 p. m.; Corozal, 7.51 p. m.

Returning, the train will leave Panama at 11.30 p. m.

The Canal Zone Humane Society was recently reorganized and funds are needed to carry on educational and other work outlined by the organization. The membership is still small and efforts are being made to awaken an interest in the work and place the society on a sound basis. The net proceeds from the performance of "The Private Secretary" by the Ancon Dramatic Club in August for the benefit of St. Luke's church organ fund were $325.

Baseball.

A baseball team has been formed out of the clubs of the Atlantic League, exclusive of the Commissary-Subsistence team, to be known in the new league organization as the Atlantic club, instead of the Cristobal-Colon team, as heretofore mentioned. All the clubs in the league have agreed to respect last season's contracts, thereby reserving the players until definite action is taken concerning them. It has been further agreed that the number of players to be carried shall be twelve for each club, and also managers and umpires, when necessary, upon playing dates when the official schedule calls for any of the teams to visit another town in the circuit. The new league organization will be officially known as the Panama Canal Baseball League.

PERSONAL.

Col. Geo. W. Goethals sailed for the United States on the *Colon*, on September 29, to attend the wedding of his son, Lieut. George R. Goethals. He will be away from the Isthmus three weeks.

Lieut.-Col. C. A. Devol, and Mrs. Devol, were passengers on the *Panama*, which arrived at Cristobal on October 5.

Corozal Masonic Club.

The Corozal Masonic Club was organized on Wednesday evening, September 21, with a membership of about 25. Another meeting was held on September 28 to consider a constitution and by-laws, and on Wednesday night, October 5, a meeting will be held to elect officers and effect a permanent organization. The regular meetings of the club will be held on the first and third Wednesday evenings of the month.

Hebrew Benevolent Society—Day of Atonement.

THE CANAL RECORD:

Divine service will be conducted at the Sojourners lodge room, Colon, on Wednesday evening, October 12, at 6.15 o'clock, and on Thursday morning, October 13, beginning at 8.15 o'clock. All Jewish residents of the Canal Zone are cordially invited.

J. JULIUS SASSO,
Secretary.

Colon, R. P., October 1, 1910.

Electrician and Wireless Operator.

Examinations are announced to be held for the positions of electrician and wireless telegraph operator in the Lighthouse Service, at $75 a month, for duty under the Assistant Inspector of the Twelfth Lighthouse District, Territory of Hawaii, and wireless telegraph operator in the Philippine Bureau of Posts, at $1,200 per annum. The receipt of applications will be closed on October 11. Application blanks and information in regard to either of the above may be secured by addressing the undersigned.

JOHN K. BAXTER,
Secretary, Isthmian Civil Service Board.

Culebra, C. Z., October 1, 1910.

Claims for 16 houses and the surrounding fruit trees in the Canal prism, north of Bohio, have been allowed at $800.50. The claims as presented aggregated $954.40.

Band Concert.

The Isthmian Canal Commission Band will give a concert at Hotel Tivoli, Ancon, C. Z., on Sunday, October 9, 1910, at 7.30 p. m. The program follows:

1	March—*Col. Sullivan*	Barrington-Sargent
2	Overture—*Raymond*	Thomas
3	Intermezzo—*Silver Bell*	Wenrich
4	Waltz—*Bad'ner Mad'ln*	Komzak
5	Medley Selection—*The Sunny South*	Lampe
6	*a* Oriental Rag—*Turkish Trophies*	Egan
	b Medley March—*Has Anybody Here Seen Kelley?*	Murphy
7	El Gitanillo—*Tango*	France
8	Selection—*Bright Eyes*	Hoschna
9	Concert Piece—*Chimes of Love*	d'Albret
10	March—*Militar*	Franco

CHAS. E. JENNINGS, *Musical Director.*

The next concert will be given at Culebra on October 16, at 5.45 p. m.

COMMISSION CLUBHOUSES.

Activities of the Young Men's Christian Association.

CULEBRA.

On Saturday night, October 1, the Gatun second team took three games from the Culebra second team by the following scores:

Gatun.				Culebra.			
Dalton.....	166	151	145	Fleischman	170	185	150
Harrington..	175	154	174	Huttlemeier	125	146	116
Myers......	162	158	155	R. Kop'ski	169	129	155
Duryea.....	163	165	140	Cushing...	170	195	186
Hodges.....	200	189	191	Mengel....	100	134	163
Total.....	866	817	805	Total...	734	789	770

A moving picture entertainment was given at the clubhouse on Tuesday evening, September 27.

The present standing of the men in the chess tournament is as follows:

	Won.	Lost.
Bartlett......................	2	5
Dubois......................	6	2
Mengel......................	3	6
Putnam......................	2	5
Stiles......................	2	3
Warner......................	8	0

All men interested in basketball should come out for practice on Wednesday nights. Gymnasium classes are held Mondays and Wednesdays from 5.15 to 5.45 p. m.

The standing of men on September 24 who have played ten or more games in the local handicap bowling tournament was as follows:

	Name.	Won.	Lost.	Average.	Per cent.
1	Hall............	10	3	181	769
2	Hurst............	10	4	180	714
3	Hostetter.........	9	4	194	692
4	Huttlemeier......	17	8	173	680
5	Hayes............	12	7	179	631
6	Dunham.........	10	6	167	625
7	Cornthwaite.....	13	8	174	619
8	Mengel..........	16	11	172	592
9	Leibundguth.....	7	7	163	500
10	Koperski, R......	11	12	169	478
11	Brown..........	6	8	166	428
12	Fleischman......	8	12	165	400
13	Sickler..........	5	8	163	396
14	Fox.............	9	15	158	375
15	Koperski, E......	8	14	157	363
16	Hill.............	4	7	156	363
17	Warner..........	4	9	152	307
18	Case............	5	14	166	263

EMPIRE.

Empire took two out of three games from Gorgona's first team on Saturday night, October 1, by the following scores:

Gorgona.				Empire.			
Roper......	142	166	188	Brown....	180	158	147
Gaedkie....	163	159	179	Potter....	193	169	194
White......	161	142	156	Shaugne'sy	220	146	155
Otis........	167	190	194	Pearson...	174	167	180
Sexton......	168	140	140	Huson....	161	171	121
Total.....	801	797	857	Total...	928	811	797

The membership of the Empire clubhouse is now 350. The membership committee is working hard to reach the 400-mark before January 1.

The meeting of the discussion club last week was led by R. G. Goodman of Cristobal, his subject being "What Is Happiness?"

The next moving picture entertainment will be held on Friday evening, October 7.

Miss MacLaren's final entertainment at the Empire clubhouse was attended by one of the largest audiences ever assembled in the hall. After the entertainment an informal reception, followed by a musicale, was tendered Miss MacLaren.

Mr. Gustavson has resigned as manager of the bowling alleys after over two years' service. His place will be filled by Mr. Goolsby.

GORGONA.

At the open meeting of the discussion club on Tuesday night, September 27, impromptu subjects were brought up as suggested by the men present. Among those of interest were "The Simple Life" and "Under What Conditions can We do Our Best Work?"

The bowling match on Saturday night, October 1, between the Gorgona and Empire second teams resulted in Empire winning three games. The scores were as follows:

Empire.				Gorgona.			
Gustavson..	139	162	223	Stoehr....	161	178	192
Sawtelle....	148	167	152	Stewart...	125	144	154
Goolsby....	234	180	169	Bordt.....	156	145	166
Giavelli.....	156	181	153	M.Varen'p.	129	175	159
Bardelson...	159	185	169	Haldeman.	137	166	188
Total.....	836	875	866	Total...	708	808	859

The principal feature in the pool and billiard room for October will be a billiard tournament. Entries closed on Monday, October 3, and the tournament opened on Tuesday, October 4, with the following entries: Clarke, Robitoy, Tyan, Clapp, Francis, Evans, Ashman, and Heltemes.

The new barber shop rates are five cents more than the prevailing rate in town to nonmembers, and five cents less than the prevailing rate in town, to members. The hours for the barber shop are from 11.30 a. m. to 4.30 p. m., and from 5.30 to 10.30 p. m.

GATUN.

Until further notice gymnasium classes will be held Monday and Wednesday evenings.

Basketball practice will be held on Tuesday and Thursday evenings.

E. A. Putnam, secretary of the Culebra Y. M. C. A. will lead the meeting of the discussion club on Thursday evening of this week. His subject will be "What Is Failure?"

The next moving picture entertainment will be given on Thursday evening, October 13.

The Gatun first team took three bowling games from the Culebra first team on Saturday evening, October 1, the following being the scores:

Culebra.				Gatun.			
Cohen......	180	135	170	Ponton....	144	152	144
Hall........	157	124	133	Wolf......	151	194	171
Hayes......	150	136	128	DeMoll...	189	160	167
Case.......	190	138	127	Severn....	149	135	186
Harrington..	127	101	178	Barte.....	175	167	146
Total.....	804	634	736	Total...	808	808	814

The prize for high bowling score during the month of September was won by Mr. Durand with 222. The Gatun bowling alleys have been improved by the installation o an electric fan.

The membership of the Gatun association is now 380. A cordial invitation is extended to every American on the gold roll to join.

An informal "social" and smoker will be held on Tuesday evening, October 18. Every man in Gatun is invited.

Gorgona's second team will bowl at Gatun on Saturday evening, October 8.

A progressing pool tournament begins this week. Any member may enter. The prize will be a pair of gold cuff links. A three-cushion billiard tournament will also be started in a few days.

CRISTOBAL.

The membership campaign closed on September 30 with a final standing of 442. The I. C. C. team captained by C. A. Chambers won the team contest with 36 names to its credit.

The moving picture entertainment last week was well attended. Another entertainment will be given on Saturday, October 5, and again on October 14, in connection with a members' smoker which will be given on that evening.

The meeting of the discussion club on Thursday evening, September 27, was led by F. C. Freeman, his subject being "Our Thoughts."

Lieut. C. M. Hargraves of the British Army gave an account of his trip around the world on Friday night, September 28. Several readings and imitations were also given by him during the evening.

On Saturday night, October 1, the Marine Band from Camp Elliott gave a concert at the clubhouse.

The Cristobal basketball team defeated the Gatun team on Saturday night, October 1, by a score of 16 to 15. The line-up of the teams was as follows: Gatun—Porter, Eggleston, Porter, Mitchell, Conners and Hubner. Cristobal—Prather, Luce, Vifquain, Weller, Schwallenberg and Pring.

The local bowling match played on Saturday night, October 1, between the "Knutt-splitters" and the "Wood-butchers," resulted as follows:

"Knutt-splitters."				"Wood-butchers."			
Dickson....	183	130	151	Rabbitt...	148	142	140
Henry......	127	166	131	Adams....	185	151	173
Turner.....	158	137	153	Burns, A..	157	129	184
Burns, W...	103	91	132	Duer......	168	162	149
Burns, T....	184	136	199	Collins....	169	153	189
Total.....	755	660	766	Total...	827	737	835

Dr. Blackburn made high average for September, and Rabbitt made high score, with 253.

PORTO BELLO.

On Friday evening, September 23, C. D. Morgan played seven members of the chess club simultaneously. He won four of the seven games played.

On Tuesday night, September 26, the meeting of the discussion club was led by Geo. R. D. Kramer of Culebra; subject, "Exercise."

A pool tournament with 15 men entered has just been started. The men entered in class A are: Bradley, Cornick, Hill, Ross, Stoll, Tuttle, and Wilson. Wilson plays his games with a handicap of 25 balls. The men entered in class B are: Arden, Beattie, Elliott, King, McDonald, Richardson, Sweeney, Van Fleet, and Wallen.

Lieut. C. M. Hargraves of the British Army gave a lecture on Tuesday night, September 26.

Married.

FORD-ROARK—At Cristobal, on September 29, 1910, by Rev. Carl H. Elliott, Miss Chloe M. Roark, of Kansas City, Kan., to Stanley R. Ford of Cristobal. Residence, Colon Beach.

The following vessels arrived at, and departed from, the port of Balboa during the week ending October 1:

Arrivals—September 25, *Quito*, from Buenaventura; *Newport*, from San Francisco; September 27, *Trinculo*, from Port Harford; *Cavalier* (yacht) from Guayaquil; September 29, *Vicksburg*, from Corinto; *Arica*, from Guayaquil; September 30, *Hornelen*, from Puget Sound; *Aysen*, from south ports.

Departures—September 25, *Ecuador*, to Guayaquil; *Mexico*, to south ports; September 29, *City of Para*, to San Francisco; *Trinculo*, to Port Harford; September 30, *Quito*, to Buenaventura and Tumaco.

Launch Service to Taboga.

The steamer *Sanidad* leaves the dredge landing at Balboa at 9 o'clock Tuesday, Thursday and Saturday mornings. On the return trip it arrives at Balboa about 4.30 p.m. in time to make connections for the 5.30 train at Panama.

COMMISSARY DEPARTMENT.

The hours during which commissaries are open are as follows:

Cristobal and Culebra, 8 a. m. to 12.30 p. m.; 2 p. m. to 7 p. m.

All other commissaries, 8 a. m. to 1 p. m.; 3 p. m. to 7 p. m.

Retail prices of cold storage provisions for the week beginning October 4.

FRESH MEATS.

	Price.
Mutton—Stewing, per pound	7
Shoulder, neck trimmed off, (4 lbs. and over), per pound	10
Entire forequarters (not trimmed) 10 pounds and over, per pound	9
Legs, (8 to 10 pounds), per pound	19
Cutlets, per pound	20
Short cut chops, per pound	22
Lamb—Stewing, per pound	7
Entire forequarters, neck trimmed off, per pound	10
Legs (5 to 8 pounds), per pound	24
Chops, per pound	26
Cutlets per pound	26
Veal—Stewing, per pound	10
Shoulder for roasting (not under 4 pounds), per pound	15
Loin for roasting, per pound	19
Chops, per pound	22
Cutlets, per pound	26
Pork cuts, per pound	22
Beef—Suet, per pound	2
Soup, per pound	5
Stew, per pound	9
Corned, per pound	12, 14, 16
Chuck roast, (3 pounds and over), per pound	13
Pot roast, per pound	15
Rib-roast, second cut (not under 3½ pounds), per pound	18
Rib roast, first cut (not under 3 pounds), per pound	20
Sirloin roast, per pound	21
Rump roast, per pound	21
Porterhouse roast, per pound	21
Steak, Chuck, per pound	14
Round, per pound	15
Rib, per pound	20
Sirloin, per pound	21
Porterhouse, per pound	21
Rump, per pound	21
Tenderloin, per pound	24

MISCELLANEOUS.

Livers—Beef, per pound	10
Calf, each	60
Half, each	30
Sausage—Pork, per pound	17
Bologna, per pound	14
Frankfurter, per pound	14
Leberwurst, per pound	14
Sweet bread—Veal, per pound	1.20
Beef, per pound	25
Eggs, fresh, dozen	†32
Eggs, fresh, ½ dozen only	†18
Bluefish, fresh, per pound	16
Cod, fresh, per pound	10
Halibut, fresh, per pound	13

POULTRY AND GAME.

Chickens—Fancy Roasting, large, each	1.50
medium, each	1.30
Fowls, each	70, 82, 93, 1.04, 1.15
Ducks, large, each	1.50
medium, each	1.30
Broilers, each	75
Turkeys, per pound	30
Squabs, each	35
Capons, each	2.50
Geese, fatted, each	2.60
Pheasants, each	70, 1.00
Partridges, each	50
Grouse, each	85

CURED AND PICKLED MEATS.

Ham—English York Cut, per pound	30
German, Westphalia, per pound	36
Sugar cured, per pound	24
Sugar cured, sliced, per pound	27
Half, for boiling, per pound	25
Boiled, per pound	32
Hocks, per pound	‡18
Bacon—Breakfast, whole piece, per pound	30
Breakfast, sliced, per pound	31
Beef, salt, family, per pound	12
Pork, salt, family, per pound	16
Ox tongues, each	80
Pigs' feet, per pound	10
tongues, per pound	16
Mutton, mess, per pound	7

DAIRY PRODUCTS.

	Price.
Butter—Creamery special, per pound	40
Cheese—Roquefort, per pound	38
Philadelphia Cream, cake	10
Young America, per pound	22
Swiss, per pound	26
Edam, each	1.00
Camembert, in 2-pound tins, tin	38
Camembert, in ½-pound tins, tin	14
Neufchatel, each	6
Gouda, per pound	34
Parmesan, per pound	35
Milk, Briarcliff, bottle	**25
Buttermilk, bottle	**15

VEGETABLES AND FRUITS.

Beets, per pound	3½
Celery, per head	6
Carrots, per pound	3½
Cabbage, per pound	3½
Cucumbers, per pound	5
Lettuce, per head	5, 7, 10
Onions, per pound	3½
Potatoes, white, per pound	3½
sweet, per pound	2½
Squash, per pound	4
Tomatoes, per pound	8
Turnips, per pound	3
Yams, per pound	3½
Apples, per pound	5
Grapes, per pound	8
Lemons, dozen	24
Limes, per 100	80
Oranges, per dozen	12
Peaches, per pound	8, 10
Pears, per pound	8
Plums, per pound	10

*Indicates reduction from last list.

**Indicates 5 cents allowed for return of bottle.

†Indicates advance on last list.

‡Sold only from Commissaries; no orders taken for delivery.

Supplies for Canal Work.

The following steamers with supplies for the Isthmian Canal Commission arrived at the ports of Cristobal, Colon and Balboa during the week ending October 1, 1910:

Sibiria, September 26, from New York, with 53 kegs bolts, 184 cases fuzes for stock.

Atenas, September 29, from New Orleans, with 30 bundles push carts, 6 barrels wire rope clips, 523 pieces oak lumber, 687 pieces yellow pine lumber, 3,318 bales hay for stock; 89 pieces oak lumber, 672 pieces yellow pine lumber for Mechanical Division; 133 tons dump car parts for Cristobal shops (for erection).

Haakon VII, September 29, from Baltimore with 16,240 cases dynamite, 15,000 bundles tie plates, 180 pieces frogs, 50 crates wicker chairs, 21 cases steel bars, 1,250 cases bricks, 3,334 pieces sewer pipe, 1,580 kegs wire nails, 431 pieces black pipe for stock; 48 cases castings, 5 bundles castings, 4,223 pieces steel bars for Pacific Division; 174 pieces castings, 425 car wheels, 490 pieces steel plate for Mechanical Division; 16 pieces castings, 26 bundles castings, 4 cases castings, 263 pieces pipe for Atlantic Division.

Almirante, September 30, from New York, with 210 coils rope, 500 cases linseed oil for stock.

Hornelen, September 30, from Seattle, with 24,370 pieces Douglas fir lumber, 16,031 cross-ties, 4,092 switch ties, 13 cases blasting caps for stock; 473 pieces piles, 6,714 pieces Douglas fir lumber, 12 pieces spuds for Atlantic Division.

Advance, September 30, from New York, with 24 cases ground levers, 24 crates stoves, 30 sets rims, 25 cases air brake material, 100 drums welding compound, 1,009 kegs and 94 cases bolts, 192 drums calcium carbide, 26 cases iron unions, 10 cases sheet brass, 14 cases paper, 25 bundles rail tongs, 38 cases valves for stock; 25 packages machinery, 10 coils electrical supplies, 24 cases boots for Atlantic Division; 50 cases incandescent lamps, 99 pieces steel castings for Mechanical Division; 60 pieces steel castings for Central Division; and a miscellaneous cargo, the whole consisting of 2,046 packages, weighing 300 tons.

Rainfall from September 1 to 30, Inclusive.

MIDNIGHT TO MIDNIGHT.

COLON TO BARBADOS, CALLING AT TRINIDAD.

Atrato	R.-M.	Tuesday	Oct. 11
Tagus	R.-M.	Tuesday	Oct. 25

The next sailing of the Leyland Line will be as follows: *Jamaican* on or about October 14, for New Orleans, via Kingston, Ja.

Hamburg-American steamers leave for New York at 10 a. m., and for Port Limon every Tuesday or Wednesday.

Royal Mail steamers leave for New York on alternate Mondays at 10 a. m.; for Southampton on alternate Tuesdays at 10 a. m.

United Fruit Company's ships for New Orleans leave on Thursday at 3 p. m., and for New York on Friday at 10 a. m.

Sailings of the French line (Cié Générale Transatlantique) for Venezuelan ports, Martinique and Guadeloupe on the 3rd and 20th of each month.

CANAL RECORD

Volume IV. ANCON, CANAL ZONE, WEDNESDAY, OCTOBER 12, 1910. No. 7.

The Canal Record

Published weekly under the authority and supervision of the Isthmian Canal Commission.

The Canal Record is issued free of charge, one copy each, to all employes of the Commission and Panama Railroad Company whose names are on the gold roll. Extra copies and back numbers can be obtained from the news stands of the Panama Railroad Company for five cents each.

Address all Communications
THE CANAL RECORD
Ancon, Canal Zone,
Isthmus of Panama.

No communication, either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.

NOTES OF PROGRESS.

Land to be Leased in Cristobal.

The plot of ground back of the commissary in Cristobal will be leased by the Panama Railroad Company on condition that only fireproof buildings be erected on it in compliance with plans approved by the proper authorities. There are 27 lots 30 by 100 feet, and three smaller lots. The Masons of Colon expect to erect a Masonic temple on one end of the plot.

Panama-David Railroad Survey.

Two of the five Panama railroad engineering parties engaged in the survey of the proposed railroad to David in the province of Chiriqui, and of two projected branch lines, have completed their work in the field, and it is expected that the remaining parties will finish by the middle of November. The completed surveys comprise the section from Empire to Santiago, and the branch line through the province of Los Santos as far as the town of Pedasí. The length of this proposed branch line is approximately 65 miles.

New P. R. R. Pilot Boat.

A new pilot boat has been received by the Panama Railroad Company for use about the harbor at Colon and Cristobal. It is capable of making 15 miles an hour in comparatively smooth water and will accommodate five passengers. It is 35 feet in length (32 feet 9 inches at the water line), has a beam of 7 feet 6 inches, and is equipped with a 40-horsepower gasoline motor situated well amidship and enclosed. The vessel is provided with a melon folding hood of canvas mounted on a folding brass frame.

Canal Work in September.

The grand total of Canal excavation in September was 2,687,088 cubic yards, of which 2,621,731 cubic yards were charged to "work excavation" and 65,357 cubic yards to "plant." The dry excavation amounted to 1,717,986 cubic yards and was principally by steam shovels. The dredges removed 969,102 cubic yards in addition to the amount pumped into Gatun Dam by suction dredges. The progress on the locks at Gatun, Pedro Miguel and Miraflores is referred to elsewhere in this issue.

In the Atlantic Division, the total excavation was 603,070 cubic yards. Of this total, 124,753 cubic yards were dry excavation and the remainder was removed by the dredges in the Atlantic entrance.

The total excavation in the Central Division was 1,574,238 cubic yards, all of which was chargeable to work excavation. All records for excavation in any previous September were surpassed.

In the Pacific Division the total excavation was 509,780 cubic yards, all but 18,995 cubic yards of which was taken out by the dredges at the Pacific entrance.

A detailed statement of the excavation and a summary of the work on the locks and dams follow:

ATLANTIC DIVISION.

LOCALITY.	"Work." Excavation.	"Plant." Excavation.	Total excavation
Dry excavation—	*Cu. Yds.*	*Cu. Yds.*	*Cu. Yds.*

Miraflores Locks	....	....	....
Diversions	....	....	....
Total	473,585	17,200	490,785
Total wet and dry excavation	492,580	17,200	509,780

TOTAL CANAL EXCAVATION.

Dry excavation	1,696,273	21,713	1,717,986
Wet excavation	925,458	43,644	969,102
Total	2,621,731	65,357	2,687,088

Mean rainfall along Canal (eleven stations) 12.03 inches.

By "Work" Excavation is meant excavation actually made for one of the constituent parts of the Canal, such as Prism, Diversions, or Locks, etc.; that is, it represents material taken from the area to be occupied by the Canal, and constitutes excavation useful for the completed Canal.

By "Plant" Excavation is meant excavation outside of any of the constituent parts of the Canal, such as Prism, Diversions, or Locks, etc. It includes material necessary to be excavated for construction purposes only and is chargeable against the particular plant item for which it is performed, such as Prism, Diversions, Locks, etc.

DAM AND LOCK CONSTRUCTION.

MATERIAL.	Atlantic.	Pacific.	Total.
	Cu. Yds.	*Cu. Yds.*	*Cu. Yds.*
Fill placed in dams	686,275	11,220	697,495
Concrete laid in locks.	76,721	68,835	145,556
Concrete laid in dams and spillways	4,421	....	4,421

Corozal Recreation Hall.

Favorable action has been taken upon the application of the residents of Corozal for the placing of the recreation hall in that settlement under the direction of the Y. M. C. A. An estimate is being prepared for the additional room and equipment that will be required. It calls for the enlargement of the present building by the addition of two rooms, one, a reading room, and the other, a pool and billiard room. The reading room, which now occupies the front part of the hall, will be converted into an office, and a place for serving light refreshments.

Shovel Work in Chagres District.

On October 4, seven shovels, working in the Chagres construction district of the Central Division, excavated 9,870 cubic yards of material in the working day of eight hours, an average of 1,410 cubic yards per shovel for the day. During this time the shovels were under steam 56 hours and actually digging 44 hours and 30 minutes; waiting for cars, 5 hours and 10 minutes; clearing track, one hour; mining, 40 minutes; cleaning dipper, 4 hours and 30 minutes, and repairing shovel, 10 minutes. These shovels are all of the 65 and 70-ton class, and are digging in very stiff red clay.

Slides in Culebra Cut.

A small slide developed in the west bank of Culebra Cut at Cunette, near Empire, on October 6, and part of an old dump, made by the French and used by the Americans in 1905, moved into the Canal. The break in the bank had been widening for several days and in anticipation of the slide the water main along the west bank had been moved, and the air main securely anchored to the more stable portion of the bank. Several small buildings, forming part of the labor camp, were included in the limits of the slide and were removed. The construction track along the bank from Empire to Las Cascadas was broken, and communication between the Empire and Whitehouse yard by this line is temporarily interrupted. This track serves as the lead to the Whitehouse incline into the Cut, but the part used for this purpose was not injured by the slide.

A portion of the slide at Cucaracha, accelerated by the heavy rains and excavation at the toe of the slope, broke from the main slide

NOTES OF PROGRESS

(*Continued.*)

on October 4, and two steam shovels were put out of service for two or three days.

On account of the movement in the west bank of the Canal at Culebra, the houses of the Chief Quartermaster, and of the Constructing Quartermaster, have been taken down and are being erected on the west slope of the hill at Culebra, back of the administration building.

The dumping of rock in the slide in the east bank of the Cut at Las Cascadas has been suspended, as the rock slope is no longer moving, and it is proposed to drive a line of sheet piling to hold the bank temporarily in case of future trouble and thus prevent another break in the Obispo diversion at this point.

All the material in motion in the slides is included in the estimate of excavation to be done in Culebra Cut, and forms about 15 per cent of the total remaining to be excavated.

Rain and Wind Storm at Cristobal.

On the afternoon of October 5, a heavy rain and wind storm visited Cristobal, and in 45 minutes beginning at 3.30 o'clock, 2.27 inches of rain fell. The wind attained a maximum velocity of 36 miles an hour blowing from the southwest.

Telephone Service Improvements.

The new main exchange telephone switchboard at Empire, through which all the stations at Paraiso, Culebra, Empire, Las Cascadas and Bas Obispo will hereafter be served, was put in operation on Sunday, October 9. The old exchanges at Culebra and Paraiso were abandoned some time ago, but pending the installation of the new apparatus, the Culebra switchboard was temporarily placed in operation in the Empire exchange building. The private branch exchange switchboards in the offices of the Chief Engineer and Chief Quartermaster at Culebra will continue to be operated. A new 100-pair aerial cable has been strung from Empire to Culebra to take care of the Culebra and Paraiso stations, and a 30-pair aerial cable, extending to Las Cascadas, serves the Las Cascadas and Bas Obispo stations. The new switchboard at Empire is of the common battery, lamp signal type, and consists of two sections, wired for a total of 400 subscribers, each section being attended by two operators. It is planned to place an additional cross-arm on the pole line between Las Cascadas and Bas Obispo to provide additional facilities at the latter settlement.

The plan of laying an underground cable to provide permanent telephone facilities along the Panama railroad relocation has been abandoned. A requisition was placed some time ago for the necessary material, but only one proposal was received in response to the advertisement for bids for the cable, and the price, 48 cents a foot, was considered excessive. It has been arranged to construct a telephone line of iron poles, with their bases set in concrete, and the work will be entered upon within a few days, starting at Caimito and proceeding north to Monte Lirio. At Monte Lirio the relocation work is still in progress, but it is expected that it will be completed by the time the telephone construction force reaches there. The new pole route will carry 20 No. 10 copper circuits. At the south end of the relocation, comprising the section between Paraiso and Corozal, the pole line will parallel the railroad right-of-way for most of the distance, but will diverge at the approach to Miraflores tunnel, in order to go around the high part of the hill. There is no immediate demand for the construction of this part of the line, and it will not be started until after the Gamboa-Gatun section is completed.

The telephone line to Toro Point has been finished and is in service. It carries two No. 10 copper circuits, and there is provision for one additional circuit. There are five stations at present, three on one circuit and two on the other. A small switchboard, taken from the old stock in store, will probably be installed there in the near future.

A plan has been adopted for consolidating the number of calls during the busy hours of the morning. From 8 to 8.45 a. m., one of the trunks from Cristobal to Empire is reserved for the use of the branch commissaries in placing their orders for the day with the order department at Cristobal. Each commissary is called up in its turn, and by this method time is saved.

Improvements are to be made in the telephone facilities at the Hotel Tivoli. The existing switchboard will be replaced by another taken from stock now on the Isthmus, but rewired and simplified, and a new system of cables to the various floors will be installed.

Concrete in Gatun Locks.

The concrete work in Gatun Locks is 37 per cent completed, 781,100½ cubic yards out of a total of 2,095,000 having been placed at the close of work on October 8. The rate of advance is about 18,000 cubic yards a week. One of the cableways is operating over the upper locks in which the concrete work is nearly done. The other three cableways are placing concrete in the east side wall and the upper gate sill of the middle locks. The floor of these locks has been completed for the full width and half the length, and the construction of the culvert under the west side wall has been begun.

Between 3 and 4 o'clock on the afternoon of October 6, all hourly records for the cableways were broken by tower No. 1. Strand A of this cableway placed 49 yards, and strand B, 50 yards of concrete during the hour. The concrete foreman at that time receiving the material was H. H. Arras, and the operators in the tower were H. L. Fomon and V. M. Clayborn.

The amount of concrete placed during the week ending October 8, and the total to that date, are shown in the following statement:

DATE	Concrete placed.	Large stone.	Hours worked.	No. of mixers	Total.

Timekeeping Rules.

A book containing a compilation of the rules issued to govern timekeeping has been published for the guidance of all employes. In addition to circulars issued heretofore, which have been collected for the first time, it contains a large amount of new information and instructions. The rules in this book supersede all rules on timekeeping published heretofore.

Lock Work at Pedro Miguel.

A statement of concrete laid in the locks at Pedro Miguel during the six 8-hour working days of the week ending October 8, and of the total laid to that date, follows:

DATE.	CUBIC YARDS.			
	Construction plant.	Auxiliary plant.	Large stone.	Total.
October 3.....	1,908	104	4	2,016

Cold Storage Prices.

There are no changes in the prices of cold storage articles from those quoted in last week's issue of THE CANAL RECORD.

TABERNILLA DUMP.

A New Dump to be Made on the Old One.

Work has been begun on the "double decking" of the dump at Tabernilla, that is, an entirely new dump about 20 feet high is being made on top of the present dump, which is already from 20 to 25 feet above the level of the surrounding country and about 60 feet above sea level. At present, the work of imposing the new dump is confined to that section on which cars are unloaded from the right side, because this is the section of the present dump on which the "leads" or spur tracks are too long for economical wasting of spoil. Broadening the dump is impossible, because it is already encroaching on the Panama railroad right-of-way and the Tabernilla River. About three weeks ago the work of raising the track at the north end of the dump was begun, and when the first lead is completed there will be 2,000 feet of track on a one per cent grade rising from the beginning of the yard to a height of 20 feet, and beyond that, a 4,000-foot stretch of level dump at 20 feet above the present elevation.

The dump at Tabernilla is the largest on the Canal work and most of the spoil dumped there is from the north slope of Culebra Cut. Its content, as compared with other large dumps, on June 30, 1910, was as follows:

	Cu. Yds.
Tabernilla	15,080,749
Miraflores	6,963,135
Balboa and Naos Breakwater	9,397,215
Relocation of P. R. R. (Gamboa to Caimito)	4,508,219

All the material dumped at Tabernilla is wasted, and when the Canal is finished the dump will be a level, fan-shaped mound of earth whose top will be beneath the surface of Gatun Lake. Dumping at this point was begun in 1906 and has continued without cessation. The location was chosen, because it was near the main line of the Panama railroad, was well outside the Canal prism, and afforded a plot of low level ground two miles long and almost as wide. At first trestles were driven and the cars were dumped or ploughed clean on these trestles. When a trestle was filled the dump was extended by laying the track on "cribbing", or on a pile tail trestle, and broadened by throwing the track over to the edge of the fill. The material dumped here has been the run of the Cut, soft earth, clay, soft rock and hard rock. On this apparently barren material a small jungle has grown up consisting of a few trees with trunks the girth of a man's wrist, and a thick growth of grasses and bushes. On material dumped only two years ago hardy saplings are now growing.

A year ago the dump reached the summit of its activity when 60 trainloads of rock and earth were wasted each day and five unloaders were kept busy. When the trestles on the relocation of the Panama railroad north of Gamboa were ready the trains were gradually diverted from Tabernilla until at present only 20 a day are unloaded there and only two unloaders are required. The increase in the amount of material hauled from Culebra Cut to Gatun Dam has also lessened the dumping at Tabernilla. The force at present employed consists of 15 white Americans and 225 laborers. A comparative statement of the amount of material wasted at Tabernilla; that placed in other large dumps of the Central Division during the fiscal year 1910, and of the amounts dumped prior to July 1, 1909, follows:

DUMP.	Cubic Yards.		
	Prior to July 1, 1909.	Fiscal year 1910.	Total.
Tabernilla	10,184,800	4,895,949	15,080,749
P. R. R. relocation Gamboa-Caimito	1,226,233	3,281,986	4,508,219
Miraflores	3,846,657	3,116,478	6,963,136
Balboa and Naos Breakwater	5,562,124	3,835,091	9,397,215
Gatun Dam	401,184	1,157,494	1,558,678

Balboa Sand Distribution.

A total of 42,535 cubic yards of sand was shipped from Balboa during the month of September, which constitutes the largest amount so far delivered in any one month. All of the sand, with the exception of a few hundred yards, was transported to the storage piles at Pedro Miguel and Miraflores. The distribution in detail follows:

DESTINATION.	Number of Cars.	Cubic Yards.
Pacific Division	2,778	41,670
Atlantic Division	2	50
Central Division	25	385
Mechanical Division	5	125
Quartermaster's Department	5	125
Panama railroad	6	150
Balboa shipways	2	30
Total	2,823	42,535

Steam Shovelmen and Dredgemen.

The I. B. of S. S. and D. M. will hold its regular meeting Sunday, October 16, 1910, at the I. C. C. lodge hall, Empire, at 2.30 p. m. It is very important that all brotherhood men attend this meeting.

WALTER P. TUDOR,
Secretary and Treasurer.

Empire, C. Z., October 9, 1910.

Band Concert.

The Isthmian Canal Commission Band will give a concert at Culebra, C. Z., Sunday, October 16, 1910, at 5.45 p. m. The program follows:

1. March—*The Coming Regiment* ....Conterne
2 Overture—*Raymond*..................Thomas
3 Intermezzo—*Bitter Sweets*............Engleman
4 Selection—*Bright Eyes*................Hoschna
5 Waltz—*Cupid Astray*...................Rolfe
6 Sextet from Lucia.....................Donizetti
7 Medley Selection—*Amina*.............La Farge

Introducing "When Two Love Dearly," "Come After Breakfast," "To Err Is Human To Forgive Divine," "I Wish I Had My Old Girl Back Again," "That Teasing Rag," "My Way to Heaven Is Through Your Love, Sweetheart," "I'm Not That Kind of a Girl" and "Amina."

8 Barn Dance—*By the Light of the Silvery Moon*.............................Edwards
9 March—*Militar*........................France

CHAS. E. JENNINGS, *Musical Director.*

The next concert will be given at Las Cascadas, October 23, at 6 p. m.

Stages of the Chagres.

Maximum heights of the Chagres River for the week ending midnight, Saturday, October 8, 1910. All heights are in feet above mean sea level.

STEAM SHOVEL RECORDS.

Work of Central Division Shovels During the Month of September.

During the month of September, the total amount of material excavated in the Central Division was 1,574,238 cubic yards, of which 459,473 cubic yards were classified as earth, and 1,114,765 cubic yards as rock. Of this quantity, 1,572,064 cubic yards were removed by steam shovels, and 2,174 cubic yards by orange peel cranes.

The high record for the month was made by shovel No. 212, working 24 days in the Culebra district, which excavated 52,250 cubic yards of rock and earth. The second best record of the month was made by shovel No. 208, working 24 days in the Culebra district, which excavated 51,775 cubic yards of rock and earth.

The best record for a shovel of the 70-ton class was made by shovel No. 108, working 25 days in the Chagres district, which excavated 35,621 cubic yards of earth.

Shovel No. 208, working in the Culebra district, made the high record for one day by excavating 3,192 cubic yards of rock and earth on September 26.

Shovel No. 108, working in the Chagres district, excavated 1,890 cubic yards of earth on September 17, and this was the high record for one day for a 70-ton shovel during the month.

Except where noted, monthly records are computed by place measurement, while the daily records are based on car measurement. The best records for the month and for one day in each district are shown below:

BEST RECORDS FOR THE MONTH.

CHAGRES DISTRICT.

Colon Club.

The regular dance of the Colon Club on Saturday evening, October 15, will be dispensed with, as on that evening the floor will be given over to the philanthropy department of the Woman's club for the annual charity ball.

A. A. GREENWAY, *Secretary.*

Colon, R. P., October, 4 1910.

Launch Service to Taboga.

The steamer *Santdad* leaves the dredge landing at Balboa at 9 o'clock Tuesday, Thursday and Saturday mornings. On the return trip it arrives at Balboa about 4.30 p.m. in time to make connections for the 5.30 train at Panama.

RECORD OF CANAL WORK SINCE AMERICAN OCCUPATION.

THE COMMISSARY IN 1910.

Factors in the $5,000,000 Business of the Fiscal Year.

The operations of the commissary department of the Panama railroad aggregated over $5,000,000 in value during the fiscal year ending June 30, 1910. The value of merchandise imported was $3,913,519.14, as compared with $3,386,906.06 for the preceding fiscal year, classified as follows:

Groceries	$1,064,075.27
Hardware	98,902.50
Dry goods	694,476.67
Boots and shoes	165,303.38
Cold storage supplies	1,348,376.57
Furniture	11,918.59
Tobacco	153,986.84
Raw material	325,453.42
Paper, twine, stationery, etc	51,025.90

The chief imports during the year under the classification of "groceries," and a comparison in a number of instances with the amounts imported during the preceding year, were as follows:

ARTICLE.	1909.	1910.
	Pounds.	Pounds.

*Amount of green coffee roasted at coffee plant.

In meats and dairy products the following quantities were received: Fresh meats, 5,229,306 pounds; cured and pickled meats, 1,046,029 pounds; cheese, 114,192 pounds; eggs, 502,950 dozen; butter, 471,551 pounds; poultry, 429,575 pounds; fresh milk, 41,901 gallons; fresh cream, 22,900 gallons.

Fresh vegetables were imported in the following amounts: White potatoes, 4,586,967 pounds; sweet potatoes, 638,584 pounds; onions, 717,557 pounds; turnips, 122,632 pounds; beets, 26,059 pounds; carrots, 91,830 pounds; cabbage, 656,905 pounds; yams, 424,789 pounds; other vegetables, including celery, tomatoes, squash, etc., 622,484 pounds.

Fresh fruits were purchased abroad as follows: Apples, 526,472 pounds; peaches, 63,944 pounds; pears, 21,780 pounds; plums, 17,706 pounds; grapes, 54,066 pounds; oranges, 236,854 dozen; lemons, 13,574 dozen; grapefruit, 11,837 dozen; limes, 5,493 dozen; 59,724 canteloupes, 10,845 watermelons; other fruits 26,276 pounds.

With few exceptions, there was an increased consumption during the year in all articles under the head of groceries, provisions, fresh vegetables and fruits. The sales and issues to all departments were as follows:

Sales to Isthmian Canal Commission	$1,664,873.66
Sales to United States Government	135,068.36
Sales to others for cash	100,901.78
Sales to others for coupons	3,083,064.13
Issued to departments of the railroad and used in operation of the commissary	229,328.02
Issued to Panama railroad steamships	9,501.84
Condemned and damaged goods, shrinkage, etc	108,779.02
Total	$5,331,516.81
Average sales and issues per month	$444,293.07

The stock on hand on June 30, 1910, aggregated $1,391,342.33, in value, as compared with $810, 696.94 on June 30, 1909.

The annual report of commissary operations for 1909-10 includes a statement of the comparative selling prices of fresh meats, poultry and game, cured and pickled meats, dairy products, vegetables, fruits and groceries at stated periods, viz., April, 1907, 1908, 1909, 1910, and June, 1910. This statement shows that in the face of a constantly advancing wholesale market, goods of the above classes were being sold cheaper in the first half of 1910 than during any previous period of operations covered by the table, with the exception of pork products, on which the advance in price within the last year has been unusual.

Twenty-one commissary stores were in operation on June 30, 1910, and an additional store will shortly be opened at Miraflores. Fourteen of the stores are provided with ice boxes of sufficient size to store meats and other perishable goods. Butchers are employed in eight of the commissaries.

MANUFACTURING PLANTS.

Laundry—During the fiscal year, 2,993,761 pieces were laundered. The average number of employes served monthly was 7,265, and the value of the work performed was $90,797.56.

Bakery—The bakery used 15,631 barrels of flour, and produced 4,892,401 loaves of bread, 504,003 rolls, 130,667 pounds of cake, and 32,243 pies during 1909-10. The making of pies was discontinued in January, as it was found after about a year's experience that it is almost impossible to ship pies in this climate and deliver them to customers in a fresh and palatable condition. A new blender and elevator, equipped with an automatic scale attachment and tempering device for water, was installed during the year. The total value of the bakery product was $219,370.16.

Coffee Roasting Plant—During the year, 319,697 pounds of green coffee were roasted, valued at $77,905.43. Three grades are produced, one a pure Santos of the highest grade, which is sold roasted and ground for 17½ cents a pound; second, a blend made of a Santos base mixed with mild South American grades and Mocha and Java, sold for 25 cents a pound, and third, a pure Mocha and Java coffee, sold for 35 cents a pound. A new 100-pound roaster and a 50-pound grinder were installed.

Ice Plant—Twenty-seven thousand, nine hundred and twenty-eight tons of ice were manufactured during the year, valued at $187,446.95. During the months of April and May, and a part of June, 1910, the ice supply became so short that ice had to be hauled from New York, in addition to buying all the excess ice the local private plants could produce. A tank capable of turning out an additional 25 tons daily was installed on June 17, which relieved the shortage.

Ice Cream Plant—The demand for ice cream was steady, and 91,321 gallons, valued at $62,379.93, were manufactured. The product is carefully packed in standard tubs and shipped out to hotels and stores. Flavors are changed from four to six times a week to insure variety. Only fresh cream and milk, shipped in refrigeration from the United States, crushed fruits and the highest classes of flavoring are used. A building, designed especially for the manufacture of this article, and by which it is expected that its sale can be increased at least 50 per cent, has been constructed.

Automatic Weighing and Packing—A complete automatic weighing and packing department was installed during the year. By this method, flour, beans, peas, rice, coffee, etc., are weighed and packed ready for delivery to customer, thereby saving the waste attendant upon careless weighing, and enabling the storekeeper to sell goods in original packages. During the period from January 1 to June 30, 1910, inclusive, goods to the amount of 2,470,960 pounds were packed in this manner.

Power Plant—A 300-ton compressor, having a capacity for running the entire refrigerating and ice-making plant and affording an opportunity to shut down the other compressors when necessary to repair them, was purchased and is being installed.

Cold Storage Plant—During the year, a loading corridor 21 feet by 136 feet 5 inches was completed, which makes it possible to load all goods requiring refrigeration in a temperature not above 58 degrees Fahrenheit, thus insuring the arrival of this class of goods at destination in a fresh condition. It also provides space for the storage of smoked and pickled meats. A two-story iron and concrete warehouse 50 by 200 feet, made necessary by the enlargement of the bakery in 1909, was erected during the year.

Shooting at Culebra.

J. A. Schaberle, a white American employed in the office of the Chief Engineer, was shot in the bowels while in his quarters at Culebra about 2 o'clock on the morning of October 10, by J. R. Johnson, also an employe of the Chief Engineer's office. Mr. Schaberle was taken to Ancon Hospital where his condition is regarded as critical. Johnson was arrested and will be held pending the result of the injuries to Schaberle. The cause of the shooting is not known further than that Johnson was intoxicated.

Burglar Shot at Corozal.

A demented negro, Alfred Brooks, was shot and killed by E. N. Knapp while leaving the quarters of Mr. Knapp at Corozal at 2 o'clock in the morning of October 7. A coroner's jury returned a verdict of justifiable homicide. Brooks was indicted for the murder of Cornelius McKenzie and Ella Williams near Empire on January 20, 1910, and having been declared insane by a board of three experts, was committed to the asylum for the insane at Ancon Hospital on March 29. He escaped from the asylum on the night of October 6, and probably walked to Corozal.

Missing Men.

Information is wanted concerning the whereabouts of Frank L. Karrer of St. Louis, Mo., who is supposed to be working on the Isthmus of Panama. Any one having knowledge of him is requested to communicate with his mother, Mrs. Marian Karrer, 2926 Oliver street, St. Louis, Mo.

Any one having knowledge of the whereabouts of Granville Harper, a Barbadian, check No. 70958, who was discharged from Ancon Hospital on August 22, is requested to communicate it to THE CANAL RECORD.

Information is requested regarding the whereabouts of Edward O'Neil, who left the Canal service in 1906. Address Mrs. Philip Deubel, 2723 East Allegheny avenue, Philadelphia, Pa.

COLON IMPROVEMENTS.

Plan Approved by Panama and the United States.

The so-called "pyramid plan" for the fill and drainage of Colon, under the special appropriation of $800,000 for sanitary work in Panama and Colon, has been approved by the Government of Panama and by the Acting Chairman of the Isthmian Canal Commission for the United States Government.

Under the approved plan the area to be improved will be drained in four directions from a summit at the intersection of Ninth and E streets, where the elevation of the curb will be 8½ feet above sea level. The elevation of the curb at Ninth and D streets will be 2½ feet above sea level, and the streets between Front and E street will drain into the D street storm sewer. The curb at Second and E streets will be at 2.8 feet above sea level, and at 16th and E streets at 3.88 feet. The plan provides for future extensions of the city to the edge of Manzanillo Bay, beyond the part included in the improvements now under way. At Ninth street and Manzanillo Bay the curb elevation will be 4.61 feet above sea level.

The improvements authorized include the area from Second street to Ninth, between and including D and G streets; and from Ninth to 14th streets, between and including D and E streets.

The allotment for the improvements in Colon is $493,016.22, and of this amount, $127,016.22 has already been expended. The estimated cost of work to be carried on under the approved plan is as follows:

Class of Work.	Material.	Labor.	Total.
Sewer system...	$6,534.80	$16,957.18	$23,491.98
Water system..	20,963.18	9,438.53	30,401.71
Street imp'v'·s.	99,101.69	99,212.50	198,314.19
Street fill......	....	....	63,000.00
Extension sewer force main...	....	....	13,950.00
D street storm sewer........	....	....	136,232.89
G street storm sewer........	....	....	17,000.00
Total........	....	....	$482,390.77

The estimate for a storm sewer in G street does not contemplate the immediate construction of that sewer, but is included, because such a sewer will be necessary if the area east of G street is filled at some future time. The estimate for several items is lower than that published heretofore, because the contingencies for labor have been reduced from 25 per cent to 10 per cent, and the cost of the hydraulic fill has been estimated at 30 cents, instead of 33 cents, as previously given.

The amount of fill in the 22 blocks included within the limits of the present improvement is estimated at 348,180 cubic yards, and the street fill at 210,000 cubic yards, a total fill of 558,180 cubic yards at a cost of $167,454. The fill within the blocks will be paid for by the owners of the property, and streets and land filled at the request of the Panama Railroad Company will be paid for by that company.

Opening of Schools.

The Canal Zone schools for white children opened on October 3 with over 700 pupils in attendance. This number does not include Empire, where the schools will not open until Thursday of this week. The opening of the Empire school will probably raise the total attendance to over 850. This is much larger than the enrollment of last year. There are ten of these schools, situated at Ancon, Pedro Miguel, Paraiso, Culebra, Empire, Las Cascadas, Gorgona, Tabernilla, Gatun, and Cristobal.

As usual, the attendance for the first week in the schools for colored children was low, the enrollment being about 600. There are thirteen of these schools, situated at Balboa, Paraiso, Culebra, Empire, Las Cascadas, Matachin, Gorgona, San Pablo, Tabernilla, Gatun, Mount Hope, Cristobal, and Pleya del Flor.

A manual has been issued for the public schools containing regulations, information, and the course of study at present pursued. A copy of this book will be found at each Commission clubhouse, and parents and others interested in the work of the schools can consult it there.

Red Cross Finances.

A statement of the financial condition of the Canal Zone Chapter of the American National Red Cross for the month of September, 1910, follows:

RECEIPTS.

September 1.	Balance on hand.	$1,962.57	
			$1,962.57

DISBURSEMENTS.

September 23.	Relief of Cuban who was deported..........	$40.00	
			$40.00
September 30.	Balance on hand..........		$1,922.57

JOHN L. PHILLIPS,
Treasurer.

Approved: C. A. DEVOL,
Chairman.

Masonic Banquet.

A banquet for Masons will be given in the Washington Hotel, Colon, on Saturday evening, October 15, by the Masons on the Isthmus of Panama. Masons who are not affiliated with any Masonic organization on the Isthmus are cordially welcomed. Speeches will be made by several prominent Masons. A special train will leave Panama at 6.30 p. m., and will return after the banquet.

Masonic Club Election.

At the meeting of the Corozal Masonic Club held on Wednesday evening, October 5, officers were elected as follows: President, Eli Sims, first vice-president, Frank Cotton; second vice-president, J. C. Keller; secretary, C. H. R. Howe; treasurer, F. E. Hamlin.

Historic Find at Nombre de Dios.

The hull of an old vessel, which has every appearance of having been buried in the sand for several centuries was encountered during the latter part of September by suction dredge *No. 4*, working in the sand deposits at Nombre de Dios. The wreck was lying in the middle of the sand zone, about 300 feet distant from the beach line, and at from 18 to 20 feet below the surface of the ground. The dredge unearthed the old hulk for its entire length of about 60 feet, and has now worked past it. The wood of which the ship was built resembles oak and was put together with wooden pins.

During the time the dredge has been operating in the vicinity of the wreck, its suction pipe has drawn in several hundred pounds of iron, some pieces weighing as much as 40 pounds. The cutter of the dredge also encountered a great many pieces of hard mortar, severing, instead of breaking the pieces, when it came in direct contact with them. The mortar is practically the same as that seen in the ruins of buildings on the Isthmus constructed by the early Spaniards, and possesses remarkable adhesive power. Much of it was found set in and around the ship's iron work, including the hollow parts of a series of iron posts. Another find was that of a quantity of old slugs, bullets, etc., which may have belonged to the ship's magazine.

Tide Table.

The following table shows the time of high and low tides at Panama for the week ending October 19, 1910, (75th meridian time):

Date.	High.	Low.	High.	Low.	High.

SOCIAL LIFE OF THE ZONE.

Women's Clubs and Other Features.

An election of officers for the ensuing six months was held in the Gatun Woman's Club on Friday afternoon, October 7, the following being chosen: President, Mrs. J. H. Stevenson; vice-president, Mrs. A. L. Kerr; secretary, Mrs. A. P. McCulloch; treasurer, Mrs. C. H. Stoddard. A change in the schedule is contemplated by which meetings will be held semimonthly, instead of weekly, as heretofore. The club meets in a room assigned to its use on the second floor of the Commission clubhouse.

An outline plan of the work of the Paraiso Woman's Club was presented at the meeting on Wednesday afternoon, October 5. The program includes papers on topics of current interest, an exhibit of the Federation collection of pictures, a reception to the president of the Canal Zone Federation, a Christmas bazaar, evening entertainments monthly, and a general meeting in December, when Mr. Maurice H. Thatcher will deliver an address. Much interest is taken in the playground movement and the proceeds of the Hallowe'en dance to be held on October 29, will be devoted to that purpose.

An entertainment of moving pictures was held in the social hall, Paraiso, on Wednesday evening, October 5.

The call for the resuming of the sessions of the Gorgona Woman's Club as issued last week was headed "A Better Gorgona" and the efforts of the organization will be directed toward the development of social and civic interests in the village. Under the auspices of the club a farewell reception was tendered to Mr. and Mrs. A. J. Sweet at the Commission clubhouse on Friday evening, October 6. The guests of honor were welcomed by the president of the club, Mrs. Harry Otis, who also presented gifts on behalf of the club and citizens. There was a short program consisting of musical numbers by Miss Elizabeth La Croix, Miss Ethel Otis, and Mr. Earle Buford, and recitations by Miss Jane Calvit and Mr. Wallace Wright. Refreshments were served and the evening closed with an informal reception. Mr. and Mrs. Sweet have been active in club and public life in Gorgona during the past two years; they are leaving for their home in the States.

The Marine Dramatic Club of Camp Elliott will give a performance at Pedro Miguel on Saturday evening, October 15, for the benefit of the Marine Band.

The Empire Woman's Club has elected Mrs. Mary Westberg and Miss Jessie Smith as officers for the ensuing year.

A masked ball was held at Empire by the local organization of Kangaroos on Tuesday evening, October 4, the entertainment being managed by the Tuesday night committee. A special train brought guests from Gorgona and there was a large attendance. Two prizes were awarded for the best costumes, the lady's prize being won by Mrs. Joseph Kirk for her representation of "night", and the gentleman's prize by Mr. Rath for a "hobble" skirt costume. The Tuesday night committee is a regularly organized branch of local work which has in charge arrangements for dances and other entertainments held in the lodge hall weekly.

PERSONAL.

Lieut.-Col. John L. Phillips sailed on the steamship *Panama* for New York on October 11, on his annual leave of absence.

Capt. Courtland Nixon sailed on the United Fruit Company's steamer *Atenas* for New Orleans on Thursday, October 6, on his annual leave of absence.

Mr. W. G. Comber arrived at Cristobal on the *Allianca* on October 11.

Dramatic Entertainment.

The Empire Dramatic and Musical Society will hold an entertainment at the Commission clubhouse, Empire, on Tuesday evening, October 18, when the following program will be given:

Part I.

1 Piano quartet.
Mrs. Shivers, Miss Moulton, Mrs. Dickson, Mr. McAnelly.
2 Hawaiian Melody....................La Meda
Glee Club.
3 Spring Song..........................Pinsuti
Mrs. Ludwig, Mrs. Faure, Mr. Ross, Mr. Conner.
4 Havana
Messrs. Ross and Dickson.
5 Scene from "The Tales of Hoffman"....Offenbach
Mrs. Faure and mixed quartet.
6 "O, That We Two Were Maying".......Smith
Mrs. Ludwig and Mr. Dickson.
7 Aria
Mrs. Faure.
8 Archer's Marching Song.................Thayer
Glee Club.
9 Prison Scene from "Il Trovatore"..........Verdi
Mrs. Ludwig, Mr. Ross, and chorus.

Part II.

"Freezing a Mother-in-Law," a farce in one act.

Cast.

Mrs. Watmuff	Mrs. G. W. K. Newbold
Emily Watmuff	Miss Lucy Clark
Mr. Watmuff	Mr. Perry Brown
Ferdinand Swift	Mr. W. A. Evans, Jr.
Walter Litherland	Mr. C. H. Brodsky

Members: Soprano—Mrs. A. O. Ludwig; contralto—Mrs. L. L. Faure; pianists—Mrs. Mary G. Shivers, Miss Bessie Moulton, Mrs. Alfred Dickson, Mr. H. H. McAnelly; tenors—Messrs. C. H. Brodsky, Mr. H. W. Dohrmann, Alfred Dickson, T. H. Campbell, S. H. Kirkpatrick, W. G. Ross, F. B. Young; basses—Messrs. Perry Brown, H. Bartholomew, F. W. Conner, Oscar King, Keith Kelley, James F. Mackey, A. D. Moore, T. H. Smallwood; dramatic section—Mrs. G. W. K. Newbold, Miss Lucy Clark, Messrs. Perry Brown, W. A. Evans, Jr., C. H. Brodsky. Musical director, Mr. Alfred Dickson.

The society, which is composed of twenty-six members, is divided into two sections, dramatic and musical, with Mr. Alfred Dickson as musical director.

Arrangements will probably be made later to repeat the performance at the clubhouses at Gorgona, Gatun, and Cristobal.

One end of the station shed at Corozal has been fitted up for a freight and baggage room.

OFFICIAL CIRCULARS.

Rate of Pay for Shoemaker.

CULEBRA, C. Z., October 5, 1910.

CIRCULAR No. 229-N:

The following additional designation and rate of pay is hereby authorized:

Designation.	Unit.	Rate of Pay.
Shoemaker	Hour	$.16

H. F. HODGES,
Acting Chairman and Chief Engineer.

Acting Purchasing Agent.

CULEBRA, C. Z., October 6, 1910.

CIRCULAR No. 353:

Effective October 6, 1910, and during the absence on leave of Captain Courtland Nixon, Mr. Charles L. Parker, Assistant Depot Quartermaster, will perform the duties of Purchasing Agent on the Isthmus.

H. F. HODGES, *Acting Chairman.*

Acting Assistant Chief Sanitary Officer.

ANCON, C. Z., October 10, 1910.

SPECIAL ORDER:

During the absence on leave of Lieut.-Col. John L. Phillips, Assistant Chief Sanitary Officer, Major Robert E. Noble is assigned as Acting Assistant Chief Sanitary Officer and as such, in accordance with paragraph 2, minutes of the 119th meeting of the Isthmian Canal Commission, held in Washington, D. C., January 21, 1907, is authorized to approve for payment all vouchers, payrolls, and public bills relating to this department "By direction of the Chief Sanitary Officer."

W. C. GORGAS,
Chief Sanitary Officer.

Acting Fire Chief.

ANCON, October 10, 1910.

CIRCULAR No. 100:

During the absence on leave of Charles E. Weidman, Fire Chief, Charles F. Koerner, Assistant Fire Chief, is designated Acting Fire Chief.

M. H. THATCHER,
Head of Department of Civil Administration.

Acting Depot Quartermaster.

CULEBRA, C. Z., October 5, 1910.

Mr. CHARLES L. PARKER,
Assistant Depot Quartermaster,
Mount Hope, C. Z.

Sir: Effective October 6, and during the absence of Capt. C. Nixon, on leave, you will act as Depot Quartermaster.

You are authorized to receive and receipt for supplies of the Isthmian Canal Commission consigned to Col. C. A. Devol, or the Chief Quartermaster, Isthmian Canal Commission; to accomplish bills of lading; to certify invoices for payment as to quantity and quality of supplies shown on such invoices; and in general to perform such duties as properly belong to the position of Depot Quartermaster.

Respectfully,
C. A. DEVOL, *Chief Quartermaster.*

Private Work in Quartermaster's Shops.

CULEBRA, C. Z., October 8, 1910.

ALL DISTRICT QUARTERMASTERS:

Private work, or work for outside parties, will not be permitted in the shops of the Quartermaster's Department, without an order from this office in each case.

C. A. DEVOL, *Chief Quartermaster.*

Culebra Telephone Exchange.

COLON, R. P., October 10, 1910.

Effective this date, the telephone exchange at Culebra is abolished, and all Culebra telephones are connected to the Empire telephone exchange. This will result in changes in number in case of the telephones located in Paraiso and Pedro Miguel, which were heretofore connected to the Culebra exchange. In calling these telephones, parties will please make the call by name.

A private branch exchange has been installed in the office of the Chairman and Chief Engineer. In calling any of these 'phones, parties will ask the Empire operator for the Chief Engineer's office, and connection will be made by the private branch operator to any 'phone desired in the Chief Engineer's office.

A. B. KRATZ,
Superintendent Telephone and Telegraph.

The following vessels arrived at and departed from the port of Balboa during the week ending October 8:

Arrivals—October 3, *Peru*, from San Francisco; October 4, *Chile* from south ports; October 5, *Manavi*, from intermediate ports.

Departures—October 5, *Newport*, to San Francisco *Arica*, to Guayquil; *Aysen*, to south ports.

COMMISSION CLUBHOUSES.

Activities of the Young Men's Christian Association.

CULEBRA.

The present standing of the men in the chess tournament is as follows:

	Won.	Lost.
Bartlett	3	6
Dubois	9	2
Goodenow	5	6
Mengel	2	7
Putnam	3	8
Stiles	3	3
Warner	8	1

The Gorgona basketball team lost to Culebra on Saturday night, October 8, the score being 34 to 13 in favor of Culebra. The lineup of the teams was as follows: Gorgona—Clements, Stripling, Simka, Forster, Calvit, Hodgson. Culebra—Cushing, Purchase, Vifquain, Steen, Koperski and Case.

The discussion club met on Wednesday evening, October 5, with Mr. R. G. Goodman as leader. His subject was "What Is Happiness?"

On Saturday evening, October 15, Cristobal's first team bowls at Culebra, and Culebra's second team goes to Cristobal.

The local bowling tournament will close this week. Any one who has not rolled all the games should do so at once.

The 200, or over, scores during the week ending October 8 were made by Hall, with 205 and 203.

Another informal "social" is planned for Thursday evening, October 20. A cordial invitation is extended to all.

GORGONA.

The meeting of the discussion club held on Tuesday evening, October 4, was led by Mr. A. B. Dickson of Empire, his subject being "Responsibility." Mr. J. D. Safford of Camp Elliott will take charge of the meeting to be held on Tuesday evening, October 18. His subject will be "Leadership." All men are invited.

The moving picture entertainment on Tuesday evening, October 4, was one of the best yet given. The next entertainment of this kind will be given on Saturday night, October 15.

The present standing of the men in the billiard tournament is as follows:

	Played.	Won.	Lost.
Heltemes	3	3	0
Evans	5	4	1
Orr	3	2	1
Ashman	3	2	1
Clapp	2	0	2
Clark	2	1	1
Chambers	1	0	1
Ryan	1	0	1
Robitoy	1	0	1
Hopkins	2	0	2

A "nighthawk" bowling tournament was started last week. Following are the names of the men entered, with their handicaps: McConaughey, scratch; Hopkins, scratch; Watkins, 11 pins; Strock, 12 pins; Hoover, 15 pins; Calvit, 15 pins; Sennernger, 19 pins; Williams, 19 pins; Whitehead, 22 pins; Junker, 22 pins.

Gatun's first team took three games from Gorgona's first team on Saturday night, October 8, by the following scores:

Gatun.				Gorgona.			
Barte	200	170	155	Roper	161	188	115
Severn	131	163	135	Gaedkie	180	143	147
DeMoll	143	169	158	White	165	172	150
Wolf	177	160	184	Stewart	124	129	174
Ponton	147	164	161	Otis	138	184	178
Total	798	826	793	Total	768	816	764

The 200, or over, scores for the week ending October 8, were made by the following men: Misal, 201; Frances, 209; Stewart, 221; Roper, 231; Hopkins, 230.

Basketball practice is scheduled for Monday and Thursday nights at 8 o'clock. All men are asked to come and take part in the game. Every one that comes will have an opportunity to play.

GATUN.

The moving picture entertainment given on Thursday evening, October 6, was enjoyed by a good-sized audience. The next entertainment of the kind will be given on Thursday night, October 13. The price of admission is as follows: Members free; nonmembers, 25 cents; children, 15 cents.

Gatun's second team won three games from Gorgona's second team on Saturday evening, October 8, by the following scores:

Gorgona.				Gatun.			
Stoehr	166	106	126	Dalton	140	111	169
Frances	168	129	165	Herrington	178	172	168
Bordt	141	168	154	Myers	161	163	141
Varenkamp	167	150	113	Wilson	155	143	200
Haldeman	112	165	140	Hodges	168	159	166
Total	754	718	698	Total	802	748	844

Mr. DePoorter of Gatun and Mr. Wilson of Porto Bello will be matched in a game of pool in the near future to decide the championship of the Isthmus.

Following are the men entered for the three cushion billiard tournament, and their handicaps: Grant, Porter, Hughes, scratch; Tonsley, Kemper, Durand, 3 points each.

The contestants in the October pool tournament, with their handicaps, are as follows: Prados, 15 balls; McLain, 5 balls; Meyers, 10 balls; Miller, 5 balls; Eggleston, scratch; Ourand, 10 balls; Durand, 5 balls.

Empire's first team bowls at Gatun on Saturday night, October 15.

The discussion club will meet on Friday night, October 14, the subject being "What Is Failure?"

The "social smoker" for October has been postponed until the 20th of the month. Some excellent talent is being secured and a good program is assured.

The basketball game on Saturday night, October 8, between the Gatun and Cristobal teams, was won by the Gatun team, the score being 23 to 20.

CRISTOBAL.

The regular meeting of the discussion club held on Thursday evening, October 6, was turned over to Mr. E. T. Colton, one of the secretaries of the international committee of the Young Men's Christian Association. He gave a very interesting talk of his trip through South America, making special reference to the student life in that land. On Thursday night of this week, Mr. Dickson of Empire will lead the discussion, his subject being "Responsibility."

The first and second teams rolled a match game on Thursday night, October 6, with the following results:

First Team.				Second Team.			
Bullard	138	203	167	Barrett	176	142	171
Rabbitt	180	182	155	Weston	169	160	167
Collins	164	169	125	DeCora	167	101	168
Burns, T.	122	159	157	Adams, H.	170	185	128
Thomas	154	181	149	Blackburn	185	123	160
Total	758	894	753	Total	867	711	794

Empire's first team took three games from Cristobal's first team on Saturday night, October 8. Following are the scores:

Empire.				Cristobal.			
Gorham	169	136	161	Bullard	177	183	146
Potter	168	179	179	Rabbitt	175	138	185
Shaughnessy	204	144	161	Collins	162	181	164
Pearson	148	189	168	Burns, T.	142	132	134
Huson	209	165	174	Thomas	139	153	159
Total	898	813	843	Total	795	787	788

The Y. M. C. A. "Picks" defeated the U. S. S. *Tacoma* basketball team on Saturday night, October 8, by a score of 38 to 4. The lineup of the two teams was as follows: Tacoma—Ford, Stohlman, Goertz, Huber, Desenfants. Cristobal—Simms, Goodman, Hunter, Duer, Herrington, and Schwallenberg.

A "smoker" will be heldon Friday night, October 14. An attractive program has been planned, and all men of Cristobal are cordially invited to be present, whether members of the Y. M. C. A., or not.

A dramatic club is being organized with a view to presenting a play in the near future.

Supplies for Canal Work.

The following steamers with supplies for the Isthmian Canal Commission arrived at the ports of Cristobal and Colon during the week ending October 8, 1910:

Cristobal, October 1, from New York, with 28,000 barrels cement for Atlantic Division; 90,800 bags cement for Pacific Division.

Prinz Aug. Wilhelm, October 3, from New York with 2,000 cases mineral oil, 92 pieces jacks and vises, 12 cases sledges and vises, 130 bundles turnbuckles, 114 barrels ammonia alum for stock.

Keyingham, October 4, from Philadephia, with 551 pieces piling, 10,360 pieces yellow pine lumber for Atlantic Division; 439 pieces white oak, 551 pieces steel, plates, 210 pieces steel bars, 1,140 pieces steel angles for Mechanical Division; 76 pieces piling, 11,282 cross-ties, 1,060 pieces yellow pine lumber, 3,167 pieces steel, rails, 8,449 bundles splice bars, 3,864 pieces steel pipe 562 pieces steel plates, 450 pieces steel angles, 1,273 pieces black pipe for stock.

Panama, October 5, from New York, with 50 pieces switches, 80 crates handles, 31 bales leather belting 637 bundles shovels, 33 kegs coach screws, 75 cases water coolers, 18 cases tackle blocks, 34 barrels rosin, 88 cases caustic soda, 100 cases sapolio, 73 crates ranges, 28 bundles pad boards for stock; 371 pieces steel bars, 235 pieces castings for Mechanical Division; 10 packages electrical material for Pacific Division; 50 packages drugs for Sanitary Department; and a miscellaneous cargo, the whole consisting of 2,103 packages, weighing 244 tons.

Turrialba, October 6, from New Orleans, with 4,793 bales hay, 529 bales straw, 10 cases yellow ochre, 680 pieces yellow pine for stock; 3,195 pieces yellow pine for Atlantic Division; 445 pieces yellow pine for Mechanical Division; 452 tons dump car parts for Cristobal shops (for erection).

Santa Marta, October 7, from New York, with 20 packages castings for Atlantic Division.

Aldershot, October 7, from Gulfport, with 631 pieces piling for Atlantic Division; 159 pieces piling, 3,718 cross-ties for stock.

MOVEMENT OF OCEAN VESSELS.

The following is a list of the sailings of the Panama Railroad Steamship Company, of the Royal Mail Steam Packet Company, of the Hamburg-American Line, and of the United Fruit Company's Line, the Panama Railroad Company's dates being subject to change:

NOTES OF PROGRESS.

Acting Chairman's Monthly Report.

The report of the Acting Chairman of the Isthmian Canal Commission for the month of September is published in full in other columns of this issue of THE CANAL RECORD. It gives a detailed account of the progress of Canal work in all departments and divisions.

Shop Order System at Gorgona.

A new work order system will be installed in Gorgona shops to relieve the foremen of much of the clerical work they are now obliged to do, and thus give them more time for planning the methods of shop work and supervising the men under them. The great increase in work at the shops, without corresponding increase in supervisory force, makes it advisable to relieve the foremen of clerical duties. Two draftsmen will be required for the new system and, in addition to their clerical duties, they will be available to explain to the various foremen the details of drawings, thus accomplishing a further saving in the time of the supervisory force. The foremen who will be benefited especially are those of the machine shop, boiler, blacksmith, carpenter, planing, and pattern shops, and the night foremen.

The new system will be installed gradually, and for the present will be confined to manufacturing orders only. A material bill will be made out in the drafting room and will accompany each shop order when it is issued to the shop. It will show in distinct columns the nature of the article ordered, the quantity required, the stock on hand, or if not on hand, the date at which a definite quantity may be expected, and the shop by which stock is to be drawn from the storehouse. In this connection the storekeeper of the Quartermaster's store at Gorgona has been instructed to follow certain rules in order that there may be thorough cooperation.

The effect of the system will be to relieve the foremen of work in studying out the details of drawings, preparation of a list of materials needed for each job, and ascertaining whether the material is in stock or on the Isthmus. It is estimated that one-fourth of the time of the foremen can be saved in this way.

A progress report system will also be installed by means of which a card catalogue record of the advance of work will be kept. This record will be added to each day and it will be possible therefore to tell in just what state an order is by merely referring to the catalogue.

President Taft's Visit.

It is officially announced from Beverly, Mass., that President Taft will sail for the Isthmus on November 10 from Charleston, S. C., on board the armored cruiser *North Carolina*, and under the convoy of the sister ship *Montana*. It is expected that he will arrive on the Isthmus on November 14, and remain here four days.

Unloader Performances in Chagres District.

During the month of September, there were four unloaders at work in the Chagres district of the Central Division, two of which were working on the Tabernilla dumps and two on the dumps on the relocation of the Panama railroad between Gamboa and Caimito. The unloaders on the Tabernilla dumps unloaded an average of 20 trains per day, and those on the relocation dumps, 24 trains per day. The unloaders at Tabernilla were delayed 31 hours and 12 minutes waiting for trains, while those on the Panama railroad relocation were delayed 38½ hours for the same cause. In addition to this delay, there were numerous other delays on account of derailments, changing unloader, changing plow, and repairs. From September 1 to 15, the Lidgerwood trains averaged 19 cars to the train, after which date an additional car was added, giving an average of 20 cars per train.

Sanitary Work in Panama Suburbs.

The work of removing the unsanitary houses and shacks in the newly improved districts of Guachapali and Santa Cruz, including also the districts known as Marañon and San Miguel, which was begun on June 21, 1909, in accordance with the Health Office order of that date, is practically completed. One hundred and fifty-two buildings were ordered destroyed in Guachapali and 57 in Santa Cruz, and most of them were demolished by the Health Office forces. The district of Santa Cruz, with San Miguel, comprises about all of the settled portion of the city lying between the Panama railroad, the Caledonia road and the Zone boundary line. As a result of the recent street improvements and the installation of water mains and sewers in this section, there has been an impetus in building operations, and up to October 15, a total of 63 permits had been issued, as compared with one permit on September 30, 1909. These permits mostly cover two-story frame buildings, the floor joists of which, in accordance with existing sanitary regulations, must be set in concrete to prevent the entrance of germ-carrying vermin. Building operations in Guachapali continue, but on a smaller scale than a few months ago. The permits issued in that district to October 15 number 148, as compared with 35 on September 30, 1909. The street improvements made in these districts by the municipal engineering forces of the Pacific Division are about concluded, and most of the men have been laid off.

Hotel Improvements.

The dining room of the Washington Hotel at Colon has recently been renovated and repainted. A hat rack has been placed near the entrance for the convenience of guests, a linen room has been added, and some improvements made in the kitchen arrangements. The grounds in front of the hotel have been newly seeded, and additional plants have been set out. The driveway along the beach in front has been remetaled and rolled. An inquiry was received a few days ago from Delft, Holland, regarding accommodations for a party of four that desire to spend the months of February and March on the Isthmus inspecting the Canal.

The location of the stairway leading to the upper floor of the Cristobal Hotel has been changed to the front of the building, and the space enclosed, so that employes who have quarters in the hotel can gain access to them, without having first to enter the section of the lower veranda reserved for dining purposes.

Growth in Isthmian Shipping Trade.

The total number of vessels arriving at the ports of Colon, Cristobal and Balboa during the first six months of 1910 shows a considerable gain over the last half of 1909. At Colon and Cristobal, the increased growth amounted to over 20 per cent, and at Balboa the gain was over ten per cent. The vessels arriving at Colon and Cristobal from January to June 30, 1910, inclusive, numbered 455, as compared with 384 for the period from July 1 to December 31, 1909, inclusive. The vessels at Balboa for the same periods were 127 and 115, respectively.

The record for July, August and September of this year at Colon and Cristobal indicates a continued growth at these ports, the total of arrivals for August being 88, a larger number than has been recorded in any previous month for over a year. During the week ending October 1st, 24 vessels entered the ports. While this number has been equalled in one or two previous weeks of record, it has never been exceeded. The average number of vessels arriving each week of late has been 19 The greater part of them make Colon and Cristobal regular ports of call, and some of the colliers employed by the Earn Line to bring coal to the Isthmus have been on the same run for the past two or three years. The sailings of the new steamship service from California,

NOTES OF PROGRESS.

(Continued.)

which were begun this month, adds four more vessels to the list of those plying regularly to the ports of the Pacific and Atlantic entrances to the Canal.

The boat arrivals at Colon also include a number of sloops and schooners, which make trips between the Isthmus and Trinidad, Jamaica, and other islands of the West Indies, while a few come from Central American coast points and islands nearby. The number of boats engaged in this trade has increased considerably in the past two years. One of this class, the *Gertrude*, arrived recently from Turtle Bow on the Costa Rican coast, a locality which gets it name from the large number of turtles found there. The sloop makes occasional trips to Colon, bringing as its principal cargo, several hundred turtles reaching in size to 500 pounds, which find ready sale in the local market. Several vessels make periodic trips from the island of San Andres with fruit, and schooners from the West Indies bring yams, yucca, avocados and fruits, and also, as a rule, a few passengers.

Concrete in Gatun Locks.

The concrete work in Gatun Locks is about 38 per cent completed, 802,306 cubic yards, out of a total of 2,095,000, having been placed at the close of work on October 15. Most of the concrete being placed is put in the floor and walls of the middle locks. The record of concrete placed each day last week, and of the total up to and including October 15, is shown in the following statement:

DATE.	Concrete placed.	Large stone.	Hours worked.	No. of mixers	Total.
	Cu. Yds.	*Cu. Yds.*			*Cu. Yds.*
Oct. 10.	2,824	274¾	90:39	8	3,098¾

Vacations in Guatemala.

Regarding the announcement in THE CANAL RECORD of October 5 of the permission accorded employes to spend their vacations in Guatemala City, the Chief Quarantine Officer advises that a quarantine against ports in Guatemala touched by lines of steamers plying to the Isthmus has existed for several years past and is still in force.

Lock Work at Pedro Miguel.

The work of placing concrete in the extension of the east wall into the forebay at Pedro Miguel Locks is in progress. The west and center walls of the locks have been extended south to the first of the three lower gate sills, and the construction of the east wall is advancing.

The record of concrete laid in the locks during the six 8-hour working days of the week ending October 15, with the total to that date, is as follows:

DATE.	CUBIC YARDS.			
	Construction plant.	Auxiliary plant.	Large stone.	Total.

Gatun Dam and Spillway.

The survey made at the end of September showed that the surface of the hydraulic fill in the western section of Gatun Dam was at 27.3 feet above sea level, an increase in height of 5.3 feet during the month. Three of the four 20-inch suction dredges on the Dam work pumped into the west section all during the month and the fourth also pumped into that section after September 16. No hydraulic fill was added to the east section of the Dam during September, and the survey showed that the surface of the fill was at 56 feet above sea level,a subsidence of 1.3 feet during the month, due to consolidation. The total of the hydraulic fill at the close of the month was 4,979,457 cubic yards.

The progress of concrete laying in the spillway of the Dam during the two weeks ending October 15 is shown in the following statement:

DATE.	Cubic Yards.

Married.

WALSH–BOWMAN—On October 12, in the Union church, Cristobal, Martin Franklin Walsh of Stockton, Cal., and Jenny Lind Samantha Bowman of Santa Cruz, Cal., Rev. Carl H. Elliott officiating. Canal Zone residence, Cristobal.

EXECUTIVE ORDER.

Collection of Taxes.

By virtue of the authority vested in me, I hereby establish the following Executive Order for the Canal Zone Government:

SECTION 1. The office of the District Tax Collector, created by paragraph two of the Executive Order effective April 15, 1907, is hereby abolished.

SECTION 2. The duties heretofore discharged by the District Tax Collectors shall be performed by the Collector of Revenues in person or by duly appointed deputies, provided that there shall be a Deputy Collector of Revenues assigned to each administrative district, who, under the direction and supervision of the Collector of Revenues shall exercise and perform the duties of the Collector of Revenues within the respective districts. The Collector of Revenues shall have such additional deputies, assistants and other help as are now assigned to him or may hereafter be assigned to him by competent authority.

The existing laws relating to the execution of official bonds by the Collector of Revenues and his deputies shall not be affected in any manner by this Order.

SECTION 3. Taxes and penalties assessed against real estate or the improvements thereon shall constitute a lien on such property which shall be superior to all other liens, mortgages or encumbrances of any kind whatsoever and shall be enforceable against the property whether in the possession of the delinquent or any subsequent owner and can be discharged only by the payment of the taxes, a penalty of twenty (20%) per cent, and any costs that may have accrued.

SECTION 4. A statement showing the persons delinquent for taxes in the respective districts prepared and signed by the Collector of Revenues and approved by the Head of the Department of Civil Administration and containing the requisites prescribed by Section 54 of Act 7 of the Laws of the Canal Zone enacted September 1, 1904, shall be sufficient warrant for the proceedings to seize and sell property sufficient to satisfy the amount of taxes, penalties and costs due in each case, and the monies acquired by the Collector of Revenues at such sale shall be duly accounted for by him to the Treasurer of the Canal Zone, in like manner as other public monies received by him; and in making returns thereof he shall show the total amount of proceeds received from such sale, the amount of taxes, penalties and costs and any surplus remaining that may have been paid over to the delinquent tax payer for the payment of such surplus.

SECTION 5. The owner of personal property seized may redeem the same from the Collector of Revenues at any time before the sale, but not afterwards, by tendering to him or his deputy the amount of the taxes, penalties and costs up to the time of the tender; the costs to be charged in making such seizure and sale shall only embrace the actual expense of the seizure and preservation of the property pending the sale, and no charge shall be imposed for the services of the collecting officer.

The purchaser at a tax sale of personal property shall acquire an indefeasible title to the property sold, and the officer making the sale shall execute a bill of sale of such property to the purchaser.

SECTION 6. The provision of said Act 7 of the Canal Zone Laws, relating to the forfeiture of real estate and other immovable property to the municipalities, formerly existing, in default of bidders at tax sales, and the procedure therein established in such cases, and the conditions therein prescribed in respect to the redemption of such property by the delinquent tax payers, and the execution of deeds to the municipalities thereunder when the property was not duly redeemed shall apply hereafter to the Canal Zone Government, and the property shall pass to the Canal Zone Government in default of bidders at such tax sales, in like manner and form as it did to the abolished municipalities under the said Act 7.

SECTION 7. Deeds conveying title to real estate or to improvements thereon executed by the Collector of Revenues or his deputies to private persons or to the Canal Zone Government under tax sales pursuant to law, shall convey all right, title, and interest of the delinquent tax payer in and to the property sold, on the date of such sale, and shall be entitled to registration in the real estate records of the district in which the property is situated.

SECTION 8. All the provisions of said Act 7 of the Canal Zone Laws relating to the levy, assessment and payment of taxes and the enforced collection thereof which conferred powers and imposed duties on the officials of the abolished municipalities shall be held to apply to the Collector of Revenues, and hereafter, he shall exercise and discharge all said powers and duties in person or through his deputies in the respective administrative districts.

SECTION 9. All laws, orders or decrees in conflict with this Order are hereby repealed, but the repeal shall not affect any action or procedure that may have been taken or had under preexisting laws and such action or procedure if not terminated shall be proceeded with in conformity with this Order as near as may be: and, provided further, property now delinquent for taxes may be sold to satisfy the taxes due thereon under the provisions hereof in like manner as may be done with property becoming delinquent hereafter.

SECTION 10. Nothing in this Executive Order shall be held to deprive the Chairman and Chief Engineer or the Head of the Department of Civil Administration from exercising any power or authority now conferred on them, or either of them, by law in relation to the appointment of officers and employes, or the supervision of the work of officers and employes responsible or reporting to them, or to either of them. WM. H. TAFT.

THE WHITE HOUSE,
October 4, 1910.

[No. 1250.]

Obituary.

W. S. Halstead of Columbus, Ga., died at Ancon Hospital on October 12, after an illness of about twenty days. He was 29 years of age, single, and had been on the Isthmus four years. He was an employe of the Chairman's office at Culebra.

John A. Schaberle, who was the victim of a shooting affair at Culebra on the morning of October 10, died at Ancon Hospital on October 12. He was 33 years of age, single, and had been on the Isthmus two years, living at Culebra, where he was employed in the office of the Chief Engineer. His home address was Detroit, Mich.

A fire in the kitchen of the Bas Obispo hotel on Sunday, October 16, caused about $300 worth of damage.

FEDERATED WOMEN'S CLUBS.

Fall Meeting of the Zone Organization Held at Gorgona.

The fall meeting of the Canal Zone Federation of Women's Clubs was held in Gorgona on Thursday, October 13. Each of the six federated clubs was represented by four delegates and there were present the honorary president, Mrs. Lorin C. Collins, the three vice-presidents and other officers of the Federation, and a large number of club women. Following the Federation lunch, which was taken at the Commission hotel, the business meeting convened at the Gorgona clubhouse at 1.30, the president, Mrs. Thomas E. Brown, Jr., presiding.

It had been requested that the reports of the club presidents should outline the proposed plan of work of the clubs for the year, but owing to lateness in resuming meetings, illness, and other causes, only the presidents of the Cristobal, Gatun, and Paraiso clubs were able to announce any formal plan. In these reports, and those of the chairmen of Federation committees which followed, there was evidenced a tendency toward intellectual development through systematic and harmonious programs, and a broadening of educational effort along philanthropic lines.

The chairman of the health committee recommended a campaign against the spread of tuberculosis among natives in the poorer districts. Already some work has been begun unofficially by Mrs. Collins of the Cristobal club, and with organized effort and the cooperation of the authorities a vigorous campaign will be prosecuted. It was suggested also, that something could be done educationally by lectures, and possibly by a tuberculosis exhibit among the clubs in the Canal Zone. In order to concentrate effort the committee on philanthropy and civics has issued a list of suggestions which include medical inspection in the public schools of Panama and Colon; the establishing of playgrounds; the care of infants, it having been ascertained that a high rate of mortality obtains among children under two years; establishing free dispensaries under reputable physicians in Panama and Colon to counteract the use of patent medicines; publishing items on tuberculosis in the daily papers; distributing reading matter on preventive measures; having addresses made by physicians; and working for the establishment of free kindergartens for colored children.

Letters were read from the president of the General Federation of Women's Clubs asking the cooperation of the Canal Zone Federation in the effort to increase the treasury of the General Federation, recommending that each club become a subscriber to the official organ, "The General Federation Bulletin," and expressing appreciation of the efforts of the club women in the Canal Zone.

Resolutions were adopted on the abolition of the common drinking cup in the Canal Zone; recommending that the bread baked in the Panama railroad bakery at Cristobal be wrapped before it leaves the bakery; recommending that the home committee arrange for a course of lectures in domestic science; and requesting that clothing be contributed to the line and terminal hospitals to be given to patients when discharged. This last has been one of the philanthropic efforts of the Gatun club, and it has been greatly appreciated.

At 3.30 a ten minute recess was taken, after which the meeting reconvened in the entertainment hall of the clubhouse which was decorated with flags and flowers. Papers by the chairmen of committees included one on art by Mrs. Henry Ropes Trask; education by Mrs. Elliott; household economics by Mrs. W. H. Ellenwood, and conservation of natural resources by Mrs. F. W. Walraven. In each of these papers, suggestions were made as to the best use the clubs might make in their programs of the subject presented.

The guests of honor were Mrs. Maurice H. Thatcher, Mrs. Wesley Owen, and Mrs. H. R. Moon. At the request of the president, the honorary president and Mrs. Thatcher made informal addresses.

A musical program was rendered as follows: Piano solo, Mrs. Moon; song, Miss Ethel Otis, Miss E. Decker, accompanist; "Barcarolle," violin duet, Mrs. Wm. H. Decker and Miss Jessie Smith, Mrs. Alfred Dickson, accompanist; songs "The Spring Has Come," and "Don't You Mind the Sorrows," Mrs. Owen, Mrs. Moon, accompanist; duet for piano, "Sketches", Ethelbert Nevin, Mrs. Thatcher and Mrs. Moon. The afternoon closed with an informal reception, refreshments being served by the Gorgona club.

In order to assist the various clubs in their programs for the year, the following circular letter has been issued by the reciprocity committee:

> This committee will receive requests from clubs for outlines of programs, papers on any special subject, or for speakers for special occasions. It is desired that any club making such request should state definitely the subject required and give alternative dates, if possible, as all requests are referred to the chairmen of the Federation committees.
>
> The chairmen of the committees are asked to keep on file a list of such papers as they may be able to furnish, of such speakers as they may be able to call upon for lectures, and also, to keep a file of clippings on interesting subjects.
>
> Clubs are expected to carry all expenses connected with the work of this committee, including the transportation and entertainment of speakers, or others, who come at the request of the club.

PERSONAL.

Mr. H. H. Rousseau, with Mrs. Rousseau, returned from his annual leave in the States on the *Ancon*, which arrived at Cristobal on October 20.

Mr. S. B. Williamson returned from his annual leave on the *Ancon* on October 20.

Mr. Tom M. Cooke, accompanied by Mrs. Cooke, returned from his leave in the States on the *Metapan*, which arrived at Colon on October 14.

Mr. A. L. Robinson sailed for the States on his annual leave on the *Allianca*, which left Cristobal on October 17.

Mr. A. B. Nichols returned from his annual leave in the States on the *Colon*, which arrived at Cristobal on October 17.

Missing Man.

Any one having information regarding the whereabouts of W. Davis Porter, who is supposed to have worked in the Canal Zone, is requested to communicate with the Director of Posts, Ancon, C. Z.

Johnson Charged with Manslaughter.

J. R. Johnson was arraigned before Justice Owen in the Circuit Court at Empire on October 18 and a formal charge of manslaughter was preferred against him for having caused the death of J. A. Schaberle at Culebra on the morning of October 10. The date of trial was fixed at October 25. Under the Canal Zone laws a person accused of manslaughter may not be granted a jury trial.

Bail was fixed at $2,500.

CANAL WORK IN SEPTEMBER.

Monthly Report of the Acting Chairman to the Secretary of War.

CULEBRA, C. Z., October 15, 1910.

The Honorable the Secretary of War,
Washington, D. C.

Sir: I have the honor to submit the following report of operations on the Isthmus for the month of September, 1910:

Department of Construction and Engineering.

The following table summarizes the principal items of construction work accomplished by the Atlantic, Central and Pacific Divisions during the month:

Item.	Unit.	Atlantic.	Central.	Pacific.	Total.
Work excavation, dry	Cubic yards	103,040	1,574,238	18,995	1,696,273
Work excavation, wet	Cubic yards	451,873	....	473,585	925,458
Total work excavation	Cubic yards	554,913	1,574,238	492,580	2,621,731
Plant excavation, dry	Cubic yards	21,713	....	....	21,713
Plant excavation, wet	Cubic yards	26,444	....	17,200	43,644
Total plant excavation	Cubic yards	48,157	....	17,200	65,357
Total Canal excavation	Cubic yards	603,070	1,574,238	509,780	2,687,088
Material placed in dams	Cubic yards	686,275	....	11,220	697,495
Concrete laid	Cubic yards	81,628	....	68,835	150,463
Explosives used	Tons (Gross)	83.78	199.05	21.00	303.83
Rock drilling	Feet	78,644	351,791	28,367	458,802
Track removed	Miles	....	7.90	....	7.90
New tracks laid	Miles	2.98	12.36	1.04	16.38
Rock crushed	Cubic yards	69,733	56	58,244	128,033
Cement used	Barrels	84,997	29	70,806	155,832
New roads built	Miles	0.37	....	....	0.37
Water mains laid	Feet	9,405	1,891	1,166	12,462
Sewers laid	Feet	1,711	292	783	2,786
New drains and ditches dug	Feet	2,348	....	4,981	7,329
Average daily force		8,698	9,197	4,024	21,919
Average rainfall	Inches	12.38	13.34	5.90	12.03

Atlantic Division.

GATUN LOCKS.

Excavation—Shovel excavation during the month was confined to the lower chamber. A total of 95,561 cubic yards of material was removed, including 17,683 cubic yards of clay excavated outside the limits of the Canal prism for the impervious back-fill south of the intermediate gate. The total amount removed to date aggregates 5,308,457 cubic yards. The excavation, including excavation for the approach walls, is 91 per cent completed. The culvert excavation in the middle chamber is 92 per cent completed.

Receiving and Issuing Material—The receipts of material during the month were satisfactory, and exceeded the consumption on all items.

OPERATION OF THE PERMANENT AND AUXILIARY CONCRETE CONSTRUCTION PLANTS.

	Permanent Plant.	Auxiliary Plant.
Average hours per day worked per strand of cableway laying concrete and large stone	7.40	......
Average number of mixers per day	6.00	2.00
Average hourly output per mixer, cu. yds	25.92	74.60
Average amount of concrete and large stone laid per hour, per strand of cableway, cu. yds.	31.77	....
Total number cu. yds. of large rock laid by the cableways	4,850	....
Total number cu. yds. of concrete laid by the cableways	43,861	....
Total number of cu. yds. of concrete from this plant laid by derrick.	596	....
Average amount of concrete, per hour, laid by the derrick, cu. yds.	19.22	
Total number of cu. yds. of large rock placed	....	2,909
Total number of cu. yds. of concrete placed	....	24,991
Total amount large rock and concrete handled, cu. yds.	49,307	27,900

Concrete Work—The concrete work for the 25 working days in September shows a decrease of 8,965.5 cubic yards, as compared with the amount laid during the 27 working days in the month of August. The bucket measurement exceeded the place measurement by 309.5 cubic yards. The total amount of concrete and large stone placed during the month was 49,785 cubic yards in the upper lock, and 27,462.5 cubic yards in the middle lock, or a total of 77,207.5 cubic yards. The total amount placed to October 1, was 759,972 cubic yards, of which 702,371.5 cubic yards have been placed in the upper lock, and 57,600.5 cubic yards in the middle lock. The concrete work is 37.1 per cent completed.

Receipt of Crushed Rock and Sand—During the month 115 barges of crushed rock were brought from Porto Bello, and 33,382 cubic yards of sand, in 66 barges, were received from Nombre de Dios.

Power Plant and Pumps—The operation of the power plant and pumps during the month was satisfactory.

Iron and Steel Work—The setting of steel at the intermediate gate, and at the lower gates of the upper lock, was continued. Four anchors for safety chains above the intermediate gate were also placed.

Back-Fill—A total of 26,410 cubic yards of back-filling was placed, making 48,786 cubic yards to October 1. The back-fill is 4.06 per cent completed.

Form Work—The wooden form work during the month has been slow and expensive, on account of the large amount of interior wooden forming. Two more steel towers were transferred during the month from the upper to the middle chamber.

GATUN DAM.

Construction during the month increased the total fill by 686,275 cubic yards, making a total in place of 9,855,015 cubic yards.

Hydraulic Fill—The dredges increased the hydraulic fill by 457,637 cubic yards. The total hydraulic fill to date is 4,979,457 cubic yards.

Dry-Fill—The material received from the Central Division, the Locks, the Spillway and the plant excavation, amounted to 228 638 cubic yards and was placed on the north and south toes of the Dam, making the total dry-fill in place 4,875,558 cubic yards.

GATUN SPILLWAY.

Concrete—The construction of the east and west approach walls was continued, 4,421 cubic yards being placed. The total concrete in place is 94,605 cubic yards.

Excavation—In excavating for the forebay and for the foundation for the approach walls 25,162 cubic yards of material were removed, making a total Spillway excavation of 1,483,125 cubic yards.

Cut-off Levee—Material amounting to 13,249 cubic yards was placed in the levee from Spillway Hill to Mindi Hill, making a total of 176,461 cubic yards.

HARBOR AND CHANNEL SECTION.

Dredging from the Ocean to Mindi—Six dredges removed 420,869 cubic yards of earth and 31,004 cubic yards of rock from the Canal prism. In addition, the *Chagres* removed 5,654 cubic yards of earth at the coal dock, 2,590 cubic yards of rock in the French canal at Mindi, and 13,650 cubic yards of earth and 4,550 cubic yards of rock at the Gatun docks. On September 30th, 40 feet of water could be carried from zero to zero plus 4,700 feet; 30 feet to mile 5 plus 800 feet; 20 feet to mile 5 plus 2,550 feet, the junction with the French canal.

PORTO BELLO.

PERFORMANCE OF ROCK CRUSHER PLANT.

	Hours.
Length of working day, from September 1 to 17	16.00
Length of working day, from September 19 to 30, 6 a. m., to 6 p m.	12.00
Average number of hours worked per day	9.30
	Cu. Yds.
Average amount per hour of working day	196
Average hourly output for possible working time of 344 hours	203
Average amount per working hour	300
Total for month	69,733
Maximum day's output for 12 hours	3,508
Maximum day's output for 16 hours	3,749

SAND STONE AND CEMENT SERVICE.

In connection with this service, plant steamed 10,398 miles, handled 717 barges, and carried about 2,688 passengers.

COLON BREAKWATER.

The material excavated amounted to 12,852 cubic yards, of which 6,862 cubic yards were placed in the breakwater and 5,990 cubic yards used for ballasting track. Five hundred and forty linear feet of double track trestle were built.

NOMBRE DE DIOS.

Dredges and cranes excavated 33,013 cubic yards of sand.

MUNICIPAL ENGINEERING.

A water supply and sewer system for the camp at Toro Point were under construction during the month, and the usual work of maintenance of roads, water works and sewers, pumping stations, etc., in the territory of the division was satisfactorily performed.

Central Division.

During the month of September the total amount of material excavated by the Central Division was 1,574,238 cubic yards, of which 459,473 cubic yards were classified as earth and 1,114,765 cubic yards as rock. Of this quantity, 1,572,064 cubic yards were removed by steam shovels and 2,174 cubic yards by orange peel cranes. The total—1,574,238 cubic yards,—was primary excavation for the Canal prism. The daily average number of steam shovels at work during the month was 46.92 and the total number of shovel days was 1,173, as compared with 44.63 shovels at work during the month of August, with 1,205 shovel days.

For comparison with the work done by steam shovels during the corresponding month of the previous year, the following table is given:

Period.	Excavated by shovels.	Classification of material.		Av. No. of shovels at work.	W'kg days.	Av. yards per shovel day.
		Rock.	Earth.			
1909:	*Cu. Yds.*	*Cu. Yds.*	*Cu. Yds.*			*C. Y.*
Sept. ..	1,454,287	1,104,505	349,782	46.40	25	1,248.3
1910:						
Sept....	1,572,064	1,114,765	457,299	46.92	25	1,340 2

Rainfall at Empire: 1909, 7.22 ins.; 1910, 8.99 ins.

The above table shows the average output per shovel to be 7.36 per cent greater in September, 1910, than in the corresponding month of the previous year.

The total amount of material excavated from the prism in the Culebra section of the Central Division in September, 1910—1,339,948 cubic yards—was the greatest record in that section for the month of September, the next largest having been 1,235,978 cubic yards in September, 1909.

The total estimated amount of material to be removed in the Central Division was 97,125,018 cubic yards, and up to October 1, 1910, 63,321,815 cubic yards had been removed, leaving 33,803,203 cubic yards yet to be removed in order to complete all excavation in the Central Division. From these figures it will be seen that 65.2 per cent of all excavation in the Central Division had been completed up to the close of the month of September, and 34.8 per cent remained uncompleted.

Considering the two sections which compose the Central Division, the excavation completed and that yet to be completed at the close of September operations were as follows:

CULEBRA SECTION.	*Cubic Yards.*
Completed	53,164,665
To be completed	31,022,059
CHAGRES SECTION.	
Completed	10,157,150
To be completed	2,781,144

From the above figures it will be seen that the Culebra section, locally known as Culebra Cut is 63.15 per cent completed, and 36.85 per cent yet to be completed; the Chagres section is 78.5 completed and 21.5 per cent yet to be completed.

During the month the following quantities of material were hauled from the Canal prism and dumped into the embankment for the new roadbed for the relocation of the Panama railroad: 1,050 cubic yards in the vicinity of Pedro Miguel. The total amount to date used for this purpose is 3,714,318 cubic yards. One hundred and fifty-three thousand, nine hundred and eighty-two cubic yards of rock and earth from Culebra Cut were transported to Gatun for use in construction of the Dam. The total to date for this purpose is 1,985,599 cubic yards.

The average daily number of laborers at work on the whole division during the month was 8,327, while the average number of gold men working was 870.

Pacific Division.

DISTRICT NO. 1—LOCKS AND DAMS.

Excavation—The total excavation during the month amounted to 18,995 cubic yards, of which 10,405 cubic yards were taken from the Pedro Miguel lock site, and 8,590 cubic yards from the Miraflores lock site.

Filling and Embankment—During September, no additional dry-filling was placed in the prism of the west dam at Pedro Miguel, leaving the total quantity in place at the close of the month 260,852 cubic yards. Five hundred and seventy-eight cubic yards dry-filling were placed in back-fill, increasing the total amount to 16,521 cubic yards. At Miraflores, 11,220 cubic yards dry-filling were added to the toe; no hydraulic filling was added to the core of the west dam, making the totals at the end of the month 547,309 cubic yards and 138,587 cubic yards, respectively. No material was added to back-fill, leaving the total amount in place at the end of the month 133,545 cubic yards.

OPERATION OF THE PERMANENT AND AUXILIARY CONCRETE CONSTRUCTION PLANTS AT PEDRO MIGUEL.

	Permanent Plant.	Auxiliary Plant.
Length of working day, hours..	9.00	9.00
Average number of hours per day worked laying concrete and large stone (actual working time)	6.66	*4.13
Average number of mixers per day	4.00	†.40
Average hourly output per mixer (actual working time)	*Cu. Yds.* 72.92	*Cu. Yds.* 19.35
Average amount of concrete and large stone laid per hour per chamber crane (actual working time)	74.51	....
Large rock laid	409.00	50.00
Concrete laid	48,725.00	1,518.00
Total concrete laid	49,134.00	1,568.00

* One locomotive crane in service 19 days and one derrick four days; total hours, 78.43.

† One 2-cubic yard mixer in service nine days.

PEDRO MIGUEL HANDLING PLANT.

The temporary mixer at the south end of the west storage trestle was completed and ready for use, and that at the south end of the east storage trestle was 80 per cent completed.

OPERATION OF THE PERMANENT AND AUXILIARY CONCRETE CONSTRUCTION PLANTS AT MIRAFLORES.

	Permanent Plant.	Auxiliary Plant.
Length of working day, hours...	9.00	9.00
Average number of hours per day worked laying concrete and large stone (actual working time)	5.16	No plant
Average number of mixers per day	....	5.56
Average hourly output per mixer (actual working time)	*Cu. Yds.* No plant.	*Cu. Yds.* 19.90
Average amount of concrete and large stone laid per hour, per chamber crane (actual working time)	*27.71	No plant
Large rock laid	42.00	296.00
Concrete laid	2,716.00	15,079.00
Total concrete laid	2,758.00	15,375.00

*Laid by berm crane "F", in service 19 days.

MIRAFLORES HANDLING PLANT.

The berm crane on the east berm at Miraflores has been operated during the greater part of the month, being supplied from two 2-cubic yard cube mixers on the east storage trestle. The berm crane on the west berm was completed during the month. The west storage trestle was 40 per cent completed. Three ⅘-cubic yard concrete mixers were put in service in the early part of the month, and are being used on the floor system and head walls.

DISTRICT NO. 2—DREDGING.

The following is a statement of the output of the five dredges which were in operation during the month:

Dredge.	Type.	Work.		Plant.		Total.	Remarks.
		Earth.	Rock.	Earth.	Rock.		
		Cu. Yds.	*Cu. Yds.*	*Cu. Yds.*	*Cu. Yds.*	*Cu. Yds.*	
Cardenas	Dipper	74,600	....	1,600	....	76,200	Place measurement
Badger	Ladder	50,145	15,794	....	....	65,939	Place measurement
Marmot	Ladder	83,827	12,645	....	....	96,472	Place measurement
Mole	Ladder	5,400	4,524	15,600	....	25,524	Place measurement
Culebra	Suction	226,650	....	....	....	226,650	Scow measurement
Total	....	440,622	32,963	17,200	....	490,785	

HYDRAULIC EXCAVATION PLANT.

The pumping station of the hydraulic excavation plant was completed and four pumps placed in operation. Two monitors have been in operation during the greater part of the month, as well as three 18-inch centrifugal dredging pumps. Two of the dredging pumps have been disposing of material disintegrated by monitors Nos. 1 and 2, while the third pump was used to pump water from the lock site.

BALBOA TERMINAL HARBOR.

Exploration borings were continued over the site of the Balboa terminal harbor, and 108,950 square feet of the area were cleared of mangrove trees and brush.

SAND AND CRUSHED ROCK.

The ladder dredge *Gopher* took out 44,100 cubic yards of sand at Punta Chamé, and the Ancon rock crusher plant delivered 58,244 cubic yards of crushed rock.

DISTRICT NO. 3—MUNICIPAL AND SANITARY ENGINEERING.

Apart from the operation and maintenance of pumping and filtration plants, the maintenance of roads, water mains and sewers, forces were engaged on municipal improvements in the city of Panama, and in the construction of roads for the Canal Zone Government. Sanitary drains and ditches were maintained and extended.

DISTRICT NO. 4—ANCON QUARRY.

Sixty-three thousand, two hundred and fifty-five cubic yards of material were excavated at the quarry. The following table summarizes the operations of the rock crushing plant:

PERFORMANCE OF ROCK CRUSHER PLANT.

	Hours.
Length of working day	9.00
Average number of hours per day (actual working time)	6.63
	Cu. Yds.
Average number of cubic yards crushed per hour of working day	258.86
Average number of cubic yards crushed per working hour	351.40
Total output for the month	58,244.00

Relocation of Panama Railroad.

During the month, 203,225 cubic yards of material were excavated, making the total excavation at the close of the month 4,545,553 cubic yards, and 287,993 cubic yards of material were placed in embankments, making the total at the close of the month 9,745,858 cubic yards.

A trestle 690 feet long was driven, numerous small culverts were built, and 780 linear feet of 70-pound track were taken up, leaving a total of 157,678 feet of 70-pound track and 18,997 feet of 90-pound track in place. The total force averaged 1,585 men.

Quartermaster's Department.

Labor—There was sufficient skilled labor of all classes on the Isthmus to meet demands.

Quarters—On account of the concentration of work at the Gorgona shops, it became necessary to provide quarters for 108 more American bachelors than were quartered in this settlement in August. To do this, it was necessary to remove several families from nonhousekeeping quarters and convert the houses into bachelor quarters. Owing to a reduction of force at Porto Bello, quarters at that point are no longer crowded.

Building—There was more construction work under way than during previous months, particularly in connection with the enlargement and repair of various schoolhouses in anticipation of the opening of the school year.

Material and Supplies—During the month, 27,825 tons of miscellaneous material, 2, 368,540 feet B. M. of lumber, 488 pieces of piling and 20,123 cross-ties were received. These supplies were valued at $808,017.04.

Subsistence Department.

The operation of the European laborers' messes and the colored laborers' kitchens showed a net profit of $5,601.35. The line hotels showed a net loss of $1,821.89, and the Hotel Tivoli, a net loss of $710.81. There was a profit of $174,37 on the operation of restaurants, penitentiary and dredge messes. The net profit on all subsistence operations was $3,243.02.

Department of Civil Administration.

COURTS.

Fifteen civil and 22 criminal cases were disposed of in the Circuit Courts of the Canal Zone, and 71 civil and 498 criminal cases in the District Courts.

DIVISION OF POSTS, CUSTOMS AND REVENUES.

Money order sales for September amounted to $466,121.28, and the fees to $2,025.53. Receipts from stamp and card sales, and newspaper postage, aggregated $7,322.07. The total collection of revenues made by the division was $21,243.21, and the collection on account of court fines, costs and fees, $2, 592.03.

Eighteen vessels entered at and 16 vessels cleared from the port of Ancon; and 15 vessels entered at and 19 vessels cleared from the port of Cristobal.

DIVISION OF POLICE AND PRISONS.

The total number of persons arrested was 500, of which 460 were men and 40 women, 45 nationalities being represented. The number of arrests shows a decrease of 118, as compared with the figures for the previous month. Nine convicts were committed to the penitentiary, and seven were discharged, leaving 145 convicts confined on September 30. The cost of guarding and subsisting the convicts was $2,648.60, and the value of their labor on roadwork was $2,068.

DIVISION OF FIRE PROTECTION.

There were six fires in the Canal Zone during the month. The estimated value of property involved was $307,350, and the damage was $18.95 to Government property, and $10 to private property.

DIVISION OF PUBLIC WORKS.

In the city of Panama the average daily consumption of water was 1,161,250 gallons, and in Colon 902,508 gallons.

The usual inspection and maintenance work of this division was performed during the month.

Department of Sanitation.

The total number of deaths from all causes among employes was 48, thirty-three being from disease and 15 from external causes. The death rate among employes for the month of September in this and previous years was as follows:

1904	14.31
1905	32.00
1906	57.34
1907	28.63
1908	12.78
1909	12.76
1910	11.47

The annual average per thousand for deaths in the cities of Panama and Colon, and in the Canal Zone, including both employes and the general population, was 21.60, as compared with 19.01 in September, 1909; 24.91 in September, 1908; 32.93 in September, 1907; and 54.54 in September, 1906.

The annual average death rate from disease per thousand for employes, segregating whites and blacks, was as follows: Whites, 3.58; blacks, 9.46.

The following diseases caused death: Malarial fever, 4; pneumonia, 6; pulmonary tuberculosis, 3; typhoid fever, 2; all other diseases, 18.

No cases of yellow fever, smallpox or plague originated on the Isthmus, or were imported during the month.

Respectfully,
H. F. HODGES, *Acting Chairman.*

OFFICIAL CIRCULARS.

Duties of Counsel and Chief Attorney.

CULEBRA, C. Z., October 4, 1910.

CIRCULAR NO. 183-O:

The Department of Law, created by the Executive Order of January 6, 1908, establishing an organization under the Isthmian Canal authorities, shall be under the direction of the Counsel and Chief Attorney, subject to the supervision of the Chairman and Chief Engineer.

In addition to the powers and duties assigned to him by the Executive Order of April 16, 1910, the Counsel and Chief Attorney shall be charged with the general supervision of the legal matters pertaining to the Commission, including the acquisition of right-of-way and the adjustment of land damages.

GEO. W. GOETHALS,
Chairman and Chief Engineer.

Approved: October 4, 1910.
ROBERT SHAW OLIVER,
Acting Secretary of War.

Acting Superintendent, Mechanical Division.

CULEBRA, C. Z., October 15, 1910.

CIRCULAR NO. 354:

Effective October 17, 1910, Mr. A. T. Corcoran will act as Superintendent of the Mechanical Division during the absence of Mr. A. L. Robinson, on leave.

H. F. HODGES, *Acting Chairman.*

Surplus Material and Supplies.

CULEBRA, C. Z., October 17, 1910.

CIRCULAR NO. 355:

Pursuant to the investigation of the method to be adopted to prevent the accumulation of surplus material and supplies, instituted by this office in letter of August 10, 1910, the following is published for the information of all concerned:

The Quartermaster's Department will continue to issue lists of surplus stock and material on hand, and a supply of these lists will be kept at all Quartermaster's storehouses.

The Quartermaster's Department is authorized to make substitutions in filling requisitions and foremen's orders, after consultation with the interested department or division, if this is practicable. If not practicable, the substitution is authorized with the understanding that the material may be returned if it cannot be used. All substitutions will be issued at the standard price in the price book.

In making "A" requisitions, particularly for spare parts, care should be exercised that an accumulation of such parts will not be left on hand owing to the probability of construction units being retired from service as the work nears completion.

The cooperation of all departments and divisions is enjoined.

H. F. HODGES,
Acting Chairman.

Examinations for Levelman and Transitman.

CULEBRA, C. Z., October 18, 1910.

SIRS: Examinations for promotions to the positions of levelman and transitman in the service of the Isthmian Canal Commission and the Panama Railroad Company on the Isthmus will be held at the Administration Building at Culebra on Sunday, October 30, and Sunday, November 6, 1910, at 9 a. m.

All rodmen and levelmen in the service of the Commission and the Panama Railroad Company on the Isthmus must take the examination in order to become eligible for promotion.

The examination for transitman may be taken by any rodman and if passed will render him eligible for promotion successively to levelman and transitman without further examination. Rodmen may also take the examination for levelman to qualify for promotion to that grade only.

All those who pass the examinations successfully will be equally eligible for promotion to the respective grades.

No levelmen nor transitmen will be hereafter selected in the United States for service on the Isthmus so long as there are eligibles on the Isthmus, who have become so by reason of these examinations, available for transfer or promotion.

Examinations will be both written and oral. They will consist of such practical problems as engineers in the service of the Commission are called upon to solve in the ordinary routine of their duties, and will be conducted with a view to ascertain the applicants' fitness for the work to be done. The written examination will have a weight of 40 per cent; experience and testimonials, 40 per cent; oral examination, 20 per cent.

More than three testimonials from each applicant are not desired. Similar examinations will be held every six months, or oftener, if circumstances require.

It is requested that you will advise the rodmen and levelmen under your direction that they will be expected to enter this first examination, and divide them into two squads, one to appear on October 30, and one to appear on November 6. A list of the men to be examined on either date should be forwarded as soon as practicable to Mr. A. B. Nichols, Chairman of the Examining Board.

H. F. HODGES,
Acting Chairman, Isthmian Canal Commission.
Second Vice-President, Panama Railroad Company.

District Dentist at Culebra.

ANCON, C. Z., October 15, 1910.

CIRCULAR:

Employes are advised that Dr. R. H. Brumby, district dentist at Culebra, has returned from leave of absence and is ready to continue his work.

ROBT. E. NOBLE,
Acting Assistant Chief Sanitary Officer.

Train Schedule in Case of Floods.

PANAMA RAILROAD COMPANY,
OFFICE OF GENERAL SUPERINTENDENT
COLON, R. P., October 7, 1910

CIRCULAR NO. 217:

To All Concerned: In case of high water at Black Swamp or Bridge 27, preventing the running of Panama railroad trains over the present main line, the following modified schedule will be put into effect without further notice:

High water between Bohio and Gatun—Trains Nos. 1, 3 and 7, and local south will run from Gatun over relocated line via Frijoles Junction to Frijoles, thence over main line.

Trains Nos. 2, 6 and 8, and local north will run over the main line to Frijoles, thence over relocated line via Frijoles Junction to Gatun.

Trains Nos. 4 and 5 will be annulled north of Frijoles.

Train No. 4 will run on regular schedule to Frijoles and back south as No. 5, approximately one hour late.

High water between Gorgona and Bohio—Trains Nos. 1, 3 and 7, and local south will run from Gatun over relocated line to Gamboa Bridge, and will come north to Gorgona before proceeding south.

Trains Nos. 2, 6 and 8, and local north will come to Gorgona before proceeding north via Gamboa Bridge.

Trains Nos. 4 and 5 will be annulled north of Gorgona.

Train No. 4 will run north to Gorgona on regular schedule and return to Panama as No. 5, approximately one-half hour late.

Sunday schedule—Trains Nos. 1, 23 and 27 will run south as above, to arrive at Panama approximately one hour late.

Trains Nos. 20 and 24 and pick-up will run north as above, to arrive at Colon approximately one hour late.

Trains Nos. 21, 25, 22, and 26 will be annulled.

Trains Nos. 28, 29, and 30 will be annulled north of Gorgona.

Trains Nos. 28 and 30 will run north to Gorgona on regular schedule and No. 29 will run south from Gorgona on regular schedule.

On steamer days passengers will take No. 2 (or No. 8 the previous evening). No. 6 will pick up the refrigerator cars *and will not carry passengers.*

Trains Nos. 3 and 6 will handle hospital car.

F. MEARS, *Acting General Superintendent.*

COMMISSION CLUBHOUSES.

Activities of the Young Men's Christian Association.

CULEBRA.

On Saturday night, October 15, Cristobal's first team took two out of three bowling games from Culebra's first team. The scores were as follows:

Cristobal.				Culebra.			
Louch......	163	205	213	Cohen....	199	164	148
Rabbitt.....	180	135	140	Herrington	168	142	139
Collins......	228	139	206	Cushing...	164	184	132
Burns......	174	138	139	Case......	173	143	138
Thomas.....	165	169	144	Dougherty.	167	207	158
Total.....	910	786	842	Total...	871	840	715

The local handicap bowling tournament closed last week. Prize for greatest number of games won was awarded to Mr. Hurst; prize for high average to G. C. Hayes; prize for second high average to Mr. Cohen.

The standing of the men in the chess tournament is as follows:

	Won.	Lost.
Bartlett....................	·4	7
Dubois......................	10	2
Goodenow....................	5	7
Mengel......................	2	7
Putnam......................	3	7
Stiles......................	5	5
Warner	8	1

The meeting of the discussion club held on Wednesday night, October 12, was led A. B. Dickson of Empire. Subject, "Responsibility."

Basketball practice will be held on Monday and Wednesday nights of each week. All men interested in basketball should come out and try for the team.

EMPIRE.

The meeting of the literary and debating society has been postponed from October 14 to October 28.

A large audience attended the entertainment given by the Empire Musical and Dramatic Society on Tuesday night, October 18. This society was organized under the auspices of the Y. M. C. A. and will in the near future cooperate with the Empire Stock Company, and produce a minstrel show and vaudeville program. The program presented at the Empire clubhouse on October 18, will be repeated at Cristobal on Friday evening, October 21.

Empire's second team defeated Gatun's second team two out of three bowling games on Saturday night, October 15, by the following scores:

Gatun.				Empire.			
Dalton.....	181	167	174	Giavelli...	123	154	155
Myers......	169	146	130	Nicodemus	137	157	162
Duryea.....	156	152	119	Sawtelle...	129	166	197
Wilson......	164	142	134	Goolsby...	177	162	212
Hodges.....	189	190	193	Bardelson.	215	173	189
Total.....	859	797	750	Total...	781	812	915

Gynasium classes will reopen on November 1.

GORGONA.

The meeting of the discussion club held on Tuesday evening, October 11, was led by Geo. R. D. Kramer of Culebra; subject, "Exercise." The meeting of the club to be held on October 25, will be under the leadership of R. G. Goodman of Cristobal; subject, "What is Happiness?"

On Wednesday evening, October 12, a bowling team from house No. 91 took three games from a team composed of the Y. M. C. A. employed force.

A smoker was held on Friday night, October 14. The Guatemalan quartet gave several numbers on the "mariumba," and there was an exhibition of wrestling between Frank Shoensiegel of Gorgona and Forest Mills of the U. S. S. *Tacoma*. Mr. Mills got one fall at the end of seventeen and one-half minutes.

The 200, or over, scores at bowling made during the week ending October 15 are as follows: Strock, 210; Reinhold, 212; Otis, 211; Gaedkie, 203; and Geo. Lowe, 212. This last was high score for the week.

The standing of the men in the "Night Hawks" bowling league is as follows:

	Handicap.	Played.	Won.	Lost.
McConaughey....	Scratch	14	9	5
Junker............	22	15	9	6
Strock............	12	19	11	8

Calvit............	15	0	0	0

On Saturday night, October 22, Cristobal's second team will play at Gorgona, and Gorgona's first team will play at Cristobal.

The basketball league series will open on Saturday night, October 22, when Empire will play at Gorgona.

GATUN.

On the evening of October 17, a farewell reception was given Mr Warr in the gymnasium, which was decorated with pennants and college posters. R. M. Sands acted as chairman of the occasion. The program consisted of brief addresses by several of those present and several vocal and instrumental selections. Mr. Sands presented Mr. Warr with tokens of appreciation on behalf of the members and council of the association.

E. A. Putnam of Culebra was the leader at the discussion club meeting on Friday night, October 14; subject, "What Is Failure?"

Gatun's first team took two out of three games from Empire's first team on Saturday night, October 15, by the following scores:

Empire.				Gatun.			
Gustavson .	188	188	155	Barte.....	201	138	160
Gorham....	155	125	170	Harrington	150	193	....
Shaughnessy	171	159	147	DeMoll...	158	153	191
Pearson.....	191	126	184	Wolf......	188	171	150
Potter......	176	174	195	Durand...	190	137	188
				Severn............			148
Total.....	881	772	851	Total...	887	792	837

On Thursday evening, October 20, a smoker for the men of Gatun will be held. A good program is planned. All men in Gatun are cordially invited to be present.

CRISTOBAL.

A "smoker" was held at the clubhouse on Friday night, which was enjoyed by a large number of the members. The following program was given: Bass solo by Mr. MacArthur; characteristic songs by Messrs. King and Cullen; "The Hypnotist," given by the Empire Stock Company, introducing a comic scene called "The Chinese Laundry;" monologue and songs by Mr. Young of Empire; moving pictures.

A dramatic club was organized last week with the following officers: President, W. G. Manley; vice-president, C. C. Carr; secretary-treasurer, Miss Heine. It is planned to give a play in the near future. About 25 people bave signified their desire to take up this work. The club will meet at the clubhouse every Wednesday night.

Some good scores were made in the bowling match on Thursday night between the first and second Cristobal teams. Results were as follows:

First Team.				Second Team.			
Louch	146	177	178	Barrett....	182	166	220
Rabbitt.....	160	211	150	Weston...	186	210	155
Collins......	159	220	169	Gibson....	132	....	....
Burns, T....	179	166	152	Bullard...	147	141	159
Thomas.....	229	149	157	Blackburn.	168	150	148
				Adams, H.....		159	114
Totol.....	873	923	806	Total...	815	826	796

In the match between the Culebra and the Cristobal second teams on Thursday night the following scores were made:

Culebra.				Cristobal.			
Hall.......	156	147	192	Barrett. .	193	162	151
Hayes.....	181	155	136	Weston. .	162	139	199
Kop'ski, R.	143	184	138	Henry....	142	121	....
Kop'ski E.	168	117	135	Adams, D	166	161	192
Mengel....	144	139	221	Blackb'rn	155	159	197
				Turner............			140
Total....	792	*742	822	Total..	818	*742	879

*In the second game an extra frame was rolled and was won by Cristobal 70 to 68.

The following 200, or over, scores have been made so far this month: Louch, 217,201; Adams, D., 209, 232; Weston, 209; 210; Bullard, 203; Schofield, 204; Blackburn, 209; Barrett, 220; Rabbitt, 211; Collins, 220; Thomas, 229; Veen, 222.

The *Prinz Joachim* orchestra gave a very enjoyable concert at the clubhouse on Monday evening.

Tickets will be on sale Tuesday night for the Empire Operatic Company's show, which will take place Friday evening, October 21. The entire hall will be reserved.

The discussion club program was abandoned last week and there will be no meeting this week Next Thursday, Dr. Claud C. Pierce will take charge of the meeting, taking for his subject "Shall We Be Vaccinated?" The final meeting of the club will be held on Thursday, November 3; leader, A. B. Dickson of Empire. Subject, "Responsibility"

The basketball league will open at Cristobal on Saturday night, when Culebra plays.

The boys' department will take an all-day outing to Toro Point on Saturday of this week.

The library will be closed all of this week in order that the books may be recatalogued and checked. It will be opened again to the public on Monday, October 24.

A pressing club will probably be started in the near future. The methods and rates prevailing at the other Zone clubhouses will be adopted

PORTO BELLO.

Beginning October 16, Superintendent Gibbs has arranged to have a train leave town each Sunday at 3 p. m. to take gold employes and their families around to the bathing beach. This train will return about 5 p. m. The locomotive engineers have volunteered their services for these special trips.

The dock and float in connection with the clubhouse is now completed and open to the use of boats and bathers.

The standing of the men in the pool tournament is as follows:

Class A.	Played.	Won.	Lost.
Wilson.............	5	5	0
Hill...............	6	4	2
Stoll..............	6	4	2
Tuttle.............	5	2	3
Cornick............	4	1	3
Ross...............	5	1	4
Class B.			
Richardson.........	7	7	0
Elliott............	4	4	0
Wallen.............	4	3	1
McDonald...........	4	2	2
Bowen..............	2	1	1
Sweeney............	4	1	3
Beattie............	5	0	5
Van Fleet..........	4	0	4
King...............	2	0	2

Mr. Pflueger played the members of the chess club simultaneously on October 7. Mr. Hanbury played the club on October 14.

Band Concerts.

No communication, either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.

NOTES OF PROGRESS.

Rapid Movement in Cucaracha Slide.

On May 25 there was a movement of earth and rock on the east side of Culebra Cut in what is known as Cucaracha slide, and it was estimated that 500,000 cubic yards of material had broken away from the bank and was gradually sliding into the Canal prism. Excavation of this mass of material has continued with few interruptions until the present time, and there remain to be removed only about 175,000 cubic yards of the original 500,000. This remaining material, which is almost entirely earth, received a new impetus on the afternoon of October 22, and there ensued the most rapid movement of a large mass of earth that has yet been experienced in the excavation of Culebra Cut.

At 4.40 o'clock the material began to move toward the Canal axis and by 5 o'clock the toe had advanced 75 feet toward the axis, completely filling the pioneer shovel cut and drainage ditch, carrying away all four of the construction tracks on the east side of the Cut, catching and imprisoning 16 Lidgerwood flat cars, locomotives Nos. 227 and 280, and steam shovels Nos. 254 and 208. Shovel No. 208 was moved laterally a distance of 50 feet and remained on its tracks, perfectly horizontal, so that it could have resumed excavating as soon as the movement ceased if there had been any way of sending cars to it to take away the spoil. All the equipment caught in the slide will be extricated this week and the excavation will continue as heretofore.

No new material was set in motion by this movement in Cucaracha slide, and the statement heretofore made, that this and all slides that have so far developed in Culebra Cut represent about 15 per cent of the total excavation remaining, still holds good.

Improvements to Balboa Port Terminal.

The improvement of the terminal facilities at the port of Balboa was begun on Monday, October 24, when the dredge *Marmot* was transferred from its former position in the Canal channel opposite the Corozal flats and set at work removing a part of the mud spit in front of the shipways. A 300-foot channel will be dredged from that point to the site of the proposed concrete dock, north of the sand unloading dock, to a depth of 45 feet, which will provide ample room for the navigation of ships. As the present channel width is less than 200 feet, a cut over 100 feet wide will be made. Plans for the changes to be made to the Panama Railroad Company's steel pier, and other improvements in connection with the enlargement of dock facilities, are being prepared in the drafting office of the railroad at Colon.

Canal Record Index.

The index to Vol. III of THE CANAL RECORD, in form suitable for binding with the year's issues of the paper, will be ready for distribution shortly. It will be sent free, on application, to such persons, institutions, libraries, etc. as desire to preserve their copies of THE CANAL RECORD in book form.

High Water in the Chagres.

High water in the Chagres River during the week ending October 22 made it necessary for the steam shovels which are excavating in the Canal prism at Gorgona and Mamei to cease work on October 20, 21, and 22. The water rose above the fire boxes of the shovels and inundated the construction tracks, making a continuation of work impossible. These floods are expected and the procedure is to merely wait until the water subsides and then start work again. Meanwhile the river dumps are cleaned by the high water.

A statement of the stages of the river, during the week referred to, follows, all elevations being above mean sea level:

DAY AND DATE	STATION.				
	Vigia.	Alhajuela	Gamboa.	Bohio.	Gatun Lake.
Sunday, Oct. 16	129.4	95.5	49.4	16.9	16.4
Mon. Oct. 17...	127.6	94.0	47.4	16.4	16.3
Tues. Oct. 18...	135.4	99.5	52.3	16.5	16.0
Wed. Oct. 19...	136.6	100.1	53.8	19.1	17.1
Thurs. Oct.20..	137.8	101.0	55.3	20.7	17.1
Friday, Oct. 21.	136.3	101.0	56.1	23.2	20.1
Sat. Oct. 22....	131.1	96.5	53.5	22.4	20.3
Height of low water.......	125.0	92.0	46.0		

Further Economies in the Shops.

An order has been placed for three sandblast machines, with flexible hose and nozzles, to be used in removing scale from steel cars when they are brought into the shops at Gorgona for repairs.

A washer machine has also been ordered. It will be capable of punching washers from 3-16 of an inch to two inches in diameter. Scrap metal will be used for the washers, thus giving it a greater value than it has as scrap, and at the same time making it unnecessary to buy in the States the large amount of washers required by the mechanical work.

The Taylor-Barth system of caring for leather belts is to be installed at the Gorgona shops. It consists of two parts, the first being a card index by which accurate account of the condition of the belts is kept, and the second a belt-cutting machine. By the use of this machine a belt can be cut to its proper length under tension, so that when the ends are united with wire lacing it will be at the tension proper for the transmission of power. A record will be kept of the dates on which each belt may need adjustment, and on that day, the inspector will restretch and recut it. Thus the belts will always be in condition, so that no machine need be stopped for relacing and replacing them. The readjustment will be done during the noon hour and between 5 and 7 o'clock in the evening, after the day shift has quit work and before the night shift has begun.

Excavation in Empire District.

On October 12, twenty steam shovels of the 100-ton class working in the Empire construction district of the Central Division, excavated 25,623 cubic yards in an 8-hour day, an average of 1,281 cubic yards for every shovel in the district on that date. During this period, the shovels were under steam 160 hours; were actually at work 116 hours and 25 minutes; were waiting for cars 23 hours and thirty minutes, the rest of the time being lost in moving back, repairing shovels, cleaning track, etc.

Adjustment of Land Claims.

An agreement has been reached between the Isthmian Canal Commission and the Panama Railroad Company, through their Counsel and Chief Attorney, and Hinckley and Ganson of Panama, representing 58 claimants, whereby claims for improvements on lands to be inundated by the waters of Gatun Lake will be adjusted for $21,559. The claimants' estimate of the value of the improvements was $66,000. Originally, 116 claims were presented, but only 58 of these were adjusted, some were rejected, and about thirty remain to be settled.

Agents of the Panama Railroad Company were sent into the Trinidad valley to locate the claims on blue prints showing the situation and elevation of each holding, and to determine the character of the improvements. The Counsel and Chief Attorney will arrange for the identification of the claimants at the time the payments are to be made, and thus a double check will be obtained on the land and the claimants. No allowance was made for clearing or for yearly crops, but the occupants may remain on the land to gather the crops at their own risk until the land is flooded. Improvements may be moved.

Outside of the Canal Zone and in the Trinidad valley 34 claimants were found on

NOTES OF PROGRESS.

(Continued.)

Panama railroad land and their claims were allowed at $14,799; inside the Canal Zone on railroad lands there were 13 claimants whose claims were adjusted at $6,210. All this land is owned by the Panama Railroad Company on grant from the Colombian Government. Eleven claimants on land owned by the United States Government at Guarapo, near Gatun, title having been acquired from the French canal company, were allowed $550.

High Tides at Pacific Entrance.

High tides accompanied by high winds at the Pacific entrance to the Canal last week drove the water at times over the breakwater which is being built from the shore line toward Naos Island. On October 16, the amplitude, the difference between high and low tide, was 10.8 feet, on October 20, the amplitude was greatest, 20.6 feet, and on October 22 it had fallen to 17.2 feet. On October 20, the lowest low tide was 9.6 feet below mean sea level, and the highest high tide was 11 feet above mean sea level. The maximum altitude recorded since December 23, 1905, was that of April 11, 1910—20.8 feet, and the maximum amplitude last week was only two-tenths of a foot less than this. The maximum amplitude each year since 1905, as compared with that of October 20, is shown in the following statement:

1906, May 9 and November 18	20.1 feet
1907, January 16	19.0 feet
1908, October 11	20.1 feet
1909, October 2	20.6 feet
1910, April 11	20.8 feet
1910, October 20	20.6 feet

Concrete in Gatun Locks.

The concrete work in Gatun Locks is about 39 per cent completed, 822,668 cubic yards out of a total of 2,095,000, having been placed at the close of work on October 22. The record of concrete placed each day last week, and the total up to and including October 22, is shown in the following statement:

DATE.	Concrete placed.	Large stone.	Hours worked.	No. of mixers	Total.
	Cu. Yds.	*Cu. Yds.*			*Cu. Yds.*
Oct. 17.	3,000	323	90:16	8	3,323

Grand total.	....	....	....	......	822,668½

Miraflores Locks.

The output of concrete with the temporary plant in the upper lock at Miraflores is now averaging over 800 cubic yards for each 8-hour day. The work is done by six mixers, two of which are of two cubic yards capacity, and the others of one-half cubic yard capacity each. There are two other small mixers assigned to these locks, but they are undergoing a general overhauling having been in commission almost continuously for nearly a year and a half.

The lateral culverts in both 400-foot chambers and six in the east and five in the west 600-foot chambers of the lock have been finished, the foundation of the east side wall has been extended for about one-half of its total length, and work on the north head walls has made headway. The output of the trestle mixers is entirely utilized in the construction of the east side wall, it being desired to build it as rapidly as possible in order to curtail inconvenience from slides which occur in the earth bank after heavy rains. The work of removing the remaining excavation in the west chamber by steam shovel is in progress. The west berm crane will be completed in a few days, but will probably not be used to any extent until the west wall excavation is finished.

The record of concrete placed at these locks during the six 8-hour working days of the week ending October 22, and of the total laid to that date, follows:

DATE.	AUXILIARY PLANT.			
	2-Cubic yard mixers.	½-Cubic yard mixers.	Large stone.	Total.

Knights of Columbus.

All members of the Knights of Columbus on the Isthmus, who are not affiliated with Panama Council, No. 1371, are requested to send their names, council number, and location to the undersigned for insertion in the directory.

WM. J. ERGENZINGER, *Grand Knight.*
Empire, C. Z. October 23 1910.

In case the harbor at Colon is too rough during the visit of President Taft, November being one of the months when "northers" are frequent, the cruiser on which he comes and its convoy can be coaled in the bay at Porto Bello. An inquiry as to the conditions for coaling at Porto Bello has been answered to the effect that there is no swell and very little tide in the harbor, and that ships can lie at anchor and swing in any direction without touching bottom.

Lock Work at Pedro Miguel.

A statement of the concrete laid in the locks at Pedro Miguel during the six 8-hour working days of the week ending October 22, and of the total laid to that date, follows:

DATE.	CUBIC YARDS.			
	Construction plant.	Auxiliary plant.	Large stone.	Total.
October 17	1,984	272	18	2,274
October 18	1,646	182	14	1,842
October 19	1,984	150	6	2,140
October 20	1,982	154	10	2,146

Obituary.

James Lynch, a white American, employed by the Pacific Division, died at Ancon Hospital on October 13, aged 38 years. His home was in New York where his brother lives at 340 State street. He had been on the Isthmus six months.

Notice to Shriners.

All members of the Ancient Arabic Order, Nobles of the Mystic Shrine, please send your name, name of temple, and Isthmian address to the undersigned at your earliest convenience, also indicating whether or not you have your "fez" on the Isthmus. Shriners not having a "fez" are advised to send for one at once. GERALD D. BLISS.
Pedro Miguel, C. Z., October 21, 1910.

Sailing of the Ancon.

The sailing of the steamship *Ancon* has been fixed for 3 p. m., Thursday, October 27, from pier No. 11, Cristobal.

LABOR FORCE AND QUARTERS IN SEPTEMBER.

On September 28, there were 35,369 employes actually at work on the Canal and the Panama railroad, and of the number, 29,688 were Canal employes. The gold force on the Canal work, composed almost entirely of white Americans, was 4,459.

The report of the Chief Quartermaster for September shows that the number of family quarters occupied by "gold" employes was 1,704, which is 4 less than in August, and the occupants numbered 5,221, an increase of 41. Of this number, 1,765 were women, and 1,755 children. Bachelor quarters occupied by "gold" employes numbered 1,899 and the occupants numbered 3,336, of whom 121 were women. The family quarters occupied by European laborers numbered 291, and the occupants, 920: bachelor quarters, 116, and the number of occupants, 5,362. The family quarters occupied by West Indians numbered 1,077, and the occupants, 3,519: bachelor quarters, 266, and the number of occupants, 4,885,

A statement of the force actually at work on September 28, follows:

POLITICAL ACTIVITY.

Government Employes May Not Take an Active Part in Political Movements.

At the request of the Civil Service Commission, the portion of the circular warning against activity in politics by federal officers and employes, which is applicable to I. C. C. employes, is published for the information of all concerned.

The Isthmian Canal Commission will cooperate with the Civil Service Commission in punishing violations of the rules and laws specified.

WARNING AGAINST ACTIVITY IN POLITICS BY FEDERAL OFFICERS AND EMPLOYES.

2. *Political Assessments or Contributions*—The Civil Service Act provides that "no person in the public service is for that reason under any obligations to contribute to any political fund, or to render any political service, and * * * * * he will not be removed or otherwise prejudiced for refusing to do so." Section 118 of the Criminal Code provides that no Federal officer or employe shall, directly or indirectly, solicit or receive, or be in any manner concerned in soliciting or receiving any political assessment, subscription, or contribution from any other Federal officer or employe. Section 120 of the Criminal Code prohibits the discharge, promotion, or degrading of any officer or employe for giving or failing to make any political contribution. Section 121 of the Criminal Code prohibits any Federal officer or employe from making any such political contribution to another Federal officer or employe, and Section 119 prohibits the solicitation or receipt of any political contribution in any room or building occupied in the discharge of official duties by any officer or employe of the United States, or on other Federal premises, by any person whatsoever, whether in the public service or not. In connection with this latter provision the United States Supreme Court has held that a solicitation by letter or circular addressed and delivered by mail or otherwise to an officer or an employe of the United States at the office or building in which he is employed in the discharge of his official duties, is a solicitation within the meaning of the law, the solicitation taking place where the letter was received. Section 122 of the Criminal Code provides that whoever shall violate any provision of the four sections above mentioned shall be fined not more than $5,000, or imprisoned not more than three years, or both.

It is the duty of the Civil Service Commission to see that the Civil Service Act and Rules and the above mentioned sections of the Criminal Code, which were originally enacted as a part of the Civil Service Act, are strictly enforced and it will employ every legitimate and available means to secure the prosecution and punishment of persons who may violate them. The Commission requests any person having knowledge of any such violation to lay the facts before it that it may at once take action thereon.

Electrical Workers.

Local Lodge, No. 214, International Brotherhood of Electrical Workers, was instituted at Ancon lodge hall on October 9, by Past President H. C. Martell, with 41 charter members. The following officers were elected and installed: President, Charles Potter; vice-president, Wells H. Hall; treasurer, Walter B. Smith; recording and financial secretary, J. L. Harding; press secretary, James H. O Connell; foreman, Rudolph Oetter, Jr.; trustees, John Boland, William A. Kelly, H. E. Weitzel; inspectors, J. S. Marsh, R. M. McDonald. Committees from the International Brotherhood of Steam Shovelmen and Dredgemen, and the Brotherhood of Railway Trainmen were present. The institution of the local lodge, the charter for which was granted in July, was largely due to the fact that electrical workers, on account of prohibitive rates, are practically barred from insurance benefits. The Brotherhood now pays a death benefit of $100, but it is proposed to increase the amount to $2,500 as soon as possible after the first of the year, and in addition, there will be disability and total disability payments of $1,000 and $1,500, respectively. The regular meetings will be held at Ancon lodge hall at 1.30 p. m., on the second and fourth Sundays of each month.

Local Union, No. 677, International Brotherhood of Electrical Workers, will hold meetings in Gatun lodge hall on Wednesday night, October 26, at 8 o clock, and on Sunday afternoon, October 30, at 2.30 o clock. Applications for charter membership must be made before 2.30 p. m., October 30. All electrical workers are invited to attend these meetings.

J. W. SMITH, *Recording Secretary.*

Gatun, C. Z., October 21, 1910.

An open meeting of Local Lodge, No. 214, of the International Brotherhood of Electrical Workers will be held at Ancon lodge hall on Sunday, October 30, 1910, at 1.30 p. m.

JOHN L. HARDING, *F. S. and R. S.*

Balboa, C. Z., October 22, 1910.

Steam Shovel Records on P. R. R. Relocation.

The performance of steam shovels on the Panama railroad relocated line during September, as compared with other months, was as follows:

MONTH.	Output.	Average No of shovels	No. of working days.	Output per shovel.	
				Per day.	Per month.
	Cu. Yds.			*Cu Yds.*	*Cu. Yds.*
January.	206,334	8.24	25	1,002	25,040
February	214,411	7.91	23	1,179	27,106

New Steamship Service Begun.

The steamer *Pennsylvania*, one of the two vessels which the Pacific Mail Steamship Company have transferred from its coast service to the fast freight service between San Francisco and the Isthmus, arrived at the port of Balboa on the first trip, under the new schedule on Friday, October 14, one day late. The steamer sails on its return trip on October 23.

The *Stanley Dollar*, one of the three vessels in the new services of the California-Atlantic Steamship Company, between San Francisco and Balboa, arrived in Panama Bay on Monday, October 17, also a little behind its schedule. The boats of this service make one stop en route, calling at San Pedro, the port of Los Angeles. The *Stanley Dollar* left San Francisco, October 1; the *Mackinaw*, which is provided with cold storage space, left there on October 15. and the *G. W. Fenwick* is scheduled to leave on October 31.

Clothing for District Prisoners.

District prisoners will be supplied with two-piece uniforms of khaki, in which to work, as soon as some cloth owned by the Zone Government can be made into clothing at the tailor shop in Culebra penitentiary. Heretofore, the district prisoners have been obliged to work in clothing worn by them when arrested, and the result has been that many men have lived in wet clothing day after day. The new uniforms will be used by the men while at work, and they will then be able to put on dry clothing after their return to the jails at night. District prisoners are short term men who are confined at the district jails and not sent to the penitentiary. The long term prisoners will continue to use striped suits while at work.

Ancon Rock Crusher.

A statement of the rock crushed at Ancon quarry in the weeks ending October 15, and 22, respectively, follows:

DATE.	Hours worked.	Cubic Yards.
October 9......................	8:10	3,345
October 10......................	8:05	3,405
October 11......................	7:15	2,575
October 12......................	7:45	3,375
October 13......................	7:05	2,550
October 14......................	7:25	2,540
October 15......................	6:45	2,300
Total......................	52:30	20,090

DATE.	Hours worked.	Cubic Yards.
October 17......................	7:15	2,420
October 18......................	7:40	2,625
October 19......................	7:55	2,120
October 20......................	7:45	2,845
October 21......................	7:10	2,200
October 22......................	6:25	1,975
Total......................	44:10	14,185

University Club Election.

At its annual election on the evening of October 15, the University Club of Panama chose the following officers for the ensuing year: President, T. C. Hinckley; vice-president, W. H. May; second vice-president, A. L. Robinson; secretary, J. E. Marsh; treasurer, A. E. Cornwell; board of governors, J. K. Baxter, W. G. Comber, F. B. Fearon, J. St.C.Hunt, O. E. Malsbury, C. C. Metcalf, A. C. Parke.

Edwin Warner, a Jamaican, check No. 102,393, an employe of the Atlantic Division at Gatun, was run over and instantly killed about 7 p. m., Tuesday, October 25, as the Gatun shuttle train was entering the yard at the Colon station. The accident occurred as he was alighting from the train.

Dr. S. T. Darling of the Ancon Hospital laboratory and J. J. McGuigan of the Panama Health Office left on Monday, October 24, for the province of Los Santos to investigate the reported appearance of smallpox in that section.

YEAR WITH THE CLUBHOUSES.

Field Enlarged During 1909-10, and a Material Gain in Membership Was Made.

During the fiscal year 1909-10, two new clubhouses, a large one at Gatun on March 5, and a smaller one at Porto Bello on April 12, were opened by the Isthmian Canal Commission, increasing the number of such buildings to six. The largest membership for any month of the fiscal year was 1,643 in June, 1910, and the smallest was 1,075 in November, 1909. The membership on June 30, 1910, was 1,222. About 2,479 different men availed themselves of the membership privilege, as compared with 2,140 during the preceding year. The gross receipts amounted to $64,973.12, an average of $5,414.42 a month, which was $615.56 a month greater than the year before, and $933.55 a month greater than two years ago. The net balance above estimated liabilities was $8,156.54, which was $6,987.11 greater than the net balance on June 30, 1909. Collections on account of dues alone aggregated $13,493. The total receipts of the refreshment counters were $25,025.54, a daily average of $68.67, and a gain over the year before of $2,795.14. These are operated as a convenience to members, and not as a source of profit, and are conducted on as close a margin as practicable.

The attendance was carefully estimated each month during the year, and on several occasions an actual count was taken for periods ranging from ten days to two weeks. As a result, the total attendance is placed at over 600,000, or about 100,000 more than during the fiscal year 1908-09.

The work of the year was carried out along practically the same lines as in the past, especial attention being paid to the physical and entertaining features. There was a monthly average of 184 different men using the gymnasiums during the year and 692 were enrolled in systematic gymnasium work, with a total of 10,475 in attendance, an increase of 3,304 over the preceding twelvemonth. Basketball and indoor baseball proved attractive features, and men were trained for participation in several outdoor athletic meets.

In the amusement field, local entertainments, given by the members themselves, were encouraged as far as practicable. These consisted of dramatic entertainments, minstrel shows, concerts, "smokers," debates and lectures. Several professional entertainers were brought to the Isthmus, and on three occasions during the year, the people of the Zone were given an opportunity, through the clubhouse management, of attending grand opera at the National Theatre in Panama. One hundred and ninety-four entertainments were held, with an attendance of over 38,000. In addition, 119 functions outside the association management were given in the clubhouses, with an attendance of nearly 17,000.

The clubhouse libraries were kept well supplied with the latest publications. The members availing themselves of this privilege averaged 602 monthly, and a total of 17,821 books were withdrawn. The reading rooms were well filled at leisure times, and on the correspondence tables, which occupy a space therein, 62,433 letters were written.

During the year there were 56,792 bowling games, a monthly average of 4,732, and 179,949 games of pool and billiards, a monthly average of 14,996. Seventy-six different tournaments were conducted in which 1,184 players were enrolled. The average monthly enrollment of chess and checker clubs was 46; glee clubs, 12; dramatic and minstrel clubs, 28; camera clubs, 80; Bible clubs, 50. In addition, 274 men were enrolled in educational classes, and 42 religious meetings were held, with a total attendance of about 4,000.

The boys' department proved a successful feature. The membership, which includes boys between the ages of 10 and 16, averaged 65, and the attendance averaged 47. Forty-two outings were planned and carried out for them during the year. The plan of admitting women to the privileges on two afternoons of each week, as well as to evening functions, was continued, and in this manner the entire community was served.

Although the clubhouses are not provided with regularly equipped dormitories, 3,300 beds, improvised from cots and mattresses, were furnished free of charge to members and guests during 1909-10. More than 1,600 hospital visits were paid and magazines and newspapers were distributed among the sick. There was a monthly average of 14 committees and 79 committeemen cooperating with the secretaries in conducting the work.

The advisory committee, representing the Commission's interests in the clubhouses, consists of Col. W. C. Gorgas, W. W. Warwick, Maj. H. A. Brown, chaplain, Joseph Bucklin Bishop and F. C. Freeman. Messrs. H. L. Stuntz and A. Bruce Minear, who were on the 1908-09 committee, resigned, and their places were filled by Maj. Brown and Mr. Freeman. In addition, executive councils are appointed for each clubhouse to cooperate with the local secretary in managing its affairs.

OCCUPANTS OF COMMISSION QUARTERS.

The number of occupants of Commission quarters in September was 23,711, of whom 9,025 were white Americans, 7,697 negroes, and 6,282 Europeans. By comparison with the statement of the labor force in September, published elsewhere in this issue, it will be seen that practically all of the American and European employes and their families are housed in Commission quarters, while only a small portion of the negro employes are so housed. The majority of the negroes prefer living in lodging houses in the various villages, or in small huts on the edge of the jungle. A statement showing the number of occupants in the various villages follows:

PLACE.	GOLD.			WEST INDIAN.			EUROPEAN.		
	Men	Women	Children	Men	Women	Children	Men	Women	Children

Porto Bello Crusher.

A statement of the work done at Porto Bello crusher, by days, for the weeks ending October 15 and 22, respectively, follows:

DATE.	Hours worked.	Cubic Yards.
October 10	9:50	3,092
October 11	6:30	2,987
October 12	10:13	3,872
October 13	10:08	2 945
October 14	9:20	3,287
October 15	7:33	3,650
Total	53:34	19,833

DATE.	Hours worked.	Cubic yards.
October 17	10:52	3,228
October 18	9:21	3,703
October 19	6:51	2,835
October 20	9:17	2,872
October 21	7:41	2,614
October 22	10:05	2,253
Total	54:07	17,505

Revolver Match.

In the revolver match held at Culebra, October 1 to 9 inclusive, the results were as follows: First, a 38 calibre new army revolver, value $25, donated by a Panama hardware company, won by C. B. Larzelere, with a score of 407 out of a possible 500; second, a silver medal suitably inscribed, won by F. A. Browne, with a score of 391 out of a possible 500; third, a bronze medal suitably inscribed, won by T. E. L. Lipsey, with a score of 374 out of a possible 500. The other contestants made scores as follows: Wm. Hadley, with a score of 345 out of a possible 500; H. F. Tucker, with a score of 341 out of a possible 500; C. S. Boyd, with a score of 322 out of a possible 500.

Money Order Business.

The money order business in the Canal Zone post-offices for September, as compared with that of September in 1909 and 1908, was as follows:

	1910	1909	1908
Orders issued	17,973	16,331	14,822
Value	$466,127	$417,803	$429,990
Payable in U. S.	354,692	311,734	317,617
Payable in C. Z.	110,833	105,795	112,373

LOST—At the National Theatre, Panama, or between the Panama railroad station and theatre on October 14, a crescent pin of pearls and enamel. Finder please return to Y. M. C. A. secretary, Empire, and receive reward.

COLON BREAKWATER.

Village at Toro Point and the Work in Progress There.

The double trestle at Toro Point, from which the rock fill is made for the new breakwater in Colon harbor, is being built seaward at the rate of three bents, or about 40 feet each working day, and now extends about 1,600 feet from the shore. The trestle leaves the mainland just inside the point, only a few yards from the lighthouse and extends in a northeasterly direction. Two piledrivers are employed at present, one working on each track, but these will be replaced shortly by a new machine ordered especially for the breakwater work. The parts for the piledriver, which will be the largest in the Commission service, have been received but not yet assembled. The body part will be 45 feet long, and the machine will be able to handle piles 100 feet in length, driving them anywhere within a radius of 28 feet off center.

The trestle has been filled in with material from the quarry for a distance of about 600 feet, and partly filled in for about 850 feet farther. In this work four locomotives of the French type and 24 Western dump cars are used, each train consisting of from five to six cars. About 50 more cars will be added to the motive equipment within a short time. The French locomotives are able to haul ten full cars each, as the grade of the track running up on the breakwater trestle is very slight. The trestle has reached a point where the water is 37 feet deep and only 80-foot piles or longer can be used. From here to the end of the breakwater, between 8,000 and 9,000 feet, the depth of the water varies from 37 to 44 feet. So far only hard bottom has been encountered, and there has been but little subsidence and practically no wash of the material after it has been placed. From 1,800 to 2,000 cubic yards of material mostly rock, are dumped from the trestle each working day, the output being supplied by two 70-ton steam shovels, working at quarry No. 1.

Two more steam shovels will probably be added to the excavating equipment later on. There are two quarries available, but only one has been worked to date, although the second has been blasted and can be opened at any time. The rock mass is broken up in large boulders and is transported to the breakwater in sizes as large as can be loaded on the cars. The rock is of a soft variety, but does not decompose in sea water. Explorations farther inland from the quarry site have been and are being made with a view to ascertaining if harder rock can be obtained. About 500 men are now employed on the breakwater construction. In addition, about 160 men are working on the reservoir. The piledriving and clearing gangs are composed principally of West Indians, but Spaniards are employed at the quarry and other forms of labor about the camp.

All the buildings called for in the original plans for the Toro Point settlement are practically completed. The last of these, a combination storehouse and office building, and a machine shop and engine shed, are erected but not occupied. The superintendent of the works has been using rooms temporarily in building No. 4, bachelor quarters, for office purposes, but will be able to move in a few days. The new office is divided into three rooms, one for the superintendent's use, one for drafting purposes, and a third for the timekeeping force. The new telephone exchange will also be located in this building. The engine house and machine shop occupies a site near the end of the point. None of the machinery has yet been installed, but most of it is on the ground. In one corner will be an office and tool room 10 by 15 feet in size, and the rest of the space will be utilized by the engine and boilers, and the plant machinery, consisting of a shaper, drill, planer, blower, and all the equipment necessary to do ordinary repairs, the most of which was taken from stock already on the Isthmus. Two boilers, type not yet known, will furnish steam for driving the machinery mentioned above, and also for operating a 50-kilowatt generator for supplying the settlement with electric lights.

Nearly all the safeguards and conveniences found in the settlements of the Zone have been or will be duplicated at Toro Point. A large number of ditches and drains have been dug and low places oiled. The sick rate of the camp has shown a steady diminution. On October 22, only two of the 67 white employes were in the hospital, and one of the cases was the result of an accident. The quarters all skirt the beach, face the east, and occupy fully as favorable a location in respect to ocean breezes as the quarters on Roosevelt avenue, Cristobal, while the rainfall is believed to be less than across the bay, although no accurate observations have yet been made. The stretch of beach in front of the quarters is being leveled to prevent water from collecting in low spots, and when the work is completed there will be an excellent palm walk. The road to reach the American quarters, and those of the silver laborers beyond, will be laid off behind them, instead of in front. Half a mile or more south along the shore is a bathing beach, equal, if not superior to any found near the Canal Zone. It is reached from the settlement by a path which winds among the cocoanut palms all the way. On Sundays, from 50 to 75 people from Cristobal and towns in the Zone visit Toro Point and the bathing beach, one of the Atlantic Division clapets awaiting the morning train from Panama on that day to carry passengers over. On week days, the clapet leaves dock No. 13 at 6.30 a. m., or as soon thereafter as possible, and in the afternoons of week days and Sundays at 4.30 o'clock, returning at 5.30. The District Quartermaster's launch also makes a trip daily, leaving dock No. 11 at 9.30 a. m.

Work is still in progress on the 50,000,000 gallon reservoir on the Sweetwater River, which is to furnish the breakwater camp with a reserve water supply. The construction is well advanced and will probably be completed in time to impound sufficient water to last the settlement through the dry season. Water is at present piped to the camp direct from the headwaters of the river, and the gauge reading, except when the engines are taking water, shows from 70 to 80 pounds pressure.

STATEMENT OF CLASSIFIED EXPENDITURES TO AUGUST 31, 1910.

	Department of Civil Administration.	Department of Sanitation.	Department of Construction and Engineering.	General Items.	Total.
Total to June 30, 1910..	$3,427,090.29	$9,673,539.28	$69,622,561.42	$78,022,606.10	$160,745,797.09

PERSONAL.

Col. Geo. W. Goethals sailed from New Orleans on October 22 on the United Fruit Company's ship scheduled to arrive at Colon on October 27.

Spanish War and Philippine Veterans.

All veterans of the Spanish and Philippine campaigns residing in the Canal Zone are requested to send their names and addresses to John H. Lloyd, member of the Richard J. Hardin Camp, Washington, D. C., at Gatun. It is proposed to organize a camp of the Spanish War Veterans' Association in the Canal Zone, and all those eligible for membership are invited to cooperate to this end.

A school for white children will be opened at Bas Obispo as soon as repairs to building No. 54 in that village can be completed. One teacher will be employed and there will be about 20 children in attendance.

Contract for Clearing Trails.

MOUNT HOPE C.Z., October 25, 1910.

Bids will be received at the office of the Purchasing Agent on the Isthmus, Isthmian Canal Commission, Mount Hope, C. Z. up to 2.30 p. m., Monday, November 14, 1910, at which time they will be opened in public, for clearing the Arraijan-Rio Grande trail from the Canal Zone boundary to a point on the Panama railroad, 600 feet below the Rio Grande dam, a distance of about seven (7) miles; and for clearing the Arraijan-Paraiso trail from the Canal Zone boundary line to the Panama railroad, a distance of about six (6) miles; and also for clearing the Arraijan-Cochinito trail from the Canal Zone boundary line, south of Arraijan, to the village of Cochinito, in the Canal Zone. The work shall be done in accordance with specifications to be had upon application to the Superintendent of Public Works, I. C. C., Administration Building, Panama. Proposals may be made for the clearing of each trail separately, or for the three. The successful bidder will be required to furnish bond or cash deposit in the amount of $25 for each trail as a guarantee that the work will be carried out. Proposals should be enclosed in sealed envelopes, marked "Proposals for clearing Arraijan-Rio Grande, Arraijan-Paraiso and Arraijan-Cochinito trails." The Commission reserves the right to reject any and all bids, to accept any bid as may be deemed to its interest, and to waive defects and informalities in proposals.

CHARLES L. PARKER,
Purchasing Agent on the Isthmus.

Proposal for 86,000 Feet Guayacan (Lignum Vitae) Lumber.

MOUNT HOPE, C. Z., October 15, 1910.

Sealed proposals will be received at the office of the Purchasing Agent on the Isthmus, Mount Hope, C. Z., until 2 o'clock p. m., November 2, 1910, at which time they will be opened in public, for furnishing 32,000 feet, board measure, of guayacan lumber, of sizes 6"x6", 6"x8", 6"x10", and 6"x12", in 8-foot lengths, and 54,000 feet, board measure, of guayacan lumber, sizes 6"x6", 6"x8", 6"x10", and 6"x12", in 10-foot lengths. Bidders will be required to indicate time necessary for delivery of material, and submit sample of same. Delivery will be accepted on board cars at any point along the Panama railroad. The right is reserved to reject any or all bids. Bids should be addressed to Charles L. Parker, Purchasing Agent on the Isthmus, Mount Hope, C. Z.

Public Sale of Carpenter's Tools, Etc.

There will be sold at public auction, at the Quartermaster's Depot at Mount Hope, at 2 p. m., October 29, 1910, a full line of carpenter's tools, such as awls, bits, chisels, gimlets, mortise gauges, draw knives, planes, saws, shaves, squares; also items of beds, chalk, surrey, corn knives, etc. Purchasers will be required to pay in cash before removal of articles, and all articles sold must be removed within 48 hours from date of sale. These articles may be seen on any week day upon application at the office of the Depot Quartermaster. Catalogue will be furnished upon request. The right is reserved to reject any or all bids.

CHARLES L. PARKER,
Acting Depot Quartermaster.

SOCIAL LIFE OF THE ZONE.

Women's Clubs and Other Features.

The meeting of the Paraiso Woman's Club was held in the lodge hall on Wednesday afternoon, October 19, when reports of the delegates to the Gorgona convention, and papers on current events were read. Arrangements for the benefit dance to be held on Saturday evening, October 29, are about completed. There will be special trains from Gorgona and Balboa. The hall will be decorated with the club colors, and the club flag, bearing the name of the organization, will be used for the first time. The music will be furnished by the Tivoli orchestra.

Much of the interest manifested in this dance is due to the cause for which it is given—the establishment of a playground for the American children of the village. Paraiso has over thirty white children of school age and under, and the need of some provision for their diversion is felt. To this end, a tentative movement has been started in the Woman's club to organize the boys under a captain for sports and scout activities. They will be formed into a regular club and will hold meetings under the supervision of one of the club women. A similar organization for the girls is projected, which will include sewing classes and possibly gymnastics.

The meeting of the club on November 2, will be "cup and saucer day," each member presenting a cup and saucer, and tea will be served thereafter at the close of each business meeting. The Christmas bazaar will be held the third week in December.

The Pedro Miguel Woman's Club held a social meeting at the home of Mrs. L. M. Vacher, Paraiso, on Wednesday afternoon, October 19. The club presented the hostess with a gold embroidered pillow top.

The meetings of the Empire club have been suspended for three weeks owing to the illness of the president and the absence from the Isthmus of the vice-president.

The annual Christmas bazaar of the Cristobal Woman's Club will be held in the Commission clubhouse on Wednesday afternoon, November 30. There will be a sale of fancy work, cakes and sweets. A Japanese tea room, and a toy booth will be special features. As a result of the bazaar last year, the Cristobal club was able to expend the sum of over $100 toward the Christmas entertainments in Colon and Cristobal.

As a result of the recent performance given by the Ancon Dramatic Club at the National Theatre, Panama, the sum of $228 has been donated to the Canal Zone Humane Society.

The friends of Chaplain and Mrs. Brown are invited to attend a reception given to them by the Woman's Guild of Trinity Church, at the Commission clubhouse in Culebra, at 8.15 o'clock on Tuesday night, November 1.

Church Notices.

The annual meeting of the Woman's Guild of St. Luke's Church, Ancon, will be held at the residence of Mrs. W. C. Gorgas on November 1. This will also be the seventieth meeting of the organization, and will mark the closing of the third year of its existence. An election of officers for the ensuing year will be held. The day will be further observed by a special service in St. Luke's Church at 9 a. m., at which time the corporate communion of the Guild will be made. The church will be suitably decorated and memorial hymns will be sung.

At a recent evening "social" held by the Woman's Foreign Missionary Society of the Methodist church, Panama, the proceeds amounted to approximately $75. A part of this money will be used to complete the payment on the scholarship in the Methodist college maintained by the society, ten dollars will be donated to the Christmas entertainment, and the remainder will be kept in the treasury to form the nucleus of a working fund or missionary purposes.

Notice to Red Cross Members.

The general secretary of the American National Red Cross has requested the Canal Zone Chapter to elect delegates to represent that organization at the general annual meeting to be held in Washington, D. C., on the first Tuesday after the first Monday in December. Members of the chapter who are expecting to be in the States on annual leave at that time and who could conveniently arrange to be present at the meeting, are requested to send their names to the chairman of the chapter, Lieut-Col. C. A. Devol at Culebra, as soon as possible in order that a selection may be made. Section 25 of the rules and regulations for branch societies provides that delegates to the annual meeting may be either elected, or designated by the chapter chairman.

During the absence on annual leave of the treasurer, Lieut.-Col. John L. Phillips, the business of the treasury will be conducted by the chairman of the chapter, and communications regarding the same should be addressed to him at Culebra.

Preliminary to arranging for the annual meeting, a meeting of delegates from the local districts will be held in the office of the District Quartermaster, Ancon, on Sunday afternoon, October 30, at 3 o'clock. These delegates will place in nomination candidates for office for the ensuing year.

Dance at Corozal.

A dance will be given by the young men of Corozal at the recreation hall on the night of November 2. A special train will be run leaving Ancon at 7.30 p. m.; Balboa, 8.40; Paraiso, 8.10; and Pedro Miguel, 8.20. Returning, the train will leave Corozal at 12, midnight.

Masonic Banquet at Colon.

A banquet of Masons for the Masons residing on the Isthmus was held at the Washington Hotel, Colon, on Saturday night, October 15. Two hundred and forty members of the craft were present, a special train bringing the guests from Panama and the villages in the Canal Zone, returning at 1.15 a. m. The dining room was appropriately decorated in honor of the event, and music was furnished by an orchestra. William H. Decker officiated as toastmaster.

Ancon Club Declared Winner.

A decision in favor of the Ancon Athletic Club has been rendered by the Amateur Athletic Union on the question of the relay race at the Y. M. C. A. field meet held at Empire on Labor Day. The race was won by Ancon under protest. This decision makes the Ancon club winner of the meet, and the trophy shield will therefore be presented to that club as soon as it is received from the States.

OFFICIAL CIRCULARS.

Transfer of Rolling Stock.

CULEBRA, C. Z., October 19, 1910.

CIRCULAR No. 356:

When rolling stock is transferred from the Panama Railroad Company to the Isthmian Canal Commission, the Panama Railroad Company will obtain memorandum receipt from the department or division using the equipment, and will make a monthly report to the Chief Quartermaster showing equipment loaned to the Commission and in whose service.

The department or division of the Commission using such equipment will also make monthly reports to the Chief Quartermaster, these reports to be used as a check against the record of the railroad company.

The Chief Quartermaster will have this record available at all times in order that equipment can be readily located.

H. F. HODGES,
Acting Chairman, Isthmian Canal Commission.
Second Vice-President, Panama Railroad Company.

Board of Local Inspectors.

CULEBRA, C. Z., October 18, 1910.

Mr. C. J. Anderson,
Dry Dock,
Cristobal, C. Z.

Sir:

Under authority conferred upon me by Executive Order of the President No. 1131, dated October 2, 1909, you are hereby appointed a member of the Board of Local Inspectors, for the performance of the duties prescribed therein.

Respectfully,
H. F. HODGES, *Acting Chairman*

Sale of Public Buildings.

CULEBRA, C. Z., October 17, 1910.

Sealed proposals for the purchase of the following Isthmian Canal Commission buildings located in the Santa Cruz-Las Cascadas-Bas Obispo district will be received at this office until 3 p. m., Saturday, October 29, 1910, and then opened:

203 Storeroom, Central Division.
240 Laborers' barrack.
205 Storeroom, Quartermaster's Department.
206 Laborers' barrack.
207 Range closet.
208 Laborers' barrack.
209 Laborers' barrack.
210 Rest house.
211 Range closet.
212 Laborers' barrack.
213 Laborers' barrack.
214 Range closet.
215 Laborers' barrack.
216 Laborers' barrack.
217 Storeroom, Quartermaster's Department.
218 Gold married quarters.
219 Storeroom, Subsistence Department.
221 Silver married quarters.
222 Silver married quarters.
223 Silver married quarters.
224 Bath and closet.
225 Gold bachelor quarters.
226 Silver married quarters.
227 Gold bachelor quarters.
228 Silver married quarters.
229 Laborers' barrack.
230 Laborers' barrack.
231 Laborers' barrack.
232 Gold married quarters.
233 Laborers' barrack.
234 Gold married quarters.
235 Laborers' barrack.
236 Silver married quarters.
237 Laborers' barrack.
238 Laborers' barrack.
239 Laborers' barrack.

Proposals will be received for each building or for the entire number. A deposit of fifty dollars ($50) U. S. currency will be required to accompany each bid.

The successful bidder to make payment in full upon receipt of award. Buildings to be removed by the successful bidder within a period of ninety (90) days from date of award. Proposals will be expressed in U. S. currency.

Proposals will be mailed in a sealed envelope marked on such envelope "Proposals for the purchase of Isthmian Canal Commission buildings, located at Santa Cruz, to be opened at 3 p. m., Saturday, October 29, 1910," and addressed to the Chief Quartermaster, Isthmian Canal Commission, Culebra, C. Z.

The Government reserves the right to accept or reject any or all bids or any part thereof.

For further information apply to the District Quartermaster, Las Cascadas; the Assistant District Quartermaster, Bas Obispo, or to this office.

C. A. DEVOL, *Chief Quartermaster.*

The following vessels arrived at and departed from the port of Balboa during the week ending October 15:

Arrivals—October 9, *Ecuador*, from Guayaquil; October 10, *San José*, from San Francisco; October 14, *Ucayali*, and *Limari*, from south ports; *Pennsylvania*, from San Francisco.

Departures—October 9, *Chile*, to south ports; *Marian*, to intermediate ports; October 12, *Peru*, to San Francisco; October 13, *Hornelen*, to Puget Sound; October 14, *U. S. S. Vicksburg* to north ports.

COMMISSION CLUBHOUSES

Activities of the Young Men's Christian Association.

CULEBRA.

The standing in the chess tournament is as follows:

	Won.	Lost.
Bartlett	4	7
Dubois	10	2
Goodenow	5	7
Mengel	2	10
Putnam	4	8
Stiles	5	5
Warner	9	1

The discussion club met on Wednesday evening; subject, "Climate and Diet," under the leadership of Mr. Kramer. Mr. Smith of Gatun will have charge of the next meeting; his subject will be, "Fellowship." The discussions will be extended four weeks due to the interest shown.

An informal social was held at the clubhouse on Wednesday evening. The program was as follows: Piano duet, Mrs. Carlson and Mr. Howard; reading, Mrs. Kirpatric; violin solo, Mr. Talty; mixed quartet, Mrs. Jacobs, Miss Lee, Messrs. Case and Kramer; reading, Mr. Kearns of Cristobal; cornet solo, Mr. Schildhauer; reading, Mr. Kearns. After the program was over, refreshments were served, after which every one joined in singing.

The duckpin tournament will open on the first of December. The alleys are open now for those who desire to get ready for the tournament. Men desiring to enter should leave their names at the desk or see Mr. Dougherty, who is in charge of the alleys.

The billiard tournament will open early next month.

The bowling match between the second teams of the Empire and Culebra associations resulted in Empire taking two out of three games. Following are the scores:

Culebra.				Empire			
Fleischman	180	134	123	Gustavson	142	172	176
Hayes	139	142	179	Nicodemus	124	181	171
Huttle	160	123	168	Goldsmith	138	135	165
R. Koperski	123	135	....	Giavelli	150	199	159
Mengle	153	112	160	Bardelson	175	159	153
Baumer			149

EMPIRE.

The Empire Musical and Dramatic Society will give an entertainment at Gorgona on October 26, at Culebra, on the 28th, and at Gatun on November 3.

At the meeting of the discussion club led by Mr. Freeman on October 26, the topic was "Leadership."

The regular meeting of the literary and debating society will be held on October 28. An interesting program is being prepared by the committee.

The Cristobal basketball team plays the Empire team at Empire on Saturday night, October 29.

GORGONA.

The discussion club was led by J. D. Safford last week and his subject, "Leadership," was generally discussed.

The opening of the Isthmian Basketball League occurred on Saturday night. Empire took a well played game from the Gorgona five. The line-up was as follows:

Empire.	Position.	Gorgona.
Eason	Forward	Ridge
King	Forward	Hodson
Bartholomew, Capt	Center	Strippling
McCollum	Guard	Calvitt, Capt.
Seaton	Guard	Foster

Summary: Empire, 34; Gorgona, 17. Goals by Bartholomew 9; King, 3; McCollum, 4; Strippling, 3; Ridge, 2. Foul goals by Bartholomew, 2; Strippling, 4; Ridge, 1; Hodson, 2. Referee, Christopherson. Umpire, Charnley. Scorer, Clements. Timer, Warr. Time of halves, 20 minutes. Basketball practice nights are Monday and Thursday at 8 o'clock. All men are invited to come out and try for the team and help Gorgona win.

The bowling scores of 200, or over, for the week follow: Misal, 200, 208; Halderman, 202; White, 224; Bordt, 203; McConaughey, 200.

The second team took two out of three games from the Cristobal second team on Saturday night. Scores:

Gorgona.				Cristobal.			
Stoehr	126	156	121	Barrett	121	157	161
Misal	129	119	108	Blackburn	141	140	155
Frances	149	143	162	Hess	149	133	119
Varenkamp	159	161	178	Adams	121	160	159
Bordt	158	186	135	Weston	178	161	191
Total	721	765	704	Total	710	751	785

Next Saturday the Empire first team rolls the Gorgona first team.

Sunday, October 29, is the regular Sunday song service night. All are urged to come. There will be an address and special music.

GATUN.

The program at the "social" and smoker held at the clubhouse on Thursday, October 20, included a sketch by the Empire Stock Company entitled "The Hypnotist," tenor solo by Samuel Perkins, sleight-of-hand work by R. Prados, comic duet by Messrs. King and Cullen, and a sketch by F. B. Young, followed by songs in which Mr. Young was assisted by a male chorus.

C. C. Carr, principal of the high school, led the discussion club meeting on Friday night; subject, "The College Man." The meeting this week will be led by J. Dwight Safford of the Camp Elliott Y. M. C. A.; subject, "Leadership."

The Empire Musical and Dramatic Club will give an entertainment on the night of November 3, presenting the program published in THE CANAL RECORD of October 12.

A class in Spanish is in process of organization and any member of the Y. M. C. A. is eligible for membership.

A duckpin tournament will be held during the month of November.

Louis DePoorter wishes to meet any man on the Isthmus for the pool championship of the Isthmus.

Archie O. Ludwig, the new physical director, was introduced to the members at the smoker held on the night of October 20.

CRISTOBAL.

Tuesday night the Cristobal council met and planned some changes in the association building as well as an extension of the work.

The first and second basketball teams had a lively game Thursday night, the first team winning. At a meeting of the first team, J. H. Weller was elected captain for the Isthmian Interassociation Basketball League.

The Empire Musical and Dramatic Society gave an enjoyable entertainment at the clubhouse on Friday night, October 21. The program published in THE CANAL RECORD of October 12 was carried out.

The bowling game Saturday night between the first teams of Gorgona and Cristobal resulted in the latter winning all three games. The scores were:

Gorgona.				Cristobal.			
Roper	158	156	192	Bullard	185	182	168
Stewart	96	170	107	Rabbitt	134	164	146
White	133	182	172	Collins	192	157	176
Halderman	142	151	131	Burns, T.	127	178	204
Otis	150	173	160	Thomas	165	160	162
Total	679	832	762	Total	803	841	856

Cristobal has risen from last to third place in the past two weeks, Empire and Gatun only leading.

Dr. Claude C. Pierce will conduct the discussion club this week with the subject of "Shall We Be Vaccinated?" All are invited to attend and take part.

The Cristobal Y. M. C. A. pressing club was authorized by the executive council last week and will be started on November 1. Tickets entitling the holder to have four suits pressed a month will be sold for $1.50. These must be purchased in advance and no work will be done unless a ticket is held. Single suits will be cared for at the rate of 75 cents, or two suits for $1.

The Canal Zone clubhouses gave an outing for the boys' department on Saturday, October 22. Sixty boys were taken to Toro Point and under the care of the physical directors enjoyed the day swimming, playing games, and rambling among the cocoanut trees.

At the basketball league game on Saturday night between Cristobal and Culebra, the score for the first half was 31 to 18 in favor of Cristobal, and in the second half the score was 22 to 12 in Cristobal's favor. Total Cristobal 53, Culebra, 30. The line-up was as follows:

Culebra.	Position.	Cristobal.
Cushing	Forward	Sartor
Purchase	Forward	Prather
Vifquain	Center	Vifquain
Case	Guard	Luce
Koperski	Guard	Weller, Capt.

Summary: Goals, Cushing; Purchase, 2; Vifquain, 5; Koperski, 1; Sartor, 6; Prather, 3; Vifquain, 6. Goals from fouls, Prather, 3. Fouls, Cushing, 3; Purchase, 2; Vifquain, 1; Koperski, 1; Prather, 2; Luce, 2.

STATISTICAL REPORT FOR SEPTEMBER.

The following vessels arrived at and departed from the port of Balboa during the week ending October 22:

Arrivals—October 16, *Peru*, from south ports; *Rupanco* from south ports; October 17, *Stanley Dollar*, from San Francisco; October 19, *Arica*, from Guayaquil; October 22, *Pectan*, from Port Harford.

Departures—October 15, *Ecuador*, to Guayaquil; October 17, *Ucayali*, to south ports; October 18, *San José*, to San Francisco; October 19, *Limari*, to south ports; October 22, *Pennsylvania*, to San Francisco.

COMMISSARY DEPARTMENT.

Thanksgiving Fruit Cakes.

CRISTOBAL, C. Z., October, 22, 1910.

Fruit cakes for Thanksgiving are now ready for delivery, and orders for the same at $1 each will be taken.

EUGENE T. WILSON,
Subsistence Officer.

Retail prices of cold storage provisions for the week beginning October 26.

FRESH MEATS.

	Price.
Mutton—Stewing, per pound	7
Shoulder, neck trimmed off, (4 lbs. and over), per pound	10
Entire forequarters (not trimmed) 10 pounds and over, per pound	9
Legs, (8 to 10 pounds), per pound	19
Cutlets, per pound	20
Short cut chops, per pound	22
Lamb—Stewing, per pound	7
Entire forequarters, neck trimmed off, per pound	10
Legs (5 to 8 pounds), per pound	24
Chops, per pound	26
Cutlets, per pound	26
Veal—Stewing, per pound	10
Shoulder for roasting (not under 4 pounds), per pound	15
Loin for roasting, per pound	19
Chops, per pound	22
Cutlets, per pound	26
Pork cuts, per pound	22
Beef—Suet, per pound	2
Soup, per pound	5
Stew, per pound	9
Corned, per pound	12, 14, 16
Chuck roast, (3 pounds and over), per pound	13
Pot roast, per pound	15
Rib-roast, second cut (not under 3½ pounds), per pound	18
Rib roast, first cut (not under 3 pounds), per pound	20
Sirloin roast, per pound	21
Rump roast, per pound	21
Porterhouse roast, per pound	21
Steak, Chuck, per pound	14
Round, per pound	15
Rib, per pound	20
Sirloin, per pound	21
Porterhouse, per pound	21
Rump, per pound	21
Tenderloin, per pound	24

MISCELLANEOUS.

Livers—Beef, per pound	10
Calf, each	60
Half, each	30
Sausage—Pork, per pound	17
Bologna, per pound	14
Frankfurter, per pound	14
Leberwurst, per pound	14
Sweet bread—Veal, per pound	1.20
Beef, per pound	25
Eggs, fresh, dozen	†33
Eggs, fresh, ½ dozen only	†19
Bluefish, fresh, per pound	16
Cod, fresh, per pound	10
Halibut, fresh, per pound	13

POULTRY AND GAME.

Chickens—Fancy Roasting, large, each	1.50
medium, each	1.30
Fowls, each	70, 82, 93, 1.04, 1.15
Ducks, large, each	1.50
medium, each	1.30
Broilers, each	75
Turkeys, per pound	30
Squabs, each	35
Capons, each	2.50
Geese, fatted, each	2.60
Pheasants, each	70, 1.00
Partridges, each	50
Grouse, each	85

CURED AND PICKLED MEATS.

Ham—English York Cut, per pound	30
German, Westphalia, per pound	36
Sugar cured, per pound	22
Sugar cured, sliced, per pound	25
Half, for boiling, per pound	23
Boiled, per pound	28
Hocks, per pound	‡8
Bacon—Breakfast, whole piece, per pound	30
Breakfast, sliced, per pound	31
Beef, salt, family, per pound	10½
Pork, salt, family, per pound	15
Ox tongues, each	80
Pigs' feet, per pound	10
tongues, per pound	16
Mutton, mess, per pound	7

DAIRY PRODUCTS.

	Price.
Butter—Creamery special, per pound	40
Cheese—Roquefort, per pound	38
Philadelphia Cream, cake	10
Young America, per pound	22
Swiss, per pound	26
Edam, each	1.00
Camembert, in 2-pound tins, tin	38
Camembert, in ½-pound tins, tin	14
Neufchatel, each	6
Gouda, per pound	34
Parmesan, per pound	35
Milk, Briarcliff, bottle	**25
Buttermilk, bottle	**15

VEGETABLES AND FRUITS.

Beets, per pound	3
Celery, per head	6
Carrots, per pound	3½
Cabbage, per pound	3
Cucumbers, per pound	5
Cauliflower, per pound	10

Ancon, Canal Zone,
Isthmus of Panama.

No communication, either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.

NOTES OF PROGRESS.

Atlantic Entrance Terminal Facilities.

A study is being made of the land and water near the Atlantic entrance to the Canal on which to base plans for a terminal harbor and docks, such as have already been arranged for at the Pacific entrance. A survey has just been completed of the territory between Cristobal Point on the north, Gatun Locks on the south, the French canal on the east and the American Canal on the West, an area approximately four miles long and one mile wide. About 100 wash drill borings have been made to determine the nature of the bottom, and dry samples were taken from the holes at regular intervals. A few extra borings are being made north and west of Gatun Locks and when these are completed the terminal studies will be continued.

Hydraulic Fill of Colon.

The hydraulic fill of the lowlands in the southern part of the city of Colon will be begun this week. It forms part of the permanent improvement under the $800,000 appropriation for the further sanitation of the cities of Colon and Panama, approximately $500,000 of which will be spent in Colon. Twenty-two city blocks will be reclaimed and made fit for building sites by pumping coral sand from Manzanillo Bay upon the swampy area now uninhabitable. Filling will be begun on the area near Ninth street, between D and E streets, and about 100,000 cubic yards of the 558,000 of the total fill will be deposited there. It is estimated that the fill will require five months in the making, due to the heavy nature of the material to be pumped and the long distance it must be forced from the dredge to the city, most of it over a mile. The total lift is not over five feet.

The filling will be done by the 20-inch suction dredge *Sandpiper*, formerly excavating at Miraflores Locks, but recently reerected at Cristobal marine shops for use in the Atlantic Division. This dredge was towed from the shops to its position in Manzanillo Bay on October 29. In its reconstruction all the ladder machinery was renewed, including a new cutter head, cutter engine, ladder head, and the substitution of an 8-inch for the old 6-inch shaft which turns the cutter. The pump has been rebuilt and the engines and boilers thoroughly overhauled. An improved spud frame, by means of which the spuds are lifted and lowered without the mechanism being under water, has been built on the rear end, and round spuds have been substituted for the old square ones. The quarters for the crew have been refinished, and the whole upper deck is screened against mosquitos.

Corozal Recreation Hall.

The improvements authorized for the recreation hall at Corozal include an extension 35x60 feet on the north side of the present building. This will be divided into a reception and a billiard room, each 25 by 33 feet, with quarters for the secretary and a toilet room between them. The building will then include, besides the rooms mentioned, a sitting room and lobby, assembly hall, with stage, kitchen, and ladies' retiring room. The improvements will cost about $3,000.

Tug Miraflores Making Slow Time.

The new Pacific Division tug *Miraflores*, which left the shipbuilding yards at Wilmington, Del., on August 12 to voyage around South America to Balboa under its own steam, was reported by cable on October 24 as being off Valparaiso, Chile. The vessel is several days behind its schedule, as it was originally expected to arrive at Balboa about October 23. If the same rate of speed is maintained up the west coast of South America, the boat will probably not reach port before November 12.

18-inch Thermit Weld.

The largest piece of process welding ever done on the Isthmus was turned out this week from Gorgona shops. It is one of the 18¾-inch shafts of the rock breaker *Vulcan*, which is on subaqueous rock excavation in the Pacific entrance. This shaft forms a part of the ram by the weight of which the rock is crushed. It is made of compressed cast steel, is 56 feet long and weighs 19 tons. Immediately after it was broken it was placed on a car and sent to the shops at Gorgona where a mold was made for a Thermit weld. The weld was made last week, 1,000 pounds of Thermit and 200 pounds of wire nails being used. After the shaft had cooled it was annealed and dressed, and is now ready for further service.

Pacific Division Telephone Service.

A telephone plant, maintained and operated independently of the Panama Railroad Company's system, was installed by the Pacific Division a few months ago for use of its various offices and plants at Pedro Miguel, Miraflores, Corozal, Ancon quarry and Balboa. The exchange is situated in a wing of the yard office at Miraflores and about 50 stations are now served from it. Twenty-one lines have been strung and most of them are operated on the party-line system. The switchboard is wired for 50 lines, but by continuing the party-line method, it will be able to furnish service to upward of 100 stations. The apparatus is of the magneto type. Wherever possible, the poles carrying the transmission lines from the Miraflores power house have been utilized in stringing the telephone wires to stations at a distance. The plant is under the supervision of the chief electrician of the Pacific Division, and all repairs to apparatus are made and line troubles cleared by the force under him. Service is furnished only during working hours, and but one operator is employed. A directory containing the number of the stations, and their location, will be issued shortly.

Hydraulic Excavation at Miraflores Locks.

The four 7,500-gallon pumps that furnish water for the hydraulic work in the Pacific Division are working satisfactorily except that during the extreme low tides of the week ending October 22, the increased depth to water caused the pumps to labor and pound heavily. In order to obviate this difficulty, which occurs only during the extreme tides, two coffer dams are being thrown across the tidal channel, one above the pumping station and the other at some distance below, which will form a reservoir where a sufficient quantity of water can be impounded, so that the pumps can be kept running at their maximum capacity at all times. The lower coffer dam will be fitted with regulating gates, which will be opened at high tide so that the reservoir can fill. When the tide begins to ebb the gates will be closed.

All three of the dredging units on the concrete barges are in service. One has been connected through the relay pumping station near Cocoli Hill, which is intended to aid in lifting the material into the dam when the latter is nearing its permanent height of 70 feet. The connection was made at this time in order that the relay apparatus might be tested. No auxiliary pressure is required at present, for the dredging unit on barge *No. 2*, which is working through the relay station, has on recent trials made the lift through the pipe up and around the face of the hill to the dam to a height of 75 feet unaided.

The other two barge pumps are pumping directly into the core of the dam, both working in the lower lock site at Miraflores, where a pit of considerable extent has been opened. The excavation so far made indicates that this section may have been formerly the bed of a river, silt and débris having gradually filled the channel until it was finally diverted. Numerous limbs and trunks of cocoanut trees have been encountered in the mud at a depth of several feet below the surface of the ground. These are frequently drawn into and choke the suction pipes of the barge pumps. When

NOTES OF PROGRESS.

(*Continued.*)

this happens a colored workman dives to the mouth of the pipe and extracts the débris. The washings have also exposed a large quantity of gravel, the finer portion of which is carried out through the pipes.

The pit in which the dredging pumps are working has been unwatered, and is kept as nearly dry as possible. The plan for deepening it consists in making sumps beneath the barges to a depth of 10 feet or more, into which the material dislodged and disintegrated from the bottom of the pit can be washed by the nozzles of the hydraulic giants. A stream of water from Cocoli Lake finds its way into the pit and to prevent it from accumulating one of the pumps is kept at work nights.

Building Notes.

Seven type-15, one-family houses, formerly located on the street in Culebra, known as "Steam Shovel Row" have been dismantled and rebuilt at other points. Four have been taken to Gatun, two to Corozal, and one has been reconstructed on a site in front of the residence of the Chief Engineer. Four more of these houses are to be moved shortly, two to Pedro Miguel, one to Corozal, and one to a new site in Culebra. In reerecting the houses some modifications in the type are made, which practically convert them into type-17, one-family quarters. There has been an increase in the number of applications for married and bachelor quarters at Pedro Miguel and Corozal. On October 1, there were 10 applications on the No. 1 list and 42 on the No. 2 list for married quarters at Pedro Miguel and Paraiso, and one application on the No. 1 list and 30 on the No. 2 list for married quarters at Corozal.

The schoolhouse at Corozal will be converted into quarters for two families, with three bedrooms, a living room, dining room, dry room, bath and kitchen in each part. An 8-foot veranda surrounds the building on all sides.

The one-story part of house No. 40, located in the old part of Pedro Miguel, recently used as a storehouse, is to be converted into bachelor quarters. This is an old French building and was used as a hotel in 1905 and 1906, before the Commission hotel on the east side of the railroad track was built.

Plans have been prepared for fireman's quarters to be erected on the north toe of Gatun Dam, not far from the cement shed. The main part will be 18 by 20 feet in size, with a wing 6 by 6 feet. The purpose is to have a fireman within reach in case of fire, as the cement shed, power house, storehouse, and the unloading docks for sand and stone are all in the immediate vicinity.

House No. 2 at Culebra, situated near the penitentiary will be converted into a dispensary for the prison. It will be moved a short distance from its present site, in order that it may be included within the stockade without the necessity of making an angle which would be inconvenient to guard. The building will be provided with a ward for eight or more beds or cots, and a surgical room fitted with a medicine closet and the necessary shelving.

Nombre de Dios Sand Output.

The output of sand at Nombre de Dios in October was about 44,000 cubic yards, as compared with 32,500 cubic yards in September. During the latter part of the month the output was over 2,000 yards a day, and at this rate the sand pile at Gatun Locks can be built up rapidly. The 18-inch suction dredge *No. 4*, which is digging the sand, is now working on the site of the village where the deposit is deep and free from clay, and under present conditions it could excavate 4,000 cubic yards a day. At present, however, the four barges in the sand service are working at capacity in taking away 2,000 cubic yards, but four barges of 500 cubic yards capacity each, now on order in the States, will be added to the fleet early next year. With this addition to the barge service the suction dredge can be worked at its full capacity and the storage of sand in large quantities at Gatun may be begun.

The method of loading now in use will be changed within a few weeks by the installation of a charging bin on a dock alongside which the barges may tie up. At present the suction dredge pumps directly into the barges, and the operation disturbs the barge on which the pipe is resting, wastes sand overboard, and necessitates a large amount of pipe line work. It is proposed to erect a water-tight bin of about 200 cubic yards capacity and with three 20-inch discharge pipes hanging out over the water, each fitted with a valve. The dredge will pump into this bin, and the sand will be discharged into the barges lying at the dock beneath the discharge pipes. In this way the loading of the barges may be continuous, the work of adjusting the pipe line on each barge will be done away with, and the waste of sand overboard will be avoided.

Contract for Cement-Carrying Ships.

A contract has been made with the Munson Line to furnish all the ships necessary to carry cement to the Isthmus, in addition to that which can be carried by the steamships *Ancon* and *Cristobal* up to March 31, 1911. The rate allowed for this service is $1.70 a ton, while the rate allowed to the *Ancon* and *Cristobal* is $1.75 a ton. The contract was entered into after competitive bids had been received in the usual way, and the offer of the Munson Line was found to be the best. The steamer *Nordpol*, the first vessel to load under the new arrangement, arrived at Cristobal on October 31. There will be approximately one sailing a month of these steamers.

New Rock Crusher at Porto Bello.

The new No. 21 gyratory rock crusher for the crushing plant at Porto Bello was put in operation on September 6, and most of the changes suggested by the "trying out" of the past two months have been made, or have been determined upon. It has a capacity of 500 cubic yards an hour, but the barge service is not sufficient to carry away more than 3,500 yards daily, which is the amount required for the concrete at Gatun. The average daily performance, 12 hours a day, in October, was 3,040 cubic yards. This new crusher is supplementary to the plant of two No. 9 and four No. 6 crushers already installed at Porto Bello, which has been furnishing crushed rock for Gatun Locks and Spillway for over a year. Its purpose is to lessen the amount of secondary blasting or "dobeying" necessary to break the rock as it comes from the quarry into pieces small enough to be handled by the No. 9 crushers of the original plant. It does this work so well that already a saving of 50 per cent in the amount of dynamite used has been effected. The new crusher takes rock as it comes from the quarry, and only pieces that cannot be handled by the steam shovels now require secondary breaking. The openings on either side of the "spider," which spans the top of the crusher, are 42 inches wide and 96 inches long. The new conveyor, which takes rock from the crushers to the storage bin, is working satisfactorily and is capable of handling 400 cubic yards an hour.

CONCRETE WORK IN GATUN LOCKS.

Concrete work in Gatun Locks is about 40 per cent completed, 865,524½ cubic yards out of a total of 2,085,000 having been placed at the close of work on October 29. The record of concrete placed each day last week, and the total up to and including October 29, is shown in the statement below. Work has begun on the concrete cut-off wall, which will extend from the east side of the upper lock into the hill on which the division office is situated, this hill forming a part of the Dam. The floor in the middle lock is about 80 per cent completed, and the construction of the wall monoliths is advancing rapidly. On Friday morning, October 28, the cableways established a new hourly record, when 244 cubic yards of concrete and 28 cubic yards of hard rock, a total of 272 cubic yards, were placed from 8 to 9 o'clock.

On October 29, in the afternoon between 1 and 2 o'clock, tower No. 4 of the lock cableways placed 98 cubic yards of concrete, 48 cubic yards on cable A and 50 on cable B. The operators in the tower were E. C. Connolly and J. Mitchell. The foreman receiving the material was O. G. Shafer. Sixty-four cubic yards of the above amount were placed during the first 32 minutes, or at the rate of two cubic yards a minute.

EXCAVATION AT MINDI.

Work in this Section of Atlantic Division Resumed on October 24.

Excavation was resumed in what is known as the Mindi section of the Atlantic Division on October 24, when the 20-inch suction dredge *No. 86*, which has been pumping into the western section of Gatun Dam, was withdrawn from that work and began operations at Mindi. This piece of excavation is through a low hill. It was begun in July, 1907, when a steam shovel was set at work, and it continued as a steam shovel job up to the middle of November, 1909, when the pit was flooded during heavy rains and work ceased. At that time, 1,476,821 cubic yards had been excavated and it was estimated that there remained about 973,000 cubic yards, more than half of which is rock.

For some time prior to the flooding of the pit the steam shovels had been working below sea level, and one of them began a cut on the bottom of the Canal at 42½ feet below sea level a few weeks before the suspension of work. The pit was kept dry by a pumping plant and, although only a narrow dike separated the excavation from the French canal on the north, there was little trouble from seepage water. At the south end of the cut along the east side the shovels were excavating a quantity of mud which was sliding on slick rock into the prism. On the east side and about midway between the two ends another mass of loose dirt, which it is said was pumped from the French canal behind a row of piling, was moving into the prism. This loose material, which is more expensive than rock to excavate by steam shovel, will be pumped out by the suction dredge now at work there. After this has been done the dredge will be withdrawn, the dike between the excavation pit and the French canal restored, and the water in the pit pumped out, in order that the steam shovels may resume their work and remove the remaining rock.

Defective Roof Gutters.

A resolution has been signed by the Governor of Panama amending decree No. 38 of 1906 relative to defective roof gutters in the city of Panama. The decree of 1906 empowered the Panama Health Office to alter the gutters to conform to sanitary conditions, but its operation was not wholly successful. The resolution which was officially published on Saturday, October 29, renders it imperative for all owners having defective gutters to call on the Health Officer within 48 hours and consult with him as to the best means of placing them in repair. Ten days are given in which to make the necessary changes. If the property owners fail to comply with these provisions, the Health Office is empowered to take steps to repair the defective gutters or to remove them if they are not indispensable.

The Health Office inspectors are engaged in making a house to house inspection with the object of locating all unsanitary roof gutters and their work in this respect has been done on all lateral streets in the city up to Seventh street. Gutters are considered defective when pools of water are found by the inspectors to have collected in them after rains, thereby creating favorable breeding places for mosquitos. The roof gutters found in good condition are permitted to remain, although the gutter is eliminated in all new construction. There are no roof gutters on the houses erected in the recently improved districts of Guachapali, Santa Cruz and Cocoa Grove; it is only in the old part of the city that they exist, although even there many were removed in the city-wide crusade against mosquitos during the years 1905 and 1906.

Anti-Cigarette League.

Interest in the work of the Boys' Anti-cigarette League of Gorgona is well sustained, good membership both in the junior and senior sections being maintained. The senior section, under the leadership of Mrs. A. L. Hackenberg, has been engaged in the study of the scout movement, with the object of organizing for field work as soon as a suitable leader can be found. The section had a Hallowe'en party in October, the evening being spent in story-telling and a candy frolic. Under the direction of Mrs. J. B. Marsh, the junior section meets one evening in each week. Fifteen new books have been added to the circulating library and a number of games have been purchased. A prize for bringing in the largest number of members during the past year has been awarded to Carl Paulus.

Visit of the Mining Engineers.

A party of about 120 persons, members of the American Institute of Mining Engineers and their friends, arrived at Colon on the *Prinz August Wilhelm* from New York on November 1 for a visit of seven days on the Isthmus. The ship called at Havana and Kingston on the trip down and will call at Port Limon, Kingston, and Fortune Island on the return.

CONCRETE WORK IN PACIFIC DIVISION LOCKS.

The estimate of the amount of concrete to be laid in the locks at Pedro Miguel and Miraflores during October was 82,500 cubic yards. At the close of work on October 30, all but 2,954 cubic yards of this amount had been placed. On Monday, October 31, 3,537 cubic yards were laid in the two locks, bringing the combined total up to 83,083 cubic yards and exceeding the estimate by 583 cubic yards. Both plants were operated on the last two Sundays of the month. On Sunday, October 23, the two mixers in No. 1 berm crane at Pedro Miguel were operated for a total of 6½ mixer hours, and at Miraflores, two ½-cubic yard mixers were operated for a total of 14 mixer hours. On Sunday, October 30, the construction and auxiliary plants at both locks were operated on full time.

The concrete work in the Pedro Miguel Locks is a little over 44 per cent completed, 369,285 cubic yards out of a total of 837,400 having been laid at the close of work on October 29. The quantity placed in both the Pedro Miguel and Miraflores Locks during October—83,083 cubic yards—exceeds the previous best monthly record, that of September, 1910, by about 14,000 cubic yards.

The record of concrete placed during each of the six 8-hour working days of last week at the Pedro Miguel Locks, as well as that of Sunday, October 23, is shown in the following statement:

DATE.	CONSTRUCTION PLANT. 2-Cubic yard mixers.			AUXILIARY PLANT. 2-Cubic yard mixers.				Total.

MIRAFLORES.

A total of 4,849 cubic yards of concrete was placed in the locks at Miraflores during the week ending October 29, the record for each of the six 8-hour working days, as well as that of Sunday, October 23, when part of the plant was in operation, being shown in the following table:

DATE.	AUXILIARY PLANT.							Total.
	2-Cubic yard mixers.			½-Cubic yard mixer.				
	Concrete placed.	Hours worked.	No. of mixers	Concrete placed.	Hours worked.	No. of mixers	Large stone.

On Friday, October 28, No. 6, one of the new ½-cubic yard mixers in service at these locks broke, it is believed, all local records of output for a mixer of this size in one day, by producing 190 cubic yards in 7½ hours actual working time, an average of one batch of concrete every two and one-half minutes. The same mixer nearly duplicated the performance on Sunday, October 30, when it turned out 186 cubic yards.

P. R. R. RELOCATION.

Amount and Cost of Grading Between Gatun and Gamboa.

A statement has been prepared showing that the cost of grading on the relocation of the Panama railroad in the fiscal year 1910 was 70.725 cents per cubic yard. Another statement shows the cost in the months of July and August by items, and indicates a reduction. In the statement by months for the fiscal year there is a considerable difference in the cost, due to the fact that the material was charged against the work according to the month in which it was ordered out regardless of the fact of whether it was used during that month. The monthly averages are also affected by the yardage output. This statement follows:

Month.	Yardage.	Cost per cubic yard.
1909		*Cents.*
July	165,706	70.70
August	184,955	59.40
September	180,524	74.70
October	192,314	78.40
November	168,294	72.30
December	169,513	69.80
1910		
January	214,957	78.40
February	226,251	59.30
March	255,344	81.00
April	225,624	81.50
May	223,248	64.60
June	243,165	58.60
Average cost per cubic yard	....	70.725

It was estimated that on September 1 about three million cubic yards of material would have to be moved to complete the relocation between Gatun and Gamboa to permanent grade. Most of the temporary trestle, temporary track, clearing, and right-of-way work has been finished and will not be necessary to any large extent in the future. From this time on the material for the fill will be procured almost entirely from borrow pits, and it is believed that there will be a considerable reduction in cost of grading henceforth. The itemized statements for July and August follow:

COST OF EXCAVATION DURING JULY, 1910.

Total yardage, 197,000 cubic yards.	Total cost	Cost per cubic yard.
Steam shovel crews	$7,010.80	$0.0356
Dumping and doing temporary track work	26,640.95	.1352
Drilling and blasting	8,969.80	.0455
Train crews handling excavation.	10,246.15	.0520
Clearing	842.15	.0043
Finishing ditching and permanent track work	8,148.25	.0414
Supervision and other expenses	5,167.00	.0262
Ten per cent surcharge on labor	6,702.51	.0340
Charge for engine service	14,545.00	.0738
Coal for steam shovels	2,748.56	.0139
Material	32,309.40	.1640
Total cost per cubic yard in cents	....	$0.6259

COST OF EXCAVATION DURING AUGUST, 1910.

Steam shovel crews	$7,247.45	$0.0303
Dumping and building temporary tracks	22,530.95	.0941
Drilling and blasting	8,827.00	.0369
Clearing	1,209.15	.0050
Train crews handling excavation.	9,882.25	.0413
Finishing ditching and Monte Lirio track work	5,284.75	.0221
Supervision and other expenses	4,001.70	.0166
Ten per cent surcharge on labor	5,829.33	.0246
Coal for steam shovels	1,740.37	.0073
Charge for engine service	13,031.25	.0544
Material	28,698.48	.1198
Total cost per cubic yard in cents	....	$0.4524

The right-of-way along the operated line of the Panama railroad is being cleared of trees and undergrowth. This has involved the cutting down of a number of trees of considerable size along the railroad between Frijoles and Mount Hope. One tree, however, the largest on the railroad right-of-way, constituting a landmark near Ahorca Lagarto, has been spared.

Traffic on Roads near Cristobal Schools.

Drays, carts, wagons, and all steel-tired vehicles are prohibited from driving faster than a walk along Columbus avenue from its juncture with Fifth avenue to its juncture with Broad street, and along Fourth avenue from its juncture with Columbus avenue to house No. 35 on Fourth avenue, Cristobal, between the hours of 8 and 11.30 a. m., and 1 and 3.30 p. m., on Monday, Tuesday, Wednesday, Thursday and Friday of each week during the school year.

Heads of departments and divisions have been directed to instruct all teamsters accordingly.

Physician, Isthmian Canal Commission.

An examination will be held in the near future for the position of physician in the Isthmian Canal Service, for which qualified persons are urged to apply. Applicants should be between the ages of 20 and 40 years and be graduates of recognized medical schools. The entrance salary for this position is $1,800 per annum. The receipt of applications will be closed on November 8.

JOHN K. BAXTER.
Secretary, Isthmian Civil Service Board.
Culebra, C. Z., October 29, 1910.

Clearing Zone Trails.

Two trails extending from the Panama railroad to the Canal Zone boundary line near the native village of Arraijan are to be cleared under the supervision of the Superintendent of Public Works, in accordance with the notice calling for bids published on another page of this issue of THE CANAL RECORD. One of the trails begins at Cartagenita, a Canal Zone native settlement situated near the Panama railroad where it turns to cross the trestle over the Canal at Paraiso, and extends to Arraijan in the Republic of Panama, a village about one-fourth of a mile from the Canal Zone boundary line.

Another trail in the direction of Arraijan will be cleared, beginning at the native hamlet known as "Hong Kong," situated in a ravine just west of the Panama railroad and about 600 feet south of the dam at the Rio Grande reservoir. Before reaching the former site of Corocito village, the trail will be changed to avoid crossing the Arraijancito River.

The trail between the Canal Zone boundary and the native hamlet of Cochinito, situated about half way between Arraijan and Balboa will also be improved. It will follow the route of the old trail through the land leased by Dr. Rafael Neira, and its direction will be changed slightly to avoid crossing the Caceras River.

The trails are to be cut and cleared of all brush, cane, grass, poles and trees not exceeding one foot in diameter for a width of 20 feet, and the material is to be removed and piled or burned on the outside of the strip. The total distance to be cleared is approximately 17 miles.

There were formerly fairly good trails between Pedro Miguel and Arraijan, and Miraflores and Arraijan, but these have been abandoned to a large extent on account of the lock work at Pedro Miguel, and because of the patrol of the Cocoli Lake watershed, near Miraflores. In 1906, the Pedro Miguel-Arraijan trail was cleared and opened up for the greater part of the distance. In March and April, 1908, the Pedro Miguel-Arraijan and the Rio Grande-Arraijan trails were cleared by contract, and in April and May, 1909 the Miraflores-Arraijan trail was also cleared by contract. In 1909, part of the Arraijan-Rio Grande trail was cleared by the residents of that district who worked out their poll tax, and this year about three miles of the trail was cleared in the same manner. The trails above mentioned, together with the Empire-Chorrera trail, all converge at a point a little east of Arraijan. From there into the village the trail is well traveled and in fair condition.

Changes in United Fruit Company's Steamship Services.

Beginning with the steamer *Metapan*, which is scheduled to sail from Colon for New York on Thursday, November 17, the weekly sailings of the United Fruit Company's vessels for New York will be on Thursday at 11 a. m., instead of Friday at 10 a. m., as at present. Beginning with the sailing of the steamer *Parismina* from New Orleans on November 2, there will be a double weekly service of this company between Colon and New Orleans. There will be no change in the direct sailings on Thursday of each week to New Orleans; but a new service will be added with stops at Bocas del Toro, Limon, and Puerto Barrios, Guatemala. The steamers on this run will leave New Orleans every Wednesday, arriving at Colon Thursday of the following week at about 9 a. m. Returning, the vessels will leave Colon at 6 p. m., Thursday, arriving in New Orleans Friday of the following week at 4 p. m.

Missing Men.

Any one having information regarding the present whereabouts of W. T. Coburn, who was at one time in the employ of the Panama Railroad Company, is requested to communicate with THE CANAL RECORD.

Mrs. Laura Lester of 609 Davis street, Evanston, Ill., wishes to hear from her husband, who is supposed to be working on the Isthmus, as she is in a destitute condition and needs his help.

James Graham left New Orleans two years ago with a string of race horses with which he proposed to open a racing establishment on the Isthmus; a few weeks later Mrs. Graham joined him. Nothing has been heard from either of them since that time. Information concerning them should be addressed to THE CANAL RECORD.

Obituary.

Mrs. Rose Sapusnik, wife of Leon Sapusnik of Empire, died at Ancon Hospital on August 13, 1910. She was thirty-three years of age, had been on the Isthmus two and one-half years, and is survived by her husband and four children. Her body was sent to the States for interment in Washington cemetery, New York City, on the S. S. *Panama*, which sailed from Cristobal on August 23.

The contractors who have in hand the work of making and erecting the gates for the locks expect to have a force on the Isthmus early in December to begin the preliminary work.

NAOS ISLAND BREAKWATER.

A Gap of Less than 5,000 Feet Remaining to be Closed.

The breakwater which extends from the shore at Balboa, parallel with the channel of the Canal at the Pacific entrance, has been completed about two-thirds of the distance to Naos Island, and the gap between the end of the dump and the island is less than 5,000 feet long.

The method of construction is to drive a trestle out into the water and make a fill by dumping rock and earth dug from Culebra Cut, and when this fill is completed to drive another section of trestle. Dumping of spoil was begun in October, 1907, and the progress was rapid in proportion to the amount of material deposited until the channel, made by the French as an entrance into the basin at Balboa docks, was reached. Then slide after slide occurred to retard the filling. Time and again a whole section of trestle with its half made embankment would disappear over night; then new trestle would be made and the dumping continued. Since August, 1909, in fourteen months of continuous dumping, the breakwater has been extended toward the island only 2,500 feet, but it has been broadened and made stable almost its entire length of 2 miles. In several places on the dike the sum of the daily vertical settlements of the roadbed amounted to over 60 feet in three months. In the fiscal year 1910 there were dumped on the breakwater 182,000 cubic yards of rock and earth. Not one foot of the last mile of track now rests on the trestle on which it was originally built.

The old French channel has been crossed, and there are indications of firmer bottom as the trestle nears the island. Even now the 70-foot piles sink through 30 feet of soft mud before they find firm ground, and one day last week the outermost end of the fill sank several feet, making it necessary to suspend filling until the tracks could be bolstered up to the proper level. It is hoped the time has passed when sections of the trestle and embankment will sink below the surface of the water, because the sinkings are becoming less marked as the work advances. At low tide the nature of these sinkings may be seen, because on either side of the breakwater a beach of mud has been formed by material pushed out and up by the rock fill. On August 9, 1909, a clapet ran into the trestle carrying away several hundred feet of track which sank into the mud of the bottom. Some of the rail was fished out, but much of it was not recovered. Recently this lost rail has been forced to the surface on top of the mud which the rock fill is displacing.

After each sinking of the trestle the tracks are bolstered up and the dumping is renewed. The amount that can be dumped is limited only by the condition of the trestle. From 35 to 40 trains consisting of 20 cars of 20 cubic yards capacity each are dumped at Balboa every day, and in the fiscal year 1910 the amount dumped there and in the breakwater dike was 3,835,091 cubic yards. The filling can be done more rapidly than the piles can be driven and the limitation on the breakwater construction is therefore that of the trestle standing and allowing the fill to be completed.

At the request of the Government of Panama, the pathologist of the Commission, Dr. S. T. Darling, has been directed to visit the Pacora valley in the province of Panama to make an investigation into the nature and origin of a disease that is causing great mortality among the horses on the stock breeding farms.

Americans Injured in Panama.

Arrangements have been made between the Canal Zone Government and the Republic of Panama whereby Americans who are in any way injured in the city of Panama will be taken to Ancon Hospital for treatment, instead of to Santo Tomas Hospital as heretofore. It frequently happens that injuries to Americans in the city of Panama are the result of personal violence following a violation of the law, and in such a case the Canal Zone Government guarantees the return of the person to the authorities of Panama to answer whatever charges are lodged against him.

Notice to Rodmen and Levelmen.

In the notice sent out to rodmen and levelmen relative to the examinations for promotion, it was stated that the second squad of competitors should report for examination on Sunday, November 5. This should have read Sunday, November 6. It should also have been stated in the notice that competitors in the examination should provide themselves with tables of sines, cosines, etc. Those who were listed for the examination which took place October 30, and were unable to attend because of sickness or other unforseen circumstances, may attend the examination on November 6.

A. B. NICHOLS,
Chairman, Examining Board.
Culebra, C. Z., October 31, 1910.

Empire School Consolidation.

The addition to the Empire schoolhouse has been completed, and the consolidation of the Las Cascadas school with that of Empire was effected on Monday, October 31.

Improved Order of Red Men.

The regular monthly meeting of the intertribal committee of the Improved Order of Red Men will be held at Empire, Sunday, November 6, at 2 p. m. All the members of this committee from the various tribes, and as many more as can make it convenient, are requested to attend this meeting.

Cocles Tribe, No. 3, of Empire has sent out notices and invitations to the tribes to attend their meeting next Saturday night, November 5, at 7.30 o'clock. They have three "palefaces" to adopt, and are arranging for a" big smoker" after the meeting.

The committee on uniform by-laws is to have a meeting on Sunday morning, November 6, at 9.30 o'clock in the wigwam of Cocles Tribe at Empire.

W. H. KROMER, *D. G. I.*
Colon, R. P., October 31, 1910.

Change in Sailings of Hamburg-American Line.

The Hamburg-American Line has announced a change in its sailings for New York from Colon, which, however, do not affect those of the steamers *Prinz August Wilhelm* and *Prinz Joachim*. These vessels will continue to leave on alternate Tuesdays at 10 a.m. from Colon, via Kingston, to New York. In addition, the steamships *Sarnia* and *Sibiria* will leave every other Tuesday from Colon to New York direct, carrying second class passengers only. The change in the service became effective with the sailing of the *Sibiria* from Colon on **Tuesday, November 1.**

EXECUTIVE ORDER.

To Prescribe the Manner of Leasing Public Lands in the Canal Zone.

By virtue of the authority vested in me I hereby establish the following Order for the Canal Zone:

SECTION 1. The Isthmian Canal Commission is hereby authorized and empowered to establish rules and regulations, from time to time, for the leasing of public lands in the Canal Zone, in accordance with the provisions of the Act of Congress, approved February 27, 1909, and entitled: "An Act relating to the use, control and ownership of lands in the Canal Zone, Isthmus of Panama."

SECTION 2. The leases for public lands authorized to be made under said Act of Congress shall be executed by the officer in charge of the Land Office of the Canal Zone Government, with the approval of the Head of the Department of Civil Administration, but the Isthmian Canal Commission, with the approval of the Secretary of War, may designate some other officers to execute or approve such leases, when, in the opinion of the Commission it is necessary or convenient to do so.

WM. H. TAFT.
THE WHITE HOUSE,
October 7, 1910.
[No. 1253.]

PERSONAL.

Maj. Chester Harding, with Mrs. Harding and daughter, returned from annual leave in the States on the *Turrialba*, which arrived at Colon on October 27.

Chief Justice H. A. Gudger, with Mrs. Gudger, and Mr. E. J. Williams returned from leave in the States on the *Panama*, which arrived at Cristobal on October 28.

Maj. Edgar Jadwin and family, Mr. A. S. Zinn and family, and Mr. and Mrs. C. M. Saville returned to the Isthmus on the *Cristobal,* which arrived on November 2.

Ancon Rock Crusher.

A statement of the rock crushed at Ancon quarry during the week ending October 29, follows:

DATE.	Hours worked.	Cubic Yards.
October 24	7:05	2,680
October 25	6:50	2,677
October 26	8:10	2,635
October 27	7:10	2,530
October 28	8:25	2,395
October 29	8:20	2,690
Total	46:00	15,607

Porto Bello Crusher.

A statement of the work done at Porto Bello crusher, by days, for the week ending October 29, follows:

DATE.	Hours worked.	Cubic Yards.
October 24	9:40	3,400
October 25	9:54	2,942
October 26	9:49	3,046
October 27	11:28	2,536
October 28	10:45	2,455
October 29	8:23	3,194
Total	59:59	17,573

Lock City Lodge, No. 5, Knights of Pythias, at a meeting on October 4, adopted resolutions of sympathy on the death of John J. Coit on September 1.

SOCIAL LIFE OF THE ZONE.

Women's Clubs.

There will be a meeting of the executive board of the Canal Zone Federation of Women's Clubs and conference of presidents at the Tivoli Hotel, Ancon, on Tuesday afternoon, November 8.

At the first general meeting of the Cristobal Woman's Club, in October, Dr. C. C. Pierce read a paper on sanitation. The first meeting of the art and literary department was held in the clubhouse on Wednesday, October 26, Mrs. C. C. Pierce, chairman of the department, presiding. The subject for the afternoon was "Famous Women in French History." Mrs. P. T. Murphy read a paper on Joan d'Arc, Mrs. I. P. Eppelsheimer on Catherine de Medici, Mrs. Pierce on Marie Antoinette, Mrs. A. O. Herman on the Empress Josephine, Mrs. H. Grant on Charlotte Corday, and Mrs. Charles H. Carter on Madame de Staël and the Empress Eugenie. The November program of the department meeting will be "A Trip to Paris," and in addition to the principal paper there will be short discourses on French life in town and country. In January, the annual complimentary concert of the department will be held.

The Christmas bazaar under the auspices of the home department, as announced in last week's issue of THE CANAL RECORD, will be held on Thursday, December 1, instead of November 30. The sale will be opened in the afternoon at 2 o'clock.

The Gatun Woman's Club held a Hallowe'en party at the residence of Mrs. C. H. Stoddard on Friday, October 29. There were 25 present. On the same evening, the Union Sunday school of Gatun held a Hallowe'en party in the lodge building, and on Saturday evening, a dance was held by the Kangaroos in the Commission clubhouse.

The Daughters of Rebekah entertained about 300 Gorgona residents at a Hallowe'en party at the lodge hall on Friday evening, October 28. There was a program consisting of vocal and instrumental music and recitations, while fortune telling and ducking for apples were features of the entertainment. The evening closed with an informal dance, refreshments being served in the intermission.

The Las Cascadas Sunday school held a Hallowe'en entertainment in the lodge building on Friday evening, October 28.

The Canal Zone Pythian Sisters celebrated the twenty-first anniversary of the founding of their order on Wednesday evening, October 26, the meeting being held in the lodge hall at Las Cascadas. The business meeting was followed by a social session, refreshments being served.

On Saturday evening, October 29, a Hallowe'en dance was given in the social hall at Corozal in which the general public took part. The evening was spent in games and dancing. The expenses of the entertainment were defrayed by subscription among the men, and refreshments were provided by the ladies. There were about 300 present.

Church Notes.

A men's dinner was given on board the Royal Mail steamer *Tagus* on Monday evening, October 24, under the auspices of the Cristobal Union Church. Dr. C. C. Pierce was toastmaster and the principal speaker of the evening was Dr. W. H. Bell of Colon Hospital. Selections for violin were played by Dr. Hill. Covers were laid for 110.

The Rev. J. H. Coin of Greenville, Miss., representing the Home Mission Board of the Southern Baptist Convention, arrived on the Isthmus on the United Fruit Company's steamer *Turrialba*, on October 6, for the purpose of conducting a series of evangelistic meetings and to assist in the work of the church in the Canal Zone for an indefinite time. On Sunday, October 16, a two weeks' series of meetings was begun in the Commission chapel at Gorgona.

The Home Mission Board has erected a parsonage for the resident pastor at Empire, which will be ready for occupancy within a short time. A lease of the building site opposite the Commission chapel was granted by the Panama Railroad Company, and lumber and other materials were purchased from the Commission at cost price. The house is a modified design of the Commission type-17 and cost $1,500. Of this sum, $300 were donated by the First Baptist Church of Empire and the remainder was contributed by the Mission Board.

There will be a dance at Ancon Hall on Saturday evening, November 19, for the benefit of the Roman Catholic Church at East Balboa, St. Mary's Star of the Sea.

Athletic Events.

A meeting of the presidents of the six baseball associations on the Isthmus will be held at Ancon on Sunday, November 6, to organize the Panama Canal Baseball League, adopt a constitution and elect officers. An executive committee will be appointed later by the president of the league, which will have in charge the preparation of the schedule of games for the 1910-11 season.

A game of ball was played at Ancon park on Sunday afternoon, October 30, between teams from Ancon and the U. S. S. *Yorktown*, resulting in favor of the *Yorktown* players by a score of 5 to 2.

Ten games have been played to date in the series between the employes of the Department of Civil Administration and the Ancon Hospital doctors, the Civil Administration team winning six, tieing two, and losing two.

An athletic meet will be held at the Empire baseball park on November 3, under the auspices of the West Indian athletic association of that village. There will be bicycle and foot races, and other endurance contests. Three expert bicyclists from Jamaica have promised to be present and participate.

Family Quarters.

Applications for married quarters were on file on October 1, as follows:

	No. 1 List.	No. 2 List.
Ancon	....	19
Ancon Hospital	....	3
Balboa	1	39
Corozal	1	30
Cristobal	2	163
Culebra	5	3
Empire	3	15
Gatun	1	134 (50)
Gorgona	15	92 (28)
Las Cascadas-Bas Obispo	3	11
Miraflores	....	1
Pedro Miguel-Paraiso	10	42
Porto Bello	4	27
Tabernilla	1	....
Toro Point	2	6
Total	48	585 (82)

The figures in parentheses show the number of applicants already occupying regular or nonhousekeeping family quarters at stations, other than those at which applications are filed. The No. 1 list is made up of employes who entered the service prior to January 1, 1908.

OFFICIAL CIRCULARS.

Panama Independence Day.

CULEBRA, C. Z., October 31, 1910.

CIRCULAR No. 358:

Thursday, November 3, 1910, the anniversary of the Independence of the Republic of Panama, will be observed as a holiday in the Canal Zone, and, as far as possible, all public business will be suspended on that day.

GEO. W. GOETHALS, *Chairman.*

Claims for Defective Castings.

CULEBRA, C. Z., October 30, 1910.

CIRCULAR No. 215-B (Superseding CIRCULAR No. 215-A):

Effective November 1, 1910, in lieu of circular No. 215-A of August 22, 1910, the following rules will govern the procedure to be followed in all machine and repair shops of the Isthmian Canal Commission and the Panama Railroad Company in case a casting made at the Gorgona shops has to be rejected on account of defects.

If it is necessary for any machine or repair shop to reject, on account of defects, a casting of any material made at the Gorgona shops, after it has been partly or entirely machine finished, a tag will be attached to it, with the correct designation of the casting and the name of the shop rejecting it written in ink on one side, and "The Superintendent, Mechanical Division, Gorgona Shops, Gorgona, Canal Zone," on the other side, and the casting delivered to the nearest Quartermaster's storekeeper, who, acting in the capacity of shipping agent only, will ship it to the addressee.

Upon the rejection of each defective casting the shop which worked thereon will submit promptly a claim on the superintendent of the Mechanical Division, on form D. O. 440 for credit for the original cost of the casting, the actual cost of machine work done on the casting, the cost of handling and laying it out, the amount of general shop expense, and the total cost of the work lost, including that of the casting.

After verification of the correctness of the claim it will be allowed by the superintendent of the Mechanical Division, and the shop so informed. Each claim allowed will be entered on form 221 C. E., under the proper foundry account, and the amount thereof included in the total monthly cost of the castings and in the price per pound fixed for them.

The same method of claim and allowance will be followed in cases of defects in castings developed in Gorgona shops.

GEO. W. GOETHALS,
Chairman and Chief Engineer,
Isthmian Canal Commission.
President, Panama Railroad Company.

Compensation to Injured Employes.

CULEBRA, C. Z., October 31, 1910.

CIRCULAR No. 235-C:

The Solicitor of the Department of Commerce and Labor has rendered the opinion that an injured employe who is entitled to compensation under the Act of Congress approved May 30, 1908, and who by reason of his injury is unable to do his regular work, cannot be required to render other service. This should be thoroughly understood, and no employe should be permitted to work under the provisions of circular No. 235-A until it has been carefully explained to him that he can draw his full injury pay without rendering any service whatever, and unless with a complete understanding of his rights he shall prefer to work rather than remain idle.

GEO. W. GOETHALS, *Chairman.*

Work for Disabled Employes.

CULEBRA, C. Z., September 1, 1909.

CIRCULAR No. 235-A:

In case an employe entitled to the benefits of the Government Employes' Compensation Act, approved May 30, 1908, is disabled in such manner that after recovery he is unable to resume his regular duties, he shall be entitled to the benefits of said Act for a period of one year from date of injury.

If, however, such employe elects to work at a decreased remuneration in some other position in order to gain seniority or acquire experience to fit himself for promotion, he may do so with the understanding that the amount of his pay will be deducted from the amount to be paid him as injury compensation.

H. F. HODGES, *Acting Chairman.*

Equipment Surveyed and Turned In.

CULEBRA, C. Z., October 28, 1910.

CIRCULAR No. 323-A:

Equipment surveyed and turned in to the Quartermaster's Department by direction of the Chairman to be dismantled and used in making repairs to similar equipment will be handled as follows:

The unit will be invoiced to the designated storekeeper, 50 per cent of the original cost being placed to the credit of the division or department making the invoice.

The storekeeper will take up the unit on his return and account for it until a certificate can be rendered that all available parts for repair have been removed, when the unit will be scrapped and dropped from his return on the above certificate.

Divisions or departments desiring to utilize available parts of the unit will place foremen's requisitions therefor, which will be priced at the price-book price of such parts, the parts being taken up by the storekeeper as found at post and dropped on the requisition.

GEO. W. GOETHALS,
Chairman and Chief Engineer.

False Clearance Papers.

CULEBRA, C. Z., October 29, 1910.

HEADS OF DEPARTMENTS AND DIVISIONS:

The attention of this office has been called to the presentation by silver employes of clearance papers which have been altered after delivery to employes so as to entitle the holders to higher rates of pay. Any employe presenting such a clearance can be convicted on a charge of an attempt to defraud the Government by a false representation, or by a false token. When such clearances are presented in the future the foreman receiving same should report the matter to the officer in command of the nearest police station, in order that he may be able to make an investigation, and if desired, secure the necessary affidavit from the foreman for apprehending the person presenting the false clearance.

GEO. W. GOETHALS, *Chairman.*

Temporary Services of Mechanics.

CULEBRA, C. Z., October 26, 1910.

CIRCULAR No. 357:

1. The economical administration of machine shops engaged entirely or principally in repair work requires the employment therein of the minimum number of workmen that can make the average quantity of repairs within the permissible time limit. To facilitate the prompt obtaining of additional workmen necessary at any time to make repairs in excess of the average quantity, and for other purposes, the division engineers of the Central, Atlantic and Pacific Divisions, or such of their assistants as they may designate, are hereby authorized to call directly upon the superintendent of the Mechanical Division for the temporary services of such number of machinists, blacksmiths, boilermakers and other craftsmen, and helpers, as may be required.

2. Each request made for the temporary services of employes should state separately the number of each trade required for day and for night work, the number of helpers for each trade, the probable length of time their services will be required, and the person to whom and place at which they should report, in order that assignment may be made in such manner as will insure the continuous employment of not more than eight hours per day to each employe, except when overtime is ordered in cases of emergency.

3. Division engineers and their subordinates will have entire jurisdiction over and will arrange for and obtain suitable quarters for such employes during the period of their temporary services.

The time of each employe will be kept by the borrowing division in the manner as prescribed for other employes, except the names of the temporary employes will be grouped in time books under the heading, "Temporary Employes from Mechanical Division," and will not be carried to the time and pay rolls. The labor charges of temporary employes will be charged direct to the job or jobs on which they work, as in the case of other employes. The time in transit from and to Gorgona shops will be charged to the borrowing division.

4. The Mechanical Division will promptly furnish the division engineer with the names, trades, wages, and date and hour of departure, of each employe furnished upon request, and a copy of each list will be sent to the Examiner of Accounts. When their services are no longer required the employes will be directed to return to the Gorgona shops, unless the superintendent of the Mechanical Division specially requests that they be sent elsewhere. The superintendent of the Mechanical Division will be furnished promptly with a statement showing for each employe the number of hours of work performed each day, date and hour of arrival and departure, and character of workmanship.

5. All employes sent from Gorgona shops on temporary duty will be carried and paid on the pay rolls of the Mechanical Division, and the time worked by each employe on each day will be entered from the statement furnished by the division engineer. The Mechanical Division will render each division engineer a bill covering the total labor temporarily furnished during each month. The bill will show the total amount of labor and a surcharge thereon of ten per cent to cover annual leave, holiday pay, etc.

6. The construction division will include the direct part of the labor charge in the properly distributed items and the ten per cent surcharge in the items of shop expense on form 132 C. E. To make the total labor agree with the pay roll a credit of the total amount should be taken under the item "Temporary Labor from Mechanical Division" in the "Labor" column, and recharged in the column "Other Expenses."

The amount of the surcharge will be credited by the Mechanical Division to "Vacation, Sick and Transit Time," and the total amount charged to the proper construction division.

H. F. HODGES,
Acting Chairman and Chief Engineer.

Civil Service Examinations Not Official Business.

CULEBRA, C. Z., October 25, 1910.

HEADS OF DEPARTMENTS AND DIVISIONS:

Several inquiries have been received of late relative to the issue of official business trip passes to employes who have entered the civil service examinations held at Culebra. Competitors in these examinations are not traveling on official business, and should be required to use their monthly allowance passes or half-rate requests.

By direction of the Acting Chairman.

C. A. MCILVAINE, *Chief Clerk.*

Dentist at Empire.

ANCON, C. Z., October 26, 1910.

Dr. H. W. Mitten, dentist, having reported for duty is detailed for service with the Commission at Empire.

Bids for an Addition to Recreation Hall, Corozal.

Sealed proposals, for labor (exclusive of plumbing and painting) only, will be received at the office of the Constructing Quartermaster, Culebra, C. Z., until 3 p. m., November 12, 1910, and then opened, for the erecting of an addition to the recreation hall at Corozal by contract. Plans and specifications can be obtained from the Constructing Quartermaster by making a deposit of $5. Fifty dollars must be deposited with the proposal and $150 when the contract is signed.

C. A. DEVOL, *Chief Quartermaster.*

Contract for Clearing Trails.

MOUNT HOPE C.Z., October 25, 1910.

Bids will be received at the office of the Purchasing Agent on the Isthmus, Isthmian Canal Commission, Mount Hope, C. Z. up to 2.30 p. m., Monday, November 14, 1910, at which time they will be opened in public, for clearing the Arraijan-Rio Grande trail from the Canal Zone boundary to a point on the Panama railroad, 600 feet below the Rio Grande dam, a distance of about seven (7) miles; and for clearing the Arraijan-Paraiso trail from the Canal Zone boundary line to the Panama railroad, a distance of about six (6) miles; and also for clearing the Arraijan-Cochinito trail from the Canal Zone boundary line, south of Arraijan, to the village of Cochinito, in the Canal Zone. The work shall be done in accordance with specifications to be had upon application to the Superintendent of Public Works, I. C. C., Administration Building, Panama. Proposals may be made for the clearing of each trail separately, or for the three. The successful bidder will be required to furnish bond or cash deposit in the amount of $25 for each trail as a guarantee that the work will be carried out. Proposals should be enclosed in sealed envelopes, marked "Proposals for clearing Arraijan-Rio Grande, Arraijan-Paraiso and Arraijan-Cochinito trails." The Commission reserves the right to reject any and all bids, to accept any bid as may be deemed to its interest, and to waive defects and informalities in proposals.

CHARLES L. PARKER,
Purchasing Agent on the Isthmus.

COMMISSARY DEPARTMENT.

Panama Cookery Book.

CRISTOBAL, October 31, 1910.

The first edition of the Panama Cookery Book has been received and placed on sale at 75 cents per copy in all commissary stores.

This book was compiled by the Home Department of the Canal Zone Federation of Women's Clubs.

EUGENE T. WILSON,
Subsistence Officer.

Thanksgiving Fruit Cakes.

CRISTOBAL, C. Z., October, 22, 1910.

Fruit cakes for Thanksgiving are now ready for delivery, and orders for the same at $1 each will be taken.

EUGENE T. WILSON,
Subsistence Officer.

Cold Storage Prices.

There are no changes in the prices of cold storage articles from those quoted in last week's issue of THE CANAL RECORD.

Married.

SMITH-O'CONNOR—At Randolph, Neb., on September 30, Florence Margaret, daughter of Mr. and Mrs. D. C. O'Connor, to Leroy Smith of Bridgeton, N. J. Canal Zone residence, Gorgona.

GAMBLE-SNYDER—At Senatobia, Miss., on October 19, Minnie May, daughter of Mr. and Mrs. J. B. Snyder, to Robert McDuffy Gamble. Canal Zone residence, Gatun.

CHAMBERS-HENNIGH—On October 26, at the home of the bride's parents in Paraiso, Adda Lenore Hennigh to Albert Livain Chambers, the Rev. Carl H. Elliott officiating. Canal Zone residence, Cristobal.

PALM-WINNE—On October 28, in the Commission chapel, Cristobal, Florence Nancy Winne to John Delmont Palm, the Rev. Carl H. Elliott officiating. Canal Zone residence, San Pablo.

Band Concert.

The Isthmian Canal Commission band will give a concert at Gatun, C. Z., on Sunday, November 6, 1910, at 2 p. m. The program follows:

1 March—*Monstrat Viam*....................Joy
2 Overture—*Poet and Peasant*..............Suppe
3 Intermezzo—*Silver Bell*..............Wenrich

10 March—*The Coming Regiment*..........Conterno

CHAS. E. JENNINGS, *Musical Director.*

The next concert will be given at the Cathedral Plaza, Panama, on November 13, at 7. 30 p. m., in exchange with the Republican Band, which will play at the Hotel Tivoli on that evening.

LOST—On dock No. 11 at Cristobal, on the special train from the *Panama*, or at Gorgona on October 28, a bank book. Return to Glen H. Pierson, Gorgona.

LOST—At Gatun commissary on October 25, an umbrella with light colored handle. Finder please return to house No. 70, Gatun.

Launch Service to Taboga.

The steamer *Sanidad* leaves the dredge landing at Balboa at 9 o'clock Tuesday, Thursday and Saturday mornings. On the return trip it arrives at Balboa about 4.30 p.m. in time to make connections for the 5.30 train at Panama.

COMMISSION CLUBHOUSES.

Activities of the Young Men's Christian Association.

CULEBRA

The standing in the chess tournament is as follows:

	Won.	Lost.
Bartlett	5	7
Dubois	10	2
Goodenow	5	7
Mengel	2	10
Putnam	4	8
Stiles	6	5
Warner	9	2

The discussion club met on Wednesday evening; subject, "Fellowship," under the leadership of Mr. Smith of Gatun. Due to the interest shown and by request of the men that belong to the club, Mr. Kramer will spend one more evening on the discussion of "Diet." The club will meet on Thursday, instead of Wednesday evening.

The bowling game between the Gatun first team and the Culebra first team resulted in Culebra taking two out of three. The following are the scores:

Culebra.				Gatun.			
Cohen	192	212	149	Ponton	181	159	198
Herrington	171	177	148	Harrington	136	167	154
Hayes	191	163	159	DeMoll	142	149	200
Case	148	148	162	Wolf	162	165	158
Dougherty	196	156	226	Durand	173	160	145
Total	898	856	844	Total	794	800	855

The basketball game between Gatun and Culebra, first half 14 to 10 in favor of Gatun; second half, 9 to 13 in favor of Culebra, game tie. The final score was 23 to 26 in favor of Gatun. The line-up was as follows:

Culebra.	Position.	Gatun.
Cushing	Forward	Egleston
Purchase	Forward	Bob Porter
Vifquain	Center	C. Porter
Koperski	Guard	Mitchell
Johnson	Guard	Conners
Kersey	Guard	

The Empire Musical and Dramatic Society gave an entertainment at Culebra on Friday evening, October 28.

The billiard tournament opened on Tuesday, November 1, with nine contestants. The winner will receive a medal.

Men that desire to join the duckpin tournament should hand their names to the man at the office or to Mr. Dougherty.

A handicap tournament for big pins is being arranged for in which the men that finished in the last tournament are allowed to participate. E. A. Putnam has offered a gold medal for the winner.

EMPIRE.

Gorgona's second team defeated Empire two out of three games at bowling on the Empire alleys last Saturday evening. The score was as follows:

Empire.				Gorgona.			
Gustavson	189	152	137	Stoehr	154	130	135
Sawtelle	156	204	151	Humphrey	172	199	172
Goolsby	156	166	169	Montgom'y	150	131	113
Giavelli	164	197	130	M. Van	175	145	212
Bardelson	124	187	140	Bordt	159	185	192
Total	789	906	727	Total	810	790	824

At a meeting of those interested in the literary and debating society held Saturday night it was decided that the program committee would continue the policy that met with success during the past few months. At the next meeting, November 11, there will be a debate to be taken part in by all the members. All men anxious to practice in the art of public speaking are urged to join the society.

Cristobal defeated Empire's basketball team at Empire last Saturday night. The score was as follows: Empire 21, Cristobal, 29. The following players took part:

Cristobal.	Position.	Empire.
Sarter	Forward	Lyons
Prather	Forward	Eason
Vifquain	Center	Bartholomew
Weller	Guard	Seaton
Luce	Guard	King

The monthly pool tournament was won by H. M. Lloyd. There were 24 entries.

The Empire and Gatun basketball teams will play at Gatun next Saturday evening.

GORGONA.

On Wednesday, October 26, the Empire Musical and Dramatic Club gave an entertainment.

Saturday, October 29, Empire's first bowling team took three straight games from the local team. Scores as follows:

Gorgona.				Empire.			
Roper	181	135	191	Gorham	161	156	167
Stewart	162	162	179	Potter	177	210	179
Weigold	129		139	Shough	161	152	203
Halderman	145	162	129	Pearson	162	171	173
White	156	155	151	Huson	194	156	155
Otis		152					
Total	773	766	789	Total	855	845	877

McConaughey broke all local records for high average for three successive bowling games on Saturday, when he rolled 204, 210, 232, an average of 215. His score of 232 is also high score for the month of October.

At the men's meeting on Sunday afternoon the Rev. Mr. Coin gave an address entitled "Knocking at the Door."

Bowling, pool and billiards will be free on Thursday, November 3, until 6 p. m. All men are urged to spend the holiday at the clubhouse. New men are especially invited.

GATUN.

Louis Durand leads in the 3-cushion billiard tournament and A. J. McLain in the pool tournament.

Mr. Wilson of Porto Bello has accepted Mr. DePoorter's challenge at pool for the championship of the Isthmus. The game will be played in the latter part of November.

J. Dwight Safford of Camp Elliott acted as leader of the discussion club last Thursday evening, subject, "Leadership." The club has had an average attendance of 15 for the month of October and interest is such that the meetings will be continued during the month of November. Speakers and subjects will be announced later.

A handicap duckpin tournament will be started on Saturday, November 5. Medals will be given as prizes. Every member of the clubhouse is cordially invited to participate. Entry blanks and other information can be secured from T. G. DeMoll, supervisor of bowling. In addition to this, a prize will be given for high score in tenpins during November.

The first team of Gatun will play Gorgona's first team next Saturday night at Gatun. The public of Gatun are invited to witness the match as it determines the winner of the preliminary tournament. Gatun and Empire are now in the lead.

Gatun's second team plays at Gorgona next Saturday night.

All members wishing to participate in the Isthmian bowling tournament on Thanksgiving Day are requested to hand in their names at once to Mr. DeMoll. It has been decided that the bowlers of the several clubhouses shall bowl on their local alleys rather than all teams at a single clubhouse. Prizes will consist of cups, gold and silver medals.

Gatun's second team took all three games from the second team of Culebra last Saturday night. Scores follow:

Gatun.				Culebra.			
Dalton	157	165	168	Warner	137	146	165
H'r'g'n, C R	190	146	172	Huttle	124	133	105
Myers	176	202	189	Hayes	135	143	140
Wilson	198	141	182	Koperski	134	132	127
Hodges	148	161	202	Baumer	112		
				Fox		148	149
Total	869	815	913	Total	642	702	686

A number of new books have been ordered for the library.

Regular systematic gymnasium work will begin on Friday, November 4. Basketball practice on Monday and Thursday nights.

CRISTOBAL.

Dr. Claude C. Pierce, quarantine officer for Cristobal and Colon, conducted the last of the discussion club programs on Thursday night with the subject "Shall We Be Vaccinated?"

The Cristobal Dramatic Club met Friday night and drew up a constitution and by-laws. The following were elected to serve on the executive committee: Dr. Pierce, Mrs. Pierce and R. G. Goodman. Next week an informal program will be given by four members of the club.

A meeting of those interested in the Christmas entertainment held every year for the benefit of the children of Cristobal will be held at the clubhouse on Friday evening at 8 o'clock. Representatives from the Union Church, Woman's club, Cristobal school, Y. M. C. A., and fraternal orders or lodges are requested to be present in order that this matter may be carefully considered and plans undertaken for a successful affair.

Arrangements have been made by the Cristobal association with the Pan-American Pressing Club to take care of the work of its members. It will be started on November 1.

The regular afternoon gymnasium classes for the office men will be continued as usual on Tuesday and Thursday afternoons at 5.30 o'clock.

The orchestra from the *Prinz August Wilhelm* will play at the clubhouse on Thursday night. There is no charge for admission and all are welcome.

The second bowling team won two out of three games from the first team on Thursday night. On Saturday night, the married men defeated the single men in all three games.

The following were the winners of prizes during the month of October on the Cristobal alleys: High score, Dan Adams, 232; high average, J. W. Barrett, 170; greatest number of games rolled, 81, by G. K. Weston.

MOVEMENT OF OCEAN VESSELS.

The following is a list of the sailings of the Panama Railroad Steamship Company, of the Royal Mail Steam Packet Company, of the Hamburg-American Line, and of the United Fruit Company's Line, the Panama Railroad Company's dates being subject to change:

NEW YORK TO CRISTOBAL.

Allianca	P. R. R.	Friday	Oct. 28
Colon	P. R. R.	Friday	Nov. 4
Advance	P. R. R.	Thursday	Nov. 10
Panama	P. R. R.	Wednesday	Nov. 16
Allianca	P. R. R.	Tuesday	Nov. 22
Colon	P. R. R.	Monday	Nov. 28

CRISTOBAL TO NEW YORK.

COLON TO BARBADOS, CALLING AT TRINIDAD.

Oruba	R.-M.	Tuesday	Nov. 8
Magdalena	R.-M.	Tuesday	Nov. 22
Clyde	R.-M.	Tuesday	Dec. 6

The next sailing of the Leyland Line will be as follows: *Meltonian*, on or about November 13, for New Orleans, via Kingston, Ja.

Hamburg-American steamers leave for New York at 10 a. m., and for Port Limon every Tuesday or Wednesday.

Royal Mail steamers leave for New York on alternate Mondays at 5 p. m.; for Southampton on alternate Tuesdays at 10 a. m.

United Fruit Company's ships for New Orleans leave on Thursday at 3 p. m., and for New York, beginning November 17, on Thursday at 11 a. m.

Sailings of the French line (Cié Générale Transatlantique) for Venezuelan ports, Martinique and Guadeloupe on the 3rd and 20th of each month.

CANAL RECORD

Volume IV. ANCON, CANAL ZONE, WEDNESDAY, NOVEMBER 9, 1910. No. 11.

The Canal Record

Published weekly under the authority and supervision of the Isthmian Canal Commission.

The Canal Record is issued free of charge, one copy each, to all employes of the Commission and Panama Railroad Company whose names are on the gold roll. Extra copies and back numbers can be obtained from the news stands of the Panama Railroad Company for five cents each.

Address all Communications
THE CANAL RECORD
Ancon, Canal Zone,
Isthmus of Panama.

No communication, either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.

NOTES OF PROGRESS.

Cost of Canal Construction.

Two exhibits showing the cost of Canal construction are published elsewhere in this issue of THE CANAL RECORD.

First, a summary showing costs of construction and engineering, including expenses for Quartermaster's Department, Examination of Accounts, Disbursing office, office of the Chairman, and purchasing expenses in the United States and on the Isthmus, but not including expenditures for sanitation, hospitals, civil government, lands purchased, terminal docks and wharves, relocation of Panama railroad, second main track of Panama railroad, purchase of steamers, construction and repair of buildings, municipal improvements in Panama and the Canal Zone.

Second, showing in detail the unit cost of lock and dam construction, including the spillways.

In the issue of November 16 there will be published a similar exhibit giving in detail the cost of excavation in the Canal prism, and the cost of rock and sand production.

Pacific Division Dredges.

The Pacific Division dredges, with the exception of the *Culebra*, the *Marmot* and the *Gopher*, are working in the Canal prism between the shipways and the zone of hydraulic operations. The suction dredge *Culebra* is working out at sea excavating loose material that has been drawn into the channel by currents and tidal wash. The *Marmot* is at work opposite the shipways widening the channel leading to the site of the new Panama railroad dock to 450 feet. The *Gopher* is engaged in dredging sand at Punta Chamé.

The *Mole* is making an under water cut on the west bank of the Canal opposite the sand dock. The *Badger* is making a pioneer cut to 35 feet on the west bank of the Canal, near station No. 2155, and is advancing at the rate of about 10 feet every 24 hours. Ahead of the dredge is a rock shoal which is being drilled and blasted. The dipper dredge *Cardenas* has been excavating mud on the east bank of the Canal, near station 2180, but was transferred this week to a point on the west bank, below the *Badger*, to remove a ledge of rock.

At the present time there is an open water channel at low tide from the sea to within a few hundred feet of the pumping station of the hydraulic plant. The width of this channel varies, but will average about 300 feet. The depth varies from 25 to 35 feet.

Dredging at Atlantic Entrance.

The dredges at work in the Atlantic entrance to the Canal accomplished more excavation during October than in any month since December, 1908, and the record has been surpassed in only seven months, as the following statement shows:

1910.	Cu. yds.
October	549,788
1908.	
May	564,386
June	572,749
July	675,497
August	638,217
September	624,776
November	570,832
December	679,604

The Atlantic dredging fleet was not occupied entirely in the Atlantic entrance during the month of October. Dredging in the French canal, at Gatun docks, and in the slip to the cement shed at Gatun occupied several days, the total excavation on this account being 28,791 cubic yards, making the month's work for the Atlantic Division dredges, not including those pumping material into Gatun Dam, 578,579 cubic yards.

Channel to Projected Lumber Dock.

The plans for the dredged channel to the reinforced concrete lumber dock, which is to be constructed at the Pacific entrance, near the site of the present sand dock, have been changed so as to provide for a channel 450 feet broad throughout. The original plan was for a channel 400 feet broad at the entrance and 300 feet broad opposite the sand dock. The ordinary lumber ship which enters Balboa would have to be towed stern first to the dock throughout this channel, a distance of 2,700 feet. The 450-foot channel will give room for economical dredging, head room for ships to pass congested points, and sufficient space for any but the largest ships entering the port to turn.

Barrack for Injured Laborers.

A number of employes drawing injury pay under the Act of Congress approved May 30, 1908, have recently been discharged from the Commission hospitals in order to relieve the hospitals of a class of patients that have been permitted to remain in the wards on account of helplessness rather than because further treatment could improve their condition. The injury pay due these patients is sufficient to maintain them for the time being, but in order to assist them as much as possible, two buildings of the standard barrack type, one for West Indians and one for European laborers, will be fitted up in one of the vacant labor camps. Janitor service will be furnished at the expense of the Commission.

Permanent Bridge Across Culebra Cut.

Lieut.-Col. H. F. Hodges, Lieut.-Col. D. D. Gaillard, Civil Engineer H. H. Rousseau, Mr. J. A. Smith and Lieut. F. Mears have been appointed a committee to make investigations, and submit plans and estimates for a permanent bridge across Culebra Cut.

Study of Canal Zone Geology.

Dr. C. W. Hayes of the United States Geological Survey arrived on the *Allianca* on November 3. He has been detailed, by direction of the President, to make a preliminary examination and study of geologic formations in the Canal Zone, especially with reference to Culebra Cut, and to lay out plans for future work in geology of the Canal.

Arrival of Tug Miraflores.

The tug *Miraflores*, arrived in Panama Bay on the morning of November 4, having made the trip up the west coast of South America from Valparaiso, Chile, in about 10 days, which was considerably better time than it made during the previous part of its voyage. It left the yards of Pusey and Jones at Wilmington, Del. on August 12, the builders having made a contract with the captain, R. G. Ludwig, for delivery at a stipulated price. The first stop was at Barbados, where the tug was in dry dock for eight days. It then continued on its voyage around South America meeting with almost continuous rough weather until after it had passed through the Strait of Magellan. Stops were made at Barbados, Pernambuco, Montevideo, Sandy Point, Coronel, and Callao. All but three members of the original crew deserted during the voyage, the vessel reaching its destination with 12 men, besides the captain and mate. The tug showed the effects of the rough voyage in its weather-beaten sides, while two or three panels in the deck house had been splintered by heavy seas. It was beached on Naos Island for inspection, and will be placed in commission with a new crew this week, towing sand barges to and from Punta Chamé. This will allow an opportunity for overhauling the tug *La Boca*, which has been handling the tows ever since the sand service was begun. Immediately after its arrival at Balboa, after the voyage of 13,000 miles, the *Miraflores* was given a speed trial and made 10 knots in 42 minutes.

The new tug conforms closely in dimensions and equipment to the *La Boca*. Its length is 118 feet 6 inches over all; breadth 23 feet, and depth at side 12 feet 6 inches. Its engine is of the triple expansion surface condensing type, has a 24-inch stroke, and is fitted with a high pressure cylinder 13 inches in diameter, intermediate cylinder 21 inches in diameter, and a low pressure cylinder 32

NOTES OF PROGRESS.

(*Continued.*)

inches in diameter. The boiler is of the cylindrical return tubular type, 14 feet in diameter, 12 feet 6 inches long, having three cylindrical furnaces 45 inches in diameter, and a combustion chamber with a working pressure of 150 pounds. Coal will be the fuel used. The condenser, consisting of ¾-inch solid brass drawn tubes, contains 900 square feet of cooling surface. Its electric plant is capable of supplying current for about 80 lights, and also a 120-ampere searchlight. The propeller shaft is 8½ inches in diameter. Two rooms are fitted up in the after part of the boat, one for the use of the captain, and the other for the mate.

The Pacific Division tugboat fleet now consists of four vessels, the *La Boca*, *Cocoli*, the supply boat *Chamé* and the *Miraflores*.

Gatun Dam Spillway.

The amount of concrete and large rock laid in the spillway of Gatun Dam during the weeks ending October 29 and November 5, is shown in the following statement:

DATE.	Cubic Yards.		
	Concrete	Large rock.	Total.

Garbage Cans in Colon.

On and after November 15, the Sanitary Department will cease supplying the householders in Colon with garbage cans. These cans have been supplied free of charge, but after the date above mentioned the Sanitary Department will dispose of all the cans in use in Colon at one-half their cost, and in future it will be necessary for the occupants of houses to provide their own cans. A decree, making the action mandatory, has been passed by the municipal council of Colon, and it will be published in a few days. In the city of Panama, garbage cans are furnished the occupants of houses by the municipality.

President Taft's Visit.

President Taft, according to latest advices, will sail from Charleston, S. C., on the armored cruiser *Tennessee* on November 10, arriving at Cristobal, either on the evening of the 14th, or on the morning of November 15. He will be the guest of Col. Goethals at Culebra during his visit. His intention is to remain on the Isthmus until November 20. He has accepted an invitation from the Government of Panama to be the guest of honor at a banquet on November 16. The party on the *Tennessee* will consist of the President's brother, Charles P. Taft; his secretary, Charles D. Norton; Capt. Archibald W. Butt, military aide; Lieut.-Commander L. C. Palmer, naval aide; and Maj. Thomas L. Rhoads, army surgeon. On the convoying cruiser *Montana* there will be six newspaper correspondents, Robert Small, Associated Press; Jerry Mathews, *New York Sun*; William Hoster, National News Service; F. E. Sturdevant, *New York World*; A. P. Arnold, United Press; and Henry S. Brown, *New York Herald*.

Spanish War Veterans Organizations.

The commander-in-chief of the United Spanish War Veterans, Col. Joseph J. R. H. Jacoby of Seattle, has designated John T. Oates of New York to come to Panama and organize three camps of the veterans in the Canal Zone. Commander-in-Chief Jacoby has promised to visit the Canal Zone in January and install the officers. Persons desirous of becoming charter members of the new camps should send name and address to Charles Cameron, Commissary Department, Cristobal, or to Charles Rose, Empire.

All veterans of the Spanish and Philippine campaigns residing in the Canal Zone are requested to send their names and addresses to John H. Lloyd, member of the Richard J. Hardin Camp, Washington, D. C., at Gatun. It is proposed to organize a camp of the Spanish War Veterans' Association in the Canal Zone, and all those eligible for membership are invited to cooperate to this end.

Ancon Rock Crusher.

A statement of the rock crushed at Ancon quarry during the week ending November 5, follows:

DATE.	Hours worked.	Cubic Yards.
October 31	5:10	1,665
November 1	5:50	2,010
November 2	6:40	2,264
November 3 (Holiday)		
November 4	7:05	2,340
November 5	7:20	2,555
Total	32:05	10,834

Visit of the Mining Engineers.

The party composed of members of the American Institute of Mining Engineers and their friends, numbering about one hundred and fifty persons in all, that arrived on the Isthmus on November 1, sailed for New York, via Kingston, on November 8. On their arrival, on Tuesday, they were taken at once to Hotel Tivoli, having reached Colon too late to inspect any portion of the Canal that day. On the following morning, Wednesday, they were taken by special train through the Culebra Cut; Thursday, being a holiday, was devoted mainly to an inspection of the models of the locks and dams in the Chief Engineer's office at Culebra; on Friday, they were taken by special train over all parts of the work in the Pacific Division; on Saturday, they were taken by boat to Taboga; on Sunday, they inspected Ancon Hospital; on Monday, they were taken by special train over the relocated line of the Panama railroad to Gatun where they inspected the locks and dam.

Porto Bello Crusher.

A statement of the work done at Porto Bello crusher, by days, for the week ending November 5, follows:

DATE.	Hours worked.	Cubic Yards.
October 31	7:53	2,440
November 1	8:11	2,745
November 2	9:27	2,443
November 3 (Holiday)		
November 4	7:39	2,015
November 5	6:13	1,513
Total	39:23	11,156

Visit of Congressmen.

The Appropriations Committee of the House of Representatives, the Hon. James A. Tawney, chairman, will sail for the Isthmus on the *Ancon* on November 12, due to arrive at Cristobal on November 19.

Representatives of the World's Panama Exposition Company of New Orleans have arranged for a trip to the Isthmus in the interest of the exposition. They will be accompanied by members of the Louisiana Congressional delegation, and invitations have been sent to the members of the Senate Committee on Industrial Expositions and of the House Committee on Industrial Arts and Expositions to join the party. They propose to leave New Orleans on November 12, arrive at Colon on November 17, and depart on the return trip on November 24.

CONCRETE WORK IN GATUN LOCKS.

Concrete work in Gatun Locks is about 40 per cent completed, 861,849 cubic yards out of a total of 2,085,000 having been placed at the close of work on November 5. The record of concrete placed each day last week, and the total up to and including November 5, is shown in the statement below. No concrete was laid on November 3, Panama Independence Day.

CONCRETE WORK IN PACIFIC DIVISION LOCKS.

The concrete work in the locks at Pedro Miguel is about 46 per cent completed, 384,292 cubic yards out of a total of 837,400 having been laid at the close of work on November 5. The output at these locks on Wednesday, November 2—2,878 cubic yards—was the largest for any one day since the beginning of the work on September 1, 1909. The combined output for the Pedro Miguel and Miraflores Locks on that day was 3,761 cubic yards. The combined output for the week at both locks—20,253 cubic yards—and the total for the week at the Pedro Miguel Locks—15,007 cubic yards, exceeded all previous records at these points.

A statement of the concrete placed during each day of last week, including Sunday, but excepting Thursday, is shown below.

PEDRO MIGUEL.

MIRAFLORES.

The total amount of concrete laid in the Miraflores Locks during the week ending November 5—5,246 cubic yards—has been exceeded but once at that point. The ½—cubic yard mixer, No. 6, surpassed its performance of producing 190 cubic yards in one day recently, by mixing 208 cubic yards on November 5. The time in the former instance, however, was 7½ mixer hours, and in the latter, 8¾ mixer hours, the output per mixer hour being slightly larger on the 190—yard day.

The record of concrete placed during each day of last week, Sunday included, but Thursday excepted, is shown in the following statement:

DATE.	AUXILIARY PLANT.										Total.
	2-Cubic yard mixers.			½-Cubic yard mixers.			½-Cubic yard mixer.

Ancon Dramatic Club.

The Ancon Dramatic Club is rehearsing Bronson Howard's play, "Young Mrs. Winthrop," which will be presented at the National Theatre, Panama, on Friday evening, November 18. There will be a special train from Las Cascadas and return for the occasion, and tickets will be on sale at the villages along the line after November 7. Twenty-five per cent of the net profits of this entertainment will be donated to the Panama Orphan Asylum. The club is an organization composed of Canal employes, or members of their families, residing in Ancon and vicinity. Its purpose is to produce standard plays, drama, comedy, and farce at intervals of two months. The courtesy of use of the National Theatre in Panama has been extended to the club for the performances. The money derived from the entertainments will be devoted, after the expense of the production is deducted, to the purchase of equipment for the staging of more elaborate plays, requiring costumes and special scenery. All profits in excess of a certain sum will be given to charities, American and Panamanian.

Collapse of Part of Dock No. 4.

A part of Panama railroad dock, No. 4, in Colon, covering a space about 20 by 70 feet, collapsed at 9 o'clock on the morning of November 8 with 3,500 bags of cement, most of which was lost. The cement had been unloaded from the steamer *Nordpol*, one of the ships chartered by the Munson Line to carry cement for the Commission.

Missing Men.

Any one having information regarding the present whereabouts of Henry L. Jernigan, who is supposed to be in the Canal Zone, is requested to communicate with the Director of Posts, Ancon, C. Z.

Information is wanted regarding the whereabouts of "Tony" Macon who is supposed to be in the Canal Zone. Address Evan J. Owen, Gorgona, Canal Zone.

Any one possessing information regarding the whereabouts of Abraham Hughes, who is believed to have left Peru for Panama in February, or March, 1907, is requested to communicate with the British Vice Consul at Colon.

PERSONAL.

Mr. Robert P. Porter, who is in charge of the South American supplement of the *London Times*, arrived on the Isthmus from Chile on October 31, remaining here until November 8, when he sailed for London, via New York. During his visit he made a thorough study of Canal work with a view to writing a series of articles for the *Times*.

Dr. Henry S. Drinker, president of Lehigh University, Pennsylvania, and Mrs. Drinker, were members of the party of mining engineers who visited the Isthmus last week.

Commander W. J. Maxwell, U. S. N., and Maj. W. C. Brown, U. S. A. were among the passengers on the *Allianca*, which arrived at Cristobal on November 3.

The Ven. Archdeacon Henry B. Bryan returned from his leave in the States on the *Abangarez* which arrived at Colon on November 3.

Order of Isthmian Conductors.

A regular meeting of the Order of Isthmian Conductors will be held at Las Cascadas at 2 o'clock on Sunday afternoon, November 13. All members are requested to be present. By order of the Chief Conductor.

F. H. ANDERSON,
Secretary and Treasurer.

Pedro Miguel, C. Z., November 7, 1910.

Johnson Sentenced.

Julius R. Johnson, found guilty of manslaughter in the Circuit Court at Empire on Wednesday November 2, was sentenced to four years at hard labor in the Culebra penitentiary, by Judge Wesley Owen, on Tuesday, November 8.

Band Concerts.

A concert will be given by the Banda Republicana of Panama at Hotel Tivoli, Ancon, on Sunday, November 13, 1910, at 7.30 p. m. The program follows:

1 March—*Outer Waffengefahrten*............Zeike
2 Waltz—*Birds' Voices*....................Vollstedt
3 Concerto for Clarinets.......................Gatti
4 Grand Variations from *Somnambula*........
Arranged by S. Jorge A.
5 Grand Potpourri—*Musical Jokes*..........Hamm
6 Grand Fantasia—*Dixie*...................Langey

SANTOS JORGE A., *Director*.

A concert will be given by the Isthmian Canal Commission Band in Cathedral Plaza, Panama, on Sunday, November 13, 1910, at 7.30 p. m. The program follows:

1 March—*Festal Day*..........................Roux
2 Selection—*Bright Eyes*..................Hoschna
3 Caprice—*Goody Two Shoes*.................Pryor
4 Overture—*Raymond*.......................Thomas
5 Waltz—*Bad'ner Mad'ln*...................Komzak
6 Medley Selection—*The Sunny South*......Lampe
7 Selection—*Bohemian Girl*...................Balfe
8 March—*The New Colonial*....................Hall

CHAS. E. JENNINGS, *Musical Director*.

The next concert will be given at Empire, November 20, at 6 p. m.

Proposals for Excavation in Canal Prism.

OFFICE OF CHIEF QUARTERMASTER,
CULEBRA, C. Z., November 2, 1910.

Sealed proposals for excavation of about 112,450 cubic yards of earth located at point 4–B, mile 29, on the Chagres River, will be received here until December 1, 1910, and then opened. Full information will be furnished by the division engineer, Empire, Canal Zone. Envelopes containing proposals must be endorsed "Proposals for excavation in Canal prism", and addressed

C. A. DEVOL,
Chief Quartermaster.

STATEMENT OF CONSTRUCTION EXPENDITURES TO SEPTEMBER 30, 1910.

Table No. 1.

Includes administrative and general expenses, but does not include general items or expenditures for sanitation, hospitals, and civil government.

51 Construction, locks					159,306.40			159,306.40	
Total					$632,999.76			$632,999.76	
52 Naos Island breakwater		$319.10			$36,867.76			$37,186.86	
Total construction cost, Pacific Division		$1,679,267.20			$11,276,733.69			$12,956,000.89	
53 Plant and equipment to be absorbed in construction costs after September 30								$3,489,908.67	
Total expenditures, Pacific Division								$16,445,909.56	
Total expenditures, constr. and engr'n'g.								$103,005,169.73	

Item 7—*Gatun Spillway Back filling.* Material obtained mainly from excavation in preparing foundations, expenses in connection therewith being charged to Item No. 4.

Item 21—*Colon Breakwater.* Unit cost computed on basis of yardage placed in breakwater. Expenditures represent preliminary work, such as tracks, trestles, etc. Filling was commenced only in September, 1910.

Item 25—*Dredging excavation, prism.* Preliminary surveys.

Item 38—*Miraflores Dams and Spillway.* Hydraulic filling. Expenditures represent preliminary work, such as pipe lines, flumes, etc.

Item 44—*Miraflores Locks.* Hydraulic excavation. Expenditures represent preliminary work.

Items 49, 50, 51—*La Boca Locks and Dams.* These expenditures were incurred prior to adoption of Miraflores as site for the lower locks and dams at the Pacific entrance to the Canal.

Item 52—*Naos Island Breakwater.* Expenditures represent cost of trestling only. Filling is done by Central Division and the cost thereof charged to Item No. 23—Central Division dry excavation, prism.

Items 22, 26, and 53—*Plant.* The expenditures for plant and equipment are absorbed into construction costs on the basis of estimated total cost of plant, and the estimated quantities of work to be done. The amounts shown under these items represent the balance of the expenditures which are to be absorbed into construction costs after September 30.

General—When excavated material is used in filling, such as dams, back filling, etc., the cost of dumping only is charged to the items benefited.

DAM CONSTRUCTION.

SOCIAL LIFE OF THE ZONE.

Dancing Parties.

The bachelors living at Corozal gave a dance on Wednesday evening, November 2. A special train was furnished from Balboa to Paraiso, and the attendance was large. A second dance is proposed for the near future.

On Thanksgiving eve there will be a dance at Paraiso in aid of the playground for the village. A committee, under the name of the playground committee, composed of men and women, has been formed, and the arrangements for this dance will be in its hands.

The Daughters of Rebekah, Gorgona, held a reception in honor of Mrs. Leroy Smith at her residence on Friday evening, November 4.

The Gatun Tennis Club has purchased Tungsten lamps and made arrangements to purchase electric current to illuminate the courts at night. Thirty lights of 100 watt power have been installed.

Church Work.

Mr. Bernard N. Baker of Baltimore, president of the Moral Education Board representing a movement in 27 states, will deliver an illustrated lecture at St Luke's Church, Ancon, at 8 o'clock on Sunday night, November 13. The public is cordially invited to be present.

The Gatun Christian League has called to the pastorate of the Union Church in Gatun the Rev. Charles O. Purdy, of the Christian Church of Des Moines, Ia. Mr. Purdy has been appointed Commission chaplain with residence at Gatun. The League was organized at Gatun in 1909, and has a membership of 100. Its activities include the organization and charge of the Union Sunday school and the arranging for services in the chapel. Social affairs held in the chapel are also under the organization.

The annual meeting of the Woman's Altar Guild of St. Luke's Church, Ancon, was held at the home of Mrs. W. C. Gorgas on Tuesday afternoon, November 1, with a large attendance. The election of officers for the ensuing year resulted as follows: President, Miss Beattie; vice-president, Mrs. Charles F. Mason; secretary, Miss Wilhelmina Bryan; treasurer, Mrs. H. C. Hanson. Miss Gorgas was appointed secretary *pro tempore*, owing to the absence from the Isthmus of Miss Bryan. The next meeting of the guild will be held at the home of Mrs. Wesley Owen, on Tuesday, November 15.

The reception given in honor of Chaplain and Mrs. Brown by the members of the Woman's Altar Guild of St. Mark's Church, Culebra, on November 1, was well attended. Selections for violin and cornet were played and refreshments were served.

Masses at the Church of the Holy Redeemer, Culebra, will be at 7.30 and 9 o'clock in the morning.

The United Methodist Church (colored) opened a meeting room on the border line of Ancon and the city of Panama on Sunday, November 6. The Rev. C. M. Anderson is pastor.

Canal Zone Humane Society.

A meeting of the directors of the Canal Zone Humane Society was held at the Hotel Tivoli on Sunday afternoon, November 6. It was decided to petition the head of the Department of Civil Administration for permission to allow the society to erect a sign printed in Spanish and English at the intersection of the Corozal and Sabanas roads, warning drivers against violation of the humane laws. A committee was appointed to complete arrangements for a workhorse parade to be held on Washington's Birthday. It was decided to give an excursion to Taboga for poor children of Panama. In response to a request from the International Humane Society, arrangements will be made for "Mercy Sunday" in the churches of the Canal Zone and Panama, when sermons on humane work will be preached. The Rev. Father Quijano and Archdeacon H. B. Bryan were appointed a committee to arrange the date and other details.

Married.

GODDARD-THOMAS—On November 4, in the Commission chapel, Cristobal, Cora Inga Thomas of Connersville, Ind., to Arthur Joseph Goddard of New York City, the Rev. Carl H. Elliott, officiating. Canal Zone residence, Colon.

OFFICIAL CIRCULARS.

Changes in Ice Orders.

CRISTOBAL, C. Z., November 2, 1910.

To All Concerned—As the Commissary ice waybill closes at 9 a. m. for delivery on the day following, changes in ice orders must reach the order room, building No. 2, Cristobal, before that hour or delivery cannot be made on the following morning.

EUGENE T. WILSON,
Subsistence Officer.

New Rates and Rules for Hotel Tivoli.

CRISTOBAL C. Z., November 9, 1910.

CIRCULAR No. 96-A:

Circular No. 96, effective November 1, 1909, prescribing rates and rules for the Hotel Tivoli, is hereby revoked.

The following rates and rules for the Hotel Tivoli are published, effective November 10, 1910:

RATES FOR ROOM AND MEALS—NONEMPLOYES.

Grade of room.	Number persons in room.	Transient Daily.	WEEKLY.		MONTHLY.			
					First Month.		Second Month.	
			Per day.	Per week.	Daily.	Monthly.	Daily.	Monthly.
1	1	$5.50	$5.00	$35.00	$4.00	$120.00	$3.50	$105.00
1	2	10.00	9.00	63.00	7.00	210.00	6.00	180.00
2	1	5.00	4.50	31.50	3.50	105.00	3.00	90.00
2	2	9.00	8.00	56.00	6.00	180.00	5.00	150.00
3	1	4.50	4.00	28.00	3.25	97.50	2.50	75.00
3	2	8.00	7.00	49.00	5.50	165.00	4.50	135.00

EMPLOYES.

Daily—Same as daily rates for first month nonemployes.

Monthly—Same as monthly rates for second month nonemployes.

Employes' monthly rate for room and meals will not be given without authority from the Subsistence Officer in each case.

Special rates will be made for room and meals for women employes for whom no quarters are provided at Ancon.

RATES FOR ROOM WITHOUT MEALS—NONEMPLOYES AND EMPLOYES.

Guests at "room and meals" rate may be rented second grade rooms for use as parlors at the following rates:

Transient, daily, $3.

Weekly, per day, $2.75; per week, $19.25.

Monthly, per day, $2.50; per month, $75.

EMPLOYES ONLY.

Grade of room.	Number persons in room.	Daily, or for night's lodging only.
1	1	$2.00
1	2	3.00
2	1	1.50
2	2	2.00
3	1	1.25
3	2	1.75

Rooms without meals will not be rented to employes for a longer period than two days, at which time bills will be rendered and collected. No other rates for rooms without meals will be made.

RATES FOR MEALS.

	TRANSIENT.		TABLE BOARD.	
	Nonemployes.	Employes.	Nonemployes.	Employes.
Breakfast.	$0.75	$0.75	$14.00	$ 12.00 per week.
Lunch...	1.00	.75	48.00	45.00 per month.
Dinner...	1.00	.75		

NOTE—At table board no credit will be given for meals not taken.

Meal tickets will be purchased at the office before entering dining room by employes at "room without meals" rate and by all persons without rooms.

RATES FOR MEALS A LA CARTE.

Minimum charge per meal, $1.

This service will supplement the regular service for lunch and dinner.

Guests at "room and meals" rate, as well as all purchasers of regular meal tickest, may order a la carte, not to exceed $1 without additional charge, but when exceeding $1, will be required to pay amount of such excess in cash, or to sign check for same, before leaving dining room.

Children at the $1, or the $1.25 per day rate will pay 25 cents extra for each a la carte meal taken, and, in addition, when bill for such a la carte meal exceeds $1 will pay the amount of such excess.

TEA ROOM SERVICE.

Hours—3 to 6 p. m. Minimum charge, 25 cents.

An extra charge of 25 cents per day per person will be made for grade 2 rooms en suite with grade 1 rooms with bath.

FAMILIES OR PARTIES AT "ROOM AND MEALS" RATE OCCUPYING A GRADE 2 ROOM EN SUITE WITH A GRADE 1 ROOM.

NO. OF PERSONS.*	CHARGE.
Two...........	One in grade 1 One in grade 2 En suite charge for one, 25 cents.
Three..........	One in grade 1 Two in grade 2 En suite charge for two, 50 cents.
Four...........	Two in grade 1 Two in grade 2 En suite charge for two, 50 cents.

*Not including children under 12.

If in any of the three above mentioned groups one of the persons is a nurse or servant, the nurse or servant will be considered located in the grade 1 room and be charged two-thirds the regular rate for same. An extra charge of 25 cents will be made for breakfast served in room and an extra charge of 50 cents for lunch or dinner.

Two in a room is ordinarily the full capacity of grade 1 and grade 2 rooms, but if it be necessary for more than two persons to occupy a room temporarily, the charge for each additional person will be $4.50 for grade 1 rooms, $3.75 for grade 2 rooms, and $3 for grade 3 rooms. Grade 3 rooms will ordinarily not be rented to more than one person by day or week.

The rate for servants when occupying room will be two-thirds the regular rate; when occupying cot in room or bath room, or in regular servants' quarters, one-half the usual rate for grade 3 room.

The rate for children under twelve when occupying room with parents or nurse and requiring no extra bed, but old enough to occupy seat at table, will be a flat rate of $1.25 per day for daily rate and $1 per day for weekly or monthly. Over twelve years of age, full rates will be charged. An extra charge of 50 cents per day per cot or bed will be made for children where a cot or extra bed is required in room with parents or nurse.

In case a room is occupied by one or more children under 12, without nurse or other person over 12 in room, a room charge per room will be made as follows:

NONEMPLOYES.

Grade of room.	Transient Daily.	WEEKLY.		MONTHLY.			
				First Month.		Second Month.	
		Per day.	Per week.	Per day.	Per month.	Per day.	Per month.
1	$2.25	$2.00	$14.00	$1.50	$45.00	$1.25	$37.50
2	2.00	1.75	12.25	1.25	37.50	1.00	30.00
3	1.75	1.60	11.20	1.15	34.50	.75	22.50

EMPLOYES.

Daily—Same as daily rates for first month nonemployes.

Monthly—Same as monthly rates for second month nonemployes.

Employes' monthly rates will not be given without authority from the Subsistence Officer.

Children under twelve will not be put alone in a grade 1 room unless parent or nurse, or another child of family over twelve occupies grade 2 room en suite. Whenever there are more than one person over 12 in a suite, the "families or parties" rate for suites applies.

The "per room" charge for rooms occupied by children under 12, is in addition to regular charge for children, and in addition to any charge made for extra bed or cot, or any en suite charges.

Employes will be required to pay bills at time of leaving in coupons. If properly identified as employes to the satisfaction of the manager, bills may be paid in currency. Persons at "room and meals rate" must pay for all meals, unless one day's meals, or more, are missed consecutively, in which case notice must be given to the clerk in advance, in order to secure credit. Credit for meals will be allowed to nonemployes at the rate of $2.50 per day on daily rates and at the rate of $2.25 per day on weekly rates, and to employes at the rate of $2 per day on daily rates.

If rooms be occupied by the month and guests are absent, credit will not be given for the room. If absence is for one full week, credit will be allowed for meals from the full monthly rate at the rate of $1.50 per day for first month nonemployes, and $1,25 per day for employes authorized to stay at the Hotel Tivoli by the month and for second month nonemployes. Notice must be given to the clerk in writing or in person, in advance, to secure credit.

When one day's meals, or more, are missed consecutively and required notice given in advance, children under 12 will be given credit for meals at rate of 75 cents per day and servants at rate of $1 per day.

Open accounts will not be permitted. Guests will be required to pay their bills upon leaving. Accounts of transient employes unpaid at time of leaving will be made up at the proper nonemployes' rate and sent to the Examiner of Accounts. Weekly bills will be rendered when due. Monthly bills will be made up on the 7th, 14th, 21st and last day of the month. All bills are due and payable upon presentation. No variations from this rule will be made without authority from the Subsistence Officer.

The weekly rate does not apply unless stay has been for a full week and the monthly rate does not apply unless stay has been for a full month. And since bills are made up once a week, the weekly bills of nonemployes who have expressed their intention of staying at the Tivoli by the month will be made out during the first month at weekly rates and proper correction will be made at the end of first month's stay, and the weekly bills of employes authorized to stay at the Hotel Tivoli by the month will be made out during the first month at the first month nonemployes' rate and proper correction will be made at the end of first month's stay.

SPECIAL RATES.

Delegations from business mens' clubs and other organizations, or special parties visiting the Canal will be given the following rates:

For parties of 10 or more, and less than 25: For less than 5 days, weekly rates; for 5 days or more, employes' rates. For parties of 25 or over: Employes' rates.

No employe of the hotel has authority to make any other rates or to modify any of the foregoing rules.

EUGENE T. WILSON, *Subsistence Officer.*

Paraiso Station Discontinued.

PANAMA RAILROAD COMPANY,
OFFICE OF GENERAL SUPERINTENDENT.
COLON R. P., November 4, 1910.

CIRCULAR No. 247:

To All Concerned:—Effective this date, the nonagency station at Paraiso Junction will be discontinued, and all freight hereafter for that place will be billed to Pedro Miguel.

J. A. SMITH,
General Superintendent.

Contract for Clearing Trails.

MOUNT HOPE C.Z., October 25, 1910.

Bids will be received at the office of the Purchasing Agent on the Isthmus, Isthmian Canal Commission, Mount Hope, C. Z. up to 2.30 p. m., Monday, November 14, 1910, at which time they will be opened in public, for clearing the Arraijan-Rio Grande trail from the Canal Zone boundary to a point on the Panama railroad, 600 feet below the Rio Grande dam, a distance of about seven (7) miles; and for clearing the Arraijan-Paraiso trail from the Canal Zone boundary line to the Panama railroad, a distance of about six (6) miles; and also for clearing the Arraijan-Cochinito trail from the Canal Zone boundary line, south of Arraijan, to the village of Cochinito, in the Canal Zone. The work shall be done in accordance with specifications to be had upon application to the Superintendent of Public Works, I. C. C., Administration Building, Panama. Proposals may be made for the clearing of each trail separately, or for the three. The successful bidder will be required to furnish bond or cash deposit in the amount of $25 for each trail as a guarantee that the work will be carried out. Proposals should be enclosed in sealed envelopes, marked "Proposals for clearing Arraijan-Rio Grande, Arraijan-Paraiso and Arraijan-Cochinito trails." The Commission reserves the right to reject any and all bids, to accept any bid as may be deemed to its interest, and to waive defects and informalities in proposals.

CHARLES L. PARKER,
Purchasing Agent on the Isthmus.

COMMISSION CLUBHOUSES.

Activities of the Young Men's Ghristian Association.

CULEBRA.

The discussion club will meet on Thursday evening of this week under the leadership of A. A. Nellis; subject, "Thrift."

The duckpin tournament will open on November 15. Men wishing to join should hand their names to Mr. Dougherty.

A smoker has been arranged for on November 18.

The standing in the handicap billiard tournament i as follows:

Name.	Handicap	Won.	Lost.
French	60	6	2
Conlan	100	5	0
Silver	40	3	3
Dubois	100	3	1
Case	60	2	1
Kaufman	60	1	3
Thomson	90	1	4
Koperski	60	0	5
McCann	70	0	2

The following are the men who have bowled over 200 during the week: Dougherty, 226, 203, 200; Fox, 225, 203; Cornthwaite, 201; Cohen, 212.

The men having the highest average during the week and the scores are: Cohen, 3 games, average 184; Hill, 1 game, average, 181; Dougherty, 17 games, average, 170⅓.

EMPIRE.

Empire's first team took three straight games from the Cristobal bowling team last Saturday evening. Score were as follows:

Cristobal.				Empire.			
Bullard	178	226	171	Gorham	156	187	173
Rabbitt	169	158	166	Potter	184	212	170
Collins	186	141	162	Shaughn's'y	140	169	173
Adams	118	170	126	Pearson	179	167	175
Thomas	138	171	146	Huson	202	161	172
Total	789	866	771	Total	861	896	863

The following high scores were bowled last week: Edwards, 211, 201; Shaughnessy, 206; Sawtelle, 206; Gustavson, 229; Bardelson, 218.

Gymnasium classes will be continued on Tuesdays and Thursdays.

A meeting of representatives of all the official, social and religious organizations in Empire will be held on Thursday evening, November 10, for the purpose of making plans for the Christmas celebration for the benefit of the children of Empire.

GORGONA.

On Monday, October 31, a dramatic club was organized with E. W. Mitchell, as manager, and E. L. Emery, stage manager. Parts were assigned for a play and one rehearsal has been held.

R. G. Goodman led the discussion club on Tuesday night; subject, "What Is Happiness?" The club has proved interesting and leaders are being assigned for the month of November.

On Thursday, November 3, the Gorgona ladies' bowling team took one game out of three from a team composed of the night men. Thursday, November 10, they go to Empire as the guests of the Empire ladies to bowl. Mrs. Corcoran rolled 241 last week, which is the highest score ever made by a lady on the Isthmus.

Two hundred scores at bowling for the past week were made as follows: Mrs Corcoran, 201, 241; Arnold, 209, 201, 204; Humprey, 212; Witmer, 208; White, 238; Stewart, 225.

For the most games with a score of over 140 during the month of November a prize of one pair of high top bowling shoes is offered. The high score prize is a silver medal.

Gatun's second team took two out of three games from the Gorgona second team on Saturday night. Scoies were as follows:

Gatun.				Gorgona.			
Dalton	225	189	184	Stoehr	148	126	174
Harrington	165	154	155	Arnold	161	162	175
Myers	158	158	126	Montg'm'y	146	134	152
Wilson	166	175	172	M.Var'k'p.	137	154	170
Hodges	150	155	152	Bordt	180	156	171
Total	864	831	789	Total	772	732	842

Next Saturday night the third game of the basketball league will be played on the home floor against Culebra. Culebra will also send her first bowling team for the ast game of the preliminaries with the local first team.

GATUN.

Four hundred people attended the entertainment by the Empire Musical and Dramatic Society on Wednesday evening, November 2.

The Spanish class will hold its first meeting this week. It is hoped that a large number of the people of Gatun will avail themselves of this opportunity to learn the language. For tuition fees and other information see the secretary.

The Culebra Y. M. C. A. has donated 100 of its books to the Gatun Y. M. C. A. library.

Emphasis is being placed on the increasing of the membership during the month of November. Eleven new members were added during the first six days.

A general meeting of the various organizations in Gatun will be called in the near future to make arrangements for the community Christmas celebration.

The Gatun team defeated the Empire five at basketball on the local floor by the score of 37 to 22 last Saturday night. The line-up was as follows:

Empire.	Position.	Gatun.
Myers, Moore	Forward	R. Porter
Eason	Forward	F. Huber
Bartholomew	Center	C. Porter, Eggleston
Seaton	Guard	J. Mitchell
King	Guard	G. Connor.

Next Saturday the Gatun five will meet the Cristobal team at Cristobal. These teams are tied for first place in the league.

The local first bowling team was defeated by Gorgona, losing two out of three games in last Saturday's match. Following are the scores:

Gatun.				Gorgona.			
Ponton	167	150	146	Roper	186	162	170
Severn	155	139	148	Stewart	163	145	151
DeMoll	192	154	155	Otis	185	155	198
Wolf	171	136	144	Haldeman	155	185	149
Durand	136	167	213	White	128	200	152
Total	821	746	806	Total	817	847	820

Next Saturday will complete the preliminaries in the bowling tournament. Cristobal's second team will play Gatun's second team on the Gatun alleys.

There is still time to join the local handicap duckpin tournament. All wishing to enter the tournament are requested to see Mr. DeMoll.

John J. Lucky won the prize for high tenpin score for the month of October.

H. H. Hodges is acting assistant bowling manager during the absence of Mr. Barte.

Chas. Ourand won first prize in the October pool tournament. The three cushion billiard tournament closes this week.

CRISTOBAL.

Thursday, November 3, was celebrated at the Cristobal clubhouse with an all day "open house," together with a boys' gymnasium class in the afternoon, basketball game and bowling match in the evening, and a concert by the orchestra from the *Prinz August Wilhelm.*

Cristobal defeated Gorgona in the league basketball game Saturday night by the score of 22 to 10. The line-up and summary follow:

Gorgona.	Position.	Cristobal.
Sonnenberg	Forward	Prather
Ridge	Forward	Luce
Swanson, Capt	Center	Vifquain
Earl	Guard	Weller, Capt.
Simka, Stripling	Guard	Pring

Summary—Goals, Sonnenberg, 1; Swanson, 1; Prather, 1; Luce, 4; Vifquain, 4; goals from fouls, Ridge, 2; Simka, 3; Stripling, 1; Prather 4; fouls, Sonnenberg, 1, Ridge, 1; Swanson, 4; Simka, 2; Stripling, 1; Prather, 3; Luce, 2; Vifquain, 1; Weller, 4; Pring, 1;.

The standing of the basketball league at present is as follows:

Team.	Won.	Lost.	Per cent.
Cristobal	3	0	1000
Gatun	2	0	1000
Empire	1	2	333
Culebra	0	2	000
Gorgona	0	2	000

The bowling match on the local alleys on Saturday resulted in favor of Empire. The scores were:

Empire.				Cristobal.			
Gustavson	192	156	201	Barrett	211	183	128
Sawtelle	129	175	156	Blackburn	150	169	104
Goolsby	156	179	168	Turner	130	142	168
Leon	200	168	171	Howard	159	155	133
Bardelson	171	169	174	Weston	172	164	167
Total	848	847	870	Total	822	813	700

The following 200 and over scores were made during the week: Barrett, 200, 225, 209, 211; Bullard, 212, 200; Rabbitt, 210, 202; Herrington, 212; Rigney, 203; Collins, 201; Hess, 203.

On Saturday, November 12, the boys' department will take an all-day outing to Toro Point.

The meeting of the Cristobal Dramatic Club Wednesday night will be rendered interesting by selections from several members who have volunteered. The following will take part this week: Messrs. Shradley, Manley, Sexton and Henriquez.

Bids for an Addition to Recreation Hall, Corozal.

Sealed proposals, for labor (exclusive of plumbing and painting) only, will be received at the office of the Constructing Quartermaster, Culebra, C. Z., until 3 p. m., November 12, 1910, and then opened, for the erecting of an addition to the recreation hall at Corozal by contract. Plans and specifications can be obtained from the Constructing Quartermaster by making a deposit of $5. Fifty dollars must be deposited with the proposal and $150 when the contract is signed.

C. A. DEVOL, *Chief Quartermaster.*

MOVEMENT OF OCEAN VESSELS.

Magdalena	R.-M.	Tuesday	Nov. 22
Clyde	R.-M.	Tuesday	Dec. 6
Atrato	R.-M.	Tuesday	Dec. 20

The next sailing of the Leyland Line will be as follows: *Louisianian*, on or about November 13, for New Orleans, via Kingston, Ja.

Hamburg-American steamers leave for New York at 10 a. m., and for Port Limon every Tuesday or Wednesday.

Royal Mail steamers leave for New York on alternate Mondays at 5 p. m., for Southampton on alternate Tuesdays at 10 a. m.

United Fruit Company's ships for New Orleans leave on Thursday at 3 p. m., and for New York, beginning November 17, on Thursday at 11 a. m.

Sailings of the French line (Cié Générale Transatlantique) for Venezuelan ports, Martinique and Guadeloupe on the 3rd and 20th of each month.

LOST—Gold watch chain and small gold bell charm, on Saturday afternoon between P. R. R. train and Cristobal hotel. Suitable reward to finder.

M. HERZ, Mount Hope.

CANAL RECORD

Volume IV. ANCON, CANAL ZONE, WEDNESDAY, NOVEMBER 16, 1910. No. 12.

The Canal Record

Published weekly under the authority and supervision of the Isthmian Canal Commission.

The Canal Record is issued free of charge, one copy each, to all employes of the Commission and Panama Railroad Company whose names are on the gold roll. Extra copies and back numbers can be obtained from the news stands of the Panama Railroad Company for five cents each.

Address all Communications
THE CANAL RECORD
Ancon, Canal Zone,
Isthmus of Panama.

No communication, either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.

NOTES OF PROGRESS.

Cost of Canal Construction.

Exhibits showing the cost of excavation in the Canal prism and of rock and sand production are published elsewhere in this issue of THE CANAL RECORD. They supplement exhibits published last week, showing the cost of Canal construction, and the unit cost of lock and dam construction.

Rainy Season Record in Culebra Cut.

The excavation in Culebra Cut during the month of October—1,323,846 cubic yards—was the greatest accomplished during any October since the inception of the work. The records since 1907 were as follows:

OCTOBER.	Excavation	Rainfall.
	Cu. Yds.	*Inches.*
1907	834,499	15.44
1908	1,160,101	8.87
1909	1,302,901	21.14
1910	1,323,846	12.57

Culebra District Steam Shovels.

Twenty shovels, all of the 200-class, excepting one, working in the Culebra construction district of the Central Division on November 11, excavated 30,077 cubic yards of rock and earth, an average of 1,503 cubic yards per shovel for the 8-hour working day. This is the highest output for a single day ever made in the Culebra district. The shovels were under steam 160 hours, actually digging 109 hours, and waiting for cars 38 hours and 40 minutes. The rest of the time was lost in mining, cleaning track, repairing shovel, repairing track, moving shovel back from slide, etc.

Canal Work in October.

The grand total of Canal excavation in October was 2,884,382 cubic yards, of which 2,784,994 cubic yards were charged to "work excavation" and 99,388 cubic yards to "plant." The dry excavation amounted to 1,773,580 cubic yards and was principally by steam shovels. The dredges removed 1,110,802 cubic yards in addition to the amount pumped into Gatun Dam by suction dredges. The progress on the locks at Gatun, Pedro Miguel and Miraflores is referred to elsewhere in this issue.

In the Atlantic Division, the total excavation was 731,721 cubic yards. Of this total, 153,142 cubic yards were dry excavation and the remainder was removed by the dredges in the Atlantic entrance.

The total excavation in the Central Division was 1,602,255 cubic yards.

In the Pacific Division, the total excavation was 550,406 cubic yards, 467,873 cubic yards of which were taken out by the dredges at the Pacific entrance.

A detailed statement of the excavation and a summary of the work on the locks and dams follow:

ATLANTIC DIVISION.

LOCALITY.	"Work." Excavation.	"Plant." Excavation.	Total excavation

TOTAL CANAL EXCAVATION.

LOCALITY.	"Work." Excavation.	"Plant." Excavation.	Total excavation
Dry excavation	1,727,333	46,247	1,773,580
Wet excavation	1,057,661	53,141	1,110,802
Total	2,784,994	99,388	2,884,382

Mean rainfall along Canal (eleven stations) 14.39 inches.

By "Work" Excavation is meant excavation actually made for one of the constituent parts of the Canal, such as Prism, Diversions, or Locks etc.; that is it represents material taken from the area to be occupied by the Canal, and constitutes excavation useful for the completed Canal.

By "Plant" Excavation is meant excavation outside of any of the constituent parts of the Canal, such as Prism, Diversions, or Locks, etc. It includes material necessary to be excavated for construction purposes only and is chargeable against the particular plant item for which it is performed, sucb as Prism, Diversions, Locks, etc.

DAM AND LOCK CONSTRUCTION.

MATERIAL.	Atlantic.	Pacific.	Total.

Slides in Culebra Cut.

A portion of the north shoulder of Contractor's Hill broke away from the hill about 7.45 o'clock on the morning of November 14 and moved rapidly into Culebra Cut. Steam shovel No. 208 was caught, but not damaged; six well drills were wrecked, and about 200 feet of the west main track were covered. It is estimated that about 15,000 cubic yards of material are in motion.

A slide in the rock bank of the Cut, opposite the division office at Empire, showed signs of activity on November 12, and steps were taken at once to reinforce the Obispo diversion ditch by making a rock and clay fill within the ditch on the side nearest the Canal. A break in the east bank of the Cut, near the suspension bridge at Empire, threatens to carry away part of the new Empire-Paraiso highway. About 60,000 cubic yards of rock and earth are in motion here.

There have been no new developments in the slides at Culebra, Cucaracha, and other points during the week except, that on the west bank of the Canal at the south end of Contractors' Hill a crack has appeared which may involve a considerable quantity of rock and earth. The total amount of material in motion in all the slides is within the estimated amount of excavation remaining to be done, as published elsewhere in this issue of THE CANAL RECORD.

Balboa Notes.

Wash borings have been made on the site of the proposed Panama railroad lumber dock at Balboa. They show rock at a depth of from 65 to 70 feet. The overlying material consists of successive strata of clay, sand, and gravel.

Information has been received that work on the boilers and steam-fittings of the new Pacific Division ladder dredge, the contract for which was let in August of this year to a firm in Renfrew, Scotland, has been temporarily interrupted by a strike among the boilermakers. The dredge will be known as the *Corozal*.

Work is in progress on the coffer-dam across the old channel of the Rio Grande, which is designed to impound the water and form a sump for the pumping station of the hydraulic plant, south of Miraflores Locks. The method employed is to drive two rows of sheet piling, one on the upper and one on the lower side of a structure of round piling. The labor of sinking the sheet piling is performed

NOTES OF PROGRESS.

(*Continued.*)

partly by means of a windlass, operated by manpower, which raises a heavy block of wood and then lets it fall; and partly by direct hand work, according as the workmen desire a change. The earth fill will be made with material excavated from the Canal prism, which will be brought to the site by clapets, thence lifted into place by a clam-shell bucket.

The ladder of the old French dredge, *No. 9*, stranded on the bank of the Chagres River between Gorgona and Mamei, has been removed by workmen from the Balboa shipways. This dredge has been a landmark to travelers over the Panama railroad for several years, and was carried to its present position during a freshet. At a normal stage of the river, the dredge is high and dry, but during the period of floods, it is partly submerged, and the high water of December, 1909, nearly covered it. The Central Division steam shovels, now working in this section, have recently excavated all around it. The hull of the dredge is in fair condition, and will probably be left where it is until the Gatun lake region is flooded, when it will be raised and towed out of the channel.

Steam Shovel and Dredgemen.

The regular meeting of the I. B. of S. S. and D. M. will be held in the I. C. C. lodge hall, Empire, Sunday, November 20, at 12.15 p. m. It is very important that all brotherhood men attend this meeting. Officers will be elected for the year 1911. WALTER P. TUDOR,
Secretary and Treasurer.

Empire, C. Z., November 10, 1910.

Civil Service Examination for Anæsthetist (female).

The United States Civil Service Commission announces an examination on November 30, 1910, to secure eligibles from which to fill a vacancy in the position of anæsthetist (female), Philippine General Hospital, at $1,800 per annum, without board and quarters, and vacancies requiring similar qualifications as they may occur in the Philippine Service.

It will not be necessary for applicants to appear at any place for examination. Their eligibility for the position will be determined upon the evidence furnished in examination Form 375 concerning their education, training, and experience.

Applicants are desired to have had at least one year's experience in the administration of general anæsthetics in institutions for the care of the sick.

Applicants must have reached their eighteenth birthday, but not their fortieth birthday, on the date of their examination.

The medical certificate in Form 2 must be filled in by some medical officer in the service of the United States, who should indicate his rank or official designation on such certificate.

Each applicant will be required to submit with her application a photograph of herself, taken within three years, which will be filed with her examination papers as a means of identification, in case she receives appointment. An unmounted photograph is preferred. The name and date of examination, the competitor's name, and the year in which the photograph was taken should be indicated on the photograph.

This examination is open to all citizens of the United States who comply with the requirements.

This announcement contains all information which is communicated to applicants regarding the scope of the examination, the vacancies to be filled, and the qualifications required.

Applicants should at once apply to the Secretary, Isthmian Civil Service Board, Culebra, C. Z., for Forms 2 and 375.

CONCRETE WORK IN PACIFIC DIVISION LOCKS.

The concrete work in the locks at Pedro Miguel is about 48 per cent completed, 400,948 cubic yards out of a total of 837,400 having been laid at the close of work on November 12. All daily records for laying concrete were broken on Wednesday, November 9, when the plants at Pedro Miguel and Miraflores mixed and placed 4,030 cubic yards, thereby exceeding the previous best record on the Isthmus, that at Gatun Locks on June 6, 1910, by 32 cubic yards. The operated plant at Pedro Miguel on this date consisted of six 2-yard mixers, four in the construction plant and two in the auxiliary plant; that at Miraflores consisted of two 2-yard, three ½-yard and one ⅓-yard mixers. Reducing these to a common unit, a total of 58.29 mixer hours were worked, an average of 6.03 hours per mixer, the total output representing an average of 69.14 cubic yards an hour per 2-yard mixer. The amount of concrete placed during the week in both locks—22,491 cubic yards—is the best record made so far at these points, and exceeds the previous best Isthmian record for one week, that made at Gatun Locks, June 19-25, inclusive, by 808½ cubic yards.

Work on the center and side walls at the Pedro Miguel Locks has been extended south as far as the end sill and T-culvert. Between 300 and 400 feet of the side walls remain to be constructed before the wing sections are reached, and about the same distance of center wall to the point where it ends. The concrete in the floor of the lock south of the end sill has not yet been laid, but the wall construction will proceed in advance of it, leaving the floor work to a later date. Two hundred feet are yet to be added to the south guide wall, about 100 feet to each end, making the total length of the wall when completed, 1,200 feet. Practically all the iron work for the end sill is set, and as this section is out of reach of the chamber cranes, the concrete used there is supplied by the auxiliary mixer on the east bank and placed by derrick and locomotive crane. Excavation for the extension of the east wall, north into the forebay, is completed, and the concrete work at that point is well under way. Similar excavation for the extension of the west wall is in progress.

The record of concrete placed during each of the six 8-hour working days of the week ending November 12, follows:

PEDRO MIGUEL.

DATE.	CONSTRUCTION PLANT. 2-Cubic yard mixers.			AUXILIARY PLANT. 2-Cubic yard mixers.				Total.

MIRAFLORES.

Concrete work in the upper lock at Miraflores is at present confined to the floor and culvert system and the east side wall. Mixer No. 6, engaged on the culvert work dumping directly into place, established a new daily record for ½-yard mixers on November 11, when it produced 223 cubic yards in 7½ mixer hours. The previous best record, made by the same machine, was 190 cubic yards in 7½ mixer hours. The smallest mixer in these locks, a ⅓-yard machine, recently returned from shop, made an unusual record on November 10 by producing 133 cubic yards of concrete in 8.50 mixer hours. equivalent to 399 mixings during the day's run.

The record of concrete placed in the upper lock at Miraflores during the six 8-hour working days of the week ending November 12, follows:

DATE.	AUXILIARY PLANT.										Total.
	2-Cubic yard mixers.			½-Cubic yard mixers.			⅓-Cubic yard mixer.

WOMEN'S CLUBS.

Federation and Club Work—Christmas Gifts.

A meeting of the executive board of the Canal Zone Federation of Women's Clubs and a conference of presidents was held at Hotel Tivoli, Ancon on Tuesday, November 8, the main business of the day being to arrange for the mid-season convention. It was decided to hold this convention at Hotel Tivoli on a date after January 15 to be determined hereafter. There will be two sessions, the business meeting in the morning, and in the afternoon, addresses and music, followed by an informal reception. Invitations will be issued, and all club-women are expected to attend.

The pictures in the Federation art collection have been numbered, classified, and catalogued by Mrs. M. E. S. Smith of Empire. A copy of this catalogue will be forwarded to each club to assist in the preparation of the program of the "Art Exhibit Day" for which each club is urged to arrange.

The philanthropy committee solicits subscriptions for the Christmas box for the patients in the leper asylum at Palo Seco. For the past two years the Federation has provided a box containing personal gifts for each of the 38 inmates of the institution, and the response to the appeal this year is not less generous than it has been heretofore.

Mrs. A. O. Herman has been designated chairman of the educational committee in the the place of Mrs. J. A. Storla, resigned. The president of the Federation, Mrs. Thomas E. Brown, sailed on the *Allianca* on Thursday, November 10, for a short visit in New York. The Federation will tender a farewell reception to Mrs. Lorin C. Collins, on Saturday afternoon, November 26, at the Commission clubhouse in Cristobal, the Cristobal Woman's Club entertaining.

The Gatun Woman's Club met in the Commission clubhouse on Friday, November 11. The club library will be opened for the distribution of books after December 1. The club will cooperate with the Sunday school in the Christmas entertainment for the children. A number of pictures will be purchased and presented to the school at Christmas. The social meeting will be omitted this month and the club will hold its next business session on Friday, December 9.

The business meeting of the Pedro Miguel Club was held on Wednesday, November 9. A committee was appointed to cooperate with the Sunday school in the Christmas entertainment. It is proposed to begin a short course of study of the history of Panama, and papers on current events will be read at each business meeting, followed by a discussion.

Suicide of I. C. C. Employe in Colon.

Dexter Tate, an American, employed in the Depot Quartermaster's storehouse at Mount Hope, committed suicide by shooting himself in the head with a rifle in a room, near the corner of Fifth and Bolivar streets in Colon, on the morning of November 14. He was 43 years of age and arrived on the Isthmus July 12, 1905. His legal residence was in Escambia County, Florida. A brother, Sterret Tate of 17–21 William street, New York City, survives him.

Kangaroo Ball.

Cristobal Court, No. 8, I. O. P. K. will hold their second annual ball at the Imperial Hotel, in Colon, on Thanksgiving Eve, November 23.

All Kangaroos in good standing are cordially invited to attend. A special train will be run from Panama, making all stops, in accordance with the following schedule: Leave Panama, 7; Corozal, 7.08; Pedro Miguel, 7.18; Culebra, 7.30; Empire, 7.35; Las Cascadas, 7.40: Bas Obispo, 7.45; Gorgona, 7.55; San Pablo, 8.10; Tabernilla, 8.15; Gatun, 8.40; arrive Colon, 8.55. Returning, the train will leave immediately after the ball Invitations can be obtained from the comptrollers of the respective courts.

C. D. Hoffman, *Secretary*.

Colon, R. P., November 7, 1910.

President Taft's Visit.

President Taft and his party arrived on the Isthmus on the morning of November 14. They were met at Cristobal by the Isthmian Canal Commission and officials of the Panamanian Government, and were taken by special train to Culebra. On the morning of Tuesday, November 15, the President and his party were taken by special train to Gatun, where they made a thorough inspection of the locks and dams, returning to Culebra on the relocated line of the Panama railroad in the afternoon. In the evening the President, accompanied by Col. Goethals, went to Paraiso, where he addressed a meeting of Canal employes under the auspices of the Canal Zone branch of the Red Cross and the Y. M. C. A. On Wednesday morning a trip by special train was made through Culebra Cut; and in the afternoon, the President will receive delegations of employes. In the evening he will attend a banquet in Panama tendered by the President of the Republic. On Thursday, he will make a trip over the locks and other work in the Pacific Division, returning to Colon in time to board the *Tennessee* before nightfall.

Caught in Slide at Gatun Locks.

Shortly before 5 o'clock on the afternoon of November 9 a part of the bank in the south forebay of the locks at Gatun, where a gang was excavating for the east wing wall, caved in. The bank had been caving slowly all the afternoon, but about 4.40 o'clock the movement became rapid. The workmen were warned, but in running to escape, Mateo Rodriguez stumbled, fell, and was covered with earth. He was smothered before he could be dug out. The moving earth crushed some concrete forms and two negro laborers were caught in the falling timber, but were not seriously injured.

Mateo Rodriguez was 42 years of age and came to the Isthmus about eight months ago from Alberca, in the province of Salamanca, Spain. A wife, living in that village, survives him.

Band Concert.

The Isthmian Canal Commission Band will give a concert at Empire, C. Z., on Sunday, November 20, 1910, at 6 p. m. The program follows:

1 March—*Columbia Phonograph Co*	Burton
2 Selection—*Chocolate Soldier*	Straus
3 Intermezzo—*Bitter Sweets*	Engleman
4 Overture—*Raymond*	Thomas
5 Waltz—*Tres Jolie*	Waldteufel
6 Medley Selection—*The Cristobal Minstrels*	Jennings

Introducing "Prairie Song Bird," "How Do You Do, Miss Josephine?" "Won't You Change Your Name?" "I'm Awful Glad I Met You," "Could You Learn to Love Me?" "Can't You See?" "Pony Boy," "Strawberries," "Schoolmates," "Molly Lee," and "When We're Out On Dress Parade."

7 Duet for Cornet and Baritone—*Angels' Serenade*	Braga

Messrs. Smith and Sanmartin.

8 Humoresque—*What's the Matter With Father?*	Lampe
9 March—*Any Little Girl That's a Nice Little Girl*	Fischer

Chas. E. Jennings, *Musical Director*.

The next concert will be given at Corozal on November 27, at 7.30 p. m.

Rainfall from November 1 to 12, Inclusive.

CONCRETE WORK IN GATUN LOCKS.

Concrete work in Gatun Locks is about 42 per cent completed, 879,297 cubic yards out of a total of 2,085,000 having been placed at the close of work on November 12. The record of concrete placed each day last week, and the total up to and including November 12, is shown in the statement below.

Date.	Construction Plant. 2-Cubic yard mixers.			Auxiliary Plant. 2-Cubic yard mixers.			Large stone.	Total.

OFFICIAL CIRCULARS.

Accumulative Leave.

CULEBRA, C. Z., November 8, 1910.

CIRCULAR No. 132-H:

The following extract from the minutes of the one hundred and fifty-eighth meeting of the Commission is published for the information of all concerned:

To facilitate the reduction of force that will be necessary as the construction of the Canal nears completion, and for the benefit of those employes who are unable to meet the expense of an annual vacation in the United States without encroaching on the savings which they may require to tide them over a period of enforced idleness when their employment on the Isthmus is finally terminated, it is

Resolved, That any employe whose forty-two days' leave of absence with pay shall become due on or after January 1, 1911, may defer such leave until his service is terminated, and if an employe serves twenty-two months continuously he may be granted not to exceed eighty-four days' leave with pay, provided that his resignation is accepted to take effect at the expiration of such leave, or that he be discharged on account of reduction of force.

Resolved further, That an employe who has deferred his leave and who is discharged on account of reduction of force may be granted, in addition to forty-two days' leave of absence with pay, three and one-half days' cumulative leave for each month's actual service in excess of twelve months to a total of not more than eighty-four days.

An employe who has accumulated eighty-four days' leave, but does not propose to leave the service, may be allowed forty-two days' leave of absence with pay and may be credited with the forty-two days still due him, and may again accumulate an additional forty-two days, not to exceed a total of eighty-four days, as provided above.

This resolution amends the clause in the resolution of June 11, 1907, reading: "* * * * leave is not to be cumulative, unless an employe is prevented by the Government from taking such leave when due."

GEO. W. GOETHALS,
Chairman and Chief Engineer.

CULEBRA, C. Z., November 8, 1910.

HEADS OF DEPARTMENTS AND DIVISIONS:

Referring to circular No. 132-H being issued this date relative to granting employes cumulative leave:

It appears probable that the privilege granted in this resolution of the Commission will be taken advantage of very largely, and that during the calendar year 1911 divisions which have heretofore been carrying extra men, especially during the summer months to fill vacancies on account of employes absent on leave, can probably reduce their extra force on that account, thereby resulting in a saving to the Commission.

It is hereby directed that the head of each department and division ascertain to what extent employes will accumulate the leaves which will fall due in 1911, making a report of the number of men in each class of employment who will probably take advantage of this provision. Employes should be given to understand that this request is for the purpose of securing preliminary information regarding the approximate number of men who will defer their leaves, and that they are not thereby bound to defer their leaves if they should change their minds later. As soon as this information is compiled, steps should be taken to meet the situation which will arise, by reducing the number of extra men and by not filling vacancies which occur, and which can be taken care of without taking on additional force.

GEO. W. GOETHALS,
Chairman and Chief Engineer.

Transfer of Engineers and Conductors.

CULEBRA, C. Z., November 9, 1910.

CIRCULAR No. 348-A:

When engineers and conductors are transferred from one division to another on account of reduction of force, men so transferred shall retain all privileges to which they are entitled by seniority the same as though they were originally employed in the division to which they are transferred.

GEO. W. GOETHALS,
Chairman and Chief Engineer.

Repair of Typewriters.

CULEBRA, C. Z., November 11, 1910.

CIRCULAR No. 359:

When a typewriting machine is in need of repairs for the making of which the services of a typewriter repair man are required, the district quartermaster will be informed of the fact, together with the name of the maker and serial number of the machine, of the building and office in which the machine is located, and with the date by which the repairs should be completed.

The district quartermaster will telephone the above information to the superintendent of the Mechanical Division, Gorgona shops, and the latter will send the repair man to make the repairs.

Before leaving the district the repair man will ascertain whether or not any additional machines requiring repairs have been reported to the district quartermaster.

All departments and divisions should cooperate with the district quartermaster in the endeavor to reduce the number of trips to each district to a minimum.

GEO. W. GOETHALS,
Chairman, Isthmian Canal Commission.
President, Panama Railroad Company.

Construction and Repair of Sidewalks.

CULEBRA, C. Z., November 14, 1910.

CIRCULAR No. 183-P:

Effective December 1, 1910, the construction and repair of sidewalks, including wood, gravel and cinders, will be performed by the Quartermaster's Department, except in such cases as the sidewalks are constructed simultaneously with roads which they parallel, when the work will be performed by the same force which builds the roads; and also except in such cases as a different method of construction may be ordered by me.

GEO. W. GOETHALS,
Chairman and Chief Engineer.

Colored Cotton Waste.

CULEBRA, C. Z., November 14, 1910.

CIRCULAR No. 314-C:

Until further notice colored cotton waste will be used as standard for all general purposes on the Isthmus, and the use of white waste will be confined to such special purposes as motor cars, in filters, etc., for which the colored waste is not suitable. All storehouse requisitions for white waste will state the purpose for which required.

GEO. W. GOETHALS,
Chairman, Isthmian Canal Commission.
President, Panama Railroad Company.

Reduction in Force of Artisans.

CULEBRA, C. Z., November 14, 1910.

CIRCULAR No. 262-C:

Whenever a reduction in the force of artisans employed in any shop can be made, a list of the employes whose services can be dispensed with will be forwarded to the inspector of shops, and the latter will either indicate the place and position to which they will be transferred or the action to be taken in their cases.

No artisan will hereafter be given five days' notice or discharged on account of reduction in force, except by the direction of the inspector of shops.

GEO. W. GOETHALS, *Chairman.*

Supplies for Canal Work.

The following steamers with supplies for the Isthmian Canal Commission arrived at the ports of Cristobal and Colon, during the weeks ending October 29, November 5 and November 12:

Sibiria, October 24, from New York, with 240 barrels sulphate alumina, 184 cases fuses, 200 barrels carbolic acid, 19 cases paper for stock.

Advance, October 25, from New York, with 18 pieces gear segments, 30 pinions, 6 cases hoisting machinery, 15 pieces hoisting machinery, 11 cable chains, 13 cases dredge sleeves, 16 packages dredge machinery for Atlantic Division; 5 cases electrical material, 3 crates concrete mixing machinery for Pacific Division; 45 kegs nuts, 25 cases iron forgings, 37 bundles castings, 572 pieces castings for Mechanical Division; 370 cases bandages for Sanitary Department; 165 drums paint, 58 cases school desks, 100 kegs spikes, 250 kegs bolts, 500 galvanized ash cans, 40 cases picks, 75 bundles claw bars, 69 cases water meters, 175 bundles manila paper, 88 cases caustic soda, 582 pieces white pine lumber for stock; and a miscellaneous cargo, the whole consisting of 3,844 packages, weighing 518 tons.

Turrialba, October 27, from New Orleans, with 6 reels wire rope for Mechanical Division; 66 tons dump car parts for Cristobal shops (for erection); 141 cases fire brick, 26,400 feet white oak lumber, 20 cases rail benders and wrenches, 8 pieces spuds for masts, 2,029 pieces yellow pine car stakes for stock.

Almirante, October 28, from New York, with 3,513 sacks oats, 46 barrels drift bolts, 21 bundles steel bars, 20 pieces steel bars, 14 cases fuses for stock.

Gretavale, October 28, from Brunswick, with 45,000 cypress cross-ties for stock.

Panama, October 28, from New York, with 9 bales hose for Atlantic Division; 39 steel castings for Central Division; 437 pieces car couplers, 750 pieces castings for Mechanical Division; 30 cases drugs and sundries for Sanitary Department; 188 cases caustic soda, 18 cases brass rods, 10 cases drills, 32 cases wrenches, 10 crates grindstones, 200 cases Sapolio, 24 cases rubber hose, 425 kegs bolts and rivets, 84 cases lanterns, 40 kegs wire nails, 250 bundles plain wire for stock; and a miscellaneous cargo, the whole consisting of 3,133 packages, weighing 290 tons.

Glenwood, October 30, from Baltimore, with 162 tons lock construction material, and 12,046 feet spruce lumber for Atlantic Division; 915 bundles corrugated steel bars, 2,063 pieces corrugated steel bars for Pacific Division; 450 pieces black wrought steel pipe for Mechanical Division; 12,500 cases dynamite, 906 drums lubricating oil, 1,250 cases fire brick, 500 kegs white zinc, 754 tons coke, 1,196 pieces steel pipe, and 2,500 kegs railroad spikes for stock.

Nordpol, November 1, from New York, with 15,300 barrels cement for Atlantic Division; 61,200 bags cement for Pacific Division.

Prinz August Wilhelm, November 1, from New York, with 10 cases enamel, 114 barrels lump alum for stock.

Cristobal, November 2, from New York, with 25,500 barrels cement for Atlantic Division; 102,000 bags cement for Pacific Division.

Abangarez, November 3, from New Orleans, with 160,283 feet yellow pine lumber for Atlantic Division; 419 pieces cypress piling for Pacific Division; 276 cases fire brick, 3,192 pieces yellow pine car stakes, and 208 bales cotton waste for stock.

Allianca, November 4, from New York, with 1 relay pump unit, complete, 28 packages machinery, 10 cases dredge sleeves, for Atlantic Division; 12 crates furniture, 44 barrels alcohol for Sanitary Department; 1,163 pieces castings, 1,209 pieces knuckles, for Mechanical Division; 48 cases picks, [illegible] cases graphite, 447 kegs rivets, 115 kegs bolts, [illegible] bolts, 67 crates pails, 8 cases bronze rods for [illegible] and a miscellaneous cargo, the whole consisting of 3,797 packages, weighing 352 tons.

Santa Marta, November 4, from New York, with 60 pieces steel angles, 119 tons lock construction material for Atlantic Division; 8 crates steel castings for Mechanical Division; 23 cases steel shafting, 50 pieces switches, 35 reels steel rope, 100 packages brooms for stock.

Sarnia, November 6, from New York, with 200 barrels crude carbolic acid, 40 cases lamp black, 8 cases paper for stock.

Galveston, November 7, from Philadelphia, with 2,652 bundles corrugated steel bars, 83 tons lock construction material, 105 pieces steel rail for Atlantic Division; 35 crates machinery, 339 tons lock construction material for Pacific Division; 198 pieces steel bars for Mechanical Division; 334 tons steel plates, angles etc.; 331 tons steel pipe, 350 cases gasoline, 650 cans gasoline, 774 bars iron for stock.

Atenas, November 10, from New Orleans, with 114,963 feet yellow pine lumber for Atlantic Division; 39,660 feet white oak lumber, 1,592 pieces yellow pine car stakes, 138 bales straw, 25 barrels tallow for stock.

Metapan, November 10, from New York, with 17 cases shafting, 32 reels steel cable, 31 bundles insulated copper wire, 274 drums car oil, 102 cases gas engine oil for stock.

Colon, November 11, from New York, with 14 cases electrical machinery for Atlantic Division; 259 pieces castings, 24 barrels locks for Mechanical Division; 23 cases bandages, 34 cases drugs and sundries for Sanitary Department; 200 pieces switches, 20 cases wrenches, 13 cases machetes, 60 cases water coolers, 700 kegs white lead, 115 kegs mule shoes, 25 kegs broncho shoes, 150 cases sal soda, 20 cases lubricating oil, 42 bundles shovels, 13 cases oil cans for stock; and a miscellaneous cargo, the whole consisting of 1,912 packages, weighing 205 tons.

Aldershot, November 11, from Gulfport and Mobile, with 1,061,708 feet yellow pine lumber, 211 pieces piling for Atlantic Division; 6,375 feet white oak lumber for Mechanical Division; 288,923 feet yellow pine lumber, 116 pieces piling for stock.

Stages of the Chagres.

Maximum heights of the Chagres river for the weeks ending midnight, Saturday, November 5 and 12, 1910. All heights are in feet above mean sea level:

COMMISSION CLUBHOUSES.

Activities of the Young Men's Christian Association.

CULEBRA.

The chess tournament closed last week with the following scores:

	Won.	Lost.		Won.	Lost.
Dubois	10	2	Goodenow	5	7
Warner	9	3	Putnam	4	8
Stiles	7	5	Mengel	2	10
Bartlett	5	7			

The men that bowled over 200 during the week are: Dougherty, 217; Fox, 203, 204; Cornthwaite, 201; Cohen, 204; Huttlemeier, 204.

The men that rolled over 100 in duckpins are: Hurst, 105; McIlvaine, 104; Fox, 105; Fleischman, 100.

The bowling match between Gorgona's second team and Culebra's second team at Culebra resulted in Gorgona winning. Scores: Culebra, 719, 773, 740; Gorgona, 723, 728, 819.

The standing in the handicap billiard tournament is as follows:

Name.	Handicap.	Won.	Lost.
Conlan	100	6	0
Case	60	3	1
French	60	6	2
Dubois	100	4	2
Silver	80	4	4
McCann	70	3	4
Thomson	90	3	5
Kaufmann	60	2	5
Koperski	60	0	8

The discussion club met on Thursday night under the leadership of the Rev. A. A. Nellis; subject, "Thrift." The club will meet again on Thursday under the leadership of Mr. Kramer; subject, "Diet on the Canal Zone."

EMPIRE.

The following high scores were bowled during the week: Bardelson, 204; Gorham, 209; Goolsby, 200, 211, 201; Huson, 203; Anderson, 206; Drake, 203.

The Gorgona ladies' bowling team defeated the Empire ladies' team two out of three games on November 10. Following are the scores: Gorgona, 503, 500, 611; Empire, 506,499, 542.

At the meeting of the discussion club held on November 9, led by F. G. Smith, the subject discussed was "Fellowship."

The following program was given by the literary society on November 11: Paper on socialism, H. W. Sawtelle; article on eating, J. H. Cash; parliamentary quiz, J. H. McNeil; "How to improve the society," Perry Brown.

At the meeting of the committee on Christmas celebration, held on November 10, the following officers were elected: Chairman, W. W. Warwick; chairman, finance committee, T. L. Clear; treasurer, E. P. Beck; secretary, A. B. Dickson.

A big smoker will be held on November 18 to which every man in Empire is invited. In addition to sketches by Young and Evans, and King and Cullen, there will be numbers of shorter duration.

At a meeting of the Empire Dramatic and Musical Society held on November 12, A. B. Dickson was elected president, and Miss Lucy Clark, secretary and treasurer. The society plans to give an oratorio in December; a minstrel show and play in January, and a light opera in February.

GORGONA.

The pool committee has arranged a handicap pool tournament for November, the winner to receive an ivory-tipped jointed cue. The following men are entered: Emery, Ewing, Gowan, Goree, Montgomery, Lux, Clarke, Chambers, Pierson, Kaufmann, Kneeland, Ashman, Canfield, Sheridan, Burmeister and Robitoy. The tournament began on November 14.

The 200 or over bowling scores for the week were made as follows: Arnold, 200, 200; Witmer, 209; Roper, 205; Halderman, 202, 210; McConaughey, 223, 226; Hopkins, 203, 245.

The local team took three straight bowling games from Culebra's first team on Saturday, November 12. Scores: Gorgona, 781, 752, 832; Culebra, 702, 737, 694.

The Culebra-Gorgona basketball game on Saturday night was a victory for Gorgona by a score of 32 to 15.

GATUN.

Gatun defeated the Cristobal second bowling team two games out of three on Thursday evening, November 10. Scores: Gatun, 827, 784, 682; Cristobal, 763, 737, 876.

A meeting of the committee, which is to arrange for the Christmas celebration, was held on Tuesday evening, November 15, at the clubhouse. The celebration will be on a much larger scale than in any previous year.

On Wednesday evening the Spanish class will hold its first meeting. The Y. M. C. A. will try to organize a class in any study in which at least five men are interested and for which a teacher can be secured.

The executive council, consisting of Col. Sibert, Mr. Windes, Nat Johnson and Dr. Vaughn, met last Friday night. It was decided to adopt the committee idea in conducting the work of the association. Mr. Windes, Dr. Vaughn and the secretary will act as a special committee to select the following committees: Library and reading room, membership, visitation of sick, bowling, pool and billiards, social and entertainment, house, barber shop, gymnasium, and religious work. On Saturday evening of this week, a committee will meet to consider plans for increasing the membership of the association. A campaign will probably be launched.

Several new sets of chessmen have been ordered from the States and a chess and checker tournament will be started when the equipment arrives.

The committee on visitation of the sick would appreciate being notified of the illness of any of the men of Gatun. Such notices can be telephoned to the clubhouse.

CRISTOBAL.

The final bowling games of the preliminary series for the Isthmian championship were rolled at Cristobal on Saturday night between Gatun and Cristobal. Cristobal won by the following scores: Gatun, 776, 847, 818; Cristobal, 877,773, 842.

In the basketball game held at Cristobal on Saturday night between Gatun and Cristobal, the latter team won by the score of 11 to 8.

The standing in the interassociation basketball league is as follows:

	Won.	Lost.	Per cent.
Cristobal	4	0	1000
Gatun	2	1	666
Empire	1	2	333
Gorgona	1	2	333
Culebra	0	3	000

Misdirected Letters.

Ancon, C. Z., November 16, 1910.

The following insufficiently addressed letters originating in the United States and its possessions have been received in the office of the Director of Posts and may be secured upon request of the addressee:

Tide Table.

The following table shows the time of high and low tide at Panama for the week ending November 23, 1910. (75th meridian time):

DATE.	Low.	High.	Low.	High.	Low.
	A. M.	A. M.	A. M.	P. M.	P. M.
November 17	......	3.22	9.43	3.52	10.02
November 18	......	4.07	10.28	4 37	10.48
November 19	......	4.52	11.15	5.23	11.36
			P. M.		
November 20	......	5.38	12.02	6.10	......
November 21	12.25	6.27	12.51	7.00	......
November 22	1.18	7.18	1.45	7.55	......
November 23	2.16	8.16	2.43	8.57	......

LOST—A Greek letter fraternity pin set with pearls and garnets and engraved "F. C. Nichols" on the back. Finder will please return to F. C. Nichols, Balboa, C. Z., care Union Oil Company, and receive reward.

MOVEMENT OF OCEAN VESSELS.

The following is a list of the sailings of the Panama Railroad Steamship Company, of the Royal Mail Steam Packet Company, of the Hamburg-American Line, and of the United Fruit Company's Line, the Panama Railroad Company's dates being subject to change:

NEW YORK TO CRISTOBAL.

Advance	P. R. R.	Thursday	Nov. 10
Ancon	P. R. R.	Saturday	Nov. 12
Panama	P. R. R.	Wednesday	Nov. 16
Allianca	P. R. R.	Tuesday	Nov. 22
Colon	P. R. R.	Monday	Nov. 28

CRISTOBAL TO NEW YORK.

Advance	P. R. R.	Tuesday	Nov. 22
Panama	P. R. R.	Monday	Nov. 28
Allianca	P. R. R.	Sunday	Dec. 4
Colon	P. R. R.	Saturday	Dec. 10

A fortnightly service of the *Cristobal* and *Ancon* will be maintained as nearly as possible, leaving Cristobal on or about the 4th and 25th of each month. Due notice of the sailings of these ships from the Isthmus will be given. On the outward voyage these ships sail from the pier at the foot of 12th street, Hoboken, N. J.

NEW YORK TO COLON.

COLON TO BARBADOS, CALLING AT TRINIDAD.

Magdalena	R.-M.	Tuesday	Nov. 22
Clyde	R.-M.	Tuesday	Dec. 6
Atrato	R.-M.	Tuesday	Dec. 20

The next sailing of the Leyland Line will be as follows: *William Cliff* on or about November 26, for New Orleans, via Kingston, Ja.

Hamburg-American steamers leave for New York at 10 a. m., and for Port Limon every Tuesday or Wednesday.

Royal Mail steamers leave for New York on alternate Mondays at 5 p. m., for Southampton on alternate Tuesdays at 10 a. m.

United Fruit Company's ships for New Orleans leave on Thursday at 3 p. m., and for New York, beginning November 17, on Thursday at 11 a. m.

Sailings of the French line (Cié Générale Transatlantique) for Venezuelan ports, Martinique and Guadeloupe on the 3rd and 20th of each month.

Proposals for Excavation in Canal Prism.

OFFICE OF CHIEF QUARTERMASTER,
CULEBRA, C. Z., November 2, 1910.

Sealed proposals for excavation of about 112,450 cubic yards of earth located at point 4-B, mile 29, on the Chagres River, will be received here until December 1, 1910, and then opened. Full information will be furnished by the division engineer, Empire, Canal Zone. Envelopes containing proposals must be endorsed "Proposals for excavation in Canal prism", and addressed

C. A. DEVOL,
Chief Quartermaster.

CANAL RECORD

Volume IV. ANCON, CANAL ZONE, WEDNESDAY, NOVEMBER 23, 1910. No. 13.

The Canal Record

Published weekly under the outhority and supervision of the Isthmian Canal Commission.

The Canol Record is issued free of charge, one copy each, to all employes of the Commission and Panama Railroad Company whose names are on the gold roll. Extra copies and back numbers can be obtained from the news stands of the Panama Railroad Company for five cents each.

Address all Communications
THE CANAL RECORD
Ancon, Canal Zone,
Isthmus of Panama.

No communication, either for publication or requesting information, will receive attention unless signed with the full name ond address of the writer.

NOTES OF PROGRESS.

Chairman's Monthly Report.

The report of the Chairman of the Isthmian Canal Commission for the month of October is published in full in other columns of this issue of THE CANAL RECORD. It gives a detailed account of the progress of Canal work in all departments and divisions.

Excavation in Chagres District.

On November 17, nine steam shovels of the 100-class, working in the Chagres district of the Central Division, excavated 12,654 cubic yards of material, or an average of 1,406 cubic yards per shovel for the 8-hour working day. The shovels were under steam 72 hours; were actually at work 54 hours and 25 minutes, and were delayed 10 hours and 35 minutes waiting for cars. Other delays were experienced on account of cleaning track, cleaning dipper, and repairing shovel.

Economy in Use of Dynamite.

The amount of dynamite in tons of 2,240 pounds, used in the Central Division for the months of August, September and October for the years 1908, 1909 and 1910, is as follows:

YEAR.	August.	September.	October.	Total.
	Tons.	*Tons.*	*Tons.*	*Tons.*
1908	322.21	324.65	327.75	974.61
1909	297.90	360.20	295.20	953.30
1910	191.30	199.05	153.23	543.58

The amount of rock excavated during the period in question was as follows:

YEAR.	August.	September.	October.	Total.
	Cu. Yds.	*Cu. Yds.*	*Cu. Yds.*	*Cu. Yds.*
1908	907,746	1,054,526	1,015,143	2,977,415
1909	1,043,355	1,107,649	1,196,297	3,347,301
1910	1,177,621	1,114,765	1,076,678	3,369,064

From this it will be seen that only 55.77 per cent as much dynamite was used during August, September and October of 1910 as was used for the same months in 1908, and 57.02 per cent as much as was used in the corresponding months in 1909.

The total saving for August, September and October, 1910, as compared with the corresponding months of 1908, is 431.03 tons (of 2,240 pounds), which at the present price of dynamite, amounts to $115,939. To this should be added the cost of handling, loading, shooting, etc., estimated at $30 per ton, or $12,930 additional saving. The total saving, therefore, exclusive of drilling and blasting or of exploders and connecting wire, which are assumed to have remained constant, is $128,869 for the period of three months, an average of $42,956 per month. This is the result of efforts made for some time past to reduce the consumption of dynamite, and the reduction has been especially marked since July 1, 1910.

Hydraulic Fill of Gatun Dam.

The hydraulic fill of the east section of Gatun Dam, which was suspended late in August will be resumed and two 20-inch suction dredges which have been pumping into the west section will be set at work on the east section. The filling of the east section was suspended, in order that the material already pumped in, which had reached an elevation of about 57½ feet above sea level, might consolidate and dry out, and that the filling of the west section on which little had been done might be advanced to a stage secure against the November floods of the Chagres. The fill of the west section has actually advanced more rapidly in proportion than the building of the toes, and the temporary suspension will, therefore, give an opportunity for increasing the proportion of dry fill. Little chance will be given during the months of November and December for the drying out of the east section, and the dredges will, therefore, continue to pump into that section until the beginning of the dry season, when they will again be transferred to the west section, and the eastern half will be allowed to consolidate and dry out during the whole of the dry season. The fill in the western section is now at 31.7 feet above sea level, and that in the east section at 56 feet above sea level, which is about 1½ feet lower than when the hydraulic work was suspended in August, the subsidence being due to consolidation and drying out of the material.

Concrete Wagon Bridge Over Mandingo River.

The Las Cascadas-Gorgona section of the Canal Zone highway is completed, with the exception of three-quarters of a mile of metaling, and a bridge over the Mandingo River between Bas Obispo and Gorgona. Plans for a bridge, which will span the stream at the site of the present ford, have been prepared in the office of the resident engineer at Empire. They provide for a reinforced concrete structure, with a floor supported by two 50-foot piers resting on concrete footings 5 feet 6 inches by 16 feet. Each pier will be 4 by 16 feet at the base and 3 by 12 feet at the top, and the distance between piers of 23 feet 6 inches from center to center. The length will be about 130 feet. The road surface at this point will be 93 feet 6 inches above sea level and about eight feet above the normal level of Gatun Lake. The present river level is at about elevation 60 feet.

It is estimated that the approaches to the bridge will require approximately 12,000 cubic yards of fill. The heaviest fill will be on the Gorgona side where the bank has a gradual slope, and there, an embankment 300 feet long must be made. Less than 100 feet of fill will be required on the Bas Obispo side where the bank descends more abruptly. There will be used in the construction of the bridge, according to the estimate, 409 cubic yards of concrete and 16½ tons of old French rail. About 200 cubic yards of excavation will be necessary in preparing for the pier foundations.

Gatun Dam Spillway.

The amount of concrete and large rock laid in the spillway of Gatun Dam during two weeks ending November 19, is shown in the following statement:

DATE.	Cubic Yards.		
	Concrete	Large rock.	Total.
November 7	202	4	206
November 8	246	12	258
November 9	242	6	248
November 10	204	10	214

Petition of Hourly Employes.

During the visit of President Taft, on November 16, he listened to petitions from the Americans on the Canal work, who are employed by the hour, in which an increase in pay and annual leave of six weeks, instead of two weeks, were requested. The employes were informed that an answer would be given them as soon as the President arrived in the States. That night a meeting of the boilermakers employed at Gorgona shops was held, and a notice of five days was given, at the end of which the resignations of the boilermakers would become effective, unless their demands were acceded to. On November 22, practically all of the first grade boilermakers at Gorgona had quit work. There are 122 in this grade, and up to quitting time on November 22, only two of them had expressed a desire to withdraw their resignations. About 75 of the men have applied for, and have been granted transportation to the States; others

NOTES OF PROGRESS.

(*Continued.*)

express an intention of leaving for New Orleans by the next ship, and still others say they will remain on the Isthmus at other work until the matter is settled.

The petition of the hourly men had been considered and refused by the Commission, prior to the arrival of the President. On Sunday, November 20, the machinists held a meeting in Colon, at which it was decided to take no further action until the decision of the President had been received.

Ancon Crusher.

A statement of the rock crushed at Ancon quarry during two weeks ending November 19, follows:

DATE.	Hours worked.	Cubic yards.
November 7	7:50	2,920
November 8	6:50	2,710
November 9	5:25	2,040
November 10	5:45	2,635
November 11	7:40	2,632
November 12	7:55	2,730
Total	41:25	15,667

DATE.	Hours worked.	Cubic Yards.
November 13 (Sunday)	8:00	3,087
November 14	4:50	1,700
November 15	7:20	2,555
November 16	7:20	2,811
November 17	8:00	2,516
November 18	8:10	2,976
November 19	7:30	3,249
Total	51:10	18,894

Porto Bello Crusher.

A statement of the work done at Porto Bello crusher, by days, for two weeks ending November 19. follows:

DATE.	Hours worked.	Cubic yards.
November 7	7:47	2,586
November 8	9:40	3,007
November 9	6:33	1,973
November 10	7:45	2,499

November 18	7:46	3,058
November 19	8:25	3,574
Total	44:20	18,481

Spanish War Veterans.

THE CANAL RECORD:

Sir: I am heartily in favor of the movement of organizing a camp of the United Spanish War Veterans Association on the Isthmus. Anything I can do to forward this movement I will be glad to do. Yours truly,

J. WARREN KEIFER, *M. C.*
Past Commander-in-Chief,
Spanish War Veterans Association.

All those eligible to membership in the United Spanish War Veterans Association please send their names to Mr. Charles Cameron, Culebra, C. Z. This applies to all eligibles, other than those living in Gatun or Cristobal.

CONCRETE WORK IN THE LOCKS.

The highest record to date of concrete laying in the locks was made by the Pacific Division on November 21, when a total of 5,564 cubic yards was placed in the locks at Pedro Miguel and Miraflores. This exceeds all previous records by 1,133¾ cubic yards. The next highest record was made at Gatun on November 16, when 4,443¼ cubic yards were placed in the locks.

On November 21, when 5,564 cubic yards of concrete were placed in the Pacific Division locks, the operated plant consisted of six 2-yard mixers at Pedro Miguel, and of two 2-yard, four ½-yard, and one ⅓-yard mixers at Miraflores, representing in all 9⅙ two-yard mixers. A total of 78.46 mixer hours was worked, an average of 8.55 hours per mixer, the output representing 70.92 cubic yards per hour per 2-yard mixer.

At Gatun, on November 16, the operated plant consisted of eight 2-yard mixers and they worked a total of 65 mixer hours, an average of 8.1 hours per mixer, and the output averaged 68.3 cubic yards per hour per 2-yard mixer.

GATUN LOCKS.

Concrete work in Gatun Locks is about 43 per cent completed, 898,196 cubic yards out of a total of 2,085,000 having been placed at the close of work on November 19. The output for the auxiliary plant has been reduced for several days past on account of the necessity of using the narrow gage equipment in taking out the slide, which occurred at the south end of the locks on November 9. It is hoped that the removal of this slide will be completed in a few days, when the output from the auxiliary plant will be restored to its normal figure.

A statement of the amount of concrete placed in the locks each 12-hour day for the week ending November 19, and of the total follows; and a similar statement for the work in the Spillway of Gatun Dam is published elsewhere in this issue:

DATE.	CONSTRUCTION PLANT. 2-Cubic yard mixers.			AUXILIARY PLANT. 2-Cubic yard mixers.			Large stone.	Total.
	Concrete placed.	Hours worked.	No. of mixers	Concrete placed.	Hours worked.	No. of mixers		
	Cu. Yds.			*Cu. Yds.*			*Cu. Yds.*	*Cu. Yds.*
November 14	2,084	36:30	6	576	8:40	2	291	2,975
November 15	2,118	35:08	6	712	11:40	2	231¼	3,061¼
November 16	2,642	43:08	6	1,552	22:00	2	236¼	4,443¼
November 17	1,811	29:18	6	538	10:10	2	201½	2,559½
November 18	1,931	32:20	6	584	10:40	2	202¼	2,717¼
November 19	2,198	35:37	6	622	10:40	2	299½	3,142½
Portable ⅓-yard mixer	......	......	......	69	......	......	......	......

Previously reported	......	......	......	......	......	......	......	879,297¼
Grand total	......	......	......	......	......	......	......	898,196

The 69 cubic yards shown for the portable ⅓-yard mixer are included in the totals for each day and were placed as follows: November 14, 24; November 16, 13; November 17, 9; November 19, 23.

PEDRO MIGUEL LOCKS.

Concrete work in the locks at Pedro Miguel is nearly 50 per cent completed, 415,711 cubic yards out of a total of 837,400 having been laid at the close of work on November 19. The record of concrete placed during each of the 8-hour working days of last week, follows:

DATE.	CONSTRUCTION PLANT. 2-Cubic yard mixers.			AUXILIARY PLANT. 2-Cubic yard mixers.				Total.
	Concrete placed.	Hours worked.	No. of mixers	Concrete placed.	Hours worked.	No. of mixers	Large stone.

PRESIDENT TAFT'S VISIT.

His Speeches and Impressions While Here.

During his visit of four days on the Isthmus, November 14 to November 17, President Taft made two public addresses, the first at a meeting of the employes of the Commission at Paraiso on November 15, and the second at the banquet in his honor given by the President of the Republic of Panama in the city of Panama on November 16. On the eve of his departure on November 17, he handed to the representatives of the press who accompanied him a formal statement of his impressions. The authorized text of these deliverances is appended.

I.

HIS IMPRESSIONS.

This is the fifth time that I have visited the Isthmus and have gone over the whole line and looked into every part of the improvement. It is about 22 months since I was here the last time and the progress which has been made is most satisfactory; indeed, it is remarkable. The first thing that strikes one is the fact that work is being done apparently on every foot of the fifty miles of the Canal, and is being done under an organization of men, plants and materials that operates as economically and effectively as if it were a machine with Colonel Goethals in control of the lever, which sets and keeps the whole machine in operation. In my visits prior to and including 1907 the question of houses for employes; of commissary and conveniences of life; of the securing of adequate labor, presented serious obstacles to overcome. Now all those questions have largely disappeared and are mere matters of smoothly working routine.

When I was here 22 months ago, the main question was the confirmation of the judgment of Congress in having adopted the lock type of canal instead of the sea level type. As to the question of the lock type of the Canal, the construction of the Gatun Dam and the Locks to the extent to which they are completed has removed from every impartial observer the slightest doubt as to the wisdom of the decision made and the feasibility of the plan adopted, and this conclusion has been further confirmed and clinched by the difficulty of slides in the Culebra Cut, which, while for a canal of an 85-foot level, make only additional excavation that can be readily taken care of, show that an attempt to sink the Canal in the Culebra Cut of nine miles to a depth 80 feet below the present proposed level would lengthen the time of construction so as to weary the patience of the American people, would make the cost almost prohibitory, and would leave exceedingly doubtful the question whether, with the difficulty of the Chagres River, such a canal was possible at all.

The Gatun Dam and Locks, with the lake now 18 feet deep and slowly increasing to a depth of 85 feet, which constitute the key of the whole plan of the Canal, are so far advanced that taken with the Culebra Cut and the locks at Pedro Miguel on the Pacific side, they give a definite picture of what the Canal is to be and inspire one with an eagerness for completion that makes itself manifest throughout the entire human organization created and maintained under Colonel Goethals and his assistants.

The reports of slides and caving in of the banks in the Culebra Cut already referred to, that come from time to time through the press, grow out of a peculiar geological formation in which igneous rock and sedimentary rock lie in juxtaposition, and the sedimentary rock loses its supporting quality through its exposure to the air, or is of such weak structure as to collapse when the balanced support given in its natural position is withdrawn. Such slides, however, can be easily removed by further excavation and a widening of the slope where they occur, and they merely add something to the amount of excavation heretofore calculated to be necessary and to the cost, but the percentage thus added, both in time of excavation and cost, is very small, and not enough to increase the estimates made by Colonel Goethals as to either the time of completion or the total cost.

The work is so far advanced that the time has come for the discussion of plans for the management and maintenance of the Canal; for the tolls to be charged; for conveniences at terminals; for economical disposition of the vast plant; for arrangements of peculiar importance to the United States Navy, and the proper means of policing and defending this greatest constructive work of many centuries.

The *esprit* that one finds among the Canal employes and the enthusiastic, intelligent and patriotic leadership that Colonel Goethals and his assistants show at every turn and under every emergency, leave no doubt that the Canal will be fully completed within the time guaranteed, to wit, the first of January, 1915, and within the estimate made by Colonel Goethals in 1908 of $375,000,000.

During this wet season we have been favored with clear weather free from rain during our stay of four days.

The Government of Panama is peacefully pursuing its course and enjoying the prosperity that the investment of $28,000,000 or $30,000,000 a year upon the Isthmus necessarily involves for such close neighbors as the people of Panama, and there is a political calm in the Republic. The authorities in charge manifest every disposition to assist the United States in its construction of the Canal and to conform in every detail to the obligations of the Treaty between the United States and Panama, which makes such generous provision for the successful carrying through of the great enterprise so far as local conditions affect it.

II.

ADDRESS AT PARAISO.

Ladies and Gentlemen—I have come here tonight at the instance of Colonel Devol, who is at the head of the Zone branch of the Red Cross, to say a word in behalf of that institution; to encourage those who are its members to continue their support, and to urge others who are not members to become so, because of its usefulness, not only to this community itself, but also to your international neighbors.

I need hardly rehearse the history of the Red Cross. Those of you who are members have had occasion to read it in the *Red Cross Bulletin*, and know that it originated in the charitable inspiration of a Swiss gentleman named Dunant, who was present on the field of battle of Solferino in the French, Italian and Austrian War in 1859. Through his intercession the governments of Europe were induced to send delegates to a conference to see if societies devoted to the aid of the wounded and suffering from the violence of battle might be encouraged by the combatants and made immune from attack by either party. The efforts of this gentleman continued during the period of our Civil War, in which the United States Sanitary Commission was organized to assist the Medical Corps of the Army in the service to the dying and wounded. The United States Sanitary Commission expended $5,000,000 in this assistance and received the thanks and the lasting gratitude of all the men connected with the armies on both sides. Growing out of the efforts of Mr. Dunant, and the lesson of the United States Sanitary Commission, the Red Cross Association assumed a definite form, and in 1882 the United States became one of the national signatories to a treaty to recognize the Red Cross in war as entitled to immunity from attack, because of its use to all combatants. A branch of the Red Cross was incorporated in this country in 1893, but did not live to successful and prosperous growth. In 1903 it was reorganized on its present basis. Miss Mabel Boardman of Washington, procured the reincorporation by Congress and the dissolution of the old association, and under her inspiring leadership it has come to very world-wide usefulness. It does not compare in numbers or in endowment fund to similar associations in foreign countries, but it is growing. There is a plan now on foot to raise an endowment fund of $2,000,000, and portions of this fund have been assigned to various cities in the ratio of their population, and the interest of the leading citizens of the country has been enlisted to secure the proper amount. The amount assigned to New York, for instance, is half a million dollars. We have already raised $418,000, and the prospect of making the $500,000 is exceedingly promising. Similar steps have been taken with respect to all the large cities, and I think we may reasonably hope that in the course of a year or more we shall have a fund of $2,000,000, the income of which can be used to form an emergency fund from which, without inviting special aid, effective assistance can be offered by the association to every people in the world who may be suffering from any calamity.

Of course, the primary cause and origin of the Red Cross was the suffering in the time of war in battle, and the lack of suitable medical and nursing assistance, and that is its primary purpose now. But as the world grows older, as intercommunication between peoples becomes closer, as the destructive freaks of nature work hardship and suffering and death to a people, the fact is soon known the world over, and the closer brotherhood of man prompts the tendering of assistance across international lines.

You have organized on the Isthmus. You have a membership that comprises ten per cent of American adult whites on the Isthmus, which is a far higher percentage than is shown in any state in the union; and you have already contributed $1,500 to the assistance of your brethren in Costa Rica, who suffered from the late earthquake. I am not here, therefore, to teach you your duty in this regard. You know it, and, knowing it, have acted. I am here to congratulate you on what you have done, and to say to you only, "Do not weary of well doing." I observe that the members of the Red Cross are seated together, and then that there are others who are not members. I urge these others, if they would spend some of their hard earned money for the benefit of their fellowmen, that they cannot find an instrumentality more effective, more economical, and better adapted to the purpose than the Red Cross; and that every dollar that they subscribe to that institution will be expended for the aid of human kind, and will add to the sum of human happiness.

I have referred to the endowment fund. The only permanent fund that the association has comes from the membership dues; from what is left over from special donations, not all used for the particular purpose for which they were given, and the endowment fund. Of course, whenever there is a great disaster the association is in the habit of calling for special contributions, and at such a time it is easy to awaken the generosity of the American people, and in time to secure ample funds. But what the society needs is ability instantaneously to send pecuniary aid to relieve such suffering. The membership dues furnish some funds for this purpose, and therefore everybody who becomes a member and pays the yearly dues is a contributor to this particular phase of the cause. This is why it is important that the membership of the association should be increased in order that its usefulness should be increased. Hence, the appeal for new members.

And now may I digress from the chief purpose of this meeting and from that which was the occasion for calling it, for a few words concerning the great work of construction in which you are all engaged. This is the fifth visit which I have made to the Isthmus since the United States acquired title to the Canal from the French canal company. The first I made in April, or May, of 1904. Then, substantially no work had been done except a little experimental excavation in Culebra Cut under the shadow of Contractor's and Gold Hills. It was not then settled whether the Canal should be sea level or a lock canal. Gatun and Miraflores and Pedro Miguel were sleeping peacefully, with no knowledge of the world-wide reputation that they were subsequently to acquire. The hills that the relocated Panama railroad has cut through; the valleys that have been crossed by its immense fills were in the center of undisturbed forest and jungle. Colon was reeking with filth and disease. The city of Panama was picturesque, but its condition was unsanitary and its streets were so badly paved as to make a visit to the city most uncomfortable. There was a notch at Culebra between Gold Hill and Contractor's Hill, and there was a cut in the surface of the earth in that neighborhood to show where the French intended the Canal should be, but with that exception it was difficult from anything that appeared on the surface to stir one's imagination and create in his mind's eye a canal upon the bosom of which should float the commercial and military navies of the world.

Since that time there has been developed a wonderful organization by which this greatest modern work is being carried on to a successful completion. Homes have been made for 40,000 strangers. Food has been furnished; machinery has been set up; cars and locomotives have been bought and placed upon the railroad. The Zone, with the two cities at either end, has been subjected to regulation by sanitary scientists so that yellow fever and malignant malaria, and the other diseases that formed an insuperable obstacle in the French construction have been driven off the Isthmus. A plan for the Canal has been adopted, which, by closing with dam and locks the basin furnished by nature, proposes to turn the Chagres River into an immense lake for navigation and to rob the river of all its destructive capacity; and the great machine made up of human and mechanical parts has been set going in this strip of fifty miles by ten until now the work has reached a point where the mere inspection of it rouses the intensest interest, the greatest enthusiasm and the profoundest admiration for Colonel Goethals and his faithful staff of experts and all the men and women, who, by their work and their presence on the Isthmus, have made this result possible.

As the great creation takes form and the plan which was so clear to the professional men who designed it, opens itself in concrete mold to the observation of the layman, the eagerness with which we all look forward to the completion of the work grows apace, and we envy the record of the men to whose skill and courage and energy, persistence and foresight, the Canal will forever form an enduring monument.

It has been given me to visit it, as I have said, five times, and I cannot exaggerate the pleasure that these opportunities have made for measuring the extent of the work and its rapid progress. Americans are justified in an intense pride that so great a work is the creation of their own people. This Canal will radically change the world avenues of trade. It will double the naval strength of the United States. It will greatly cheapen transportation between the Atlantic and the Pacific seaboards of the United States. It will bring our country far closer to the western shore of South America, to Australia and the islands of the Pacific, and it will come to be regarded, I hope, as a permanent evidence to the world of the generous willingness of our country to expend from her great national wealth hundreds of millions for the general improvement of the world's trade.

I congratulate all who hear me and who are of the organization under the Canal Commission, whether you be officials in high authority, or only in the ranks of the army that is fighting this battle with nature, upon the high satisfaction that you must always feel after the work is done that you were among those who contributed to its success.

III.

SPEECH IN PANAMA.

President Arosemena and my friends of Panama—I am always glad to accept your hospitality. As once I have done in the case of Mexico, so now in the case of Panama, I have ventured to violate the customary limitation upon the movements of the President of the United States by leaving the soil where it exercises sovereignty to come beneath the flag and the protection of a friendly neighbor.

The birth of the Republic of Panama and the peculiar interest that the United States has had since that birth in Panama's welfare and prosperity found a common cause in the construction of the Panama Canal. The Treaty between the two countries makes the United States the guarantor of the integrity of the Panama Republic, and, therefore, in a sense the guardian of the liberties of her people secured by its constitution. Our responsibility, therefore, for your Government requires us closely to observe the course of conduct by those selected as the officials of your Government after they are selected, and to insist that they shall be selected according to law. All this, I say, makes us especially interested in what is done in your Government, but this relation neither calls for nor permits annexation. We are here to construct, maintain, operate and defend a world Canal, which runs through the heart of your country, and you have given us the necessary sovereignty and jurisdiction over the part of your country occupied by that Canal to enable us to do this effectively. We do not wish any further responsibility in respect to your Government than is necessary in the carrying out of our purpose to construct and maintain this Canal. We have no desire to add to the territory under our jurisdiction except as the operation of the Canal may require it. We have guaranteed your integrity as a Republic, and for us to annex the territory would be to violate that guaranty, and nothing would justify it on our part so long as Panama performed her part under the Treaty. I wish to make this statement as emphatic as possible, because irresponsible persons, without the slightest foundation of fact, have started the rumor that my visit to the Isthmus was for the purpose of preaching annexation, when nothing could be further from the truth. Panama cannot be too prosperous, cannot be too healthy, cannot be too strong a Government for the United States. And I know I speak the unanimous voice of the people of the United States when I say that they would be most reluctant to have to take over the responsibilities of government in this neighborhood, beyond that of the Canal Zone, and that they would feel utterly dishonored in so doing unless there was some conduct on the part of the Panamanian people which left them no other possible course. I am glad to say that there is not the slighest indication or probability that the Panamanian people will ever pursue a policy which will require such a change in the present most satisfactory relations between the two Republics.

Farewell Reception and Banquet.

The Canal Zone Federation of Women's Clubs will tender a farewell reception at Colon on November 26 to Mrs. Lorin C. Collins. Tickets have been sent to club members and they will be good for transportation on the train leaving Panama at 10.45 o'clock in the morning, and leaving Colon at 4.35 in the afternoon.

The Strangers Club of Colon will tender a farewell banquet at the clubhouse at 8.30 o'clock on the night of November 26 to Judge Lorin C. Collins, who leaves for the States on November 28, and will not return to the Isthmus.

Band Concert.

A concert will be given by the Isthmian Canal Commission Band at Corozal, C. Z., on Sunday, November 27, 1910, at 7.30 p. m. The program follows:

1	March—*Columbia Phonograph Co*	Burton
2	Selection—*The Chocolate Soldier*	Straus
3	El Gitanillo—*Tango*	Franco
4	Overture—*Poet and Peasant*	Suppe
5	Intermezzo—*Silver Bell*	Wenrich
6	Medley Selection—*Popular Hits*	Alford
7	Waltz—*Bad'ner Mad'ln*	Komzak
8	Medley March—*Any Little Girl That's a Nice Little Girl*	Fischer
9	Selection—*Bohemian Girl*	Balfe

CHAS E. JENNINGS, *Musical Director.*

The next concert will be given at Gorgona on Sunday, December 4, at 6 p. m.

Married.

OGOREK-MASTERSON—On November 14, in the Commission chapel, Cristobal, Fannie Elizabeth Masterson of Colon to John Ogorek of Cristobal, the Rev. A. A. Nellis officiating.

CANAL WORK IN OCTOBER.

Monthly Report of the Chairman and Chief Engineer to the Secretary of War.

CULEBRA, C. Z., November 15, 1910.

The Honorable the Secretary of War,
Washington, D. C.

SIR: I have the honor to submit the following report of operations on the Isthmus for the month of October, 1910:

Department of Construction and Engineering.

The following table summarizes the principal items of construction work accomplished by the Atlantic, Central and Pacific Divisions during the month:

ITEM.	Unit.	Atlantic.	Central.	Pacific.	Total.
Work excavation, dry	Cubic yards	118,327	1,591,723	17,283	1,727,333
Work excavation, wet	Cubic yards	549,788	....	507,873	1,057,661
Total work excavation	Cubic yards	668,115	1,591,723	525,156	2,784,994
Plant excavation, dry	Cubic yards	34,815	10,532	900	46,247
Plant excavation, wet	Cubic yards	28,791	....	24,350	53,141
Total plant excavation	Cubic yards	63,606	10,532	25,250	99,388
Total Canal excavation	Cubic yards	731,721	1,602,255	550,406	2,884,382
Material placed in dams	Cubic yards	740,351	....	54,370	794,721
Concrete laid	Cubic yards	94,364	....	83,581	177,945
Explosives used	Tons (Gross)	99.47	153.23	32.49	285.19
Rock drilled	Feet	84,275	374,934	39,923	499,132
Tracks removed	Miles	....	9.27	....	9.27
New tracks laid	Miles	2.85	15.93	1.80	20.58
Rock crushed	Cubic yards	78,080	371	67,065	145,516
Cement used	Barrels	93,581	32	85,540	179,153
New roads built	Miles	0.14	....	....	0.14
Water mains laid	Feet	7,185	2,415	445	10,045
Sewers laid	Feet	1,812	1,092	1,444	4,348
New drains and ditches dug	Feet	7,200	....	4,859	12,059
Average daily force	....	8 699	9,074	4,119	21,892
Average rainfall	Inches	13.42	13.09	12.27	14.39

Atlantic Division.

GATUN LOCKS.

Excavation—Shovel excavation during the month was confined to the lower chamber. A total of 102,796 cubic yards of material was removed. Of this amount, 19,349 cubic yards were excavated outside the limits of the Canal prism for the impervious back fill. The total material removed to date amounts to 5,411,253 cubic yards, of which 4,725,811 cubic yards have been removed from the Canal prism. The excavation is 92.6 per cent completed.

Receiving and Issuing Material—The receipts of material during the month were satisfactory in all cases.

OPERATION OF THE PERMANENT AND AUXILIARY CONCRETE CONSTRUCTION PLANTS.

	Permanent Plant.	Auxiliary Plant.
Length of working day (hours)	12.11	12.00
Average hours per day worked per strand of cableway laying concrete and large stone	8.10	....
Average number of mixers per day	6.00	2.00
Average hourly output per mixer, cu. yds	50.73	63.00
Average amount of concrete and large stone laid per hour, per strand of cableway, cu. yds	30.77	....
Total number cu. yds. of large rock laid by cableways	5,255¼	....
Total number cu. yds. of concrete laid by cableways	46,960	....
Total number of cu. yds. of concrete from this plant laid by derrick	1,696	....
Total number of cu. yds. of concrete placed	....	30,639½
Total number of cu. yds. of large rock placed	....	3,158½
Total amount large rock and concrete handled, cu. yds.	53,911¼	*33,798

*Figures in table are for bucket measurement, which exceeded place measurement by 760¾ yards.

Concrete Work—There was an increase of 10,228 cubic yards in the amount of concrete laid, as compared with the figures for the preceding month. The daily average for the 26 working days was 3,344 cubic yards. The total amount of concrete placed during the month was 86,948½ cubic yards, in which there are included 8,413¾ cubic yards of large stone. Of the total new concrete, 34,133½ cubic yards were placed in the upper lock, and 52,815 cubic yards in the middle lock. The concrete work in the locks was 41.4 per cent completed at the end of October.

Receipts of Crushed Rock and Sand—The plant at Porto Bello shipped 124 barge loads of crushed rock, the total output for the month being 78,080 cubic yards. The plant at Nombre de Dios shipped 88 barges containing 44,691 cubic yards of sand.

Power Plant and Pumps—The operation of the power plant and pumps during the month was satisfactory.

Iron and Steel Work—The top castings for the upper guard and operating gates were placed. The setting of quoin posts at the lower gates to the upper locks was continued, and two "A" anchors for the safety chains above the lower gates of the upper lock were set.

Back Fill—The back fill was increased by 58,859 cubic yards, making the total placed at the end of the month 107,645 cubic yards. The back fill is 8.89 per cent completed.

Form Work—Three additional steel tower forms were moved into the middle chamber during October, and wooden forms were constructed for the upper portions of walls, Stoney gate valves, and culvert entrances.

GATUN DAM.

Construction during the month increased the total fill, as determined by cross section of the material in place, by 740,351 cubic yards, making a total in place of 10,595,365 cubic yards.

Hydraulic Fill—The dredges pumped 480,732 cubic yards of material into the Dam, making the total hydraulic fill to date 5,460,189 cubic yards. At the end of the month, the water surface in the hydraulic fill east of the Spillway was at elevation plus 56, and in the hydraulic fill west of the Spillway at elevation plus 31.7.

Dry Fill—A total of 259,619 cubic yards was added to the dry fill on the north and south toes of the Dam during the month, making a total dry fill in place of 5,135,177 cubic yards.

GATUN SPILLWAY.

Concrete—The construction of the east and west approach walls was continued, 7,415 cubic yards being placed, of which 181 cubic yards were bulk rock. The total concrete in place is 102,020 cubic yards.

Excavation—For the forebay and for the foundations of the approach walls 34,880 cubic yards of material were excavated, making a total Spillway excavation of 1,518,005 cubic yards.

Cut-off Levee—Construction of the levee from Spillway Hill to Mindi Hill was continued, and 697 cubic yards were placed in the fill, making a total of 177,158 cubic yards.

HARBOR AND CHANNEL SECTION.

Excavation below Sea Level at Mindi—On October 24, dredge *No. 86*, which had been transferred from Gatun Dam to Mindi, began to cut through the levee and excavated 40,168 cubic yards of earth in the levee and on the east side of the prism prior to the end of the month.

Dredging from the Ocean to Mindi—Six dredges removed 485,054 cubic yards of earth and 24,566 cubic yards of rock from the Canal prism. In addition, 7,441 cubic yards of rock were removed from the French canal, 2,800 cubic yards of earth from dock No. 2 at Gatun, and 16,492 cubic yards of earth and 2,058 cubic yards of rock from the slip to the cement dock at Gatun. On October 31, 1910, 40 feet of water could be carried from zero to zero plus 2,000 feet; 30 feet to mile 5 plus 700 feet; 20 feet to mile 5 plus 2,550 feet, the junction with the French canal.

PORTO BELLO.

PERFORMANCE OF ROCK CRUSHER PLANT.

	Hours.
Length of working day	12:00
Average number of hours worked per day	9:08
	Cu. Yds.
Average amount per hour of working day	250
Average hourly output for possible working time of 301 hours and 15 minutes	259
Average amount per working hour	329
Total for month	78,080
Maximum day's output	3,872

SAND, STONE AND CEMENT SERVICE.

In connection with this service, plant steamed 10,024 miles, handled 836 barges, and carried about 3,608 passengers.

COLON BREAKWATER.

At Toro Point, 38,452 cubic yards of material were excavated, of which 30,762 cubic yards were placed in the breakwater, the remainder being used for ballasting the tracks. The double-track trestle was extended 513 feet.

MUNICIPAL ENGINEERING.

The reservoirs, water mains, sewers, roads, and oil pipe lines were maintained and extended as required to facilitate construction work. Work was continued on the Colon municipal improvements.

Central Division.

During the month of October, the total amount of material excavated by the Central Division was 1,602,255 cubic yards, of which 525,577 cubic yards were classified as earth and 1,076,678 cubic yards as rock. Of this quantity, 1,598,335 cubic yards were removed by steam shovels, and 3,920 cubic yards by sluicing (contract). Of the total, 1,591,723 cubic yards were primary excavation for the Canal prism, and 10,532 cubic yards were for tracks not useful after the Canal is completed.

The daily average number of steam shovels at work during the month was 47.50, and the total number of shovel days was 1,235, as compared with 46.92 shovels at work during the month of September with 1,173 shovel days.

For comparison with the work done by steam shovels during the corresponding month of the previous year, the following table is given:

Period.	Excavated by shovels.	Classification of material.		Av. No of shovels at work.	W'k'g days.	Av. yards per shovel day.
		Rock.	Earth.			
	Cu. Yds.	*Cu. Yds.*	*Cu. Yds.*			*C. Y.*
1909: Oct	1,510,760	1,190,304	320,456	47.23	26	1,230.1
1910: Oct	1,598,335	1,076,678	521,657	47 50	26	1,294.2

Rainfall at Empire: 1909, 21.13 ins.; 1910, 12.57 ins.

The above table shows the average output per shovel to be 5.21 per cent greater in October, 1910, than in the corresponding month of the previous year.

The total amount of material excavated from the prism in the Culebra section of the Central Division in October, 1910—1,320,314 cubic yards—was the greatest record in that section for the month of October, the next largest having been 1,302,901 cubic yards in October, 1909.

The total estimated amount of material to be removed in the Central Division was 97,125,018 cubic yards, and up to November 1, 1910, 64,913,538 cubic yards had been removed, leaving 32,211,480 cubic yards yet to be removed in order to complete all excavation in the Central Division. From these figures it will be seen that 66.84 per cent of all excavation in the Central Division had been completed up to the close of the month of October, and 33.16 per cent yet remained uncompleted.

Considering the two sections which compose the Central Division, the excavation completed and that yet to be completed at the close of October operations was as follows:

CULEBRA SECTION.

	Cubic Yards.
Completed	54,484,979
Yet to be completed	29,701,745

CHAGRES SECTION.

Completed	10,428,559
Yet to be completed	2,509,735

From the above figures it will be seen that the Culebra section is 64.72 per cent completed, and 35.28 per cent yet to be completed; the Chagres section is 80.60 per cent completed, and 19.40 per cent yet to be completed.

During the month 510 cubic yards of material were hauled from the Canal prism and dumped into the embankment for the roadbed of the relocated Panama railroad, in the vicinity of Pedro Miguel. The total amount of spoil from the Central Division used for this purpose to date is 3,714,828 cubic yards. The Central Division also delivered at Gatun 192,943 cubic yards of rock and earth for use in the construction of the Dam. The total delivered for this purpose to date is 2,178,542 cubic yards.

The daily average number of laborers at work on the whole division during the month was 8,179, and the daily average number of gold employes, 895.

Pacific Division.

DISTRICT NO. 1—LOCKS AND DAMS.

The total excavation during the month amounted to 18,183 cubic yards. Nothing was added to the dry fill in the west dam at Pedro Miguel, the total material in place at the close of the month remaining at 260,852 cubic yards. The back fill at Pedro Miguel was increased by 1,755 cubic yards, the total in place at the end of the month amounting to 18,276 cubic yards.

OPERATION OF THE PERMANENT AND AUXILIARY CONCRETE CONSTRUCTION PLANTS AT PEDRO MIGUEL.

	Permanent Plant.	Auxiliary Plant.
Length of working day, hours	8.00	8.00
Average number of hours per day worked laying concrete and large stone (actual working time)	6.34	*9.76
Average number of mixers per day	3.93	1.31
	Cu. Yds.	*Cu Yds*
Average hourly output per mixer (actual working time)	78.70	43.34
Average amount of concrete and large stone laid per hour per chamber crane (actual working time)	77.07	....
Large rock laid	133.00	106.00
Concrete laid	54,624.00	6,559.00
Total concrete laid	54,757.00	6,665.00

Auxiliary plant consists of two 2-cubic yard mixers, and locomotive cranes and derricks as placing plant.

*This is the total number of hours of all plant units, divided by 26—the number of working days.

At Miraflores, 14,370 cubic yards were added to the dry fill in the toes, and 40,000 cubic yards to the hydraulic fill in the core of the west dam, making the total at the end of the month 561,679 cubic yards and 178,587 cubic yards, respectively. No material was added to the back fill, leaving the total amount in place at the end of the month 133,545 cubic yards.

OPERATION OF THE PERMANENT AND AUXILIARY CONCRETE CONSTRUCTION PLANTS AT MIRAFLORES.

	Permanent Plant.	Auxiliary Plant.
Length of working day, hours	8.00	8.00
Average number of hours per day worked laying concrete and large stone (actual working time)	6.35	....
Average number of mixers per day	....	5.77
	Cu. Yds.	*Cu. Yds.*
Average hourly output per mixer (actual working time)	....	25.17
Average amount of concrete and large stone laid per hour, per crane (actual working time)	38.49	....
Large rock laid	246.00	351.00
Concrete laid	6,105.00	15,457.00
Total concrete laid	6,351.00	15,808.00

Permanent plant is one berm crane, placing concrete supplied from two 2-cubic yard auxiliary mixers installed in storage trestle.

Auxiliary plant is two 2-cubic yard and five ½-cubic yard mixers; concrete was dumped directly into forms from mixers, or taken to forms in dump cars.

PEDRO MIGUEL HANDLING PLANT.

The temporary mixer at the south end of the east storage trestle was completed about the middle of the month and was in use almost continuously after that time, furnishing concrete for the east head wall and the east forebay wall. There was no concrete mixed by the mixing plant at the south end of the west storage trestle, as the excavation in the southwest forebay was not completed. The concrete work at Pedro Miguel for October showed an increase of 10,158 cubic yards over the figures for September. The total amount placed was 61,422 cubic yards, including 239 cubic yards of large stone.

MIRAFLORES HANDLING PLANT.

Work at Miraflores was continued during October with the same plant which had been used during September. Work on the west storage trestle was continued and is 50 per cent completed. The total of concrete and large stone laid was 22,159 cubic yards, as compared with 18,133 cubic yards during September.

DISTRICT NO. 2—DREDGING.

The following is a statement of the output of the five dredges which were in operation during the month, and of the amount of material excavated hydraulically:

Dredge.	Type.	Work.		Plant.		Total.	Remarks.
		Earth.	Rock.	Earth.	Rock.		
		Cu. Yds.	*Cu. Yds.*	*Cu. Yds.*	*Cu. Yds.*	*Cu. Yds.*	
Cardenas	Dipper	61,240	700	....	....	61,940	Place measurement
Badger	Ladder	16,968	36,400	....	....	53,368	Place measurement
Marmot	Ladder	29,327	20,135	24,350	....	73,812	Place measurement
Mole	Ladder	19,600	3,915	....	....	23,515	Place measurement
Culebra	Suction	279,588	....	....	....	279,588	Scow measurement
Total	....	406,723	61,150	24,350	....	492,223	
Hydraulic excavation	....	*40,000	....	....	....	40 000	Place measurement
Grand Totals	....	446,723	61,150	24,350	....	532,223	

* Excavated from lower lock site at Miraflores.

CHAMÉ SAND EXCAVATION.

Approximately 44,800 cubic yards of sand were excavated at Punta Chamé and delivered at Balboa.

BALBOA TERMINAL HARBOR.

A total area of 97,150 square feet on the site of the proposed terminal harbor at Balboa was cleared of brush and mangrove trees, and 6,375 square feet were grubbed.

HYDRAULIC EXCAVATION PLANT.

The plant as a whole has been in operation during the greater portion of the month, and the material pumped has been deposited in the west dam at Miraflores. The coffer-dams, which are to form a pool for the suctions at the central pumping station, are under construction and about 50 per cent completed.

DISTRICT NO. 3—MUNICIPAL AND SANITARY IMPROVEMENTS.

The reservoirs, water mains, sewers, and oil pipe lines have been maintained, and work has been continued on the municipal improvements in the city of Panama.

DISTRICT NO. 4—ANCON QUARRY.

The quarry operations for the month were retarded on account of the placing of the dust screen, which was almost completed on October 31, and expected to be in operation early in November.

PERFORMANCE OF ROCK CRUSHER PLANT.

	Hours.
Length of working day	9:00
Average number of hours per day (actual working time)	7:35
	Cu. Yds.
Average amount crushed per hour of working day	286.60
Average amount crushed per working hour	350.90
Total output for the month	67,065

Relocation of Panama Railroad.

During the month 241,089 cubic yards of

material were excavated, making the total excavation at the close of the month 4,786,642 cubic yards, and 296,780 cubic yards of material were placed in embankments, making a total of 10,042,638 cubic yards of material used for this purpose.

There are now 156,547 lineal feet of 70-pound rail, and 18,997 lineal feet of 90-pound rail in the permanent track, 1,131 lineal feet of 70-pound rail having been taken up during the month. The total force averaged 1,501 men.

Quartermaster's Department.

Labor—There is a surplus of all classes of unskilled labor.

Quarters—There has been a further increase in the number of bachelors at Gorgona, who have been taken care of by the removal of families to other towns, and by making use of the upper floor of the hotel and the upper floor of the court-house.

Building—The work at Toro Point was completed. A fire-proof storehouse was constructed at Colon Hospital, and a storehouse for obsolete material at Mount Hope.

Material and Supplies–A considerable quantity of material condemned on survey request has been shipped to the Mount Hope depot and placed in the storehouse for obsolete material. Such articles as can be made use of are repaired for reissue, and the balance will be sold. The Quartermaster's Department assumed the responsibility for the storehouse at Pedro Miguel.

Supplies during the month were received in 28 vessels, with cargo aggregating 40,658 tons. In addition, 662,986 feet B. M. of lumber, 252,920 lineal feet of piling, and 60,000 crossties were received. The value of all material received was $960,675.99.

Subsistence Department.

There was a net profit on the messes, kitchens and line hotels of $4,381.18, a net profit on the restaurants and penitentiary of $234.49, and a net loss of $223.18 on the Hotel Tivoli. All subsistence operations taken together showed a net profit of $4,392.49.

Department of Civil Administration.

COURTS.

Eleven civil and 30 criminal cases were disposed of in the Supreme and Circuit Courts; and 41 civil and 457 criminal cases in the District Courts.

DIVISION OF POSTS, CUSTOMS AND REVENUES.

Money order sales for October amounted to $429,211.70, and the fees to $1,862.05. Receipts from stamp and card sales, and newspaper postage, aggregated $6,170.48. The total collection of revenues made by the division was $15,991.98, and the collection on account of court fines, costs and fees, $3,233.60.

Seventeen vessels entered at, and the same number cleared from the port of Ancon; and 19 entered at and 17 vessels cleared from the port of Cristobal.

DIVISION OF POLICE AND PRISONS.

The total number of persons arrested was 474, which is 26 less than in September, and 144 less than in August. Eight convicts were committed to the penitentiary and nine were discharged, leaving 144 in confinement at the close of the month. The cost of guarding and subsisting the convicts was $2,500.09, and the value of their work on the Canal Zone roads $2,078.05.

DIVISION OF FIRE PROTECTION.

Three fires were reported, the total loss amounting to $303.00.

DIVISION OF PUBLIC WORKS.

In the city of Panama the average daily consumption of water was 1,117,299 gallons, and in Colon 978,497 gallons.

DIVISION OF SCHOOLS.

The Canal Zone schools were reopened on October 3. The teaching force consisted of 37 American and 24 West Indian teachers, as compared with 35 American and 21 West Indian teachers at the opening of the schools in October of last year. A comparison of the enrollment and average daily attendance in the schools during the month of October in 1908, 1909, and 1910 is as follows:

	1908.		1909.		1910.	
White children	622	492.7	745	638.3	931	802.0
Col. children....	1,073	695.5	1,067	672.2	906	611.0
Total	1,695	1,188.2	1,812	1,310.5	1,837	1,413.0

Department of Sanitation.

The total number of deaths from all causes among employes was 42. These were divided as follows: From disease, 23; from external causes, 19, giving the annual average per thousand of 10.19 for all causes. Dividing the causes of death into diseases and external causes, we would have an annual average per thousand of 5.58 and 4.61, respectively.

Among employes for October of previous years the annual average death rate per thousand is as follows:

1904	20.31
1905	32.85
1906	46.68
1907	25.97
1908	12.93
1909	9.95

The annual average per thousand of deaths in the cities of Panama, Colon, and the Canal Zone, including both employes and civil population, was 23.61.

The annual average per thousand among the same class of population for previous years was as follows:

1905	56.62
1906	46.40
1907	30.19
1908	27.91
1909	16.62

The increase in the death rate of October, 1910, over 1909, is due to the increase of infant mortality in the city of Panama due to intestinal disorders, the total of such deaths being 46 out of a total of 152 deaths charged to Panama.

Segregating the whites from the blacks, the annual average death rate per thousand from disease for employes was: For whites 4.51; blacks, 5.98, giving the general average of 5.58. For the same month in 1909, the annual average death rate per thousand from disease was: For whites, 3.16; blacks, 8.56, giving a general average of 7.35.

Among employes during October, 1910, deaths from the principal diseases were as follows: Malarial fever, 1; haemoglobinuric fever, 1; pneumonia, 7; tuberculosis, 3; dysentery, 2, leaving a balance of nine from other diseases, there being no deaths during the month from typhoid fever.

No cases of yellow fever, smallpox, or plague were brought to or originated on the Isthmus during the month.

Respectfully,
GEO. W. GOETHALS,
Chairman and Chief Engineer.

Examination for Superintendent of Construction.

Applications will be received up to the close of business on December 6 for an examination to be held shortly thereafter for the position of superintendent of construction, a vacancy having occurred at the United States Penitentiary, McNeil Island, Wash., at $5 a day. Subjects: Architectural construction and details, 50 per cent; training and experience, 50 per cent. Applicants should have had not less than three years' experience in architectural work as draftsman, superintendent, or supervisor of construction of buildings, and should possess a good practical acquaintance with details of construction and with shop or working drawings of planing mill work. Only those who comply with the specifications regarding training and experience will be admitted to the examination. Age limit, 20 years or over on the date of examination; applicants must be citizens of the United States. The above is all the information to be had on this examination. Applicants should apply for form 1312 and mention the kind of examination. JOHN K. BAXTER,
Secretary, Isthmian Civil Service Board.
Culebra, C. Z., November 19, 1910.

Personal.

Maj. G. M. Hoffman, with Mrs. Hoffman and their children, returned from his leave in the States on the *Colon*, which arrived at Cristobal on November 11.

Capt. Courtland Nixon, accompanied by Mrs. Nixon, returned from his leave of absence on the *Panama*, on Tuesday, November 22.

Examination for Colored Teachers.

There will be held at the Ancon schoolbuilding on Saturday, November 26, an examination for colored teachers. This examination is open to all. Time, 8 to 12 a. m., and 1 to 4 p. m. F. A. GAUSE,
Superintendent of Schools.

Order of Isthmian Conductors.

The next regular meeting of the Order of Isthmian Conductors will be held at Pedro Miguel at 1.30 p. m., Sunday, November 27.

F. H. ANDERSON, *Secretary and Treasurer.*
Pedro Miguel, C. Z., November 21, 1910.

Visit of Congressmen.

A party of Congressmen and their guests arrived on the Isthmus, on the *Ancon*, on November 20, and will leave for the States on the same ship, scheduled to sail on November 28. In the party are: James A. Tawney and his son; A. S. Burleson, W. M. Calder and Mrs. Calder, J. J. Fitzgerald and Mrs. Fitzgerald, Washington Gardner, J. Warren Keifer and his son, J. M. Miller and Mrs. Miller, W. H. Stafford, and Swager Sherley. Messrs. Tawney, Gardner, Keifer, Fitzgerald, Burleson and Sherley are members of the House Committee on Appropriations, and Messrs. Calder, Miller and Stafford, of the House Committee on Interstate and Foreign Commerce.

There arrived from New Orleans, on the *Turrialba*, on November 17, Congressmen F. B. Woods of Iowa, and Robert C. Wickliffe of Louisiana, who are visiting the Isthmus as guests of the World's Panama Exposition Company of New Orleans. Congressman A. J. Barchfield of Pennsylvania and his family are also on the Isthmus.

The members of the Committee on Appropriations and other Congressmen viewed the Canal work on Monday, Tuesday and Wednesday, and hearings on the estimates of appropriations for Canal work, conducted by the Committee, will begin at Culebra on Thursday.

The presentation of "Young Mrs. Winthrop" at the National Theatre in Panama by the Ancon Dramatic Club, which was set for November 18, has been postponed until November 25

OFFICIAL CIRCULARS.

Thanksgiving Day, a Holiday.

CULEBRA, C. Z., November 21, 1910.

CIRCULAR No. 360:

Thanksgiving Day, Thursday, November 24, 1910, will be observed as a holiday in the Canal Zone, and as far as practicable all public business will be suspended on that day. GEO. W. GOETHALS, *Chairman.*

Forms for Importations Free of Customs Duty.

CULEBRA, C. Z., November 14, 1910.

HEADS OF DEPARTMENTS AND DIVISIONS:

The following is quoted from a letter received from the General Superintendent of the Panama railroad, under date of November 12:

"In connection with making out of forms 164-C. E. covering importation of employes' shipments and their entry at Colon free of customs duties, it would greatly facilitate matters if the applicants' names were typewritten thereon, as our New York office advises in a great many instances they are having difficulty in deciphering signatures, in fact, some of them being so illegible that they have to guess at the names, the result being that at times shipments are billed at tariff rates, whereas reduced rates should be applied."

It is desired that employes be instructed to have these forms made on the typewriter where possible, or at least write their names plainly.

GEO. W. GOETHALS,
Chairman and Chief Engineer.

Time Served on Committees of Employes' Organizations.

CULEBRA, C. Z., November 16, 1910.

CIRCULAR No. 132-1:

In the future when official committees representing organizations of employes visit the Chairman and Chief Engineer, the division engineers, or other officials in authority, on business connected with the organization to which they belong, no pay will be allowed for time lost from work, but the time so lost will neither be deducted from their regular leaves nor be charged against them in computing the dates when their vacations fall due. GEO. W. GOETHALS,
Chairman and Chief Engineer.

Conductor on Track Shifters.

CULEBRA, C. Z., November 16, 1910.

CIRCULAR No. 299-H:

When track shifters are not required to move over the main line, but are used on inside tracks only, the engineer in charge may act as conductor. If this additional responsibility is imposed, the pay of the position may be increased to $150 a month.

GEO. W. GOETHALS,
Chairman and Chief Engineer.

Tide Table.

The following table shows the time of high and low tides at Panama for the week ending November 30, 1910 (75th meridian time):

Supplies for Canal Work.

The following steamers with supplies for the Isthmian Canal Commission arrived at the ports of Cristobal, Colon and Balboa during the week ending November 19, 1910.

Prinz Joachim, November 13, from New York, with 340 barrels sulphate of alumina for stock.

Beachy, November 14, from Tacoma, with 409 pieces piling for Atlantic Division; 81,626 feet Douglas fir lumber for Central Division; 1,543,138 feet Douglas fir lumber, 4,871 sawn pine switch ties, 33,484 sawn pine cross-ties, 13 cases blasting caps for stock.

In tow of the tug *Luckenbach*, November 15, from Newport News, 2 steel barges for Atlantic Division.

Advance, November 17, from New York, with 63 crates fire brick, 9 pieces shafting, 27 pieces castings for Atlantic Division; 40 pieces castings for Central Division; 400 bundles brake shoes, 268 pieces rounds, 380 pieces castings for Mechanical Division; 1 ambulance for Sanitary Department; 228 bags smelting coal, 500 garbage cans, 300 barrels white lead, 34 barrels rosin, 200 bags plugs, 10 cases printing paper, 88 cases caustic soda, 35 barrels wool waste, 50 packages iron valves and fittings, 334 bars iron for stock; and a miscellaneous cargo, the whole consisting of 3,108 packages weighing 381 tons.

Turrialba, November 17, from New Orleans, with 77,101 feet yellow pine lumber, 32 bundles cypress shingles, 22 bundles car parts, 48 pieces castings, 11 pieces steel cable for Atlantic Division; 38,656 feet yellow pine lumber for Central Division; 741 bales prairie hay, 8,219 feet oak lumber, 10 crates gate valves, 40 bales rice straw for stock.

Zacapa, November 17, from New York, with 54 tons lock construction material for Pacific Division; 167 cases candles, 54 crates range parts, 83 drums car oil, 36 drums calcium carbide, 9 barrels bolts, 80 crates handles for stock.

Stages of the Chagres.

Maximum heights of the Chagres River for the week ending midnight, Saturday, November 19. All heights are in feet above mean sea level:

Reservations on the Ancon.

All accommodations on the steamship *Ancon*, scheduled to sail from Cristobal on November 28, having been reserved for the members of the Congressional Committee on Appropriations, no further requests for this sailing will be issued to employes or their families.

Any reservations that may have been made for this sailing on requests issued prior to this date are hereby cancelled, and in such cases arrangement should be made for passage on another steamer.

By direction of the Chairman.

C. A. McILVAINE, *Chief Clerk.*

Culebra, C. Z., November 16, 1910.

Proposals for Excavation in Canal Prism.

OFFICE OF CHIEF QUARTERMASTER,
CULEBRA, C. Z., November 2, 1910.

Sealed proposals for excavation of about 112,450 cubic yards of earth located at point 4-B, mile 29, on the Chagres River, will be received here until December 1, 1910, and then opened. Full information will be furnished by the division engineer, Empire, Canal Zone. Envelopes containing proposals must be endorsed "Proposals for excavation in Canal prism", and addressed C. A. DEVOL,
Chief Quartermaster

Proposals for Excavation, Obispo Diversion.

Sealed proposals for excavation of about 21,942 cubic yards of earth, located between stations 1602 and 1612 on the east bank of the Canal, will be received until 2 p. m., December 15, 1910, and then opened. Full information will be furnished by the division engineer, Empire. Envelopes containing proposals must be endorsed "Proposals for Excavation, Obispo Diversion," and addressed C. A. DEVOL, *Chief Quartermaster.*

MOVEMENT OF OCEAN VESSELS.

The following is a list of the sailings of the Panama Railroad Steamship Company; of the Royal Mail Steam Packet Company; of the Hamburg-American Line, and of the United Fruit Company's Line, the Panama Railroad Company's dates being subject to change:

The next sailing of the Leyland Line will be as follows: *William Cliff*, on or about November 26, for New Orleans, via Kingston, Ja.

Hamburg-American steamers leave for New York every Tuesday at 10 a. m., arriving there the following Tuesday, and for Port Limon every Tuesday or Wednesday via Bocas del Toro or Puerto Colombia.

Royal Mail steamers leave for New York on alternate Mondays at 5 p. m.; for Southampton on alternate Tuesdays at 10 a. m.

United Fruit Company's ships for New Orleans leave on Thursday at 3 p. m., and for New York on Thursday at 11 a. m.

Sailings of the French line (Cié Générale Transatlantique) for Venezuelan ports, Martinique and Guadeloupe on the 3rd and 20th of each month.

LOST—At Bas Obispo, on Sunday morning, November 13, a pocket book containing a pair of prayer beads and some silver money. Finder please return the beads to Mrs. Wm. E. Wade, Pedro Miguel, C. Z.

LOST—A raincoat with two buttons missing, on Panama railroad special from Paraiso to Colon, on November 15, in second car from front. Suitable reward to finder. A. D. WEBB, Gatun, C. Z.

CANAL RECORD

Volume IV. ANCON, CANAL ZONE, WEDNESDAY, NOVEMBER 30, 1910. No. 14.

The Canal Record

Published weekly under the authority and supervision of the Isthmian Canal Commission.

The Canal Record is issued free of charge, one copy each, to all employes of the Commission and Panama Railroad Company whose names are on the gold roll. Extra copies and back numbers can be obtained from the news stands of the Panama Railroad Company for five cents each.

Address all Communications
THE CANAL RECORD
Ancon, Canal Zone,
Isthmus of Panama.

No communication, either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.

NOTES OF PROGRESS.

Addition to Corozal Recreation Hall.

Bids were opened in the office of the Constructing Quartermaster on November 12 for the erection of an addition 35 by 60 feet to the north side of the recreation hall at Corozal, which has recently been placed under the supervision of the Canal Zone Y. M. C. A. Four proposals for doing the work were received, as follows: James Preston Moore, $850; James A. Wilson, $690; E. R. Martin and R. Wilkinson, $600; A. Hinselmann, $499. Mr. Hinselmann, the low bidder, was awarded the contract, and is to furnish the labor only, the Commission supplying all materials.

The Boilermakers.

Of the 122 first-class boilermakers in the normal force at Gorgona shops, 11 were at work on Tuesday. Over half of the men who quit work on November 22 have returned to the States. Eight sailed on the *Advance* for New York on the 22d; 22 on the *Turrialba*, and one on the *Cartago* for New Orleans, and one on the *Zacapa* for New York, on the 24th; 10 on the *William Cliff* for New Orleans on the 26th; 42 on the *Panama* for New York on the 28th; and nine on the *City of Para* for San Francisco on the 29th. Thirty authorizations for reduced rates on various steamships sailing between this date and December 11 have been issued. The recruiting of men to take the place of those who have resigned continues.

On November 26, the following cable message was received from the Washington office of the Commission:

> GOETHALS, CULEBRA: The following telegram from Hinsman, National Headquarters, Boilermakers' Union, Kansas City, Kan.:
>
> "Upon advice from President Franklin I have instructed boilermakers in Canal Zone remain at work and await President Taft's reply for reasonable length of time."
>
> BOGGS.

Increase in Leave of Hourly Employes.

HEADS OF DEPARTMENTS AND DIVISIONS:

Cable advice has been received that the President has mailed his decision on the request of the hourly men for longer leave with pay. The following extract from cablegram is quoted for your information:

> "Beginning January 1. 1911, hourly men will be granted four weeks' leave yearly with pay. Also may postpone two weeks to following year, permitting six weeks' leave with pay in second year. Accumulative leave recently granted monthly men on account discharge reduction of force should apply also to hourly men."

This letter is not to be taken as the official promulgation of the above order, as the President's letter has not been received, but is given you simply for your advance information, and the Chairman states that the information may be made public.

C. A. MCILVAINE, *Chief Clerk.*

Culebra, C. Z., November 25, 1910.

Improved School Facilities at Cruces.

A schoolbuilding of the Commission type will be provided for the 51 children enrolled at Cruces, a native town in the Canal Zone, situated on the Chagres River about four miles above the railroad bridge at Gamboa. The efforts made in the past toward maintaining a school at this point have not met with much success, due largely to the lack of suitable accommodations, and to the fact that an English teacher was employed, whereas all the children speak Spanish. This year a Spanish male teacher from Peru, Señor Ricardo Arteaga, was engaged to conduct the school, and as the result, there has been a marked increase in attendance, as well as a greater showing of interest on the part of the villagers. During the month of June, the last month of the 1909-10 school year, the attendance at the Cruces school was seven. The attendance for October, the first month of the present term, was 40; average attendance, 30; per cent of attendance, 90; neither absent nor tardy, 20. The school opened on October 10. Heretofore, the school has been conducted in the old church, which has recently shown signs of falling in. The plans for the new schoolhouse provide for a one story frame building, with a corrugated iron roof, 36 feet long by 24 feet wide, divided into a classroom, 24 by 28 feet, and a combination living room and bedroom for the teacher, 8 by 24 feet.

Panama-David Railroad Survey Completed.

The survey for the proposed Panama-David railroad, and its branch lines, has been completed, and the data thus procured, together with the necessary maps, is being incorporated into a report which will be ready early in December. The total length of the line and its branches, as covered by the survey, is approximately 350 miles. This includes the main line extending from Empire, C. Z., to David, in the province of Chiriqui, 280 miles long; a branch line about 65 miles long, from a point near the Santa Maria River, which forms the boundary between Coclé and Los Santos provinces, to Pedasí, in the province of Los Santos; and a branch line, about four miles in length, from Penonomé to Anton, in the province of Veraguas. The survey was conducted by field parties from the engineering department of the Panama railroad; was begun on April 1, 1910, and completed on November 15, 1910. Each field party was assigned to about 70 miles of territory.

Manufacture of Lock Gates Begun.

The manufacture of the 46 mitering gates required for the Canal locks, together with certain fixed and spare parts therefor, the whole involving the use of about 58,000 tons of steel, was begun by the contractors, the McClintic-Marshall Construction Company of Pittsburg, in the last week in October. As a large part of the material called for by the specifications was of special design, about $100,000 worth of additional machinery for its fabrication had to be installed. One-half of the company's shops at Rankin, Pa., is engaged in the execution of the contract, and the first shipment of material is expected to leave Baltimore the latter part of this month, or early in December. The heaviest single pieces of steel will weigh about 18 tons. These will be the lowest girders, seven feet deep. The series of girders above them will range from 3.8 feet apart near the bottom to five feet apart at the top, and over the skeleton structure thus formed, a sheathing of water-tight plate will be riveted like the sheathing of a vessel. The thickness of the plates will range from an inch at the bottom to 7-16 of an inch at the top. Each gate consists of two leaves. The weight of the largest leaf will be about 600 tons, and the leaves will be 47⅓ to 82 feet high, 65 feet long, and seven feet deep. The thousands of individual pieces will be numbered and fitted prior to shipment, so that they will go together as easily as children's blocks. It is purposed to begin the erection of the gates at Gatun Locks in January, and those at Pedro Miguel in March. The contractors will bring about 400 of their own men to the Isthmus for this work.

Ditching Machine For P. R. R. Relocation.

A railroad ditching machine, manufactured by the American Hoist and Derrick Company of St. Paul, Minn., for use on the relocated line of the Panama railroad was placed in service last week. It is the only machine of its kind on the Isthmus, is designed to operate over the tops of the flat cars of a work train, and is self-propelling, traveling on two portable track sections, which it transfers from one car to another, as it proceeds with its work. These track sections are telescopic, and as the wheels on the machine are of double tread, with center flange, they are able to travel on either section. The ditcher moves in either direction along the tops of the cars from one end of the train to the other, loads a car, then picks up one section of track, which it swings to position on the car immediately in the rear of the one on which it is standing. It then propels itself to the transferred section and loads the car at the point from which the

NOTES OF PROGRESS.

(*Continued.*)

transferred section has been removed, continuing the process until the train is loaded. The machine is equipped for using either a 9-16-yard dipper, or a clamshell bucket of the Haywood patent, having ¾-yard capacity. Ditches as narrow as the width of the shovel, beginning at the end of the ties, or as wide as 31 feet 6 inches from the center of the track can be dug to a depth of five feet below the top of the rail, or as shallow as desired, with any width of shoulder. The machine can also be used as a steam shovel, handling material at a maximum rate of 90 cubic yards an hour, can load coal, ties, or rail, and with certain changes, can be converted into a locomotive crane or piledriver. It is provided with a set of auxiliary wheels of 5-foot gage, in order that it can be used on a surface track when desired. It will be employed on ditching work along the relocation on flat cars fitted with low sideboards, which will be unloaded by No. 3 Lidgerwood unloaders operating center plows. The machine does the work of a large gang of laborers and its operation requires the services of only two men, an engineer and his fireman.

Instruction of Engineer Lieutenants.

Eleven graduates of the class of 1910 at West Point, who have been assigned to the Corps of Engineers, U. S. A., have arrived on the Isthmus and reported to the Chief Engineer for professional instruction covering a period of about seven months. They are Second Lieutenants Frederick S. Strong, Jr., Creswell Garlington, William C. Sherman, Daniel D. Pullen, Carey H. Brown, Oscar N. Sohlberg, Beverly C. Dunn, Donald H. Connolly, Raymond F. Fowler, James G. B. Lampert, and David McCoach, Jr.

Lidgerwood Unloaders in October.

Passports for Deck Passengers.

Circular No. 55, issued from the office of Señor Federico Boyd, the Panamanian Secretary of Foreign Affairs, under date of October 26, 1910, states that the business of recruiting men who are employed in the service of the Isthmian Canal Commission continues, notwithstanding the measures adopted by the Panamanian Government to stop it, and in order still further to limit the practice, suggests that the agents of steamship companies in Panama and Colon refuse to furnish passage to any person who cannot exhibit a passport issued in his favor by the Consul of the country to which he belongs, and in case there is no such Consul resident, then by the Consul of some friendly nation. Attention is further called to the fact that such passports to be valid should be issued by consular officials recognized as such by the Panama Government. The above refers only to persons living on the Isthmus soliciting deck passage on steamships bound for foreign ports, and has no application to people purchasing cabin passage.

CONCRETE WORK IN THE LOCKS.

GATUN LOCKS.

Concrete work in Gatun Locks is about 44 per cent completed, 912,890 cubic yards out of a total of 2,085,000 having been placed at the close of work on November 26. The output for the auxiliary plant which had been reduced for several days on account of the necessity of using the narrow gage equipment in taking out the slide, which occurred at the south end of the locks on November 9, was restored to normal during the week.

A statement of the amount of concrete placed in the locks each day for the week ending November 26, and of the total, follows; and a similar statement for the work in the Spillway of Gatun Dam is published elsewhere in this issue:

DATE.	CONSTRUCTION PLANT. 2-Cubic yard mixers.			AUXILIARY PLANT. 2-Cubic yard mixers.			Large stone.	Total.

STEAM SHOVEL RECORDS.

Work of Central Division Shovels in October.

During the month of October the total amount of material excavated in the Central Division was 1,602,255 cubic yards, of which 525,577 cubic yards were classified as earth, and 1,076,678 cubic yards as rock. Of this quantity, 1,598,335 cubic yards were removed by steam shovels, and 3,920 cubic yards by sluicing under contract.

The high record for the month was made by shovel No. 212, working 26 days in the Culebra district, which excavated 50,825 cubic yards of rock and earth. The second best record of the month was made by shovel No. 228, working 26 days in the Empire district, which excavated 46,624 cubic yards of rock and earth. The best record for a shovel of the 70-ton class was made by shovel No. 108, working 25 days in the Chagres district, which excavated 37,585 cubic yards of rock and earth.

Shovel No. 212, working in the Culebra district, made the high record for one day by excavating 2,964 cubic yards of rock and earth on October 14. Shovel No. 108, working in the Chagres district, excavated 1,750 cubic yards of earth on October 3, and this is the high record for one day for shovels of the 70-ton class, during the month.

Except where noted, monthly reports are computed by place measurement, while the daily reports are based on car measurement. The best records for the month and one day are shown below:

Missing Men.

Information is desired by R. C. Thatcher, Toro Point, C. Z., regarding the whereabouts of Wm. G. Minkler, who is supposed to be working on the Isthmus.

Any one having information regarding the whereabouts of Herman Christensen, a painter, who left the service of the Isthmian Canal Commission on July 21, 1909, will please communicate with the office of the Chairman and Chief Engineer, Culebra, C. Z.

Any one having information regarding the present whereabouts of William Martin, known by the name of "Big Bill" Martin, who is supposed to be in the Canal Zone, is requested to communicate with W. P. Hiscock, Empire.

Any one having information regarding the whereabouts of Ed. Anderson, at one time employed on the Isthmus, is requested to communicate with either Mrs. Ernest Hawk, Negaunee, Mich., or Dominic Lavigne, Empire, C. Z.

Any one having information regarding the whereabouts of Mr. E. B. Lawyer, who is supposed to be on the Isthmus, is requested to communicate with Mrs. Minnie Lawyer, 4203 Central avenue, Madisonville, Ohio.

Porto Bello Crusher.

A statement of the work done at Porto Bello crusher, by days, for the week ending November 26, follows:

Date.	Hours worked.	Cubic Yards.
November 21	9:18	3,424
November 22	8:36	2,471
November 23	8:12	3,039
November 24—Holiday

November 26	11:14	3,679
Total	46:03	15,162

PERSONAL.

Lieut-Col. Wm. L. Sibert sailed on the *Turrialba* for New Orleans on November 24, on his annual leave of absence.

Lieut.-Col. John L. Phillips, with Mrs. Phillips and Miss Phillips, returned from his leave of absence in the States on the *Panama*, which arrived at Cristobal on November 22.

The Honorable H. G. Knowles, American Minister to Bolivia, accompanied by Mrs. Knowles, arrived on the Isthmus on November 25, and sailed for his post on Tuesday, November 29.

Mr. W. B. Corse sailed for New York on the *Panama*, on Monday, November 28, on his annual leave of absence.

Mr. W. G. Bierd, formerly general manager of the Panama Railroad Company, has been made vice-president and general manager of the Minneapolis and St. Louis Railroad Company, with headquarters at Minneapolis.

Mr. A. L. Robinson returned from his annual leave in the States on November 28.

The members of the Committee on Appropriations of the House of Representatives concluded the hearings on the Isthmus last week, and sailed for New York on the *Ancon* on November 27.

Relocation of Panama Railroad.

The performance of steam shovels on the relocation of the Panama railroad in October, as compared with other months, is shown in the following statement:

Month.	Output.	Average No of shovels	No. of working days.	Output per shovel.	
				Per day.	Per month.

Obituary.

The Rev. Joshua Heath Sobey died at the home of his son in Watkins, New York, on November 5. He was a chaplain in the employ of the Commission from 1907 until the time of his final illness. He had done missionary work for the Baptist church in Jamaica, the Cayman Islands, and Costa Rica. He is survived by his wife and two sons, Rev. Wilfred Heath Sobey of Watkins, and Melville M. Sobey of Hudson, N. Y.

LABOR FORCE AND QUARTERS IN OCTOBER.

On October 26, there were 35,334 employes actually at work on the Canal and the Panama railroad, and of that number 29,693 were Canal employes. The gold force on the Canal work, composed almost entirely of white Americans was 4,596.

The report of the Chief Quartermaster in October shows that the number of family quarters occupied by "gold" employes was 1,731, which is 27 more than in September, and the occupants numbered 5,362, an increase of 141. Of this number, 1,812 were women, and 1,803 children. Bachelor quarters occupied by "gold" employes numbered 1,948, and the occupants numbered 3,488, of whom 203 were women. The family quarters occupied by European laborers numbered 272, and the occupants, 865; bachelor quarters, 113, and the number of occupants, 5,375. The family quarters occupied by West Indians numbered 1,089, and the occupants, 3,584; bachelor quarters, 270, and the number of occupants, 4,860. A statement of the force actually at work on October 26, follows:

BASEBALL.

Panama Canal Baseball League with Six Clubs Organized for Coming Season.

Representatives of the six local baseball associations held a meeting at the University Club in Panama on Sunday, November 6, and organized the Panama Canal Baseball League. Officers were elected, as follows: President, Maj. Eugene T. Wilson; vice-president, S. B. Williamson; secretary and treasurer, Milton S. Hathaway. An executive committee will be appointed by the president of the league in a few days, which will have in charge the preparation of the schedule of games for the ensuing season. The league will consist of the following clubs: Ancon, Empire, Gorgona, Camp Elliott, Commissary-Subsistence, and Colon-Cristobal. The first four teams comprised the Isthmian League of last year. The last two teams are to be made up of the best of the players in last season's four-team Atlantic League. The schedule will probably provide for a somewhat shorter season than usual, and the first series of games will be played on Sunday, December 18. The league adopted a constitution and a set of by-laws. The latter prescribe that each association shall deposit the sum of $100 with the secretary and treasurer as a guarantee of the payment of fines that may be assessed against it. Each association will also pay a membership fee of $6 a month for each calendar month of the playing season. Any person who is a bona fide employe, or former employe, of the Isthmian Canal Commission, the Panama Railroad Company, or any branch of the United States Government service, and who has resided on the Isthmus for a period of 42 days, or who can show by any statement of the head of the department in which he is employed that his employment is reasonably expected to continue for a period of six months, or any American citizen who is regularly employed by private business interests, is eligible as a player upon the consent of two-thirds of the associations comprising the league. This provision, however, does not apply to associations controlling teams in Panama or Colon, that are members of the league.

Professional players coming to the Isthmus to play temporarily are barred, and any club violating this prohibition shall be fined $25. No player shall be guaranteed a stated sum of money for ball playing. The gate receipts will be divided as in former years, 45 per cent to the park association, and 55 per cent equally divided between the contesting teams unless otherwise agreed upon between the managers, and the park association so notified. Each club shall submit to the secretary by December 1, 1910, a list of all players either held under contract or under the reserve clause of the joint agreement of the two former leagues. These lists will be bulletined, and all players carried in excess of 15, the number of men the manager of each club is entitled to carry, shall be declared released.

Releases will be legal only when signed by the president of the association. A player released by any club cannot play with another club until four playing days have elapsed, except when, in the opinion of the president of the league, such release is given for a legitimate purpose; in which case, with his approval and that of the presidents of the associations involved, the player may be signed at once.

When 50 per cent of the league games have been played, double headers become obligatory at the park where postponed games exist, at the next playing date between the clubs having postponed games, and shall continue until all postponed games have been played, but any teams having postponed games may play them at an earlier date by mutual agreement. No rain checks will be issued; in case of failure to play, the money will be refunded.

At the annual meeting of the Atlantic Athletic Association, which controls the Colon baseball park, the treasurer reported that last season's receipts were sufficient to make possible a ten per cent dividend on the stock. Dr. Dorand and F. K. Pilson have been elected to vacancies on the board of directors. The annual election of officers of the association was held on November 14 as follows: President, John Burke; vice-president, Hilary B. Parker; secretary, F. K. Pilson; treasurer, R. G. Castel.

Memorial Services of Kangaroos.

The annual memorial services of the I. O. P. K. will be held at the National Theatre in Panama on Sunday, December 4, at 3.15 p. m. For the accommodation of all Kangaroos, their families and friends, a special train will leave Colon at 12.30 p. m., which will stop at all regular stations and will leave Panama upon the return trip at about 6 p. m. No transportation will be required upon the train to Panama, but tickets for the return trip will be distributed at the theatre at the close of the services, and only those holding such tickets will be permitted to pass the gates at the depot. All members of the order are requested to dress in white, and to form at the depot and march in a body to the theatre. Music will be furnished by the U. S. Marine Band. The public is cordially invited to attend this service, and all Kangaroos are earnestly requested to be present.

The schedule of the special train will be as follows: Leave Colon, 12.30 p. m.; Gatun, 12.45; Tabernilla, 1.10; San Pablo, 1.15; Gorgona, 1.30; Matachin, 1.35; Bas Obispo, 1.40; Las Cascadas, 1.45; Empire, 1.50; Culebra, 1.55; Paraiso, 2.07; Pedro Miguel, 2.10; Corozal, 2.22; arrive at Panama, 2.30. The exact time of departure of the train on the return trip will be announced at the theatre.

Army and Navy Union of the U. S. A.

The commander of Garrison No. 106, A. N. U., having been invited by the Supreme Court of the I. O. P. Kangaroos to furnish colors and guard for the parade in Panama, on Sunday, December 4, 1910, members are requested to be present, in uniform, at the Panama railroad depot, Panama, at 2. 30 p. m. on that date.

Transportation by Kangaroo special leaving Colon at 12.30 p m.

A. G. Smith, *Adjutant.*

Empire C. Z., November 28, 1910.

Contract for Clearing Trails.

A contract has been awarded to Domingo Matos for clearing the Arraijan-Rio Grande, Arraijan-Paraiso, and Arraijan-Cochinito trails at a cost of $975. The nature of the work was described in The Canal Record of November 2.

SOCIAL LIFE OF THE ZONE.

Women's Clubs Miscellaneous Notes.

An election of officers was held in the Gorgona Woman's Club on Thursday, November 10, the following being chosen: President, Mrs. B. F. Henckle; vice-president, Mrs. C. McCann; secretary, Mrs. A. E. Calvit; treasurer, Mrs. J. Horn. A meeting will be held every Thursday at the clubhouse and a program for the remainder of the year will be issued early in December.

Five hundred copies of the cook book issued by the Federation of Women's Clubs, under the title of "The Panama Cookery Book" have been placed on sale at the Panama railroad commissaries. The book is bound in the Federation colors, green and gold, and has an attractive cover design. Upward of four hundred recipes have been collected by the club-women, among them a number of Panamanian dishes. The book is dedicated to Mrs. Lorin C. Collins, who perfected the organization of the Federation and placed it on its present working basis.

The Colon Humane Society will give a Christmas "treat" to the poor children of the city. It is proposed to collect the sum of $300 by popular subscription and to expend one-third of this for toys and the remainder for a dinner. An entertainment will be held in the public playground on Monday, December 5. The municipal band will play. The committee on arrangements is composed of the president of the society, Dr. C. C. Pierce, the Rev. E. G. Cooke and Efrain Tejada.

Wesleyan Methodist Missions.

The Rev. William J. Williams, general superintendent of the Wesleyan missions in the West Indies and Central America, made a visit to the missions in this district during the week beginning November 20. He made addresses at Colon on November 20, and at 11 o'clock on that morning, he opened the new church at New Frijoles, which has been erected through the joint efforts of the Bohio and Frijoles congregations. This church is under the joint pastorate of the Revs. M. B. King of Panama, and E. G. Cooke of Colon. At a meeting in Colon on November 21, the Hon. M. H. Thatcher presided, and addresses were made by him, the Rev. A. A. Nellis of Culebra, Mr. H. L. Stuntz of Colon, and the general superintendent.

The Rev. Mr. Williams, accompanied by the Rev. M. B. King, is now on a visit to Bocas del Toro, but will return to the Isthmus on December 1, and after another week's visit here will sail for his home in Kingston, Jamaica.

Church at Gatun for American Catholics.

An old French building has been moved to Gatun and there reerected as a church for the Roman Catholics in the American village. There are about 100 American Catholics in the American section who find it inconvenient to attend the church in the new village on rainy Sundays on account of the distance. The pastor of the church in New Gatun will officiate at the American church, saying mass once each Sunday.

The meeting place of the American Methodist Episcopal Zion Church, which was formerly on Eighteenth street, Panama, has been changed to the Santa Rosa road on the Canal Zone boundary. The Rev. J. Wilson Bell is pastor.

ORDINANCES.

Taxes on Vehicles for Public and Private Use.

The following ordinances enacted by the Isthmian Canal Commission at its 158th meeting on August 25, 1910, were approved by the Acting Secretary of War, October 31, 1910:

Ordinance.

Be it Enacted, by the Isthmian Canal Commission, that paragraph "*a*", section 7, of the "Regulations Providing for Certain Taxes and Licenses in the Canal Zone other than for the Sale of Intoxicating Liquors," effective July 1, 1908, is hereby amended to read as follows:

> For operating for hire a public coach or carriage, not operated by motor power, for the transportation of passengers, a license tax of $1.25 per month shall be charged; for a public cart, dray, or other public vehicle, not operated by motor power, the following license taxes shall be charged, namely: For each two-wheel vehicle, $2.50 per month; for each four-wheel vehicle, $5 per month. *Provided, however*, that in the construction and application of this section all vehicles which are used on the public roads of the Canal Zone for the transportation of merchandise, or other articles of value, by merchants and dealers, shall be held to be subject to license as provided in this section. *Provided, however*, that the license taxes in this section enumerated shall not apply to conveyances of the herein indicated character wherein passengers are transported for hire, which are duly licensed in the Republic of Panama.

Ordinance

Providing for the licensing and regulation of motor vehicles in the Canal Zone.

Be it Enacted, by the Isthmian Canal Commission, as follows:

Section 1. That, hereafter, there shall be collected and accounted for, as other similar taxes, the following license taxes from the owners or operators of motor vehicles used or employed on the streets or roads of the Canal Zone, namely: (*a*) For each motor vehicle (except motor cycles) used for the transportation of freight or passengers for hire, or for the transportation of merchandise or freight by any merchant or dealer, one hundred and fifty dollars ($150) per annum; (*b*) for each motor vehicle (except motor cycles) operated for pleasure, twenty-five dollars ($25) per annum; and (*c*) for each motor cycle ten dollars ($10) per annum.

Section 2. Before any person shall use or operate any motor vehicle on the public roads or streets of the Canal Zone, he shall procure from the Collector of Revenues of the Canal Zone Government a license authorizing him to use and operate such motor vehicle on said public roads or streets.

Section 3. Each motor vehicle operated on said roads or streets shall at all times, when so operated, carry thereon, at a conspicuous place at the rear thereof, a metal tag or card bearing thereon, in large numerals, the number of the license for such vehicle. It shall be the duty of the Collector of Revenues, when such license is issued, to furnish to the licensee said metal tag or card bearing said number, and the licensee shall, in addition to the license tax, pay to said collector a fee of one dollar ($1) for furnishing said tag or card, which fee shall be accounted for by said collector to the Zone Government in the same manner as are such license taxes. It shall be unlawful for any person to operate or use on said roads or streets any motor vehicle unless the same bears, at a conspicuous place at the rear thereof, such numeral tag or card.

Section 4. The Collector of Revenues shall keep a register, wherein he shall number, in consecutive order, all licenses granted by him under this ordinance, and the names of the licensees, and a brief description of the motor vehicle licensed. Such register shall be a public record. Said collector shall, immediately upon issuing any license herein provided for, give notice thereof, and furnish the information shown by the aforesaid register, to the Chief of Police, who shall cause arrests to be made for violations of this ordinance.

Section 5. Before the Collector of Revenues shall issue any license hereunder for the operation of any motor vehicle, he must be satisfied, from proof furnished, or from bis personal investigation that such motor vehicle for which license is desired can pass with ease and safety on any turn or part of any public road or street of the Canal Zone any other vehicle authorized by law to travel thereon. The said collector's refusal to issue any license indicated herein may, upon the formal request of the refused applicant, be reviewed by the Head of the Department of Civil Administration, whose decision shall be final.

Section 6. All motor vehicles shall, when being operated on any of the Canal Zone streets or roads, between the hours of 6 p. m. and 5 a. m., carry and prominently display lights, as follows: Automobiles, or motor vehicles of similar construction, two bright front or headlights, one on either side, and one red light at the rear; motor cycles, one bright headlight.

Section 7. Except as to the requirements for the use of lights, as provided in section 6 hereof, this ordinance will not apply to motor vehicles, which may be used on the public roads or streets of the Canal Zone under the authority of the Chairman of the Isthmian Canal Commission, or of the Secretary of War, for official purposes.

Section 8. The term "motor vehicle," as used herein, shall apply to and include every vehicle or conveyance which may be drawn or propelled by means of steam, gas, naptha, fluid, electricity, or other similar motor power.

Section 9. Any person violating any provision of this ordinance shall be deemed guilty of a misdemeanor, and shall, upon conviction in any district court of the Canal Zone, be punishable by a fine not to exceed fifty dollars ($50), or imprisonment not to exceed 30 days, or by both such fine and imprisonment in the discretion of the court.

Section 10. This ordinance shall be effective from the date of its approval by the Secretary of War.

Mechanical Draftsman Examination.

Applications will be received up to the close of business on December 15 for an examination for mechanical draftsman, Isthmian Canal Service. The entrance salaries for the positions which may be filled as a result of this examination are: Mechanical draftsman, first-class, $150 a month; second-class, $125; tracer, $100. The following are the subjects and their relative weights: (1) Mathematics and practical calculations, comprising arithmetic, algebra to and including problems involving quadratics, geometry, mensuration, logarithms and use of tables, elementary problems in mechanics, and use of slide rule and the interpretation of formulæ and correct working out of results in special cases, 25; (2) materials, comprising all the materials used in machine construction, 15; (3) drawing, involving a competent knowledge of machine construction and ability to draw neatly to scale, 25; (4) training and experience, 35.

Applicants must have had training and experience sufficient to entitle them to a rating of at least 70 in that subject, otherwise the remaining subjects of the examination will not be rated. Competitors attaining over 80 per cent in training and experience will be rated as first-class draftsmen; those who attain 80 per cent, or under, will be rated as second-class draftsmen. Eligibles in the first-class are eligible to second-class positions and to tracer positions, and may be given preference in making appointments thereto, provided they state in form 1312 their willingness to accept appointment to the lower position. To be rated as a first-class draftsman, not less than three years' good drafting room experience and, in addition, shopwork experience on machine construction is required. A technical school training in mechanical engineering will be accepted as equivalent to two years' practical work. To be rated as a second-class draftsman, not less than two years in drafting room, or one year in drafting and one year in the shop or on construction, is required. A technical school training in mechanical engineering will be accepted as equivalent to the two years' practice.

Competitors will be allowed to use a slide rule. A Carnegie, or similar handbook, is required for the work in the subject of drawing on the second day. Time allowed, two days of six and five hours, respectively. Men only, citizens of the United States, physically sound and in good health, and between the ages of 20 and 45 years, will be admitted to the examination. Each applicant should submit on the day of the examination a photograph of himself, unmounted preferred, taken within two years. Form 1312 should be requested from the undersigned, and should be filed, with medical certificate executed, not later than the close of business December 15.

JOHN K. BAXTER,
Secretary, Isthmian Civil Service Board.

Culebra, C. Z., November 25, 1910.

Money Order Business.

The money order business in the Canal Zone post-offices during the month of October, as compared with that of October 1909 and 1908, was as follows:

	1910	1909	1908
Orders issued...	16,784	16,608	14,472
Value.....	$429,211.70	$431,421.47	$441,783.30
Payable in U. S....	320,697.13	323,721.09	321,095.19
Payable in C. Z.....	108,152.69	107,386.88	120,688.11
Payable in Mart'que	361.88	313.50	....

Sand Shipped from Balboa.

A report of the sand loaded and shipped from Balboa during October follows:

DESTINATION.	Number of Cars.	Cubic Yards.
Pacific Division..................	2,696	40,440
Central Division................	27	405
Atlantic Division...............	3	75
Quartermaster's Department......	4	115
Sanitary Department............	1	25
Panama railroad................	4	100
Miscellaneous..................	5	100
Total........................	2,740	41,260

This sand is dredged from Chamé Bay, 23 miles west of the Pacific entrance to the Canal.

Gatun Dam Spillway.

The amount of concrete and large rock laid in the Spillway of Gatun Dam during the week ending November 26, is shown in the following statement:

DATE.	CUBIC YARDS.		
	Concrete	Large rock.	Total.
November 21...........	214	18	232
November 22...........	190	14	204
November 23...........	210	10	220
November 24—Holiday			
November 25...........	192	....	192
November 26...........	208	6	214
Total.................	1,014	48	1,062
Previously reported...	....	....	106,528
Grand total...........	....	....	107,590

The daily average number of 2-yard mixers used was 1 1-5; the daily average of hours worked, 6½, and the average amount of concrete mixed each day, 203 cubic yards.

CLASSIFIED EXPENDITURES.

A statement of classified expenditures to September 30, 1910, follows:

	Department of Civil Administration.	Department of Sanitation.	Department of Construction and Engineering.	General Items.	Total.
Total to June 30, 1910..	$3,427,090.29	$9,673,539.28	$69,622,561.42	$78,022,606.10	$160,745,797.09
Total, fiscal year 1910..	709,351.37	1,803,040.95	26,300,167.05	2,863,088.83	31,675,648.20
July, 1910.............	58,474.88	156,006.64	2,216,849.78	280,015.85	2,711,347.15
August, 1910...........	63,887.05	164,220.65	2,348,777.07	336,961.35	2,913,846.12
September, 1910.......	60,586.46	153,433.27	2,516,814.41	236,170.76	2,967,004.90
Total...............	$4,319,390.05	$11,950,240.79	$103,005,169.73	$81,738,842.89	$201,013,643.46

COMMISSION CLUBHOUSES.

Activities of the Young Men's Christian Association.

CULEBRA.

The following is the standing in the billiard tournament which closed last week:

NAME.	Handicap.	Won.	Lost.
Conlan	100	8	0
French	60	6	2
Case	60	5	3
Dubols	100	4	4
McCann	70	4	4
Silver	80	4	4
Thomson	90	3	5
Kaufman	60	2	6
Koperski	60	0	8

McCann made best average, 1.4. Thomson made best single average, 1.8. Dubois made the best run, 26.

Cristobal played Culebra in basketball on Saturday November 26, and won by the score of 27 to 19.

The following are the men who rolled over 100 in duckpins during the week ending November 26: Kersey, 114, 100, 100; Dakin, 108; Hill, 104.

The duckpin tournament will begin on December 1. No entry fees will be accepted after the first ball has been rolled.

The following is the standing in the bowling tournament:

NAME.	Handicap.	Won.	Lost.
Cohen	Scratch	4	0
Herrington	17	1	3
Huttlemeier	22	6	2
Cornthwaite	24	2	2
Fleischman	25	1	2
Hayes, G. C	27	2	3
Hurst	30	1	2
Warner	31	0	1
Sickler	40	0	1
Koperski	55	0	1

The following are the scores of the men who rolled in the Thanksgiving tournament:

NAME.				Total.
Cohen	210	123	173	506
Herrington	155	150	150	455
Case	163	166	138	467
Cushing	181	203	166	550
Dougherty	149	168	133	450
Huttlemeier	166	149	144	459
Everett	123	197	142	462

Cushing rolled his tie game with Brown of Empire, as follows: 180, 159, 152; total, 491.

Scores in doubles were as follows:

NAME.				Total.
Cohen	214	130	167	1062
Dougherty	181	201	169	
Case	225	202	157	1113
Cushing	186	169	174	
Herrington	166	146	171	997
Huttlemeier	172	164	178	

EMPIRE.

Empire won two out of three games from the Culebra bowling team last Saturday evening by the following scores:

Empire.				Culebra.			
Gustavson	184	151	143	Cohen	136	138	186
Potter	210	196	168	Herrington	130	158	143
Bardelson	229	188	160	Fleischman	123	141	119
Pearson	184	202	128	Case	184	169	182
Huson	157	226	186	Dougherty	212	180	169
Total	964	963	785	Total	785	786	799

Gorgona defeated Empire in a game of basketball last Saturday evening by the score of 37 to 31.

The folowing program was given at the smoker on Friday evening, November 18: Violin solo, Mr. Gilman of Culebra; slack wire exhibition, Mr. Chatfield of Gatun; sketch by King and Cullen; cartoons by Mr. Stolberg; sketch by Young and Evans. The numbers were interspersed by informal songs, by the glee club and audience.

At the Thanksgiving entertainment three sets of moving pictures were shown, followed by the sketch, "In a Chinese Laundry." Refreshments were served after the entertainment. During the day the bowling tournament, in which all the clubhouses were interested, was held. Brown of Empire, and Cushing of Culebra tied for singles with a score of 550. In the play-off, Brown won by a score of 556. Potter and Huson won the doubles with a score of 1,118, and Edwards took second place in the singles by a score of 547. There were 29 entries.

GORGONA.

Two Spanish classes have been organized—the beginners' class to meet every Monday and Thursday evenings from 7.15 to 8.30, and the advanced class Tuesday and Friday evenings at the same hour. A class for men and women, which will meet every Saturday night, will be organized if enough express a wish to join. The price of the lessons is 25 cents each, payable $2 in advance. Señor Emiliano Cubillos will be the instructor.

The Rev. A. A. Nellis delivered a Thanksgiving sermon at the monthly song service held at the clubhouse on Sunday evening, November 27. A vocal solo was given by Wm. Booz.

Geo. Cook, foreman of the air brake department of the Gorgona shops, will organize a class in air brake instruction in the near future. All who are interested in this work will please leave names at the office.

On Saturday night, November 26, a meeting was held to formulate plans for the festival to be held on Christmas eve, December 24, for the people of Gorgona. Various committees were appointed to make the necessary arrangements.

GATUN.

The membership committee met recently and elected Chas. E. Wood chairman, W. C. Gayer vice-chairman, and W. E. Wittrig, secretary. The committee is planning a progressive campaign for new members. Meetings will be held every Monday night.

Gatun defeated Gorgona at basketball Saturday evening, November 19; score, 35 to 32.

The standing in the duckpin tournament is as follows:

	Played.	Won.	Lost.
DeMoll	6	6	0
Bull	3	2	1
Duryea	7	4	3
Myers	8	4	4
Harrington, C. R	4	1	3
Timer	3	0	3
Hodges	2	0	2
King	1	0	1

Gatun lost to Empire in the bowling match Saturday night, November 19. The score was as follows: Gatun, 820,785,741; Empire, 819, 873, 846.

The following 200 scores were rolled last week: Durand, 202, 210, 201, 208, 210; Hodges, 200, 206, 203; Myers, 201; O'Meara, 222; Severn, 215; Wolf, 201.

Miss Bogner will teach the elementary class in Spanish, which meets every Tuesday night, and Miss Frost will have charge of the advanced class which meets on Friday nights.

The Gatun Y. M. C. A. pressing club has adopted the following prices: Two suits within 30 days, $1; four suits within 30 days, $1.50.

The Rev. A. A. Nellis of Culebra led the discussion club on Thursday evening, November 14; subject, "Ambition." Mr. Smith led the discussion on Friday evening, November 25.

The following men are representing Gatun's bowlers in the final series: Durand, Barte, Wolf, Hodges, Harrington, and DeMoll.

The gymnasium class, so far, has an average attendance of 16 men. Piano music for the class in calisthenics is a feature of the work.

The Christmas celebration committee has elected C. C. Carr, chairman. Subcommittees on subscriptions, presents, and program have been appointed.

Pennants of the various clubhouses on the Isthmus may be secured at the Gatun clubhouse.

Open house was observed on Thanksgiving Day. The clubhouse was decorated with palms. In the evening an entertainment was given; Mrs. Ludwig sang; Mrs. Nat Johnson gave a piano selection, and Russell E. Chatfield gave a slack wire performance. The program closed with moving pictures.

"The Passion Play" in moving pictures was given at the Sunday night service on November 27. A male quartet sang sacred songs.

CRISTOBAL.

Thanksgiving Day was observed at Cristobal by the bowling championship games in the morning and afternoon, and by an informal public social in the evening. Cleary made high score for the day on the local alleys with 226. The following scores for the singles were made for the three games: Burns, 514; Bullard, 510; Rabbitt, 494. The following scores were made in the doubles for three games: Burns and Cleary, 1,039; Weston and Barrett, 1,027; Blackburn and Henry, 987. Seventeen men were entered from here in the singles, and eight teams in the doubles, making 33 in all.

Cristobal won two out of three games from Gorgona last Saturday night by the following scores:

Gorgona.				Cristobal.			
Roper	191	170	198	Bullard	168	161	157
Otis	168	158	142	Barrett	213	205	167
White	138	166	177	Collins	170	219	183
Bordt	157	137	141	Burns	137		
Varenkamp	175	196	211	Louch	178	172	165
				Weston		166	167
Total	829	827	869	Total	866	923	839

Saturday, the boys of Gatun Y. M. C. A. played the boys of the Cristobal Y. M. C. A. in basketball and indoor baseball. Gatun won the basketball game, and Cristobal the indoor baseball game.

At the Thanksgiving social the following program was given: Readings, Mr. Kearns; soprano solo, Mrs. Green; baritone solo, Mr. Jamieson; a play, "A Box of Monkeys," Mrs. Pierce, Mrs. Perkins, Miss Frost, Dr. Pierce, and Mr. Sexton.

PORTO BELLO.

On November 19 an "old fashioned social" was held. The evening was spent playing games. Mr. MacDougal danced the "Highland Fling", and gave two readings, and Mrs. Pflueger played several selections on the piano. The ladies furnished home made cakes, and ice cream, apples and cigars were also served.

The discussion club on Friday night, November 25, was led by Wm. H. Greer; subject, "Heredity."

Red Cross Finances.

A statement of the financial condition of the Canal Zone Chapter of the American National Red Cross for the month of October, 1910, follows:

RECEIPTS.

October 1.	Balance on hand	$1,922.57	
October 4.	Membership dues	2.00	
October 7.	Interest on money in bank, July, August, and September	9.68	
			$1,934.25

DISBURSEMENTS.

October 3.	Draft to secretary, American National Red Cross for one-half annual dues paid during quarter ending July 31.	$39.00	
October 7.	Cab hire	.20	
			$39.20
October 31.	Balance on hand		$1,895.05

C. A. DEVOL,
Chairman and Acting Treasurer.

Band Concert.

A concert will be given by the Isthmian Canal Commission Band at Gorgona, C. Z., on Sunday, December 4, 1910, at 6 p. m. The program follows:

1 March—*Monstrat Viam*.....Joy
2 Selection—*The Chocolate Soldier*.....Straus
3 *Procrastination Rag*.....Cobb
4 Overture—*Raymond*.....Thomas
5 Waltz—*Tres Jolie*.....Waldteufel
6 Medley Selection—*Popular Hits*.....Alford
7 Intermezzo—*Silver Bell*.....Wenrich
8 Humoresque—*What's the Matter with Father?*.....Lampe
9 March—*Any Little Girl That's a Nice Little Girl*.....Fischer

CHAS. E. JENNINGS, *Musical Director.*

The next concert will be given at Hotel Tivoli on Sunday, December 11, at 7.30 p. m.

Misdirected Letters.

Ancon, C. Z., November 30, 1910.

The following insufficiently addressed letters originating in the United States and its possessions have been received in the office of the Director of Posts, and may be secured upon request of the addressee:

Proposals for Excavation, Obispo Diversion.

Sealed proposals for excavation of about 21,942 cubic yards of earth, located between stations 1602 and 1612 on the east bank of the Canal, will be received until 2 p. m., December 15, 1910, and then opened. Full information will be furnished by the division engineer, Empire. Envelopes containing proposals must be endorsed "Proposals for Excavation, Obispo Diversion," and addressed C. A. DEVOL, *Chief Quartermaster.*

The American Society of Civil Engineers contemplates taking a trip to the Canal Zone in March.

OFFICIAL CIRCULARS.

Accounts with Republic of Panama.

CULEBRA, C. Z., October 28, 1910.

CIRCULAR No. 240-A. (Superseding CIRCULAR No. 240):

Charges and credits against the Republic of Panama on account of the installation, construction, maintenance, operation, and repairs of the water and sewer systems, and pavements of the cities of Panama and Colon shall be distributed, kept, and stated, by the Examiner of Accounts, separately for each city, in accordance with contracts dated September 30, 1910, as follows:

SUMMARY OF ACCOUNTS.

A Water and Sewer Systems.
  1 Capital Cost.
  2 Operation and Maintenance.
B Reservoirs, Pipe Lines, and Filtration Plants.
  1 Interest on Capital Cost.
  2 Maintenance and Operation.
C Pavements.
  1 Capital Cost.
  2 Repairs and Maintenance.

DEFINITION OF ACCOUNTS.

A Water and Sewer Systems.

1 Capital Cost.

This account will be charged with the entire cost of the installation of water and sewer systems within the city up to June 30, 1910, and quarterly thereafter with all expenditures on account of new construction work and with replacements costing one thousand dollars or more for a job, together with one-half per cent per quarter interest on debit balances.

This account will be credited quarterly proportionately with account C-1 with the balance of amounts collected, after proper credits to accounts A-2, B-1, B-2, and C-2, whether such balance be more or less than the quarterly capital installments with interest, as provided in the contracts.

2 Operation and Maintenance.

This account will be charged quarterly with all expenditures during the quarter on account of operation and maintenance of the water and sewer systems. This account will be credited quarterly with an amount equal to the total expenses.

B Reservoirs, Pipe Lines, and Filtration Plants.

1 Interest on Capital Cost.

This account will be charged quarterly with such proportion of the quarterly interest at one-half per cent on the entire cost of reservoirs, pipe lines, and filtration plants, as the amount of water consumed in the city during the quarter bears to the total consumption from the reservoir, or total amount of water filtered.

This account will be credited with collections for water rentals quarterly by an amount equal to the interest charge.

2 Maintenance and Operation.

This account will be charged quarterly with such proportion of the expenditures during the quarter, for the operation and maintenance of the reservoirs, pipe lines, and filtration plants, as the amount of water consumed in the city during the quarter bears to the total consumption from the reservoir, or to the total amount of water filtered.

This account will be credited quarterly with an amount equal to the total charges.

C Paving.

1 Capitol Cost.

This account will be charged with the entire cost of paving up to June 30, 1910, and quarterly thereafter with all expenditures during the quarter for new construction work and with replacements costing one thousand dollars, or more, for a job, together with one-half per cent per quarter interest on debit balances.

This account will be credited quarterly proportionately with account A-1 with the balance of amounts collected, after proper credits to accounts A-2, B-1, B-2, and C-2, whether such balance be more or less than the quarterly installments with interest, as provided in the contracts.

2 Maintenance and Repairs.

This account will be charged quarterly with all expenditures during the quarter on account of maintenance and repairs of pavements.

This account will be credited with collections from water rentals with an amount equal to the total charges.

The collections made on account of water rentals will be credited in the following order:

First—To account A-2, Maintenance and Operation.
B-1, Interest on Capital Cost.
B-2, Maintenance and Operation.
C-2, Repairs and Maintenance.

Amounts equal to the total expenditures.

Second—To account A-1, Capital Cost.
C-1, Capital Cost.

Amounts equal to their proportion of balance of collections remaining after credits to accounts A-2, B-1, B-2, and C-2.

The contracts between the United States of America and the Republic of Panama, dated September 30, 1910, contemplate a quarterly statement of the accounts on water works, sewers, and pavements; that operating expenses, interest and one-fourth of the year's capital cost shall be settled from collections, and a new capital cost determined each quarter, beginning July 1, October 1, January 1, and April 1 of each year.

GEO. W. GOETHALS,
Chairman and Chief Engineer.

Acting Division Engineer, Atlantic Division.

CULEBRA, C. Z., November 23, 1910.

CIRCULAR No. 361:

Effective November 24, 1910, and during the absence on leave of Lieutenant-Colonel Wm. L. Sibert, Major Chester Harding will be in charge of the Atlantic Division as Acting Division Engineer.

GEO. W. GOETHALS,
Chairman and Chief Engineer.

Board of Local Inspectors.

CULEBRA, C. Z., November 25, 1910.

MR. C. C. SNEDEKER,
Dry Dock, Cristobal, C. Z.

Sir: Under authority conferred upon me by Executive Order of the President, No. 1131, dated October 2, 1909, you are hereby appointed a member of the Local Board of Inspectors to serve during the absence on leave of Mr. C. J. Anderson.

Respectfully,
GEO. W. GOETHALS, *Chairman.*

Acting Resident Engineer, Pacific Division.

COROZAL, C. Z., November 28, 1910.

ORDER:

During the absence on leave of Mr. W. B. Corse, Resident Engineer, Mr. Frank Cotton will be in charge of the first district of the Pacific Division as Acting Resident Engineer, effective November 29, 1910.

S. B. WILLIAMSON, *Division Engineer.*

Proposals for Purchase of Charcoal.

Sealed bids will be received at the office of the Depot Quartermaster, Mount Hope, until 2 p. m., December 6, 1910, when they will be publicly opened, for 25,000 pounds of charcoal, to be made from mangle wood, or guayacan, or equal, and to be first-class in every respect, subject to inspection. Delivery must be made in lots of 12,500 pounds each, first lot to be delivered within 20 days after award is made; second lot within 90 days after date of award. Delivery will be accepted on board cars at any point on the Panama railroad, and charcoal will be weighed on receipt at Mount Hope depot. Material must be delivered in bags, of which an equal number will be returned to the contractor. The right is reserved to reject any or all bids. Bids must be marked "Proposal for Furnishing Charcoal," and addressed to C. Nixon, Purchasing Agent on the Isthmus, Mount Hope.

Family Quarters.

Applications for married quarters were on file on November 1, as follows:

PLACE.	No. 1 List.	No. 2 List.

Supplies for Canal Work.

The following steamers, with supplies for the Isthmian Canal Commission, arrived at the ports of Cristobal and Colon during the week ending November 26, 1910:

Ancon, November 20, from New York, with 25,500 barrels cement for Atlantic Division; 102,000 bags cement for Pacific Division.

Storfund, November 21, from New York, with 14,970 barrels cement for Atlantic Division; 59,937 bags cement for Pacific Division.

Sibiria, November 21, from New York, with 200 barrels carbolic acid, 7 bundles copper wire for stock.

Panama, November 22, from New York, with 10 cases electrical goods, 23 reels wire rope, 20 bundles wire rope for Atlantic Division; 6 reels wire rope for Central Division; 1 oxy-acetylene cutting and welding plant, complete, 30 cases castings, 700 bundles bolts for Mechanical Division; 54 cases drugs and sundries for Sanitary Department; 387 bars iron, 269 bundles iron, 80 cases concentrated lye, 226 kegs bolts and rivets, 11 cases lubricating oil, 11 cases valves, 20 drums compound, 114 cases gages for stock; and a miscellaneous cargo, the whole consisting of 2,164 packages, weighing 243 tons.

Abangarez, November 24, from New Orleans, with 88,138 feet yellow pine lumber for Atlantic Division; 42,523 feet yellow pine lumber for Central Division; 26,750 feet white oak lumber for Pacific Division; 12,610 feet white oak lumber, 800 pieces steel knuckles for Mechanical Division; 85,946 feet white oak lumber, 50 crates refrigerators, 176 bales straw, 1,944 bales hay, 92 crates beds and springs for stock.

Almirante, November 24, from New York, with 8,735 pieces steel bars for Atlantic Division; 105 tons lock construction material for Pacific Division; 83 drums car oil, 400 pails grease, 16 bundles hoes, 600 drums calcium carbide for stock.

Stages of the Chagres.

Maximum heights of the Chagres River for the week ending midnight, Saturday, November 26. All heights are in feet above mean sea level:

COLON TO BARBAOOS, CALLING AT TRINIDAD.

Clyde	R.-M	Tuesday	Dec. 6
Thames	R.-M	Tuesday	Dec. 20
Tagus	R.-M	Tuesday	Jan. 3

The next sailing of the Leyland Line will be as follows: *Mercian*, on or about December 16, for New Orleans, via Kingston, Ja.

Hamburg-American steamers leave for New York every Tuesday at 10 a. m., arriving there the following Tuesday, and for Port Limon every Tuesday or Wednesday via Bocas del Toro or Puerto Colombia.

Royal Mail steamers leave for New York on alternate Mondays at 5 p. m.; for Southampton on alternate Tuesdays at 10 a. m.

United Fruit Company's ships for New Orleans direct leave on Thursday at 3 p. m.; for New Orleans via Port Limon and Puerto Barrios on Thursday at 6 p. m., and for New York on Thursday at 11 a. m.

Sailings of the French line (Cié Générale Transatlantique) for Venezuelan ports, Martinique and Guadeloupe on the 3rd and 20th of each month.

CANAL RECORD

Volume IV. ANCON, CANAL ZONE, WEDNESDAY, DECEMBER 7, 1910. No. 15.

The Canal Record

Published weekly under the authority and supervision of the Isthmian Canal Commission.

The Canal Record is issued free of charge, one copy each, to all employes of the Commission and Panama Railroad Company whose names are on the gold roll. Extra copies and back numbers can be obtained from the news stands of the Panama Railroad Company for five cents each.

THE CANAL RECORD
Ancon, Canal Zone,
Isthmus of Panama.

No communication, either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.

NOTES OF PROGRESS.

Materials for Locks' Towing System.

A quantity of track material, about 8,000 tons, will be advertised for within the next few weeks. It is to form part of the rack railroad on which the electric towing locomotives, which will tow ships through the locks, will run along the top of the lock walls. It includes all materials necessary for the construction of the railroad, excepting a small quantity of materials on hand and the rails, splice bars, and steel track bolts; and includes also, 52 switches complete, with frogs. The larger items are: 3,212,544 pounds steel crossties, 1,934,240 pounds of rolled steel conductor-slot covers, 6,554,000 pounds of carbon steel rack castings, 831,744 pounds of copper conductor rails, 721,250 pounds of steel conductor rails, 1,273,090 pounds of steel channels. 445,000 pounds of malleable iron castings, and smaller quantities of tie clips, bolts, nuts, splice bars, rivets, insulators, etc. About 2,000 tons of 90-pound steel rail for the towing system will be included in the annual contract for rails.

The rack railroad will be installed by the Commission, and the delivery of the material extends over a period of two years, so that the erection may keep pace with the concrete construction of the locks.

Unimproved Sections of Panama and Colon.

In the new contract entered into between the Government of the United States, and the Government of Panama, relating to the method of payment for municipal improvements in the cities of Colon and Panama, published in THE CANAL RECORD of October 5, 1910, there is a provision for the proper laying out of unimproved sections of the cities before buildings may be erected thereon. In accordance with this section of the contract, the President of Panama has made a decree under date of November 7, 1910, sections 1 and 2 of which, are as follows:

Sec. 1. It shall be unlawful for any municipal or sanitary officer to grant a permit for the erection of a house, or other structure, in any of the unimproved districts, or portions, of the city of Panama, or the city of Colon, until after such district, or portion, in which such house, or other structure, is sought to be built, shall have been laid out and platted in municipal order, and a system of water works and sewerage has been duly installed therein, and the streets properly paved; all of which work must be installed in conformity with the terms of the contract above mentioned.

Sec. 2. It shall be unlawful for any person to commence the erection of any house, or other structure, in any unimproved district, or portion, of either of said cities, until after the public improvements required by the preceding section of this decree shall have been duly installed therein. Any person thus committing any violation shall be fined in any sum, not exceeding five balboas (B/5) for each day the structure, or part thereof, may remain on the premises; and should the owner of the structure refuse to remove it within a reasonable time, the said structure may be removed by the officials in charge of sanitation, and the cost of such removal shall be a lien on the material in the structure, which may be sold by the sanitary authorities to reimburse them for the cost of tearing down the structure.

The words "unimproved district, or portion, of the city," as used in this decree, shall be held to mean a district, or part, of the city, in which no houses or buildings exist at the time of the promulgation of this decree.

Section 1 is a preamble, and sections 3 and 4 provide for the enforcement of the provisions of sections 2 and 3.

Contract for Excavation.

The contract for excavating 112 450 cubic yards of earth from the Canal prism, opposite Gorgona, has been let to Llewellyn Swain of Empire at 21½ cents a yard. There were 11 bidders. The work will be done for Mr. Swain by B. B. Duncan of Las Cascadas. The unusually low price is due to the fact that about 10,000 yards of the material can be cast over into the Chagres River; 5,000 can be so dislodged with dynamite that the river will carry it away, and the longest haul on the balance is not over 150 feet.

Empty Cement Bags.

About 90 per cent of the bags in which cement is shipped to the Isthmus for use in the Pacific Division locks are saved and returned to the manufacturers, who allow 8½ cents apiece for them. The cement is shipped in a bag enclosed within another bag, both made from material of the same grade and weight, the allowance to each bag of cement, therefore, representing 17 cents. As fast as the bags of cement are emptied at the mixers they are loaded into box cars and carried to an old building, formerly used as a storehouse by the Pacific Division, situated a little north of the yard office at Miraflores, where they are sorted and baled. From 20 to 30 men, under a white foreman, are constantly employed in the sorting shed, and at the present time, a day's work in sorting and preparing for shipment represents from 25,000 to 35,000 sacks. The good bags are packed in bales of 100 each, and the torn or otherwise damaged bags, in bales of 50 each. The damaged bags are mainly utilized by filling them with sand for the construction of dikes. The bags are shaken before they are placed in the baling press, and the sweepings resulting therefrom amount to 50, or more, barrels a day. This cement is in good condition; is used in concrete operations in the locks, and the value of it pays the wages of the force employed at the sorting shed, including the foreman, but does not take into account the cost of gathering up the bags at the lock sites, and the haulage to the shed, which amounts to a small fraction of a cent per bag. Many of the bags sent to the States months ago are now returning filled the second time, and are still whole, capable of being used again. A statement of the number of good bags returned to the manufacturers from the beginning of concrete operations at the Pedro Miguel and Miraflores Locks, and the value thereof, is shown in the following table:

MONTH.	No. of bags	Value.
To April 25, 1910	740,000	$62,900.00
May	180,000	15,300.00
June	180,626	15,353.22
July	182,516	15,513.86
August	120,016	10,201.36
September	540,592	45,950.32
October	600,000	51,000.00
November	661,300	56,210.50
Total	3,205,050	$272,429.26

The cost of handling, less freight charges, during the month of October was $983.71 for 600,000 bags returned.

Gatun Locks.

The contractor for the lock gates has begun building an office and warehouse on the east side of the upper locks at Gatun. In the machine shop the work of building cranes for the gates has been begun.

Excavation by steam shovels in the lower locks is about 95 per cent completed, and at the present rate, should be completed by the end of January. This is all the excavation that remains within the lock chamber, and the excavation for the north approach walls will be done by suction dredge. Work has been begun on the lateral culverts for the lower locks, and should be completed about March.

New Commissary at Miraflores.

The new commissary at Miraflores was opened for business on November 1. It is housed in building No. 1, an old French type of quarters, used as an insane ward in the early days of American canal work, and later, as married quarters for laborers, situated near the double-track line of the Panama railroad. Numerous improvements and alterations were made in converting it into a commissary, and it is now a more valuable building than when it was first erected. It is divided into two sections, the rear section for use as a store room, and the front for the display and sale of goods. The counters are provided with railings to prevent persons from leaning upon them, and a new arrangement for serving the patrons has been established. Instead of being served inside, the customer enters, gives his order and receives his bill. He then retires to the veranda outside, hands the bill with his coupon book to the cashier through

NOTES OF PROGRESS.

(*Continued.*)

an open window, thence walks to the opposite end of the veranda and receives his goods through another window opening on the bundle counter. This method eliminates crowding in the small space allotted to customers, together with the consequent stuffiness, and is an aid to expeditious serving. No cold storage supplies are handled, as the commissary has no ice box, but orders for this class of goods are transmitted to the cold storage plant, Cristobal, by the storekeeper direct. A wagon road has recently been built from the commissary to the new railroad station on the relocated line.

Christmas Goods at the Commissaries.

Toys and other articles suitable for Christmas giving will be placed on sale at the commissaries between December 10 and 15. An order, amounting to about $3,000, was placed for this class of goods some time ago. It includes an assortment of mechanical toys, an extra quantity of cheap toys which usually sell well, and a large stock of dolls of different grades and sizes. An order for Christmas trees has also been placed, but in order that their freshness may be impaired as little as possible, the shipment will not reach the Isthmus until the week before the 25th. There was a comparatively small amount of Christmas goods left over from last year, less, in fact, than in any year since the commissary department has been making the sale of these goods a feature.

Guayacan Lumber Prices Excessive.

Proposals for furnishing 86,000 feet of guayacan, or lignum vitæ lumber in various lengths and sizes, for use in repair work at Gorgona shops, were opened at the office of the Purchasing Officer at Mount Hope on November 2. Two bids were received, one for supplying the lumber at 12 cents, and one at 10 cents, per foot, board measure, making the cost at the last named quotation in the neighborhood of $100 per thousand feet, board measure. Both bids were rejected as the prices were considered excessive, and oak lumber, which can be purchased in the States at about $35 per thousand feet, board measure, will be used in place of the guayacan.

Tin and Pipe Shop at Gorgona.

A tin and pipe shop 35 by 88 feet will be built at Gorgona shops. This will relieve the boiler shop of the tin and pipe section, and will add about 3,000 square feet of usable space for boiler work.

Head Nurse Examination (Female).

Applications will be received up to the close of business on December 20, for an examination to be held shortly thereafter to fill a vacancy in the position of head nurse (operating—female), at $480 per annum, together with board, quarters, and laundry, in the Freedmen's Hospital, Washington, D. C., and vacancies requiring similar qualifications in that hospital. Following are the subjects, with relative weights: (1) Anatomy and physiology, 5; (2) Hygiene of the sick room, 20; (3) General nursing, 20; (4) Surgical nursing, 20; (5) Obstetrical nursing, 20; (6) Experience in nursing, 15. Applicants will be required to show that they are graduates of recognized schools for trained nurses, which require a residence of at least two years in a hospital giving thorough practical and theoretical training. In addition, they must have had at least one year's post-graduate experience in an operating room, preferably in charge.

Women only will be admitted to this examination. Applicants must be citizens of the United States and have reached their twentieth, but not their fortieth birthday, on the date of the examination. Request should be made for application form 1312, mentioning the kind of examination.

JOHN K. BAXTER,
Secretary, Isthmian Civil Service Board.
Culebra, C. Z., November 30, 1910.

CONCRETE WORK IN THE LOCKS.

GATUN LOCKS.

Concrete work in Gatun Locks is about 45 per cent completed, 932,162 cubic yards, out of a total of 2,085,000, having been placed at the close of work on December 3.

A statement of the amount of concrete placed in the locks each day for the week ending December 3, and of the total, follows; and a similar statement for the work in the Spillway of Gatun Dam is published elsewhere in this issue. The construction plant works 12 hours daily, and the auxiliary plant 9 hours.

DATE.	CONSTRUCTION PLANT. 2-cubic yard mixers.			AUXILIARY PLANT. 2-cubic yard mixers.			Large stone.	Total.
	Concrete placed.	Hours worked.	No. of mixers	Concrete placed.	Hours worked.	No. of mixers

Previously reported								912,890
Grand total								932,162

*The portable ⅓-yard mixer at work on the wing wall, extending from the east wall of the upper lock into the hill, produced concrete as follows: November 28th, 26 yards; November 30th, 8 yards; December 1st, 15 yards; December 2d, 20 yards.

PEDRO MIGUEL LOCKS.

Concrete work in the locks at Pedro Miguel is about 52 per cent completed, 441,107 cubic yards, out of a total of 837,400, having been placed at the close of work on Saturday, December 3. An overflow of water into the locks from the Pedro Miguel River caused a diminunition in the output of the auxiliary plant on Saturday. The runways for the west chamber crane are being continued over and past the end sill section, in order that the crane may proceed with the construction of the center and west side walls to their points of termination. The record of concrete laid during each of the six 8-hour working days of last week, follows:

DATE.	CONSTRUCTION PLANT. 2-cubic yard mixers.			AUXILIARY PLANT. 2-cubic yard mixers.				Total.
	Concrete placed.	Hours worked.	No. of mixers	Concrete placed.	Hours worked.	No. of mixers	Large stone.

SLIDES IN CULEBRA CUT.

Preliminary Report of Chief Geologist, U. S. G. S.

A preliminary memorandum relating to side slopes in Culebra Cut, submitted to the President, through the Chief Engineer, on November 15, by Dr. C. W. Hayes, Chief Geologist of the United States Geological Survey, follows:

SECTION OF CANAL AFFECTED.

The practicable side slope depends on (1) depth of excavation; (2) character of materials, and (3) geological structure. Examination of the Cut indicates that serious difficulty through failure of slopes will be experienced only in the section between Empire and Pedro Miguel, or between stations 1720 and 1880. Small slides occur outside of this section, as at La Pita, but they are due to exceptional conditions and will be relatively unimportant.

CHARACTER OF MATERIALS.

Within the section defined above occur four distinct classes of materials in excavation, viz:

1. *Sedimentary Rocks*—This class includes: (*a*) volcanic agglomerates composed wholly of material ejected from volcanoes in the form of angular fragments varying in size from the finest dust to several inches in diameter; deposited in water but very imperfectly bedded; generally bluish green in color; moderately hard when first exposed, but crumbling rapidly in contact with the air.

(*b*) Fine grained clays; blue, red or black; composed largely of fine volcanic dust, which has been transported and deposited by water and is, therefore, well bedded; like the agglomerate, moderately hard when first exposed, but crumbling even more rapidly in contact with the air.

(*c*) Lignitic coal or black carbonaceous clay; beds, one to three feet thick, interstratified with the red and blue clays of (*b*).

These beds—(*a*), (*b*), and (*c*)—with some unimportant sandstones and limestones constitute the Culebra formation of tertiary age.

2. *Intrusive Igneous Rocks*—These are chiefly large masses of dark colored andesitic rock, which have been forced upward into the sedimentary beds, in some cases in a fluid condition, but more generally after having solidified. The intrusion was accompanied by tilting and crushing of the previously horizontal sedimentary beds. The andesite is generally intersected by numerous joints, but does not disintegrate readily on exposure, and where supported below will stand in vertical slopes. Gold Hill and Contractor's Hill are examples of these andesitic intrusive masses. All the other high hills in the Culebra section of the Zone are apparently due to the presence of similar rocks.

3. *Lava Flows*—A flow of light gray trachytic lava, 20 to 30 feet thick, occurs conformably interbedded with the Culebra clays throughout the central portion of the Cut. Its relations are exactly those of a sedimentary bed. The trachyte does not disintegrate readily, but by reason of its abundant joints, it does not afford any support to the clays above.

4. *Residual Clays*—All the rocks in this region are more or less deeply weathered and the original surface is everywhere covered with a residual deposit, generally clay, dark red in its upper prtions and varying shades of red and yellow below. This clay is derived directly from the rocks on which it rests and is thinnest over the intrusive andesites, because they decay less rapidly than the sedimentary rocks. It is thickest over those portions of the sedimentary rocks which have been so fractured as to permit the easy percolation of surface waters. It is usually separated from the underlying unweathered rock by sharp line, indicated by an abrupt change in color and texture.

FAILURE OF SIDE SLOPES.

The original three on two slopes have failed to stand at numerous points. Varying conditions have given rise to three classes of failures which may be designated (1) surface flows; (2) structural breaks, and (3) surface disintegration.

1. *Surface Flows*—Wherever the residual clay described above rests upon an inclined rock surface and the lateral support of the mass is removed, as is done when a trench is excavated, the portion of the mass lying above the unsupported side tends to flow down the sloping surface. The material has no cohesion within itself and very slight adhesion to the underlying rock. It acts like a viscous fluid and may flow on slopes as low as one on seven or eight. Having started as a purely surface flow it may gather sufficient momentum to carry down portions of the underlying unweathered rock, particularly if the latter has previously been deeply fractured. The Cucaracha and Paraiso slides are of this type. Between Gold Hill and Paraiso, a series of andesitic intrusions, east of the Canal, have given the sedimentary beds a westerly dip. They form a series of troughs pitching down toward the Canal. Moreover, the sedimentary beds, in addition to being tilted, have been deeply fractured and "slickensided," so that their cohesion is greatly reduced and the movement which started in the surface clays has extended some distance below the base of the clays and involved the underlying unweathered rock.

2. *Structural Breaks*—Every variety of rock has a limiting strength and if loaded beyond this limit will be crushed, or will flow. The crushing strength varies between very wide limits and is always lowered when one or more sides of the block are unsupported laterally. The weakest member in the sedimentary series occurring in the Culebra Cut is the lignite, or lignitic clay. When the lateral support is removed from a lignite bed it tends to give way under the weight of the overlying rocks and a slide results. The same result may occur, even if the weak bed is not cut through, but merely unloaded by excavating down nearly to it. In this case it flows out from under the load and bulges up in the excavation. This type of slide has occurred at various points between Empire and Gold Hill, and, in nearly every case, the immediate cause appears to be the failure of a lignite bed under the unbalanced pressure due to the excavation.

This type appears to offer more serious difficulties than the surface flows, and the obvious prevention is in making the slopes sufficiently low so that the weakest rock subjected to the unbalanced pressure shall not be loaded beyond the limit of its crushing strength. It seems reasonably certain that in the section of the Canal threatened by slides of this type less material will have to be removed if the slopes are lowered before the break occurs than afterwards.

3. *Surface Disintegration*—As previously stated, all the sedimentary rocks of this region tend to disintegrate very rapidly when exposed to the air. They first crumble into small angular fragments and eventually into the finest powder. Slopes cut in such rocks will rapidly disintegrate and crumble until they reach an angle on which the products of disintegration will lie and form a protective mantle. Vegetation will, of course, greatly assist in this protection. While the failure of the Canal slopes from this cause will not be a serious matter, it will involve the removal of a large amount of material in the aggregate, and constant attention for a long time.

Under certain conditions this surface disintegration becomes a more serious matter. For example, the contact between the intrusive andesite of Contractor's Hill and the sedimentary clays dips away from the Canal at an angle of 55°. The crumbling of the clays below the contact leaves the andesite mass overhanging, and the overhang will increase as the Canal is carried to its full depth and more clay is exposed. With a rock so much fractured as the andesite, this condition is unsafe and the exposed surface of the underlying clay should, therefore, be protected from further disintegration.

RECOMMENDATIONS.

1. A competent geologist should be employed on the Isthmus until the Canal is completed.
2. The geologist should continue the record of geologic facts, as revealed by the excavation, constructing a series of accurate cross sections. The work already done along this line by Messrs. Nichols and Raggi is extremely valuable and their zeal and intelligence cannot be too highly commended.
3. Additional core drill records should be obtained under the direction of the geologist, particularly to determine whether, or not, sedimentary beds of exceptional weakness occur in such position as to cause landslides of the structural break type.
4. The geologist should afford assistance to the engineers in determining the most economical slope for each section of the Canal, and the slope should be fixed, not arbitrarily, but in view of the known geologic conditions.

Baseball.

At the annual meeting of the Ancon Baseball Park Association held on November 26, the following officers were elected: President, Dr. J. C. Perry; vice-president, Dr. A. B. Herrick; secretary and treasurer, A. McGown; board of directors, Tom M. Cooke, Dr. W. E. Deeks, S. C. Russell. Provision was made to place the grounds in condition for the coming season's games.

Fatal Accident at Dock No. 11.

Thomas Brown, check No. 28096, was killed outright, and Charles McIntosh, check No. 28106, received injuries from which he died shortly after his removal to the hospital, in an accident on Saturday afternoon, December 3. The men were Jamaican laborers in the employ of the Panama railroad, and were engaged at the time in dumping cars of rock on the trestle extending out into the harbor from dock No. 11 at Cristobal Point. They had unfastened the chains on one of the cars, when a powerful wave struck the opposite side of the car causing it to tilt and overturn its contents, the mass of falling rock pinning the men between the body of the car and its trucks. An inquest was held on the body of Brown on Saturday night.

Personal.

Lieut.-Col. H. F. Hodges sailed on the *Parismina* for New Orleans on December 1, on his annual leave of absence.

Gatun Dam Spillway.

Concrete was placed in the Spillway of Gatun Dam during the week ending December 3, as follows:

Date.	Cubic Yards.		
	Concrete	Large rock.	Total.

THE HOURLY MEN.

President Taft Decides They May Have Four Weeks' Vacation, But No Increase In Pay.

On Board U. S. S. *Tennessee*,
En route for Hampton Roads,
November 19, 1910.

My Dear Colonel Goethals:

It is important that this decision should reach you promptly. I send it directly to you, therefore, and do not transmit it through the Secretary of War, to whom, however, I shall send a copy.

The question presented is made by the so-called hourly "gold" men on the Isthmus. They ask for a vacation each year of six weeks with pay, instead of two weeks with pay, which they now receive. Under the regulations of the Commission, men who are paid by the month receive a fixed compensation and enjoy a vacation of six weeks each year with pay. Originally no vacation allowance was made to the hourly gold men at all, and this, on the ground that they were allowed one and one-half times their regular compensation for every hour of overtime, that is, beyond the regular eight-hour day, while the monthly employes are not allowed pay for overtime at all, although under certain exigent conditions they are required to work beyond the regular day.

In August, 1908, the Reynolds Commission, consisting of Mr. James Bronson Reynolds, Mr. Samuel B. Donnelly, and Mr. Henry Beach Needham, considered the argument upon which the allowance of a vacation to monthly employes was granted and was denied to hourly gold employes. They recommended that no such distinction be made, but that the six weeks' vacation for one year be granted to all employes and a four weeks' vacation for the second year, with a view of permitting the employes of all classes to return to the United States once in two years, and to spend a month in the intervening year at a place nearer at hand where a healthful change of air could be secured. This was not adopted.

The petition of the employes was renewed and sent to Secretary Dickinson, and in September, 1909, he allowed the hourly gold employes a yearly vacation of two weeks with pay.

A new petition was filed by the hourly men during the present year and this was fixed for a hearing by me on the Isthmus during my recent visit. Three committees of hourly employes presented their views, and two of them argued that the discrimination against them, and in favor of the monthly men, in the matter of leave should be made up for, not by increased leave, but by additional compensation per hour. The consideration of this question by the Reynolds Commission includes certain data that are useful in reaching what seems to be a just conclusion in this case. They said:

> "The ground for declining to allow the hourly men vacation with pay is that they already are receiving time and a half for overtime, which the monthly men are not receiving. The question then is: Do the facts show that they receive an amount approximately equivalent to the sum which they would otherwise receive for the six weeks' vacation with pay?
>
> "Of the time earned in the month of February, 1908, by shop mechanics, 4.56 per cent was overtime. In computing this average it was found that the men employed in the Paraiso shops worked 12 per cent overtime, and those employed in some other shops had no overtime at all. In fact, a numerical majority of the mechanics earned little or no overtime. But since the principle is made to apply to all, the average benefit must be considered.
>
> "The total possible earnings of a mechanic paid by the hour at the rate of 65 cents per hour, at which rate the greater number of shop mechanics are employed, and who takes his vacation on his own time, amounts in a year to $1,465.20. Assuming that the overtime of all amounted to 5 per cent, that being the actual percentage of overtime in April, 1908, the total overtime earnings per capita would be $73.26 for one year. The regular earnings of hourly men receiving 65 cents an hour would amount to $187.20 for six weeks. If overtime work by the mechanics was considered as a substitute for a vacation with pay, it is evident that the actual average overtime pay is not a fair offset to a vacation with pay.
>
> " 'Gold' monthly men during the month of April, 1908, were paid $530,191.04, and 'gold' hourly men $157,145.26. Considering this month as a basis for comparison, the cost of the six weeks' vacation granted to the monthly men amounts to $795,286.56. The cost of granting an annual vacation with pay to the 'gold' hourly men, figured on the same basis, would amount to $235,717.89. On the basis of the month of April, the total earnings for one year of the 'gold' hourly men would be $1,885,743.12. Estimating overtime for all on the basis of 5 per cent, the amount representing overtime would be $94,287.15. This amount certainly cannot be considered as an offset, or in any way equal, to the amount of $235,717.89, which would be the cost of granting them vacations with pay on the same basis as the monthly men."

While the exact figures as to pay and overtime differ some from month to month, the conditions shown by this report are substantially the same as those which exist today, except that the overtime between shops is more equally distributed than it was at that time. It thus appears that under the order of Secretary Dickinson and the regulations for the payment of overtime, the hourly employes on the average now have the privilege of working approximately two weeks overtime, for which they receive 50 per cent more compensation than the regular rate of pay, and they also have two weeks' leave, for which they receive pay and do no work. For the overtime pay privilege of the hourly men averaging two weeks, we can find a rough equivalent in two weeks of the six weeks' leave of the monthly men who are required to work overtime, but who receive no pay for it. In addition to these equivalent privileges, however, the hourly men receive only two weeks' leave with pay, while the monthly men have four weeks.

The present arrangement with the monthly employes is fair and I do not wish to change it. In order to equalize the matter it would seem just to allow the hourly men four weeks' leave with pay, instead of two weeks' leave, as at present. This I have decided to grant beginning January 1, 1911, and further, to permit hourly employes to accumulate leave by postponing two weeks of it to the following year, and thus to have six weeks, instead of four, in the second year, in order that they may have the benefit of a more satisfactory visit to the United States.

In a recent order you permit the monthly men, when discharged on account of reduction of force, to accumulate their leave for two years if they shall have served two years without taking any leave. The same order should apply in the case of the hourly men.

I cannot grant the request to equalize the difference in terms of employment between the hourly men and the monthly men by increasing the wages of the hourly men. This would disarrange the whole scale of wages which has been carefully adjusted.

This order will take effect from January 1, 1911.

Sincerely yours,
Wm. H. Taft.

Colonel Geo. W. Goethals,
Chairman, Isthmian Canal Commission.
Culebra, C. Z.

FACING CULEBRA CUT.

Recommendations of Board on Revetment and Retaining Walls.

The board appointed for the purpose of determining, so far as present conditions permit, whether the faces of Culebra Cut should be revetted or protected by grouted rubble or concrete facings has submitted the following recommendations, which have been approved:

(1) The board is of the opinion that it is undesirable to attempt, under ordinary circumstances, to put in revetment for the purpose of protecting the faces of the Cut, until the full depth of the Cut has been reached.

(2) For the reason just stated, the board believes that unless something unforeseen should occur, there is no necessity, nor is it advisable, to begin any revetment work, properly so-called during the next dry season.

(3) The board is of the opinion that the preservation of a maintenance track on the east berm of the Canal is eminently desirable, if this result can be accomplished at a reasonable cost, and believes that the progress of the work up to the present time has not shown conclusively that such a track cannot be maintained without undue expense. The board, however, is unwilling to enter at the present time upon a policy which, in order to maintain the berm, might involve a large expenditure, before the possibility of such maintenance shall be conclusively established. For this reason, it believes that during the next dry season, the construction of retaining walls, or other supports, to the berm should be limited to situations where such support is necessary for construction purposes, and finds as the result of the inspection already described, but a single locality where it is prepared to recommend that measures be taken during the next dry season to support the berm, to wit:

> That portion of the 95-foot level on the east side of the Canal between stations 1870 and 1880, at the foot of the old Paraiso slide, where it believes that construction work requires the preservation of the track on the 95-foot level.

(4) The excavation has not yet reached the full depth at the point just mentioned, and the board suggests the following treatment for this locality, to wit:

> That after the dry season has set in a cut be made to full depth, or perhaps a little deeper than the bottom of the Canal, along the front of the unstable bank, extending into the bank outside of the side slope of the Canal, a distance sufficient to form the foundations for a retaining wall or support, the actual distance of the cut into the bank being determined by the manner in which the bank acts when the cut is being made. If the face of the bank remains reasonably stable and does not slide into the Cut, it may be possible to take out two shovel cuts before building the support. If so, the support may be constructed of riprap stone, with a dry facing, and probably without the use of concrete or mortar. If, on the other hand, the bank shows signs of moving when the first shovel cut is taken, a concrete retaining wall, back filled with dry rubble, will probably better meet the situation. The length of bank requiring this treatment is about 900 feet.

The board making the report consisted of Lieut.-Col. H. F. Hodges, Lieut.-Col. D. D. Gaillard and Civil Engineer (U. S. N.) H. H. Rousseau.

Band Concert.

A concert will be given by the Isthmian Canal Commission Band at Hotel Tivoli, Ancon, C. Z., on Sunday, December 11, 1910, at 7.30 p. m. The program follows:

1 March—*Monstrat Viam*	Joy
2 Selection—*The Chocolate Soldier*	Straus
3 Two-step—*Angel Eyes*	Jergensen
4 Overture—*Lustspeil*	Keler Bela
5 Waltz—*Tres Jolie*	Waldteufel
6 Medley Selection—*Popular Hits*	Alford
7 *The Rosary* (By request)	Nevin
8 Concert Piece—*Hearts and Flowers*	Tobani
9 March—*Bersagleiri*	Eilenberg

Chas. E. Jennings, *Musical Director.*

The next concert will be given at Porto Bello on Sunday, December 18, at 2 p. m.

The audit of all issues made from Quartermaster's stores on the Isthmus during the first six months of 1910 was begun by the Chief Quartermaster's office force immediately after July 1 and was completed on October 13. There were approximately 8,000,000 individual issues during the period mentioned and to secure an absolute check each item was passed on by five different persons.

RAINS AND FRESHETS.

Canal Work Retarded by Rain and Floods.

Heavy and continuous rains during the past week caused inconvenience to the Canal work in all divisions, and affected the railroad service across the Isthmus.

A freshet in the Chagres River was reported from the gaging station at El Vigia at 4 o'clock on the morning of December 3. It reached its crest at Gamboa at 6 o'clock that evening, when it was 64.6 feet above sea level; at Bohio at 7 o'clock the following morning, when it was 30.2 feet above sea level, and at Gatun on the afternoon of December 5, when it was 26.05 feet above sea level. At its crest the freshet reached 108.7 feet above sea level at Alhajuela on the upper Chagres, which is 1.9 feet lower than the freshet of December 7 to 18, 1909. A comparison of this freshet with the heaviest freshets of 1909 at Gamboa and Alhajuela, follows:

		Feet above sea level.
December 3, 1910	Alhajuela	108.7
	Gamboa	64.6
November 19, 1909	Alhajuela	111.4
	Gamboa	72.6
December 11, 1909	Alhajuela	110.6
	Gamboa	67.9
December 26, 1909	Alhajuela	121.
	Gamboa	78.2

The stages of the river at various stations during the past week are shown in the following table:

DAY AND DATE	STATION.				
	Vigia.	Alhajuela	Gamboa.	Bohio.	Gatun Lake.
Sun. Nov. 27	128.9	95.6	51.0	19.7	18.6
Mon. Nov. 28	127.8	94.3	48.3	19.2	18.6
Tues. Nov. 29	136.5	100.1	53.8	20.8	19.0
Wed. Nov. 30	138.6	101.2	55.9	21.3	19.4
Thurs. Dec. 1	133.5	98.6	55.9	22.8	20.5
Fri. Dec. 2	133.2	98.0	53.7	22.9	20.8
Sat. Dec. 3	150.9	108.7	64.6	29.0	22.6
Height of low water	125.0	92.0	46.0		

A comparison with previous floods is a fair one only so far as it concerns Alhajuela, because local conditions have made the records at Gamboa, Bohio and Gatun incomparable with those of previous years. Immediately below the gaging station at Gamboa, the Canal channel has been completed and the river, which formerly pursued a tortuous course, now flows through the broad and straight channel, thus the water escapes more rapidly than in previous years. At Gatun, the diversion channel, through which the river flowed last year at sea level, has been closed and the water now escapes through the Spillway channel, the bottom of which is 10 feet above sea level. This flood in former years would have covered the flat land at Gatun with a few feet of water where under present conditions it raises the surface of the lake formed by Gatun Dam to a height of 26 feet.

The conditions incident to the flood were anticipated so far as the valley below Gamboa was concerned. Last July the occupants in the lake region, whose buildings were below the elevation it was believed a flood would reach, were warned to move to higher ground. These elevations expressed in feet above sea level were given as follows: Tabernilla, 40 feet; Frijoles, 35 feet; Bohio, 30 feet; Ahorca Lagarto, 28 feet; Gatun, 25 feet. The prediction was correct in every case, as the surface of the lake during the flood of last week corresponded to the heights given in July, excepting that at Gatun, where the elevation was affected by a small jam of logs and other débris at the mouth of the Spillway.

The flooding of the present main line of the railroad between Gatun and Frijoles was anticipated and a schedule for trains over the relocation of the Panama railroad was published on October 19. With a few delays this schedule was followed.

Central Division.

The rain filled the diversion channel, which keeps the water from the Obispo River watershed on the east side of Culebra Cut from flowing into the excavation, and on December 1, the diversion bank broke at a point opposite Empire, immediately south of the place where the break occurred on May 7, 1910. This break was filled, but on the 3d the water forced it out again and the repairs were not completed until the night of December 4. A portion of the water from the diversion flowed into Culebra Cut and flooded it from Las Cascadas to Bas Obispo, so that no work could be done in that section. Nine steam shovels were forced to suspend and the hauling of spoil from the north end of the Cut was interrupted. The rain accelerated the numerous mud slides, and so interfered with track work that the output from the south end of the Cut was also lessened. The shovels at work at Gorgona and Mamei were forced to suspend.

Pedro Miguel Locks Partially Flooded.

A freshet in the Pedro Miguel River, aided by the back set of the tide, combined to cause a partial flooding of the locks at Pedro Miguel on Saturday of last week. The water found its way into the locks between 8 and 9 o'clock in the morning and stopped the concrete work in the end sill section for the remainder of the day. The work of the permanent handling plant, however, was uninterrupted, as the trestles on which the trains run to supply concrete to the chamber cranes were well above the flood level.

A pumping plant was formerly located at the extreme south end of the Pedro Miguel lock pit, which discharged water through a steel pipe culvert laid under the west bank to the low land beyond. The high water covered this low section and rose over the mouth of the pipe, which thus served as a conductor for the water to enter the lock pit. The earth around the pipe was also undermined and a torrent of water poured through the opening and followed the sides of the guide wall toward the locks. Earth dikes were hastily thrown up, but these failed to stay the flood's progress, which, when it first entered the locks, resembled a moving wall of water. The opening was finally filled with bags of sand, but by the time the dam was completed, the water stood 10 feet deep in the low places, reaching to one inch above the floor of the present pumping station, and to a depth of a foot over the higher floor levels. The pumps were kept going steadily all of Saturday night and Sunday, and by Monday, most of the water had been removed.

"Norther" at Atlantic Entrance.

A "norther" of short duration, but of sufficient severity to cause all large vessels to leave their berths at the Colon docks and to interrupt temporarily the Atlantic Division water transportation service with Porto Bello and Nombre de Dios, occurred in Colon on Friday and Saturday of last week. It was also responsible for the beaching on the Colon water front of a 600-cubic yard steel barge in the service of the Atlantic Division, loaded with rock. The storm arose about midday, Friday, reached its maximum force Friday night, and began to abate Saturday afternoon. During its height, the waves dashed over the protection levee along Roosevelt avenue, Cristobal, carrying with them stones and shore débris, and in places, badly washing out the road. The steamships *San Mateo* of the California and Atlantic Steamship Company, the *Versailles* of the French Line, and the U. S. S. *Tacoma* rode out the blow in the open roadstead, while the *Santa Marta* and *Atenas* of the United Fruit Company sought shelter at dock No. 11. The *Santa Marta* was due to leave Friday night, but remained in port until Saturday night.

The tug *Reliance* of the Atlantic Division towing fleet left for Nombre de Dios, with two barges in tow, on Friday afternoon, reached there safely, and returned without a tow on Saturday. No shipments of sand or stone were received on Saturday, but the regular service was resumed on Sunday. There was no communication by boat with Toro Point on Saturday, and the telephone service was also interrupted. It was feared at one time that the high seas would carry away a part of the breakwater trestle, but it held, and beyond washing out some of the fill, the damage was small.

The accident to barge No. 7 occurred about 9 o'clock on Friday night. It was the last of two barges loaded with crushed rock in tow of the tug *Mariner*, which had made the trip from Porto Bello in safety, and had reached a point opposite Manzanillo Island, when the heavy seas caused the hawser to part, and rapidly carried the barge shoreward. It struck the reefs in front of the Washington Hotel, about 300 feet from the shore, broadside on, and immediately grounded. The captain and the two barge hands reached land, with the assistance of some spectators, who swam out and pulled them in. The men were bruised and exhausted, especially the captain, who was taken to the hospital for treatment.

The sea subsided sufficiently to permit the work of floating the barge to commence actively on Tuesday morning. A bulkhead has been built around the boiler room, the room baled out, steam raised, and siphons started. The original house was carried away from the barge by the storm. The extent of the damage to the hull is not yet known.

Unusually Heavy Rainfall.

There was an unusually heavy rainfall at Culebra and nearby stations during the noon hour on December 1. The precipitation was heaviest at Camacho reservoir, where 3.48 inches were recorded. At Empire, between 11.25 and 12.35 o'clock, 1.40 inches were recorded; at Culebra, during the 62 minutes following 11.45 a. m., 2.67 inches, and at Rio Grande, between 11.50 a. m. and 1 p. m., 2.25 inches.

Steam Shovel Men and Dredgemen.

The next regular meeting of the A. U. of S. S. and D. M. will be held in the I. C. C. lodge hall at Culebra on Sunday, December 18, at 2.30 p. m. All brotherhood men are requested to be present.

EDWARD FENSTERMACHER, *Secretary.*

Culebra, C. Z., December 5, 1910.

SOCIAL LIFE OF THE ZONE.

Miscellaneous Events.

Commissioner and Mrs. M. H. Thatcher were guests of the Paraiso Woman's Club on the night of December 2. After dinner at the Commission hotel, they were entertained at the home of Mrs. E. H. Ellenwood and then went to the Commission lodge hall, where a public meeting was held, with Mrs. H. W. Coutermarsh presiding. Mr. Thatcher delivered an address on the necessity of ideals in real success. Mrs. Wm. Frazee and Miss Vacher played the piano. A collation was served.

The congregation of St. Mary's Church in Empire tendered a reception to Chaplain and Mrs. H. A. Brown at the Commission clubhouse in the village on the night of November 30. During the evening, songs were sung by W. G Ross, A. B. Dickson, and Mrs. A. Faure, and Miss Smith played the violin and Mrs. Dickson and Mrs. Hall, the piano. Refreshments were served and there was dancing

A missionary meeting will be held by the Women's Foreign Missionary Society at the Methodist church in Panama at 7.15 o'clock on the evening of December 11. Mrs. Gray will read a report of the meeting of the general executive body held recently in Boston.

A bazaar will be held in the Commission clubhouse at Empire, on December 14, for the benefit of the organ fund of St. Mary's Episcopal church. It will be conducted by the Woman's Guild and will be followed by dancing.

The committee of the Colon Humane Society in charge of the Christmas entertainment for the poor children of that city announce that it will be held on Saturday afternoon, December 24. The exercises will take place in the children's playground, but if rain interferes, the new schoolhouse for girls, situated close by, will be used. There will be a Christmas tree, and Mrs. P. T. Murphy, who is now in the States, has been commissioned to purchase 1,000 small presents for distribution on that occasion.

Improved Order of Red Men.

A joint meeting of the tribes will be held at Paraiso on Saturday evening, December 10, in the wigwam of Aztec Tribe, No. 4. This will take the place of the monthly intertribal meeting, usually held the first Sunday in the month, but which was postponed on account of the Kangaroo memorial services last Sunday. Matters of interest to all the tribes will be brought up at this meeting and a large attendance is expected. Degree teams from three tribes will be in attendance and the tribes are requested to bring their "palefaces" to this meeting for adoption. An entertainment and "smoker" will be held after the meeting.

W. H. KROMER, *D. G. I.*

Cristobal, C. Z., December 5, 1910.

Missing Men.

Any one having information regarding the whereabouts of John H. Fisher, who was at one time employed as a locomotive engineer on the relocation of the Panama railroad, will please communicate with J. W. Benjamin, Mechanical Department, P. R. R., Cristobal, C. Z.

Information regarding Roy Garnier, supposed to be on the Isthmus, is desired by his mother, Mrs. J. H. Drury, La Plata, Mo.

Any one having information regarding the whereabouts of Thomas J. Fitzpatrick, who left Mechanicsville, N. Y., about five years ago to come to the Isthmus, is requested to communicate with THE CANAL RECORD.

ORDINANCES.

Taxes on Vehicles for Public and Private Use.

The following ordinances enacted by the Isthmian Canal Commission at its 158th meeting on August 25, 1910, were approved by the Acting Secretary of War, October 31, 1910:

ORDINANCE.

Be it Enacted, by the Isthmian Canal Commission, that paragraph "*a*", section 7, of the "Regulations Providing for Certain Taxes and Licenses in the Canal Zone other than for the Sale of Intoxicating Liquors," effective July 1, 1908, is hereby amended to read as follows:

> For operating for hire a public coach or carriage, not operated by motor power, for the transportation of passengers, a license tax of $1.25 per month shall be charged; for a public cart, dray, or other public vehicle, not operated by motor power, the following license taxes shall be charged, namely: For each two-wheel vehicle, $2.50 per month; for each four-wheel vehicle, $5 per month. *Provided, however*, that in the construction and application of this section all vehicles which are used on the public roads of the Canal Zone for the transportation of merchandise, or other articles of value, by merchants and dealers, shall be held to be subject to license as provided in this section. *Provided, however*, that the license taxes in this section enumerated shall not apply to conveyances of the herein indicated character wherein passengers are transported for hire, which are duly licensed in the Republic of Panama.

ORDINANCE

Providing for the licensing and regulation of motor vehicles in the Canal Zone.

Be it Enacted, by the Isthmian Canal Commission, as follows:

> Section 1. That, hereafter, there shall be collected and accounted for, as other similar taxes, the following license taxes from the owners or operators of motor vehicles used or employed on the streets or roads of the Canal Zone, namely: (*a*) For each motor vehicle (except motor cycles) used for the transportation of freight or passengers for hire, or for the transportation of merchandise or freight by any merchant or dealer, one hundred and fifty dollars ($150) per annum; (*b*) for each motor vehicle (except motor cycles) operated for pleasure, twenty-five dollars ($25) per annum; and (*c*) for each motor cycle ten dollars ($10) per annum.
>
> Section 2. Before any person shall use or operate any motor vehicle on the public roads or streets of the Canal Zone, he shall procure from the Collector of Revenues of the Canal Zone Government a license authorizing him to use and operate such motor vehicle on said public roads or streets.
>
> Section 3. Each motor vehicle operated on said roads or streets shall at all times, when so operated, carry thereon, at a conspicuous place at the rear thereof, a metal tag or card bearing thereon, in large numerals, the number of the license for such vehicle. It shall be the duty of the Collector of Revenues, when such license is issued, to furnish to the licensee said metal tag or card bearing said number, and the licensee shall, in addition to the license tax, pay to said collector a fee of one dollar ($1) for furnishing said tag or card, which fee shall be accounted for by said collector to the Zone Government in the same manner as are such license taxes. It shall be unlawful for any person to operate or use on said roads or streets any motor vehicle unless the same bears, at a conspicuous place at the rear thereof, such numeral tag or card.
>
> Section 4. The Collector of Revenues shall keep a register, wherein he shall number, in consecutive order, all licenses granted by him under this ordinance, and the names of the licensees, and a brief description of the motor vehicle licensed. Such register shall be a public record. Said collector shall, immediately upon issuing any license herein provided for, give notice thereof, and furnish the information shown by the aforesaid register, to the Chief of Police, who shall cause arrests to be made for violations of this ordinance.
>
> Section 5. Before the Collector of Revenues shall issue any license hereunder for the operation of any motor vehicle, he must be satisfied, from proof furnished, or from his personal investigation that such motor vehicle for which license is desired can pass with ease and safety on any turn or part of any public road or street of the Canal Zone any other vehicle authorized by law to travel thereon. The said collector's refusal to issue any license indicated herein may, upon the formal request of the refused applicant, be reviewed by the Head of the Department of Civil Administration, whose decision shall be final.
>
> Section 6. All motor vehicles shall, when being operated on any of the Canal Zone streets or roads, between the hours of 6 p. m. and 5 a. m., carry and prominently display lights, as follows: Automobiles, or motor vehicles of similar construction, two bright front or headlights, one on either side, and one red light at the rear; motor cycles, one bright headlight.
>
> Section 7. Except as to the requirements for the use of lights, as provided in section 6 hereof, this ordinance will not apply to motor vehicles, which may be used on the public roads or streets of the Canal Zone under the authority of the Chairman of the Isthmian Canal Commission, or of the Secretary of War, for official purposes.
>
> Section 8. The term "motor vehicle," as used herein, shall apply to and include every vehicle or conveyance which may be drawn or propelled by means of steam, gas, naptha, fluid, electricity, or other similar motor power.
>
> Section 9. Any person violating any provision of this ordinance shall be deemed guilty of a misdemeanor, and shall, upon conviction in any district court of the Canal Zone, be punishable by a fine not to exceed fifty dollars ($50), or imprisonment not to exceed 30 days, or by both such fine and imprisonment in the discretion of the court.
>
> Section 10. This ordinance shall be effective from the date of its approval by the Secretary of War.

Rainfall from November 1 to 30, Inclusive.

MIDNIGHT TO MIDNIGHT.

STATIONS.	Maximum in one day.	Date.	Total for period.
Pacific Section—	*Ins.*		*Ins.*
Ancon	.80	25	4.29

Porto Bello	3 89	4	23.08
Nombre de Dios	4.58	4	14.99
Bocas del Toro	2.22	3	6.54

The station rainfall for November covered an unusually wide range, the totals varying from 3.97 inches at Balboa, to 30.04 inches at Cristobal. The rainfall at Ancon and Balboa was the lowest of record for November at these stations. There was a deficiency in average cloudiness over the Pacific section. The maximum temperature in the sun at Culebra was 96 degrees Fahrenheit on November 16.

Proposals for Excavation, Obispo Diversion.

Sealed proposals for excavation of about 21,942 cubic yards of earth, located between stations 1602 and 1612 on the east bank of the Canal, will be received until 2 p. m., December 15, 1910, and then opened. Full information will be furnished by the division engineer, Empire. Envelopes containing proposals must be endorsed "Proposals for Excavation, Obispo Diversion," and addressed C. A. DEVOL, *Chief Quartermaster.*

CULEBRA.

The bowling game between Gatun and Culebra resulted in Culebra winning all three games. Scores: Culebra, 876, 950, 768; Gatun, 667, 598, 654.

The following is the standing in the big pin tournament for the Putnam medal:

Name.	Won.	Lost.	Name.	Won.	Lost.
Cohen	4	0	Hayes, G.C.	2	3
Herrington	2	4	Hurst	1	3
Huttlemeier	6	2	Warner	0	1
Cornthwaite	3	4	Sickler	1	1
Fleischman	3	3	Koperski	0	1

The following is the standing in the duckpin tournament:

Name.	Won.	Lost.	Name.	Won.	Lost.
Case	3	1	Gould	1	2
Conlan	3	1	Hill	0	3
Cushing	2	1	Hurst	0	0
Dakin	1	2	Huttlemeier	1	0
Dubois	0	0	Fleischman	4	1
Fitts	0	4	Cornthwaite	3	1
Freeman	0	0	Kersey	3	0
Frederichs	0	0	Sickler	2	4

The following are the winners of the monthly prizes for the month of November: Duckpins—Kersey, high score, 114; Fleischman, high average, 86.1. Big pins—Huttlemeier, high score, 229; Case, high average, 174.

A glee club was organized on November 29 and it will meet every Tuesday.

An informal "social" will be held on Friday, December 9.

EMPIRE.

The following program will be given under the auspices of the musical and dramatic society, Sunday evening, December 11, at 8 o'clock:

"Nazareth" .... *Gounod*
Mr. Young, chorus, and instrumental quartet.
Aria .... *Gluck*
Mr. Dohrmann, with violin obligato by Mrs. Decker.
"Noel" .... *Adam*
Mrs. Ludwig, chorus, and instrumental quartet.
"Fear not ye, O Israel!" .... *Buck*
Mrs. Faure.
Address.
Hon. Maurice H. Thatcher.
Violin solo, selected.
Mrs. Decker.
"When Night Involves the Skies" .... *Shelly*
Mixed quartet, accompanied by the instrumental quartet.
"The Birthday of a King" .... *Neidlinger*
Mrs. Ross.
Selection.
Instrumental quartet.

At the meeting of the literary society on December 9, the following program will be presented: Essay, Mr. Rossiter; address, Mr. Wagg; political discussion on the recent election in the states; parliamentary quiz, led by J. R. McNiel.

The following high scores were rolled during the week: Shaughnessy, 206, 204; Sawtelle, 206, 215; Rieman, 209; Potter, 204. High score for the month of November, Nicodemus, 249.

The following program will be given as a vaudeville entertainment under the auspices of the musical and dramatic society, Tuesday evening, December 13: Sketch, "Two busted coons," Young and Evans; cartoons, E. W. Stolberg; tenor solo, "Dreams," S. H. Brodsky; "Winter song," glee club; soprano solo, Mrs. Ludwig; monologue, Ed. Keeling; soprano and tenor duet, Miss Gnuey and Mr. Ross; "Kathleen," Mrs. Faure; songs, Miss Gorham and Mr. Evans; sextet from "Lucia di Lammermoor," Mrs. Ludwig, Mrs. Faure, Messrs. Ross, Dohrmann, Young, and Conner.

GORGONA.

Persons wishing to enter a class in mathematics will kindly leave their names at the desk. Mr. Oscar Kuentz, a graduate of the University of Wisconsin, will act as instructor. The class will meet Tuesday and and Friday nights at 7.15 o'clock.

The "Every Day in the Year Club" meets every Friday at 7.05 p. m., in the committee room of the clubhouse. All men are cordially invited.

The Gorgona Dramatic Club will put on the comedy-drama "Esmeralda" some time this month. The actors are: Dan Hays, Fay Kramer, M. Meeks, Roy Ling, Ed Emery, Mrs. Spencer, Nell Wertz, Mrs. Fahr, and Mrs. Treabor.

Empire's bowling team took three straight games from the local team on Thursday December 1.

Following are the 200, or over, scores for the month of November: Arnold, 209, 204, 200, 200, 202, 201, 200, 200; Humphrey, 212; White, 202, 202, 238; Hopkins, 203, 212, 200, 201, 245; Witmer, 209, 200, 208, 220; Roper, 216, 205, 227, 200; Halderman, 202, 206, 202, 234; McConaughey, 226, 223, 212, 203, 201; Cleary, 204; R. Varenkamp, 218; Haggerty, 206; Stewart, 215, 225; M. Varenkamp, 221; Mrs. Corcoran, 202, 207, 241, 201.

The basketball game on Saturday night, December 12, between Cristobal and the local team is the last match between these two teams in the present series.

GATUN.

The educational committee met on Thursday night, December 1, and elected W. H. Brown, chairman, and G. H. Dougherty, secretary. It was decided to start classes in mechanical drawing and stenography on Wednesday, December 7. Classes in other studies will beorganized providing a sufficient number are interested.

The membership committee, which is conducting a lively campaign for 500 members by February 1, reported on December 1st, 391 members.

A "smoker" will be held on Thursday, December 15, at which an informal reception will be given to the new members.

A glee club was organized last Thursday under the direction of A. B. Dickson of Empire.

A phonograph "social" was given on Friday night, December 2. About 50 records, owned by H. Levy, were played. Refreshments were served.

PORTO BELLO.

Wilson finished first in the pool tournament and won the billiard cue. F. M. Hill won the second prize, a box of cigars.

A committee has been appointed to arrange for a Christmas program, consisting of Mrs. E. B. Pflueger, C. E. Van Fleet, and W. J. Washburn.

The discussion club on Tuesday night, November 30, was led by F. C. Freeman; subject, "Leadership." Twenty-five men attended the meeting, and Messrs. Bradley and MacDougal gave a short entertainment, with songs and readings.

Sale of Sheds at Public Auction.

There will be sold at public auction by the district quartermaster at Gatun, C. Z., at his office, at 3 p m., Tuesday, December 13, 1910, to the highest bidder for cash, the following Isthmian Canal Commission property:

Two small galvanized iron sheds now half covered by Gatun Lake, which were formerly used as dynamite sheds by the Central Division.

These buildings will be removed from the premises by the successful bidder within thirty (30) days from date of sale.

The Government reserves the right to accept or reject any or all bids. For further information apply to the district quartermaster, Gatun, C. Z.

C. A. Devol, *Chief Quartermaster.*

LOST—A card case containing membership cards to the Kangaroos, International Brotherhood of Steam Shovel Engineers, U. B. of R. E., and an I. C. C. annual pass book. Finder will receive reward by returning to owner, R. B. Leftwich, house No. 106, Paraiso, C. Z.

OFFICIAL CIRCULARS.

Seniority of Locomotive Engineers and Conductors

Culebra, C. Z., December 1, 1910.

Circular No. 348-B. (Superseding Circular No. 348):

The seniority of locomotive engineers and conductors of the Isthmian Canal Commission and Panama railroad relocation will be governed by the following rules, effective December 1, 1910:

1. The seniority of engineers and conductors will be determined by the date they entered the service as engineers or conductors, regardless of transfers from one division to another. Increase to qualified pay will depend on the date started on main line work.

2. When additional qualified men are needed, the senior unqualified man in the service (all divisions) will be given an opportunity to qualify, provided he has the requisite railroad experience.

3. If it becomes necessary to qualify a man, and the employe entitled to promotion is sick or on leave of absence, a temporary promotion of the man next on the list may be made with the understanding that the senior man will supersede him on his return to duty. In such case, the date the temporary man qualifies will also be given the senior.

4. Seniority will not hereafter be affected by absence from duty so long as the employe's service is continuous.

5. In case of reduction of force, discharges will be made as follows, all divisions being considered as one service:

A. Aliens.

B. Men who have been reported for being in the hospital for alcoholism.

C. Men habitually sick, or physically unfit for Isthmian service, as shown by repeated absences from duty.

D. Men with unsatisfactory records (to be determined by the Division Engineer.)

E. Men at the foot of seniority list.

6. The seniority of a qualified man transferred to the Panama railroad will date from his transfer.

7. The conductors and engineers on the P. R. R. relocation work will be included in the I. C. C. seniority lists and will be subject to these rules the same as though they were employes of the Commission.

8. If a qualified man refuses an offer to transfer to the Panama railroad operating department, he will thereafter have no right to such a transfer, and his name will be marked on the seniority list as having refused transfer.

9. In case of reduction of P. R. R. force, qualified men may be transferred to the I. C. C., and resume their seniority standing.

10. Personnel of crews in charge of existing runs will not be changed by this seniority order, except as vacancies occur.

Geo. W. Goethals.
Chairman, Isthmian Canal Commission.
President, Panama Railroad Company.

Vacations in Costa Rica.

Culebra, C. Z., November 30, 1910.

Heads of Departments and Divisions:

On account of improved sanitary conditions in Costa Rica, employes of the Isthmian Canal Commission and of the Panama Railroad Company will again be permitted to spend their vacations there, but they will be subject to five days' quarantine at Colon upon their return, unless they go directly from the train to the steamer at Port Limon, and can produce a certificate from the American Consul at San José, showing that they spent the last five days of their leave in that city.

By direction of the Chairman,

C. A. McIlvaine, *Chief Clerk.*

Sale of Miscellaneous Articles at Public Auction.

There will be sold at public auction by the district quartermaster at Empire, C. Z., at his office, at 3 p. m., Thursday, December 15, 1910, to the highest bidder for cash, the following Isthmian Canal Commission property:

One lumber wagon, 13 duck balls, 39 bowling balls, assorted sizes, 8 old French axes, 20 old worn tires.

Payment will be effected and articles removed immediately upon completion of sale. The Government reserves the right to accept or reject any or all bids. For further information apply to the district quartermaster, Empire, C. Z.,

C. A. Devol, *Chief Quartermaster.*

The following vessels arrived at and departed from the port of Balboa during the week ending December 3:

Arrivals—November 27, *Stanley Dollar*, from San Francisco, *Chile*, from Valparaiso; November 28, *Pennsylvania*, from San Francisco; December 1, *Newport*, from San Francisco and way ports; December 3, *U. S. S. Yorktown*, from Corinto, *Arica*, from Guayaquil.

Departures—November 27, *Ecuador*, to Guayaquil; November 29, *City of Panama* to San Francisco and way ports; November 30, *Aysen*, to Valparaiso; December 2, *G. W. Fenwick*, to San Francisco, *Beachy*, to Puget Sound.

COMMISSARY DEPARTMENT.

The hours during which commissaries are open are as follows:

Cristobal and Culebra, 8 a. m. to 12.30 p. m.; 2 p. m. to 7 p. m.

All other commissaries, 8 a. m. to 1 p. m.; 3 p. m. to 7 p. m.

Retail prices of cold storage provisions for the week beginning December 1.

Shoes at the Commissaries.

PANAMA RAILROAD COMPANY,
COMMISSARY DEPARTMENT.
CRISTOBAL, C. Z., December 1, 1910.

CIRCULAR No. 240:

To All Concerned: This department does not guarantee canvas or patent leather shoes, as we cannot obtain any guarantee from the manufacturers. Purchasers will understand that such shoes are bought at their own risk.

JOHN BURKE, *Manager.*

Approved: EUGENE T. WILSON,
Subsistence Officer.

FRESH MEATS.

	Price.
Mutton—Stewing, per pound	7
Shoulder, neck trimmed off, (4 lbs. and over), per pound	10
Entire forequarter (not trimmed) 10 pounds and over, per pound	9
Leg, (8 to 10 pounds), per pound	19
Cutlets, per pound	20
Short cut chops, per pound	22
Lamb—Stewing, per pound	7
Entire forequarter, neck trimmed off, per pound	10
Leg (5 to 8 pounds), per pound	24
Chops, per pound	26
Cutlets, per pound	26
Veal—Stewing per pound	10
Shoulder for roasting (not under 4 pounds), per pound	15
Loin for roasting, per pound	19

Supplies for Canal Work.

The following steamers, with supplies for the Isthmian Canal Commission, arrived at the ports of Cristobal and Colon during the week ending December 3 1910:

Prinz August Wilhelm, November 27, from New York, with 181 cases fuzes for stock.

Allianca, November 28, from New York, with 10 cases electrical material, 17 cases electrical machinery, 25 barrels insulators for Atlantic Division; 23 barrels bolts, 141 pieces knuckles, 329 pieces couplers for Mechanical Division; 25 packages drugs and sundries for Sanitary Department; 10 cases locks, 50 bundles iron, 14 cases railroad torpedoes, 21 barrels coal facing, 200 cases washing powder, 2 school wagons, 120 bundles plain wire, 45 rolls wire cloth, 11 cases steel shafting for stock; and a miscellaneous cargo, the whole consisting of 1,192 packages, weighing 164 tons.

Atenas, December 1, from New Orleans, with 171,758 feet yellow pine lumber for Atlantic Division; 7,076 feet white oak lumber for Mechanical Division; 7,887 feet white oak lumber for Pacific Division; 41,802 feet white oak lumber, 364 bales straw, 18 bundles bed springs for stock.

Santa Marta, December 1, from New York, with 2,240 pieces steel bars, 34 tons lock construction material for Atlantic Division; 91 tons lock construction material for Pacific Division; 15 cases belt dressing, 30 cases tape fuse, 19 pieces steel bars for stock.

Ella, December 2, from Gulfport, with 32,914 feet yellow pine lumber, 122 pieces piling for Atlantic Division; 40,792 pieces yellow pine lumber for Mechanical Division; 844,136 feet yellow pine lumber, 800 pieces cast iron pipe for stock.

Misdirected Letters.

Ancon, C. Z., December 7, 1910.

The following insufficiently addressed letters, originating in the United States and its possessions, have been received in the office of the Director of Posts and may be secured upon request of the addressee:

Atwater, Mrs. William
Benson, Maynard
Bowers, Joe
Butler, James
Farrell, W. H.
Fay, Joe F.
Gahans, Karl
Gammell, Edgar F.
Jacob, J. E.
Jamieson, Mrs. D. H.

COLON TO BARBADOS, CALLING AT TRINIDAD.

Thames	R.-M	Tuesday	Dec. 20
Tagus	R.-M	Tuesday	Jan. 3
Oruba	R.-M	Tuesday	Jan. 17

The next sailing of the Leyland Line will be as follows: *Mercian*, on or about December 17, for New Orleans, via Kingston, Ja.

Hamburg-American steamers leave for New York every Tuesday at 10 a. m., arriving there the following Tuesday, and for Port Limon every Tuesday or Wednesday via Bocas del Toro or Puerto Colombia.

Royal Mail steamers leave for New York on alternate Mondays at 5 p. m.; for Southampton on alternate Tuesdays at 10 a. m.

United Fruit Company's ships for New Orleans direct leave on Thursday at 3 p. m.; for New Orleans via Port Limon and Puerto Barrios on Thursday at 6 p. m., and for New York on Thursday at 11 a. m.

Sailings of the French line (Cié Générale Transatlantique) for Venezuelan ports, Martinique and Guadeloupe on the 3rd and 20th of each month.

CANAL RECORD

Volume IV. ANCON, CANAL ZONE, WEDNESDAY, DECEMBER 14, 1910. No. 16.

The Canal Record

Published weekly under the authority and supervision of the Isthmian Canal Commission.

The Canal Record is issued free of charge, one copy each, to all employes of the Commission and Panama Railroad Company whose names are on the gold roll. Extra copies and back numbers can be obtained from the news stands of the Panama Railroad Company for five cents each.

Isthmus of Panama.

No communication, either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.

NOTES OF PROGRESS.

Filter Plant at Gatun.

The detailed construction drawings for the sedimentation basin, filter plant and clear water well, which has been authorized for installation in connection with the new Agua Clara water works, are nearly completed, and requisitions for controllers, valves, pipes and other operating parts will go forward in the near future.

The filters are to be what is known as the "Rapid gravity" type, and are designed to deliver a daily output of 2,500,000 gallons of filtered water when three of the four beds are in service. Each of the four beds will be approximately 17 feet square, giving a rate of filtration equivalent to 100,000,000 gallons per 24 hours per acre. The coagulation basin will be about 75 feet square, divided into four compartments, and of such capacity as will give sedimentation of about three hours' duration.

The filtered water will pass by gravity from the controllers through the filters to a covered clear water well having a capacity of about 225,000 gallons. From this well the water will be pumped by the new electrical pump recently installed, to a 400,000-gallon storage tank at Gatun.

Canal Work in November.

The grand total of Canal excavation in November was 3,006,037 cubic yards, which is the greatest excavation for this month since the beginning of the Canal work. A comparison with previous years since the work was fully developed, follows:

YEAR.	Cubic Yards.	Mean rainfall.
1910	3,006,037	14.83
1909	2,458,152	28.50
1908	2,920,494	11.66
1907	1,838,486	10.73

Of the grand total in November, 2,659,046 cubic yards were charged to "work excavation," and 346,991 cubic yards to "plant" excavation. The dry excavation amounted to 1,605,182 cubic yards and was principally by steam shovels. The dredges removed 1,348,611 cubic yards in addition to the amount pumped into Gatun Dam by suction dredges, and the sluicing plants, 52,244 cubic yards. The progress on the locks at Gatun, Pedro Miguel and Miraflores is referred to elsewhere in this issue.

In the Atlantic Division, the total excavation was 909,070 cubic yards, the greatest amount of record for November. Of this total, 119,510 cubic yards were "dry" excavation, and the remainder was removed by dredges in the Atlantic entrance.

The total excavation in the Central Division—1,470,436 cubic yards, likewise established a new record in that division.

In the Pacific Division, the total excavation was 626,531 cubic yards, 559,051 cubic yards of which were taken out by the dredges at the Pacific entrance, and 47,444 cubic yards by the sluicing plant at Miraflores Locks.

A detailed statement of the excavation, and a summary of the work on the locks and dams, follow:

ATLANTIC DIVISION.

LOCALITY.	"Work." Excavation.	"Plant." Excavation.	Total excavation
Dry excavation—	*Cu. Yds.*	*Cu. Yds.*	*Cu. Yds.*
Locks, Dam and Spillway	94,552	24,958	119,510
Mindi	....	....	....
Total	94,552	24,958	119,510
Wet excavation—			
Atlantic entrance	600,708	188,852	789,560
Locks, Dam and Spillway	....	....	....
Total	600,708	188,852	789,560
Total wet and dry excavation	695,260	213,810	909,070

CENTRAL DIVISION.

Dry excavation—			
Culebra Cut	1,209,554	....	1,209,554
Chagres section	256,082	....	256,082
Wet excavation—			
Chagres section	4,800	....	4,800
Total	1,470,436	....	1,470,436

PACIFIC DIVISION.

Dry excavation—			
Locks, Dams and Spillways	20,036	....	20,036
Diversions	....	....	....
Prism, south of Pedro Miguel Locks	....	....	....
Total	20,036	....	20,036
Wet excavation—			
Pacific entrance	425,870	133,181	559,051
Miraflores Locks	47,444	....	47,444
Diversions	....	....	....
Total	473,314	133,181	606,495
Total wet and dry excavation	493,350	133,181	626,531

TOTAL CANAL EXCAVATION.

Dry excavation	1,580,224	24,958	1,605,182
Wet excavation	1,078,822	322,033	1,400,855
Total	2,659,046	346,991	3,006,037

Mean rainfall along Canal (twelve stations) 14.83 inches.

By "Work" Excavation is meant excavation actually made for one of the constituent parts of the Canal, such as Prism, Diversions, or Locks, etc.; that is, it represents material taken from the area to be occupied by the Canal, and constitutes excavation useful for the completed Canal.

By "Plant" Excavation is meant excavation outside of any of the constituent parts of the Canal, such as Prism, Diversions, or Locks, etc. It includes material necessary to be excavated for construction purposes only and is chargeable against the particular plant item for which it is performed, such as Prism, Diversions, Locks, etc.

DAM AND LOCK CONSTRUCTION.

MATERIAL.	Atlantic.	Pacific.	Total.
	Cu. Yds.	*Cu. Yds.*	*Cu. Yds.*
Fill placed in dams	395,771	56,404	452,175
Concrete laid in locks	75,152	88,119	163,271
Concrete laid in dams and spillways	5,651	....	5,651

Excavation Record in Culebra Cut.

The excavation from Culebra Cut in November amounted to 1,209,554 cubic yards and was the greatest record in that section for the month of November, as the following comparison will show:

NOVEMBER.	Cubic Yards.	Rainfall.
1910	1,209,554	8.85
1909	1,070,792	20.99
1908	1,022,576	4.46
1907	790,632	10.40

Mooring Buoys at Pacific Entrance.

In view of the changes that are to be made in the Balboa docks and the consequent curtailment of berthing facilities at that point, two mooring buoys and six mushroom anchors will be put down at the Pacific entrance to the Canal, on the right side close to the bank, so that ships can be brought in to load from or discharge into lighters, as the case may be. These buoys will also be of assistance in coaling war vessels. In addition to reducing the cost of towing, it is believed they will eliminate the possibility of lighters sinking during heavy weather in the harbor. The work will be done by the Pacific Division, and its cost will be borne by the Panama Railroad Company.

Panama Railroad Relocation from Gamboa to Pedro Miguel.

A survey for the location of the Panama railroad from Gamboa to Pedro Miguel, a distance of about 10 miles, parallel with the Canal, but at sufficient distance east of it to avoid interruption from the sliding of the banks, has been completed, and construction of the new line has been begun.

On July 30, 1908, a report made on data then available recommended the construction of this section of the relocated line on the 45-foot berm on the east side of Culebra Cut at 95 feet above sea level. On July 23, 1910, a committee reporting on present conditions recommended the construction of the line at a distance east of the Canal, in order to avoid interruptions to traffic during the time when the banks of Culebra Cut are assuming their

NOTES OF PROGRESS.

(*Continued.*)

final slope; to provide easier access to the railroad than would be possible if the line was constructed on the berm at elevation 95, which is far below the natural level of the ground throughout Culebra Cut; and to provide easy access to the contemplated bridge over the Culebra Cut at Empire. over which it is assumed a railroad will some day run. This report was published in THE CANAL RECORD of August 3.

The new location involves only two difficult pieces of work—a cut of 250,000 cubic yards at Paraiso, and a large rock cut at Bas Obispo. Between these points the grading is largely alternate cut and fill, and the work will balance. The maximum curve on the new line is 7 per cent, and the maximum grade is 1.25 per cent compensated for curvature. The line on the berm at elevation 95 feet through Culebra Cut will be completed for construction purposes.

Concrete Piling at Gatun Locks.

The south or up stream center guide wall of the Gatun Locks will extend 1,500 feet from the south guard gate into the lake. About 350 feet of the wall nearest the lock will be of solid construction, and the remaining 850 feet will be constructed as a reinforced concrete cellular wall supported by reinforced concrete piles driven to depths from 20 to 70 feet.

About 3,500 piles will be needed in the construction of the foundations. One part of cement, one and one-half parts of sand, and three parts of rock will be used in the construction of the piles, and they will be cast on two platforms about 80 feet wide and 400 feet long, located on the rock storage pile at New Gatun. The piles will be allowed to remain on the storage pile about six weeks before driving.

Two steam pile drivers of the skid type, having a maximum height above the ground of approximately 93 feet, are under construction. They will be equipped with steam hammers weighing over 10,000 pounds, 5,000 pounds of which will be in the driving or striking part of the hammer, which will fall 42 inches and strike 60 blows a minute.

In order that the piling may not be crushed by the impact of the hammer, a cast steel driving head has been designed to fit over the head of the pile. This driving head will contain a cushion of sand and manila rope.

Vacancies on Canal Force.

The steamship companies in the Panama service have been requested to post the following notice in conspicuous places at their offices and wharves in the United States, in order to discourage immigration to the Isthmus of persons in search of work:

EMPLOYMENT ON THE PANAMA CANAL.

There is at present a surplus of skilled and unskilled labor on the Isthmus. To fill occasional vacancies in the organization, for which local applicants with the necessary qualifications cannot be found, the Isthmian Canal Commission maintains an employment bureau in its Washington office, under the direction of Captain F. C. Boggs, General Purchasing Officer. Skilled mechanics, and other persons with special training and experience, can frequently secure appointment by application to him, or to one of the Commission's authorized traveling employment agents.

Persons who may intend to seek employment on the Isthmus will avoid unnecessary expense and disappointment by addressing a written application to the Isthmian Canal Commission, Washington, D. C., and remaining in the the United States until they are tendered an appointment.

Under present conditions there is but little likelihood that any man who goes to the Isthmus at his own expense and on his own initiative will find employment there.

ISTHMIAN CANAL COMMISSION.

Panama Canal Service Medal Association.

The annual meeting of the Panama Canal Service Medal Association will be held in the I. C. C. lodge hall at Gorgona on Sunday, January 8, at 9.30 a. m. There will be an election of officers. All proposed amendments to the by-laws should be forwarded at once to the undersigned. Charter membership will close on December 31, 1910.

E. F. J. GOLDSMITH, *Secretary.*
P. O. Box, No. 41.
Ancon, C. Z., December 9, 1910.

CONCRETE WORK IN THE LOCKS.

GATUN LOCKS.

Concrete work in Gatun Locks is about 46 per cent completed, 950,595 cubic yards, out of a total of 2,085,000, having been placed at the close of work on December 10.

A statement of the amount of concrete placed in the locks each day for the week ending December 10, and of the total, follows; and a similar statement for the work in the Spillway of Gatun Dam is published elsewhere in this issue. The construction plant works 12 hours daily, and the auxiliary plant 9 hours.

DATE.	CONSTRUCTION PLANT. 2-cubic yard mixers.			AUXILIARY PLANT. 2-cubic yard mixers.			Large stone.	Total.

Previously reported								932,093¾
Grand total								950,595¼

*The 119 yards shown for the portable ⅓-yard mixer were placed on the following days, and are included in the total: December 6th, 24 yards; December 7th, 26 yards; December 8th, 22 yards; December 9th, 20 yards; December 10th, 27 yards.

PEDRO MIGUEL LOCKS.

Concrete work in the locks at Pedro Miguel is about 54 per cent completed, 450,591 cubic yards, out of a total of 837,400, having been placed at the close of work on Saturday, December 10. Berm crane "E" was not in operation on Friday and Saturday, December 9 and 10. The record of concrete laid during each of the six 8-hour working days of last week, follows:

DATE.	CONSTRUCTION PLANT. 2-cubic yard mixers.			AUXILIARY PLANT. 2-cubic yard mixers.				Total.
	Concrete placed.	Hours worked.	No. of mixers	Concrete placed.	Hours worked.	No. of mixers	Large stone.

STEAM SHOVEL RECORDS.

Work of Central Division Shovels in November.

During the month of November, the total amount of material excavated in the Central Division was 1,470,436 cubic yards, of which 417,359 cubic yards were classified as earth, and 1,053,077 cubic yards as rock. Of this quantity, 1,444,567 cubic yards were removed by steam shovels; 21,069 cubic yards were blasted and washed away, and 4,800 cubic yards were sluiced by contract.

The high record for the month was made by shovel No. 221, working 24 days in the Empire district, which excavated 45,720 cubic yards of rock. The second best record of the month was made by shovel No. 228, working 24 days in the Empire district, which excavated 43,824 cubic yards of rock.

The best record for a shovel of the 70-ton class was made by shovel No. 111, working 24 days in the Chagres district, which excavated 30,756 cubic yards of earth.

Shovel No. 204, working in the Culebra district, made a high record for one day by excavating 2,603 cubic yards of rock and earth on November 11.

Shovel No. 128, working in the Chagres district, excavated 1,980 cubic yards of earth on November 17, and this is the high record for one day for shovels of the 70-ton class, during the month.

Except where noted, monthly reports are computed by place measurement, while the daily reports are based on car measurement. The best records for the month and for one day are shown below:

Mechanical Draftsman Examination.

In connection with the announcement published two weeks ago of an examination for mechanical draftsman, Isthmian Canal Service, information has been received that a separate register will be established for eligibles who have had sufficient experience in marine work to qualify them for the position of mechanical draftsman with marine experience, the entrance salary of which position will be $125 per month. This position is in addition to those mentioned in the announcement as first published.

Applications will be received up to the close of business on December 17. Form 1312 should be requested from the undersigned, and filed complete, with medical certificate. Those whose applications might be received too late should telephone to this office that they wish to apply for the above examination.

JOHN K. BAXTER,
Secretary, Isthmian Civil Service Board.

Culebra, C. Z., December 10, 1910.

Strangers' Club Election.

At a meeting of the members of the Strangers' Club held on Monday evening, December 5, officers were elected for the ensuing year, as follows: Chairman, Maj. Eugene T. Wilson; vice-chairman, R. H. Wardlaw; secretary, Robert Beverly; treasurer, J. B. Williams; governing committee, H. O. Chalkley, Surgeon William H. Bell, R. G. Castel, J. M. Hyatt, Lieut. Frederick Mears, Robert Wilcox.

Culebra Colored Association.

In November, 1909, an institute for negroes in the Canal service was opened at Culebra in a building set apart for that purpose. It was equipped with writing tables, game tables and games, such as dominoes, checkers and chess, supplied with newspapers from the West Indies, magazines and other periodicals, and in April, a billiard table was added. The playing of cards, dancing, and the use of liquor and profane language in the building were forbidden. The conduct of the institute was placed under the Rev. S. Moss Loveridge, one of the Commission chaplains whose work has been largely among the West Indian negroes. In the first month 33 men joined the institute, and in October, 1910, the twelfth month, two joined. The total number that ever joined was 58, about two per cent of the available male colored people in the vicinity. At present there are seven men on the rolls. The membership fees were 50 cents for one month; $1 for three months; $1.50 for six months, and $2.50 for twelve months. The total receipts from all sources, and the disbursements, have been as follows:

RECEIPTS.

Membership tickets	$67.50
Social and concerts	18.50
Billiard table receipts	91.75
Donations	58.00
Church outing (donated)	38.55
Proceeds of entertainments in four churches	36.77
Portion of steward's salary paid by church	250.00
Total receipts	$561.07

DISBURSEMENTS.

Subscriptions to newspapers	$16.90
Table games	11.73
Printing and stationery	52.42
Decorations	9.00
Billiard table	146.87
Refreshments (social)	2.70
Ice	25.32
Sundries	5.39
Salary of steward at $50 per month	600.00
Total disbursements	$870.33
Balance due	$309.26

On November 1, 1910, the Rev. Mr. Loveridge recommended that the institute be closed and his recommendation was approved. A few days later, the Rev. H. A. Brown, chaplain of the Engineer Corps, U. S. A., in charge of the Episcopal churches at Culebra and Empire, asked for, and was given authority to reopen the building for the benefit of the Culebra Colored Association, composed of men and women. Beginning November 24, the building has been opened every night from 7.30 to 11 o'clock. Twice a week informal dances are held, and it is proposed to hold a formal dance once a month. A new billiard table has been ordered. Alterations will be made in the interior of the building, so that the rooms formerly occupied by the janitor will be used as a retiring room, and for serving ice cream. Only members will be served, and only coupons issued to them will be accepted in payment for ice cream. There are now 60 members. The entrance fee for men is $1, and the membership dues 50 cents a month. There is no entrance fee for women, but they pay a monthly due of 25 cents.

Ancon Quarry Plant.

Beginning December 1, a 12-hour working day, divided into 8-hour shifts, was placed in effect at the Ancon quarry plant. This was done to increase the production of crushed rock, the consumption of which has grown with the concrete operations in the locks at Pedro Miguel and Miraflores. An additional dust screen of small mesh has recently been installed and the crushed rock is now cleaned of all dirt and fine particles. The screenings fall into a bin built for the purpose and are afterwards hauled away to be used as a top dressing on Canal Zone roads, or disposed of by sale to private users. Private sales are made on the basis of 50 cents, United States currency, per cubic yard, f. o. b. cars at the quarry.

A statement of the rock crushed at Ancon quarry during the week ending December 3, follows:

DATE	Hours worked.	Cubic Yards.
November 28	6:10	2,295
November 29	8:20	2,835
November 30	5:40	1,695
December 1	10:55	3,675
December 2	11:20	4,290
December 3	8:40	3,090
Total	51:05	17,880

Porto Bello Crusher.

A statement of the work done at Porto Bello crusher, by days, for the weeks ending December 3 and 10, follows:

DATE.	Hours. worked.	Cubic Yards.
November 28	6:29	2,317
November 29	9:14	2,887
November 30	9:43	2,600
December 1	10:36	2,955
December 2	11:15	3,453
December 3	1:47	600
Total	49:04	14,812
December 5	11:50	2,070
December 6	11:19	2,481
December 7	11:38	2,946
December 8	7:16	3,272
December 9	6:48	3,014

LOCK VALVE MACHINERY.

Bids to Be Advertised for, both in the United States and in Europe.

The Washington office has been directed to advertise for bids for the machinery to operate the Stoney gate valves and cylindrical valves in the locks at Gatun, Pedro Miguel and Miraflores. Bids on this machinery will be requested, both in Europe and in the United States. There will be required 116 machines, motors, and limit switches for operating the Stoney gate valves, and 120 machines, motors, and limit switches for operating the cylindrical valves. Tests of the type of valves to be used are being made at Gatun and Pedro Miguel.

The Stoney gate valves will be used for letting the water into and out of the lock culverts or tunnels. The machinery for which bids are to be asked will operate a rising valve stem fastened to the gate valve at the lower end and to a guided crosshead at the upper end. The crosshead will move vertically through a distance of 18 feet by means of two vertical revolving screws which transmit the pull through two nonrevolving nuts in the crosshead. Each screw will be driven from the motor shaft by a gear and pinion reduction and two bevel gears.

The 78-inch cylindrical valves will let the water from the main culvert of the center wall of the locks into the lateral culverts, or *vice versa.* The machinery for operating them will consist of a guided rising stem fastened at its lower end to the cylindrical valve and having a nonrevolving nut fastened to its upper end. This nut, and hence, the valve and valve stem, is moved vertically through a distance of three feet by means of a revolving screw, the end thrust being taken up by a roller-bearing at the upper end of the screw. The screw is actuated by a bevel gear which is driven by a pinion on the motor shaft.

The motors for operating the machinery will be induction, totally inclosed, moisture-proof, squirrel cage form, mill type, high torque, designed for 25-cycle, 220-volt system. It is the desire of the Commission to purchase motors which have been developed and successfully used in the operation of steel rolling mills for a period of at least one year, such service being comparable with that which will be required on the lock valves. The service for which they will be used will be intermittent, and the excessive moisture of the Canal Zone, with its deteriorating effect, must be guarded against. Tests will be made on the Isthmus to ascertain whether the motors furnished are fit to stand the effects of the moisture, and to this end the Commission may buy a sample of any, or all, of the motors offered.

All of the above apparatus will be installed by the Commission, and the time of delivery extends over a period of about two years, in order that the material may be on hand when the completion of successive parts of the concrete will permit its erection.

Arrested for Embezzlement.

Henry J. Hines, an American employed by the Pacific Division at Balboa, was placed under arrest on Wednesday, December 7, charged with embezzling United States Government property, consisting of commissary stores consigned to his charge and destined for the use of the Pacific Division floating equipment. He waived examination before Judge Blackburn in the District Court at Ancon, and on Monday, December 11, was arraigned before Judge Gudger in the Circuit Court of the First Judicial District, where he pleaded "Not guilty" and was placed under bond of $4,000 for his appearance for trial on Monday, December 19. Information was filed against him in six cases of embezzlement, one occurring in October, four in November, and one in December. Charles Silvers and F. P. Petersen, proprietors of the Hotel Metropole in Panama, have been extradited and will be tried in the Canal Zone courts for embezzlement for having received the stolen goods. They were admitted to bail on Tuesday in the sum of $5,000 each. Two Panamanians, drivers of the wagon in which the goods were hauled from Balboa to the hotel, are also held under bond.

Canal Zone Schools.

The attendance in the Canal Zone public schools during November was as follows:

WHITE.	ATTENDANCE.	
	Enrolled	Average daily.

JOHN L. PHILLIPS, *Treasurer.*

Approved:
C. A. DEVOL, *Chairman.*

Examinations for Rodmen and Levelmen.

The second examination to test the fitness of rodmen and levelmen for promotion will be held in the clubhouse at Culebra, beginning at 9 a. m., on Sunday, January 8, 1911. Rodmen and levelmen who did not enter the first examination; those who entered, but failed to pass; and those appointed since November 6, 1910, will be admitted to this second examination upon written application addressed to the Chairman of the Examining Board, Culebra, C. Z., prior to January 1, 1911.

A. B. NICHOLS,
Chairman, Examining Board.

Culebra, C. Z., December 9, 1910.

Sailing of Cristobal.

The P. R. R. steamship *Cristobal* will sail from Cristobal at 5 p. m., Friday, December 16.

Gatun Dam Spillway.

Concrete was placed in the Spillway of Gatun Dam during the week ending December 10, as follows:

DATE.	CUBIC YARDS.		
	Concrete	Large rock.	Total.
December 5	208	....	208
December 6	212	....	212
December 7	308	....	308
December 8	264	....	264
December 9	220	....	220
December 10	128	....	128
Total	1,340	....	1,340
Previously reported	....	....	109,180
Grand total	....	....	110,520

Minnesota Residents.

Will all residents of the Canal Zone who are now, or who have been, residents of the State of Minnesota kindly communicate with E. Dow Gilman, office of Assistant Chief Engineer, Culebra.

E. DOW GILMAN.

Culebra, C. Z., December 10, 1910.

Resignation of Justice Owen.

Judge Wesley M. Owen, associate justice of the Canal Zone Supreme Court, has tendered his resignation effective at the end of his annual leave in February, when he will have been on the Canal Zone bench two years. He states that his resignation is due to ill health and to the demands of business interests in Illinois.

Central Division Unloaders.

A statement of Lidgerwood cars unloaded in the Central Division during the month of November, follows:

LOCATION.	No. of unloaders.	No. of trains.	No. of cars.
Balboa	3	860	17,200
Miraflores	3	627	12,540
Gamboa	3	763	15,260
Tabernilla	1	290	5,800
Total	10	2,540	50,800

Odd Fellows.

At the annual communication of the sovereign grand lodge of the Independent Order of Odd Fellows held at Atlanta, Ga., recently, B. F. Sisson of Gatun was reappointed district deputy grand sire for the Canal Zone for the fourth consecutive year.

Traffic on the old line of the Panama railroad through the section between Gatun and Frijoles, which was suspended during the freshet of December 2 to 6, was resumed on December 9. The water in the lake rose and subsided so slowly that little damage was done in the inundated section of the railroad. Through Black Swamp the ballast on the southbound track will need renewing.

SOCIAL LIFE OF THE ZONE.

Women's Clubs.

The year book of the Canal Zone Federation of Women's Clubs has been received and is being distributed to the club women, a small charge to cover the cost of printing being made for each copy. The book contains a list of officers and chairmen of standing committees for the year 1910-11. The cover is in green and gold, and is decorated with a design of the Federation pin. It is the first year book that the Federation has issued.

The Cristobal Woman's Club has issued its third year book in the usual form. An innovation has been made in the department meetings, which are held in the clubrooms, instead of at the homes of the chairmen, as formerly. The program for each day is arranged by the department chairmen. An informal reception follows at which two or more club members act as hostesses. At the general meeting of the club on Wednesday, December 7, Dr. E. W. Hill made an address on the education of the child from a medical standpoint. The home department Christmas bazaar, held on Thursday, December 1, was well patronized, especially during the evening. During the afternoon, musical selections were rendered by Miss Beverly, and a feature of the evening was a concert by the Panama railroad orchestra. About $100 was made and the money will be used for civic purposes in Colon and Cristobal. All the articles left over from the bazaar will be placed on sale at the meeting of the home department on Wednesday, December 14.

At the November business meeting of the Gatun Woman's Club, Charles C. Carr, principal of the Canal Zone high school, addressed the women on the importance of establishing a public playground for children in the village of Gatun. The cost of the equipment considered necessary would be about $150. The club has under consideration several suggestions for ways and means of raising this sum, and at the business meeting on the first Friday in January the question will again be discussed with Mr. Carr and others. An election of officers for the next quarter will be held at this meeting. The Woman's Club is cooperating with the other organizations of Gatun in the preparations for the public Christmas celebration to be held in the clubhouse on Christmas Eve. A Christmas cantata will be sung by the children. Committees have been appointed on the different departments of the work, with Mr. Carr as general chairman. A part of the money raised in the village for the entertainment will be devoted to a Christmas celebration for the colored children in the labor camps in New Gatun and the surrounding villages.

The meetings of the Gorgona Woman's Club are held at the homes of the members, instead of at the clubhouse, as formerly. The club is assisting in preparations for the Christmas celebration to be held in the clubhouse on Christmas Eve.

Meetings of the Empire Woman's Club will be resumed after this week. A social meeting of the Pedro Miguel Woman's Club was held at the home of Mrs. William Doyle on Wednesday, December 7, the reception being in honor of the little daughter of the hostess. Refreshments were served.

The Paraiso Woman's Club has arranged a card party and sale of Christmas goods to be held at the lodge hall on Thursday evening, December 15. The next meeting of the club will be held on Wednesday afternoon, December 21.

Episcopal Churches.

The Rt. Rev. Albion W. Knight, the Bishop of Cuba, is expected to arrive on the Isthmus from Havana, on January 4, for an official visit which will extend over 18 days. The Rev. Jesse B. Bicknell of St. Paul's Church, Baltimore, has arrived on the Isthmus to take up duty in connection with the Protestant Episcopal Church Mission.

The Sunday school of St. Luke's Church, Ancon, will hold its Christmas celebration in Ancon hall on Wednesday evening, December 27, at 8 o'clock. There will be a tree and gifts, and carols will be sung. There are about 25 pupils in the school.

The next meeting of the Woman's Altar Guild will be held at Hotel Tivoli on Tuesday, December 21, when Mrs. Harry Payne will be hostess.

Miscellaneous Events.

The Ladies' Aid Society of the First Baptist Church, Empire, held a sale of fancy goods and aprons early in December for the purpose of raising money to furnish the new parsonage, which has just been completed. About $30 was made.

The Colonial Musical Association of Colon gave its first concert at Wesleyan Church on the afternoon of Sunday, December 11. The members of this organization are Jamaicans and employes of the Isthmian Canal Commission.

Observance of Christmas.

The Corozal Sunday school will hold appropriate exercises at the recreation hall on Christmas Eve. All residents of Corozal and Camp Diablo are cordially invited to attend. It is requested that presents for the Christmas tree be delivered not later than 4 p. m. on the 24th.

Colon Humane Society.

A meeting of the Colon Humane Society was held at the Government building, Colon, on Wednesday evening, December 7. The date of the Christmas dinner at the playground for the children has been fixed for December 24, instead of Christmas Day. The municipal band will play. Tracy Robinson, delegate to the International Humane Conference held in Washington in October, gave a report of the conference, and presented photographs of the delegates to the Colon society. An election of officers resulted as follows: President, Dr. Claude C. Pierce; vice-president, Frank Ullrich; secretary, J. A. Roberts; treasurer, Pascal Canavaggio; auditor, E. Lopez.

Election of Red Cross Officers.

Edw. Schildhauer, chairman of the nominating committee, announces the following results of the election of officers for the fiscal year ending October 31,1911: Chairman, Lieut.-Col. C. A. Devol, Culebra; vice-chairman, Lieut-.Col. Wm. L. Sibert, Gatun; secretary, F. C. Freeman, Culebra; treasurer, Lieut.-Col. Jno. L. Phillips, Ancon; executive committee, Major Chester Harding, Gatun; Colonel W. C. Gorgas, Ancon; R. C. Shady, Gorgona.

The original organization of the Canal Zone Chapter took place in January, 1909. The amended rules of the American National Red Cross, as published in "Charter, By-Laws and Regulations for State Boards and Chapters," issued January 1, 1910, provides under section 17—Fiscal year: "The fiscal year shall include the twelve months ending October 31." It also provides in section 26, that the officers shall be elected during the month of October. It seems desirable and necessary to bring the Canal Zone Chapter into line with the national organization, and, therefore, the officers recently elected will hold office until October 31, 1911. It also becomes necessary to collect membership dues for the ensuing year, and dues collected now, as well as those collected just prior to the President's reception, will be for the fiscal year ending October 31, 1911.

C. A. Devol,
Chairman, Canal Zone Chapter.

Personal.

The marriage of Miss Ethel Mason, daughter of Lieut-Col. Charles F. Mason, to Lieutenant J. R. D. Mathesson, U. S. A., will take place at St. Luke's Church, Ancon, on Tuesday afternoon, December 27. The ceremony will be followed by a reception at the residence of the bride. The wedding invitations have been delayed and will be sent out as soon as they are received.

Opening of Baseball Season.

At the meeting of the executive committee of the Panama Canal Baseball Association, consisting of E. J. Williams, chairman; R. H. Wardlaw, and Dr. J. C. Perry, held at Empire on December 11, it was decided to postpone the opening of the season's games from Sunday, December 18, until Sunday, January 1, 1911, New Year's Day. The schedule, as originally planned, provided for 30 games, but owing to the inability of the committee to arrange dates satisfactory to all the teams for a season of this length, it has been shortened by reducing the number of games to 20. The opening games will be played as follows:

At Colon park—Commissary-Subsistence vs. Atlantics.

At Empire park—Empire vs. Gorgona.

At Ancon park—Ancon vs. Marines.

Mr. J. P. Mead has been appointed official scorer for the league. The umpires will be elected from among the applicants receiving the highest number of votes cast by the managers and captains of the teams. The claims on various players were adjusted with one or two exceptions.

Band Concerts.

A concert will be given by the Isthmian Canal Commission Band at Porto Bello, R. P., on Sunday, December 18, 1910 at 2 p. m. The program follows:

1	March—*Festal Day*	Roux
2	Medley Selection—*Amina*	Halle
3	Waltz—*Cupid Astray*	Rolfe
4	Overture—*Lustspeil*	Keler Bela
5	Intermezzo—*Silver Bell*	Wenrich
6	Concert Piece—*Hearts and Flowers*	Tobani
7	Medley March—*Angel Eyes*	Jergensen
8	Patrol—*American*	Meacham
9	March—*Midshipman*	Laurendeau

As the accommodations for passengers on the tug, which will convey the members of the band to Porto Bello on December 18, are somewhat limited, it has been decided to issue a limited number o passes for the trip to accommodate those outside the members of the band who wish to make the trip on that date. These passes may be obtained of the musical director and members of the band.

A concert will be given by the Isthmian Canal Commission Band at Cristobal, C. Z., on Wednesday, December 21, 1910, at 8 p. m. The program follows:

1	March—*Columbia Phonograph Co*	Burton
2	Selection—*The Chocolate Soldier*	Straus
3	Intermezzo—*After Sunset*	Pryor
4	Overture—*Poet and Peasant*	Suppe
5	Waltz—*Tres Jolie*	Waldteufel
6	Medley Selection—*Popular Hits*	Alford
7	Song—*The Rosary*	Nevin
8	Humoresque—*What's the Matter with Father?*	Lampe
9	March—*The Coming Regiment*	Conterno

Chas. E. Jennings, *Musical Director.*

The next concert will be given at Culebra on Sunday, December 25, at 5.45 p. m.

COMMISSION CLUBHOUSES.

Activities of the Young Men's Christian Association.

CULEBRA.

The standing in the Putnam medal bowling tournament is as follows:

Name.	Won.	Lost.	Name.	Won.	Lost.
Cohen......	5	2	Hayes, G. C	3	4
Herrington..	4	5	Hurst......	1	3
Mengel.....	1	1	Warner....	1	5
Huttlemeier.	4	6	Sickler.....	6	1
Cornthwaite.	6	4	Koperski...	1	3
Fleischman..	4	4			

The standing in the duckpin tournament is as follows:

Case.......	7	2	Hurst......	4	3
Conlan.....	3	4	Huttlemeier	5	4
Cushing....	1	2	Fleischman.	8	5
Dakin......	3	7	Judge......	5	5
Dubois.....	0	0	Koperski...	7	4
Fitz........	0	9	Lindsay....	1	1
Freeman....	0	0	McIlvaine..	5	3
Fredericks..	11	0	Palmer.....	0	2
Gould......	4	7	Sickler.....	5	9
Hill........	4	6	Putnam....	0	2

The following program was given at the informal "social" on Friday night: Selections by the male quartet of Culebra; violin solo, Mr. Logasa; brass bar. Mr. Kramer; vocal solo, Mr. Case; violin solo, Mr. Logasa; popular songs. After the program refreshments were served.

The glee club organized two weeks ago will give a concert in the near future.

EMPIRE.

Empire won three games from Cristobal on December 10, by the following scores:

Cristobal.				Empire.			
Barrett.....	175	162	180	Gustavson.	155	153	159
Weston.....	159	176	171	Potter....	206	189	204
Collins......	171	160	151	Bardelson.	162	153	160
Bullard.....	202	174	165	Pearson...	161	175	180
Louch......	144	....	133	Shaughne'y	189	192	156
Burns..........		113	....				
Total.....	851	785	800	Total...	873	862	859

The concert of sacred music on Sunday afternoon, December 11, was well attended. These concerts will be held monthly.

The Marine Band will be one of the attractions at the entertainment for the children of Empire on Christmas Eve.

The dramatic section will start rehearsals for a play under the direction of C. C. Carr on the 16th.

GORGONA.

The moving picture entertainment on Monday night, December 5, and Friday night, December 9, were well attended. Melville Booz presided at the piano on both occasions.

About 125 men were present at the meeting of the discussion club held on Wednesday night, December 7. The next meeting will be in the form of a "smoker," and will be held on Thursday, December 15, at which time officers will be elected.

A large audience attended the basketball game on Saturday night, December 10, between Cristobal and Gorgona. Cristobal won by the score of 45 to 36. On Saturday night, December 17, there will be a league bowling match between Culebra and Gorgona. The public is invited.

GATUN.

Gatun won at basketball on Saturday night, December 10, defeating Culebra by the score of 28 to 22. The line-up was as follows:

Culebra.	Position.	Gatun.
Purchase..............	R. F.............	R. Porter
Cushing................	L. F.................	Huber
Vifquain...............	C................	C. Porter
Tupper.................	R. G.................	Shell
Koperski..............	L. G...............	Connor

The next game of basketball to be played in Gatun will be with the Cristobal team, which now leads the league. This game will decide the championship, if Cristobal wins. It will be played on Thursday, December 22, at 8 p. m.

The physical department has just received a set of anthropometric instruments. The physical director will give examinations and prescribe exercises to club members free of charge. Mr. Ludwig will receive applications at any time. Systematic physical culture classes are conducted for men every Tuesday and Friday at 8 p. m.

The membership campaign inaugurated recently has already brought good results. The total is now 425, the largest in the Zone. Jones, Wood, Uritzel, Rohr, Heiskell, Buber, Gayer and McLain are among those who have brought in the largest number of new members.

Six men have signed for the mechanical drawing class which started on Wednesday night, December 7.

Fifteen men met for the first rehearsal of the glee club on Thursday night, December 8. A. B. Dickson, secretary at the Empire clubhouse, will act as conductor; rehearsal every Thursday night at 8 o'clock.

A machine for testing the lung capacity was placed in the lobby last Friday night and is attracting much attention.

Louis Durand has been appointed assistant to Mr. DePoorter in the pool room. Mr. DePoorter is looking for challenges on the Isthmus.

An electric fan has been installed in the barber shop.

Saturday night of this week a "smoker" and informal reception will be held at the clubhouse. Every man in town is invited.

CRISTOBAL.

The "strawberry" bowling tournament is increasing in interest. The highest individual score so far was made by Wood with 213. Other 200 scores in the tournament are as follows: Herring, 206; Barrett, 200, 209; Rosteck, 211; Bullard, 202. Other 200 scores on the alleys during the week were: Rigney, 201, 223; Burns, 215; Russell, 206; Veen, 202.

The office men's gynasium class meets regularly on Tuesday and Thursday afternoons at 5.30 o'clock. Evening gymnasium classes Tuesdays and Thursdays at 8 p. m.

The closing game of the Isthmian interassociation basketball league for Cristobal will be played on the Gatun floor Thursday night, December 22. A special train will be run from Cristobal to Gatun and return, leaving Cristobal about 7 p. m. The bowling match scheduled for December 24 will be bowled on the Gatun alleys December 22, between the Cristobal and Gatun teams.

A members' "smoker" will be given on Friday night, December 16. All members are urged to come.

OFFICIAL CIRCULARS.

Oil Containers.

CULEBRA, C. Z., December 13, 1910.

CIRCULAR No. 314-D:

The provisions of circular No. 314, covering the furnishing of "four suitable oil containers of at least five gallons capacity each" to each steam shovel, are hereby amended as follows:

Steam shovels will be furnished, each, with two five-gallon oil containers for valve and car oil, and with one one-gallon oil container for kerosene.

The equipment of all steam shovels will be changed to accord herewith.

GEO. W. GOETHALS,
Chairman and Chief Engineer.

Accumulative Leave for Hourly Employes.

CULEBRA, C. Z., December 8, 1910.

HEADS OF DEPARTMENTS AND DIVISIONS:

I quote below for your information copy of telegram forwarded today to the hourly gold employes:

"After January 1, 1911, accumulative leave will be authorized at the rate of two and one-third days per month for all gold hourly employes who have completed six months' satisfactory service, which leave may be taken on termination of service, except when services are terminated for cause."

GEO. W. GOETHALS,
Chairman and Chief Engineer.

Acting Superintendent of Clubhouses.

CULEBRA, C. Z., December 9, 1910.

CIRCULAR No. 362:

Effective December 10, 1910, Mr. E. A. Putnam is appointed acting superintendent of clubhouses during the absence of Mr. F. C. Freeman, on leave.

GEO. W. GOETHALS, *Chairman.*

Duties of Traveling Engineers.

CULEBRA, C. Z., December 12, 1910.

CIRCULAR No. 266-E:

Effective Tuesday, January 3, 1911, and until further notice, Senior Traveling Engineer James G. Craig and Junior Traveling Engineer Arthur C. Stone will exchange stations and duties heretofore performed by them as stated in circulars No. 266-B, paragraph 12, and No. 266-C.

GEO. W. GOETHALS,
Chairman and Chief Engineer.

The School Holidays.

ANCON, C. Z., December 10, 1910.

BULLETIN No. 5:

The public schools of the Canal Zone will close for the Christmas holidays on Friday, December 23, at the close of the afternoon session. Schools will reconvene Tuesday, January 3, 1911.

FRANK A. GAUSE, *Superintendent of Schools.*

Stages of the Chagres.

NOTES OF PROGRESS.

Chairman's Monthly Report.

The report of the Chairman of the Isthmian Canal Commission for the month of November is published in full in other columns of this issue of THE CANAL RECORD. It gives a detailed account of the progress of Canal work in all departments and divisions.

Boilermakers for Canal Service.

The Washington office has been advised that the national headquarters of the Boilermakers' Union has instructed its subordinate offices to allow union boilermakers to enter the service of the Isthmian Canal Commission on the Isthmus.

Seven Thousand Barrels of Cement Daily.

During the dry season it is expected that the amount of concrete placed daily will be increased, and on this account, the contractor in the States has been advised that 500 barrels additional will be required each day. The total shipment per day will thus be 7,000 barrels, equally divided between wood and canvas containers. The increased shipments will be begun about February 25.

Improved Passenger Service.

On January 1, a new schedule of passenger trains will go into effect on the Panama railroad, which provides for a 10-minute reduction in the time of crossing the Isthmus, so that trains that now take 2 hours and 15 minutes will take 2 hours and 5 minutes. In the shuttle train service between Colon and Gatun, the train which leaves Colon at 6.20 a. m., and that which leaves Gatun for Colon at 8 a. m., will be discontinued.

On the first of the new year, or soon thereafter, a parlor car service between Colon and Panama will be instituted. The car will be attached to trains leaving Panama at 6.30 a. m. and 1.30 p. m., and leaving Colon at 10.30 a. m. and 4.35 p. m. The private car "America" is being remodeled for this service: there will be an observation platform on each end, and within, there will be 20 movable rattan chairs. Later, these chairs will be replaced by rattan reclining chairs of the parlor car type. Camp stools will be provided, so that all the passengers may sit on the observation platform. A fare of 25 cents will be charged, in addition to the regular ticket, for trips representing half the distance across the Isthmus, or less; and a fare of 50 cents for trips of more than half the distance across the Isthmus. If the parlor car service proves profitable, another car will be remodeled and all passenger trains will carry a parlor car.

An automatic signal system to control the movement of trains through Miraflores tunnel is being installed. The system is the same as that which controls the movement of trains over the Black Swamp gauntlet.

Concrete Mixers for Culebra Cut.

The Washington office has been directed to enter into a contract with the Ransome Concrete Machine Company of Dunellen, N. J., for a portable mixing plant with side discharge to be used in concrete revetment and retaining wall work in Culebra Cut. A portable tower concrete mixing and handling plant for this work will also be purchased from this company if certain modifications are made in the trucks of the car on which it submitted an estimate. The details of both these plants were published in THE CANAL RECORD of September 7, 1910. The board on revetment and retaining walls has reported in favor of carrying on the concrete work in only one locality during the coming dry season. This is at Paraiso slide, where it is desirable to maintain a construction track on the 95-foot berm. The length of the bank to be retained is about 900 feet.

Steam Shovel Record at Gatun.

On December 6, the 45-ton steam shovel, No. 51, working at Gatun Spillway excavated 2,448 cubic yards of earth in an 8-hour day. T. P. Kelliher was runner, and L. P. Bonnell, craneman. The best record previously made by a 45-ton shovel was that by shovel No. 58 of the Central Division, which excavated 1,356 cubic yards of earth and rock on February 5, 1908.

Excavation Work at Mindi.

When the excavation in the pit at Mindi was resumed on October 24, dredge *No. 86* was withdrawn from Gatun Dam and set to work there, and about the same time, the suction dredge *Sandpiper* began pumping mud and coral sand from the bed of Folks River into the Colon flats. On November 13, dredge *No. 86* was transferred to Folks River, exchanging positions with the *Sandpiper*, the move being made with a view of advancing the Colon work more rapidly. Up to the date of the transfer, dredge *No. 86* had pumped 141,679 cubic yards of material out of the Mindi pit, and from November 14 to the end of the month, the *Sandpiper* pumped 72,318 cubic yards, making a total of 213,997 cubic yards removed at that point to December 1. The mud and water at Mindi is allowed to flow on to the lowland east of the pit, the water passing under the Panama railroad tracks, thence to the ocean via the Mindi River. The estimate made prior to the resumption of work at Mindi showed that there were 552,000 cubic yards of wet excavation and 562,000 cubic yards of dry excavation to be removed from the pit.

Terminal Facilities and Freight Business.

The great increase in freight business between San Francisco and New York, by way of the Panama railroad steamships, since the California and Atlantic Steamship Company instituted its new service in October and the Pacific Mail Steamship Company improved its service between San Francisco and Panama, makes necessary an extension of the cargo handling facilities at both terminals of the railroad.

In November, 1910, the through freight from Colon to Panama amounted to 26,513 tons, as compared with 21,571 tons in the same month of 1909, and the freight from Panama to Colon for transportation to the States amounted to 22,734 tons, as compared with 12,049 tons in 1909. This increase in business has made it necessary for the Panama railroad to send forward on the cement ships *Ancon* and *Cristobal* from 1,000 to 2,000 tons of cargo each voyage, in addition to the freight handled on the four ships in the regular service. The freight carried from San Francisco to New York consists of wine, canned goods, and general merchandise, and that carried from New York to San Francisco is largely structural iron and pipe. The improved steamship service, both on the Pacific and the Atlantic, has resulted in freight being transported more rapidly in some instances by the Panama route than by the railroads across the continent. The time in transit takes from 23 to 30 days.

In order that the freight may be handled more expeditiously, dock No. 11 at Cristobal is being remodeled. All the offices will be taken from the cargo floor and placed over the waiting room, and the waiting rooms and baggage rooms will be reduced in size, and thus all available space will be utilized for freight. Borings are being made north of dock No. 11, with a view of extending the wharf 500 feet into the bay. Dock No. 1 at Colon is being extended 150 feet, in order to provide additional facilities for ships of the United Fruit Company and the California-Atlantic Company.

Plans for the extension of the docks at Balboa, the Pacific terminal, were published in THE CANAL RECORD of September 14, 1910. A requisition has been made on the New York office of the Panama Railroad Company for eight cranes to be erected on this wharf to take the place of four Wellman-Seaver-Morgan, and six old French cranes now installed there. The part of the dock on which

NOTES OF PROGRESS.

(Continued.)

the new cranes will be erected is known as the "steel pier" and it was first used in 1899. It is now provided with 10 "A" frame, swing boom, traveling cranes of 1½ tons capacity, and work has already been begun to strengthen it, so that it can support a concrete floor and the eight 4-ton cranes which will take the place of the old cranes.

The specifications call for 4-ton electric cargo handling cranes, capable of handling general merchandise or lumber from the holds of vessels tied up at the dock, and delivering it under cover in the dock. They must be capable of lifting the full load of four tons a maximum distance of 90 feet at a speed of 300 feet per minute, carrying it along the boom at the rate of 600 feet per minute, and depositing it on the wharf, the operation not to occupy over one minute. The cranes will move longitudinally along the front of the dock at a speed of 100 feet a minute, and the booms must extend over the ship a distance of 40 feet from the center of the crane tower to the center of the ship. All movements must be controlled from an operating platform, so located as to enable the operator to observe and control the load from the time it is raised from the hatch until it is safely deposited on the wharf. The first crane must be delivered within four months of the awarding of the contract and all of them within eight months.

Gatun Dam Spillway.

Concrete was placed in the spillway of Gatun Dam during the week ending December 17, as follows:

DATE.	Concrete Laid.	Hours worked.	No. Mixers.
	Cu. Yds.		
December 12	300	9:00	1
December 13	215	9:00	1
December 14	294	9:00	2
December 15	210	7:00	1
December 16	160	6:00	1
December 17	300	8:00	1
Total	1,479	48:00	
Previously reported	110,520		
Grand total	111,999		

Ancon Quarry.

A statement of the rock crushed at Ancon quarry for the weeks ending December 10 and 17, follows:

DATE.	Hours worked.	Cubic Yards.
December 5	5:40	1,584
December 6	6:05	1,494
December 7	10:15	3,195
December 8	8:30	2,436
December 9	8:55	2,763
December 10	8:55	2,741
Total	48:20	14,213

DATE.	Hours worked.	Cubic Yards.
December 12	8:55	3,000
December 13	9:40	3,105
December 14	6:55	2,295
December 15	7:40	2,730
December 16	9:10	2,970
December 17	7:30	1,995
Total	49:50	16,095

Opening of New Fire Station at Gatun.

The new west side fire station at Gatun was formally opened on Tuesday evening, December 13, by the members of the three volunteer companies, and their friends. The house was attractively decorated. During the evening arrangements were made for a competitive run by the three Gatun volunteer companies, with a flag for a prize, to be held on Washington's Birthday.

Excavation on Bas Obispo Diversion.

The contract for excavating about 21,942 cubic yards of earth for the Obispo diversion on the east bank of the Canal opposite Las Cascadas, has been let to Vernon Holiness of Empire at 29½ cents a cubic yard. The only other bid received was that of B. B. Duncan of Las Cascadas for 33¼ cents a cubic yard. The excavation is for the relocation of the diversion eastward of the present location opposite Las Cascadas, because at this point it is in danger from the Whitehouse slide.

CONCRETE WORK IN THE LOCKS.

GATUN LOCKS.

Concrete work in Gatun Locks is over 46 per cent completed, 969,279 cubic yards, out of a total of 2,085,000, having been placed at the close of work on December 17.

A statement of the amount of concrete placed in the locks each day for the week ending December 17, and of the total, follows; and a similar statement for the work in the Spillway of Gatun Dam is published elsewhere in this issue. The construction plant works 12 hours daily, and the auxiliary plant 9 hours.

DATE.	CONSTRUCTION PLANT. 2-cubic yard mixers.			AUXILIARY PLANT. 2-cubic yard mixers.			Large stone.	Total.

Previously reported								950,595¼
Grand total								969,279

*The 117 yards shown for the portable ⅓-yard mixer were placed on the following days, and are included in the total shown for each day: December 12th, 30 yards; December 13th, 30 yards; December 14th, 19 yards; December 15th, 19 yards; December 16th, 19 yards.

PEDRO MIGUEL LOCKS.

Concrete work in the locks at Pedro Miguel is about 55 per cent completed, 460,095 cubic yards, out of a total of 837,400, having been placed at the close of work on Saturday, December 17. Berm crane "E" was placed in operation again on Wednesday, after a shut-down of four days. The record of concrete laid during each of the six 8-hour working days of last week, follows:

DATE.	CONSTRUCTION PLANT. 2-cubic yard mixers.			AUXILIARY PLANT. 2-cubic yard mixers.				Total.
	Concrete placed.	Hours worked.	No. of mixers	Concrete placed.	Hours worked.	No. of mixers	Large stone.

A CANAL ZONE CHRISTMAS.

Church Services and Community Celebrations.

The Christmas Day services in St. Luke's Church, Ancon, will be as follows: 7 a. m., holy communion; 9 a. m., Sunday school; 10 a. m., divine service, with sermon; 8 p. m., evensong. The Rev. Henry B. Bryan will officiate.

The Sunday school celebration of the Methodist Episcopal Church, Panama, will be held on Christmas Eve at 7.30. There will be exercises, consisting of songs and recitations, and a cantata entitled "The Star of Peace" will be sung by the pupils of the school. The services on Christmas Day will be: Spanish service at 9 a. m., the Rev. Charles W. Ports, preacher; English service at 10 a. m., the Rev. W. W. Gray, preacher, and Sunday school at 11 a. m.

The Corozal Sunday school celebration will be held in the social hall on Christmas Eve.

At Pedro Miguel, there will be a public celebration with a tree and gifts for the children of the village on Christmas Eve. The program will include a Christmas cantata by the children.

The public celebration at Culebra will be held in the clubhouse on Christmas Eve, beginning at 7.30. There will be a program consisting of songs and recitations, and a Christmas play by the children of the Sunday school. Apples and nuts will be distributed and refreshments will be served. The gifts for the Sunday school children will be presented in the chapel on Christmas Day at 9.30 a. m. The church services in the chapel for Christmas Day will be as follows: Episcopal service at 11 a. m., with holy communion, Chaplain Brown officiating; union service at 7.30 p. m., the Rev. A. A. Nellis, preacher. There will be the usual service at the Culebra penitentiary on Sunday morning, December 25, at 8.30 o'clock, the Rev. S. Moss Loveridge, preacher.

The Church of the Holy Redeemer at Culebra will have a Christmas tree for the children of the Sunday school on Christmas Eve. On Christmas Day, the tree will be taken to the Culebra Spanish school, where it will be redecorated, and gifts will be distributed to the children of that school. Midnight mass will be celebrated by the Rev. Father Collins on Christmas Eve.

The Empire Christmas services will be held in the Commission chapel at 11 a. m., the Rev. A. A. Nellis, preacher, and in the evening at 7.15 o'clock, the Rev. J. H. Coin, preacher. The general celebration will be held in the clubhouse on Christmas Eve, beginning at 7 o'clock. There will be a children's entertainment, with recitations, music, and a Christmas tree with Santa Claus to distribute gifts. Following this, there will be a program for the older people. Refreshments will be served in the reading room from 9 to 11 o'clock. The Marine band from Camp Elliott will play.

The Sunday school celebration at Las Cascadas will be held in the Commission chapel on Friday evening, December 23. There will be a tree, with gifts for the pupils of the school, and a program of songs and recitations by the children.

At Bas Obispo, there will be an entertainment and "treat" for the children in the social hall on Christmas Eve.

The community celebration at Gorgona will be held in the clubhouse on Christmas Eve. There will be a tree, and each child will receive a stocking filled with candy, nuts, and fruit. Those who wish to place their gifts on the tree for friends and relatives are invited to do so. The children will sing a cantata entitled "Sleepy Santa Claus." Toward this general celebration all the fraternal and other organizations in the village have contributed. A committee of 30 has had charge of the arrangements. The Christmas celebration of the Union Sunday school will be held on New Year's Eve in the chapel. There will be a program, consisting of Christmas hymns, and a candle drill by the infant class.

The general Christmas celebration at Gatun will be held in the clubhouse on Friday evening, December 23. Two large Christmas trees will be provided, and gifts will be distributed to about 300 children. A program of songs and recitations, and a Christmas cantata will be rendered by the children. The Americans at Gatun will provide a Christmas celebration for the Spanish and West Indian children in the new village at Gatun on Christmas afternoon from 2 to 5 o'clock. Presents will be distributed. Christmas Day services at Gatun will be held in the Commission chapel at 10.45 a. m., and at 7.30 p. m., the Rev. Charles O. Purdy, preacher.

The Cristobal celebration will be held in the Commission clubhouse on Christmas Eve. The feature of the program is a play entitled "The Birds' Christmas Carol," which will be acted by the children of the Sunday school. There will be a tree, and a distribution of gifts. The service at the chapel will be at 7.30 p. m., the Rev. Carl H. Elliott, preacher. Sunday school will be held at 10 a. m.

A midnight mass will be sung at St. Rita's Church in New Gatun, beginning about 11.30 p. m., Christmas Eve. Confessions will be heard at any time during the evening up to that hour. On Christmas Day, a high mass will be sung at St. Rita's Church at 10.30 a. m.

Christmas at Culebra Penitentiary.

A committee of ladies residing in Culebra, with Mrs. C. A. Devol as chairman, is arranging for a Christmas treat for the inmates of Culebra pentitentiary. Cakes and ice cream, nuts, fruit, candy and tobacco will be furnished. Donations are solicited from residents of Empire, Culebra and Ancon. Cakes and articles of food may be delivered to the district quartermasters on the afternoon before Christmas. Subscriptions of money are also asked, and these may be also handed to the district quartermasters, or forwarded to Mrs. Devol in Culebra. It is purposed to use any money remaining from the Christmas fund for the purchase of French and Spanish books for the penitentiary library.

Church Notes.

The Rev. Aquila Lucas, representative of the International Sunday School Association for South America and the West Indies, will arrive on the Isthmus for his annual visit on December 22, and will remain until January 3. His visit will be largely devoted to the work of the Sunday schools for colored children.

The proceeds of the recent sale for the benefit of St. Mary's Church, Empire, amounted to $55. The money will be placed in the fund already started for the purchase of a new organ for the church.

The Ladies' Foreign Missionary Society, connected with the Methodist Episcopal Church, Panama, has taken up the study of a book entitled "Western Women in Eastern Lands." It treats of the efforts of cultivated Christian women in the Orient. A Spanish branch of the society has been organized with ten members. Mrs. C. W. Ports is president. The branch meets at the homes of the members on the last Thursday in each month.

The Rev. Charles O. Purdy of Des Moines, Iowa, the newly appointed Commission chaplain assigned to duty at Gatun, arrived on the Isthmus on Thursday, December 15, and preached at the two services in the chapel on the following Sunday, under the auspices of the Gatun Christian League. The morning service was attended by about 45 people, and in the evening there was a congregation of 80. Mr. Purdy is a graduate of Drake University and has been active in the ministry for five years. An informal reception was tendered to the new pastor on Tuesday evening, December 20, and on Wednesday evening, December 28, a general reception will be given for him in the clubhouse.

The Ladies' Aid Society, in connection with the Union Church at Cristobal, maintains a scholarship in the Methodist College at Panama, a little Spanish girl being the beneficiary. The society has taken up sewing for a small mission in New York as its work for the winter.

The building recently erected at Gatun for use as a chapel by the Catholics in the American settlement, has been completed and will be opened for services on Christmas morning. Mass will be said by Rev. M. A. Jiamona at 9 o'clock that morning, and all will be made welcome.

Dances.

The Cristobal Catholic Club will give a Christmas dancing party at the Cristobal clubhouse on Monday evening, December 26.

The Strangers' Club will give a dance in the rooms of the club on New Year's Eve, December 31.

Cristobal Woman's Club.

The meeting of the home department of the Cristobal Woman's Club was held in the clubhouse on Wednesday, December 14. Mrs. Carl H. Elliott and Mrs. J. W. Veen read papers on domestic science. Mrs. Elliott and Mrs. L. E. Willson were the hostesses. The club has voted $100 toward the Christmas celebrations for the children in Colon and Cristobal, $35 of which is for the Christmas dinner to be given by the Colon Humane Society on December 24.

Policemen Accidentally Shot.

The discharge of a revolver in the hands of Sergeant Guy Johannes of the Canal Zone police department caused the death of J. A. Prout, a patrolman in the same service, at Empire, in the early morning of December 14, during a struggle in a dark alley in which each was acting upon the belief that the other was a suspicious character. The injured men were taken to Ancon Hospital, where Prout died in the evening of the same day. The latter was a native of Barbados and joined the police force in September, 1905. A wife and three children survive him. Johannes is an American and has been on the force since November, 1906. Both men were well known to each other, and on the night in question darkness alone prevented recognition.

LOST—On Sunday morning, December 18, either on first train between Gorgona and Mount Hope, or on tugboat to Porto Bello, a hotel coupon book. Finder please return to A. W. Fahr, I. C. C. check No. 31134, Gorgona, C. Z.

CANAL WORK IN NOVEMBER.

Monthly Report of the Chairman and Chief Engineer to the Secretary of War.

CULEBRA, C. Z., December 15, 1910.

The Honorable the Secretary of War,
Washington, D. C.

SIR: I have the honor to submit the following report of operations on the Isthmus for the month of November, 1910:

Department of Construction and Engineering.

The following table summarizes the principal items of construction work accomplished by the Atlantic, Central and Pacific Divisions during the month:

ITEM.	Unit.	Atlantic.	Central.	Pacific.	Total.
Work excavation, dry	Cubic yards	94,552	1,465,636	20,036	1,580,224
Work excavation, wet	Cubic yards	600,708	4,800	473,314	1,078,822
Total work excavation	Cubic yards	695,260	1,470,436	493,350	2,659,046
Plant excavation, dry	Cubic yards	24,958	....	....	24,958
Plant excavation, wet	Cubic yards	188,852	....	133,181	322,033
Total plant excavation	Cubic yards	213,810	....	133,181	346,991
Total Canal excavation	Cubic yards	909,070	1,470,436	626,531	3,006,037
Material placed in dams	Cubic yards	395,771	....	56,404	452,175
Concrete laid	Cubic yards	80,803	....	88,119	168,922
Explosives used	Tons (Gross)	71.58	174.80	31.42	277.80
Rock drilled	Feet	54,930	354,365	38,637	447,932
Tracks removed	Miles	....	6.67	....	6.67
New tracks laid	Miles	1.84	15.18	1.74	18.76
Rock crushed	Cubic yards	66,699	307	59,136	126,142
Cement used	Barrels	78,748	101	89,992	168,841
New roads built	Miles	0.16	....	0.22	0.38
Water mains laid	Feet	5,727	1,700	673	8,100
Sewers laid	Feet	2,546	448	437	3,431
New drains and ditches dug	Feet	8,940	4,030	10,300	23,270
Average daily force	....	8,351	8,946	4,234	21,531
Average rainfall	Inches	28.05	13.81	11.77	14.83

Atlantic Division.

GATUN LOCKS.

Excavation—Shovel excavation during the month was carried on in the lower chamber and forebay, and on a hill north of the machine shop. The work in the forebay was necessitated by a slide, which took place on the east side of the locks, and was completed during the month. A total of 87,916 cubic yards of material was removed. Of this amount, 23,360 cubic yards were excavated outside the limits of the Canal prism for the impervious back fill. On November 30, the total material removed amounted to 5,499,169 cubic yards, of which 4,790,367 cubic yards had been removed from the Canal prism. The excavation was 94 per cent completed.

Receiving and Issuing Material—The receipts of material during the month were in all cases in excess of the consumption.

OPERATION OF THE PERMANENT AND AUXILIARY CONCRETE CONSTRUCTION PLANTS, GATUN LOCKS.

	Permanent Plant.	Auxiliary Plant.
Length of working day (hours)	12.00	(av.) 9.30
Average number of hours per day worked per strand of cableway laying concrete and large stone (actual working time)	8.17	....
Average number of mixers per day	6.00	2.00
Average hourly output per mixer, (actual working time) cu. yds.	52.29	65.71
Average amount of concrete and large stone laid per hour, per strand of cableway, or per derrick (actual working time) cu. yds.	31.92	....
Large rock laid, cu. yds.	4,568¾	2,036
Concrete laid, cableways, cu. yds.	46,204	....
Concrete laid, derrick, cu. yds.	338	....
Concrete laid, derrick, dumping and lift, cu. yds.	....	21,196
Concrete laid, portable ½-yard mixer	....	406½
Total amount concrete and large rock laid, cu. yds.	51,110¾	23,638½

Concrete from the auxiliary plant is placed by derricks, dumping, and a lift; it is therefore impracticable to estimate the average amount placed per hour by each of these units.

Mixing and Placing Plants—These plants were kept in a satisfactory condition during the month, although the output from plant No. 2 was somewhat diminished by the necessity of using some of the narrow gage equipment for removing a slide on the east side of the locks.

Concrete Work—There was a decrease of 11,796½ cubic yards in the amount of concrete laid, as compared with the figures for the preceding month. The daily average for the 24 working days was 3,131 cubic yards. The total amount of concrete placed during the month was 75,152 cubic yards, including 6,617¾ cubic yards of large stone. The bucket measurement exceeded the place measurement by 402¾ cubic yards. Of the total new concrete, 21,436½ cubic yards were placed in the upper lock and 53,715½ cubic yards in the middle lock. The concrete work in the upper lock was 75 per cent completed, and the concrete work for the entire lock system, 45 per cent completed at the end of November.

Power Plant and Pumps—The operation of the power plant and pumps during the month was satisfactory.

Iron and Steel Work—During the month the setting of the sills for the lower gates of the upper lock, and the setting of castings for Stoney gate valves was commenced.

Back Fill—The back fill was increased by 37,139 cubic yards, making the total placed at the end of the month 144,784 cubic yards. The back fill was 11.98 per cent completed.

GATUN DAM.

Construction during the month increased the total fill, as determined by cross sections of the material in place, by 380,334 cubic yards, making the total amount in place 10,919,959 cubic yards.

Hydraulic Fill—The dredges increased the hydraulic fill by 129,666 cubic yards. The hydraulic fill in the east valley was allowed to drain and settle from September 23 to November 14, during which time no material was pumped into this section. Cross sections as of November 14 showed a consolidation amounting to 55,741 cubic yards. The total hydraulic fill in place November 30 was 5,534,114 cubic yards. At the end of the month the water surface in the hydraulic fill east of the Spillway was at elevation plus 57.5, and in the hydraulic fill west of the Spillway at elevation plus 30.7.

Dry Fill—The material received from the Central Division, the locks, the spillway and the plant excavation, amounting to 250,668 cubic yards, was placed on the north and south toes of the dam, east and west of the spillway, making the total dry fill in place 5,385,845 cubic yards.

GATUN SPILLWAY.

Concrete—The construction of the east and west approach walls was continued, 5,651 cubic yards of concrete being placed, of which 129 cubic yards were bulk rock, which increased the total to 107,671 cubic yards.

Excavation—For the forebay and for the foundations of the approach walls, 29,996 cubic yards of material were excavated, increasing the total spillway excavation to 1,548,001 cubic yards.

Cut-off Levee—No work was done on the levee from Spillway Hill to Mindi Hill, the total fill of 177,158 cubic yards, as stated in the report for October, having practically completed the construction of this levee.

HARBOR AND CHANNEL SECTION.

Excavation below Sea Level at Mindi—Dredge *No. 86* was engaged on this work up to November 13, and the dredge *Sandpiper* from November 14 to November 30, a total of 213,997 cubic yards being removed.

Dredging from the Ocean to Mindi—Seven dredges removed 513,392 cubic yards of earth and 67,316 cubic yards of rock from the Canal prism. In addition, the dredge *Caribbean* removed 122,565 cubic yards of earth from the channel to dock No. 14. On November 30, 1910, forty feet of water could be carried from zero to zero plus 4,200 feet; 30 feet to mile 5 plus 850 feet, and 20 feet to mile 5 plus 2,550 feet, the end of the cut.

PORTO BELLO.

PERFORMANCE OF ROCK CRUSHER PLANT.

	Hours.
Length of working day	12:00
Average number of hours worked per day (actual working time)	8:07
	Cu. Yds.
Average output per hour of working day	232
Average hourly output for possible working time of 251 hours and 8 minutes	266
Average output per working hour	342
Total for month	66,699
Maximum day's output	3,773

SAND, STONE AND CEMENT SERVICE.

In connection with this service, plant steamed 10,970 miles, handled 757 barges, and carried about 1,964 passengers.

COLON BREAKWATER.

At Toro Point, 38,338 cubic yards of material were excavated, of which 8,434 cubic yards were used for ballasting track and 29,904 cubic yards were placed in the breakwater. The double track trestle was extended 445 linear feet.

NOMBRE DE DIOS.

During the month, 86 barges, containing 44,654 cubic yards of sand, were shipped to Gatun.

MUNICIPAL ENGINEERING.

The reservoirs, water mains, sewers, roads, and oil pipe lines were maintained and extended as required to facilitate construction work. Work was continued on the Colon municipal improvements, the dredge *Sandpiper* placing 22,137 cubic yards and *No. 86*, 43,970 cubic yards in the fill of the city.

Central Division.

During the month of November, the total amount of material excavated in the Central Division was 1,470,436 cubic yards, of which 417,359 cubic yards were classified as earth, and 1,053,077 cubic yards as rock. Of this quantity, 1,444,567 cubic yards were removed by steam shovels, 21,069 cubic yards blasted and washed away, and 4,800 cubic yards by sluicing (contract). Of the total, 1,470,436 cubic yards consisted of primary excavation for the Canal prism.

The daily average number of steam shovels at work during the month was 49.13, and the total number of shovel days was 1,179, as compared with 47.50 shovels at work during the month of October with 1,235 shovel days.

For comparison with the work done by steam shovels during the corresponding month of the previous year, the following table has been prepared:

Period.	Excavated by shovels.	Classification of material.		Av. No. of shovels at work.	W'k'g days.	Av. yards per shovel day.
		Rock.	Earth.			
	Cu. Yds.	*Cu. Yds.*	*Cu. Yds.*			*C. Y.*
1909: Nov....	1,163,700	967,891	195,809	41.75	24	1,161.3
1910: Nov....	1,444,567	1,053,077	391,490	49.13	24	1,225.2

Rainfall at Empire: 1909, 20.99 ins.; 1910, 8.85 ins.

The above table shows the average output per shovel to be 5.5 per cent greater in November, 1910, than in the corresponding month of the previous year.

The total amount of material excavated from the prism in the Culebra section of the Central Division in November, 1910—1,209,554 cubic yards—was the highest record in that section for the month of November, the previous high record having been in November, 1909, when 1,170,792 cubic yards were removed.

The total estimated amount of material to be removed in the Central Division was 97,125,018 cubic yards, and up to December 1, 1910, 66,383,794 cubic yards had been removed, leaving 30,741,044 cubic yards to be removed in order to complete all excavation in the Central Division. From these figures it will be seen that 68.35 per cent of all excavation in the Central Division had been completed up to the close of the month of November, and 31.65 per cent remained unfinished.

Considering the two sections which compose the Central Division, the excavation completed and that to be completed at the close of November operations was as follows:

CULEBRA SECTION.

	Cubic Yards.
Completed	55,694,533
To be completed	28,492,191

CHAGRES SECTION.

Completed	10,689,441
To be completed	2,248,853

From the above figures it will be seen that the Culebra section, locally known as the Culebra Cut, was 66.16 per cent completed, with 33.84 per cent to be completed; the Chagres section was 82.62 per cent completed, with 17.38 per cent to be completed.

During the month, 3,420 cubic yards of material were hauled from the Canal prism and dumped in the embankment for the roadbed of the relocated Panama railroad in the vicinity of Pedro Miguel. The total amount of spoil from the Central Division used for this purpose at the close of the month was 3,718,248 cubic yards. The Central Division also delivered at Gatun 189,110 cubic yards of rock and earth for use in the construction of the dam, making the total for this purpose at the end of November 2,367,652 cubic yards.

The daily average number of laborers at work on the whole division during the month was 8,039, and the daily average number of gold employes, 917.

Pacific Division.

DISTRICT NO. 1—LOCKS AND DAMS.

The total excavation during the month amounted to 20,036 cubic yards. During November, no dry filling was added to the prism of the west dam at Pedro Miguel, the total amount of material in place at the close of the month remaining at 260,852 cubic yards, as previously reported. The back fill at Pedro Miguel was increased by 3,822 cubic yards, the total in place at the end of the month amounting to 22,098 cubic yards. At Miraflores, 8,960 cubic yards were added to the dry fill in the toes, and 47,444 cubic yards to the hydraulic fill in the core of the west dam, making the totals at the end of the month 570,639 cubic yards and 226,031 cubic yards, respectively. No material was added to the back fill, leaving the total amount in place at the end of the month 133,545 cubic yards.

OPERATION OF THE PERMANENT AND AUXILIARY CONCRETE CONSTRUCTION PLANTS AT PEDRO MIGUEL.

	Permanent Plant.	Auxiliary Plant.
Length of working day, (one day of 12 hours) hours	8.00	8.00
Average number of hours per day worked laying concrete and large stone (actual working time)	6.75	4.73
Average number of mixers per day	4.00	2.00
	Cu. Yds.	*Cu. Yds.*
Average hourly output per mixer (actual working time)	83.46	44.24
Average amount of concrete and large stone laid per hour per chamber crane (actual working time)	80.25	28.76
Large rock laid	15.00	230.00
Concrete laid	51,983.00	12,020.00
Total concrete laid	51,998.00	12,250.00

PEDRO MIGUEL HANDLING PLANT.

The excavation for the west wall in the forebay was completed at the end of the month and it was expected that the concrete mixer at the south end of the west storage trestle would be placed in operation during the early part of December. The concrete work at Pedro Miguel for November showed an increase of 2,826 cubic yards over the figures for October. The total amount placed was 64,248 cubic yards, including 245 cubic yards of large stone.

OPERATION OF THE PERMANENT AND AUXILIARY CONCRETE CONSTRUCTION PLANTS AT MIRAFLORES.

	Permanent Plant.	Auxiliary Plant.
Length of working day, (one day of 12 hours) hours	8.00	8.00
Average number of hours per day worked laying concrete and large stone (actual working time)	3.99	6.62
Average number of mixers per day	....	6.58
	Cu. Yds.	*Cu. Yds.*
Average hourly output per mixer (actual working time)	....	24.24
Average amount of concrete and large stone laid per hour, per crane (actual working time)	....	....
Large rock laid	350.00	373.00
Concrete laid	15,556.00	7,592.00
Total concrete laid	15,906.00	7,965.00

The output of the above plant was placed by berm crane, derricks, dump cars or dumped from mixers directly into forms.

Permanent plant consists of one berm crane operating one boom.

Auxiliary plant consists of two 2-cubic yard mixers, four ½-cubic yard mixers and one ⅓-cubic yard mixer.

MIRAFLORES HANDLING PLANT.

Work on the west storage trestle at Miraflores was continued during the month. The total of concrete and large stone laid was 23,871 cubic yards, as compared with 22,159 cubic yards during October.

DISTRICT NO. 2—DREDGING.

The following is a statement of the output of the five dredges in operation during the month, and of the amount of material excavated hydraulically:

DREDGE.	Type.	WORK.		PLANT.		Total.	Remarks.
		Earth.	Rock.	Earth.	Rock.		
		Cu. Yds.	*Cu. Yds.*	*Cu. Yds.*	*Cu. Yds.*	*Cu. Yds.*	
Cardenas	Dipper	48,519	7,379	....	....	55,898	Place measurement
Badger	Ladder	37,448	27,292	....	....	64,740	Place measurement
Marmot	Ladder	....	....	133,181	....	133,181	Place measurement
Mole	Ladder	10,875	4,600	....	....	15,475	Place measurement
Culebra	Suction	289,757	....	....	....	289,757	Scow measurement
Total	....	386,599	39,271	133,181	....	559,051	
Hydraulic excavation	....	*47,444	....	....	....	47,444	Place measurement
Grand Totals	....	434,043	39,271	133,181	....	606,495	

* Excavated from lower lock site at Miraflores.

CHAMÉ SAND EXCAVATION.

Approximately 43,600 cubic yards of sand were excavated at Punta Chamé and delivered at Balboa.

PROPOSED NAVAL RESERVATION.

A total area of 58,625 square feet was cleared on the site of the proposed naval reservation.

HYDRAULIC EXCAVATION PLANT.

The work of the hydraulic excavation plant was continued during the month, bed rock being reached in several places. Of the coffer dams being built to form a pool for the pumping station, the one at the south end of Rio Grande was practically completed, and the one immediately in front of the central pumping station was about 50 per cent completed.

DISTRICT NO. 3—MUNICIPAL AND SANITARY IMPROVEMENTS.

The reservoirs, water mains, sewers, and oil pipe lines were maintained, and work was continued on the municipal improvements in the city of Panama.

DISTRICT NO. 4—ANCON QUARRY.

The installation of the dust screen was completed and the screen placed in operation. During the month, 3,270 cubic yards of screenings were obtained:

PERFORMANCE OF ROCK CRUSHER PLANT.

	Hours.
Length of working day	9:00
Average number of hours per day (actual working time)	6:99
	Cu. Yds.
Average amount crushed per hour of working day	262.83
Average amount crushed per working hour	338.40
Total output for the month	59,136

Relocation of Panama Railroad.

During the month, 232,715 cubic yards of material were excavated, making the total excavation at the close of the month 5,019,357 cubic yards, and 299,740 cubic yards of material were placed in embankment, making a total of 10,342,378 cubic yards for this purpose.

During the month, 915 linear feet of temporary trestle were driven. No permanent track was laid during November. The total force averaged 1,451 men.

Quartermaster's Department.

Labor—On account of the resignations of a number of boilermakers, there was a shortage of this class of labor on the Isthmus during the month. There was a surplus of all classes of unskilled labor.

Quarters—Both family and bachelor quarters at Gorgona were filled. Bachelor quarters at Gatun are nearly filled, and it may become necessary to provide some additional accommodations for the force of the gate contractor.

Material and Supplies—Active steps were undertaken to begin the reduction in the amount of stock carried on the Isthmus, and arrangements were made which, it is believed, will materially reduce the amounts ordered in the future, not only of general stock, but repair parts as well. Supplies during the month were received in 27 vessels, with cargo aggregating 36,470 tons. In addition, 2,962,118 feet, B. M. of lumber, 73,810 linear feet of piling and 68,458 cross-ties were received. One steel tug, *Miraflores*, and two steel barges were also delivered. The value of all material received was $1,083,431.24.

Subsistence Department.

The operation of the European laborers' messes, the colored laborers' kitchens and the line hotels showed a net profit of $1,999.55; the operation of the Hotel Tivoli showed a net profit of $2,771.76, and there was a net profit on restaurants and penitentiary of $132.39. The net profit on subsistence operations was $4,903.70.

Department of Civil Administration.

COURTS.

Forty-six civil and 25 criminal cases were disposed of in the Supreme and Circuit Courts, and 62 civil and 440 criminal cases in the District Courts.

DIVISION OF POSTS, CUSTOMS AND REVENUES.

Money order sales for November amounted to $434,905.55, and the fees to $1,938.85. Receipts from stamp and card sales, and newspaper postage, aggregated $6,537.72. The total collection of revenues made by the division amounted to $16,400.20, and the collection on account of court fines, costs and fees $2,077.70.

Twenty vessels entered at and 19 vessels cleared from the port of Ancon; and 22 vessels entered at and 23 vessels cleared from the port of Cristobal.

DIVISION OF POLICE AND PRISONS.

The total number of persons arrested was 471, of whom 434 were men and 37 women. Forty nationalities were represented. The total number of arrests for the month was a decrease of three from October, 29 from September and 147 from August. Sixteen convicts were committed to the penitentiary and seven were discharged, leaving 153 in confinement at the close of the month. The cost of guarding and subsisting the convicts was $2,053, and the value of their work on the Canal Zone roads $1,940.95.

DIVISION OF FIRE PROTECTION.

Two fires were reported in the Canal Zone during the month, the total loss amounting to $10.

DIVISION OF PUBLIC WORKS.

In the city of Panama the average daily consumption of water was 1,137,890 gallons, and in Colon, 974,875 gallons.

The usual inspection and maintenance work of this division was performed during the month.

DIVISION OF SCHOOLS.

The total enrollment in the white schools during the month was 978 and the average daily attendance 865, or 88 per cent of the enrollment, and in the colored schools the total enrollment was 918, and the average daily attendance 595, or 65 per cent. Thirty-six white and 24 colored teachers were employed in the division on November 30.

Department of Sanitation.

The total number of deaths from all causes among employes was 60. These were divided as follows: From disease 43, and from external cause 17, giving the annual average per thousand of 14.92 for all causes. Dividing the causes of death into disease and external causes, an annual average per thousand of 10.69 and 4.23, respectively, is shown for the month.

The annual average death rate per thousand among employes for the month of November in previous years since American occupation was as follows:

1904	14.47
1905	35.45
1906	30.61
1907	20.66
1908	11.50
1909	15.27

The annual average death rate per thousand in the cities of Panama and Colon, and the Canal Zone, including both employes and civil population, was 25.21

The annual average per thousand for the month of November among the same class of population for previous years was as follows:

1904	34.31
1905	67.80
1906	35.76
1907	28.86
1908	23.71
1909	19.14

The increase in infant mortality in Panama continued, about 30 per cent of the total deaths in that city being infants under one year of age.

Segregating the whites from the blacks, the annual average death rate per thousand from disease among employes was: Whites, 5.55, blacks, 12.59, giving a general average of 10.69. For the same month during 1908, the annual average death rate per thousand from disease was: Whites, 8.51, blacks, 8.68, giving a general average of 8.63; and for the same month during 1909: Whites, 5.88; blacks, 11.31, giving a general average of 10.26.

Among employes during November, 1910, deaths from the principal diseases were as follows: Malarial fever, 3; hæmoglobinuric fever, 1; pneumonia, 11; tuberculosis, 7; dysentery, 1; nephritis, 2, leaving a balance of 18 from other diseases, there being no deaths during the month from typhoid fever.

No cases of yellow fever, smallpox, or plague were brought to, or originated on the Isthmus during the month.

Respectfully,
GEO. W. GOETHALS,
Chairman and Chief Engineer.

Obituary.

J. D. Evans, a clerk in the employ of the Panama Railroad Company, living at Cristobal, died at Colon Hospital on December 15, after an illness of a little over two weeks. He was 23 years of age, single, was born at Memphis, Tenn., and had been on the Isthmus 18 months. He is survived by his father and mother, Mr. and Mrs. J. D. Evans, living at Las Cascadas, and by his brother, W. A. Evans, Jr., living at Empire. The body will be shipped to the States on December 22 for interment.

Mrs. Effie Morris Woodburn died at Ancon Hospital on December 7, after an illness of 11 days. She had been on the Isthmus six months, living at Empire with her daughter and son-in-law, Mr. and Mrs. A. L. Zacharias. She was 42 years of age, and had come to the Isthmus from Illinois.

Personal.

Col. J. P. Fyffe sailed for the States on his annual leave of absence on the *Cristobal* on December 16.

Odd Fellows.

A special train will be run from Paraiso to Panama and return for the meeting of Pacific Lodge, No. 4, I. O. O. F., at Ancon, on Thursday night, December 22. The train leaves Paraiso at 7 p. m., Pedro Miguel at 7.05, and Corozal at 7.20. Returning, it will leave Panama about 10.30 p. m. All Odd Fellows living at the above mentioned points are requested to attend this meeting.

Fatal Track Accident at Gorgona.

James F. Davis, an American, was run over and instantly killed near Gorgona shops, at about 2.15 p. m., on Saturday, December 17, by I. C. C. locomotive No. 614, traveling south with a train of empty dump cars. Richard T. Crean, another American, who was with Davis at the time, received a number of injuries and was removed to Ancon Hospital. He will probably recover. The men were walking along the northbound track, when observing a train approaching on it, stepped over to the southbound track, directly in the way of the other train. Davis was 29 years old, unmarried, and was first employed in the Canal service on November 9, 1907. He was last employed as a car repairer at Gorgona shops, his services there terminating on November 17, 1910. A brother, J. L. Davis, resides at 826 Young street, Augusta, Ga. Crean arrived on the Isthmus on September 25, 1910, and was employed as a boilermaker at Gorgona shops from October 26 to December 16, 1910.

Fatally Burned.

Mrs. Smith, wife of Richard C. Smith, a pipefitter employed in the Mechanical Department, who resided in house No. 46 at Paraiso, was fatally burned on Saturday, December 17, in an explosion caused by pouring into a stove wood alcohol, which she had mistaken for kerosene. She was taken to Ancon Hospital, where she died about 3 a. m., Sunday morning, December 18. She was 34 years old, a native of Virginia, and had lived in Washington prior to Mr. Smith's departure for the Isthmus in February, 1907. Three children survive her, two being on the Isthmus and one in the States.

Baseball.

In a practice game played at the Ancon park on Sunday forenoon, December 18, between the Ancon and Gorgona baseball teams, the home nine won by a margin of one run. Each club tried out three of its pitchers. The score by innings follows:

Gorgona	1	0	0	0	1	0	0	1	0	3
Ancon	0	0	0	0	0	2	0	2	x	4

A game of baseball will be played at the Ancon park on Sunday, December 25, between the Ancon team and a nine from the U. S. S. *Princeton*, now in Panama harbor. The game will be called at 10 a. m.

COMMISSION CLUBHOUSES.

Activities of the Young Men's Christian Association.

CULEBRA.

The standings in the second billiard tournament, handicap, follows:

Name.	Won.	Lost.	Handicap.
Bayne	1	0	100
Case	0	2	45
Conlon	1	1	100
Dubois	1	1	100
French	1	0	55
Hall	0	1	45
Hepler	1	0	45
Silver	1	1	81
Soderberg	0	1	45
Thompson	1	0	86
Clark	0	0	45

The high scores in duckpins on Friday night were: Hill, 136, 101; McIlvaine, 109; Hurst, 101; Cornthwaite, 101.

Scores of 222 in big pins were made by Cohen and Mengel. Sickler is the winner of the Putnam medal. Sickler and Cohen tied for games each winning 8 and losing 2. Each then rolled one ball which gave the medal to Mr. Sickler.

Gorgona plays its last game of basketball at Culebra on Saturday evening.

EMPIRE.

The "Pen-Pushers" beat the Nut-Splitters" two out of three games on the bowling alleys on December 17. Score:

"Pen-Pushers."			
Brown	193	181	145
Bachelor	95		
Goolsby	153	143	184
Hobbs	119	222	155
Gorham	141	156	190
Davis		144	170
Total	701	846	844

"Nut-Splitters."			
Edwards	160	210	171
Parkes	116	135	150
Giavelli	166	206	146
Argue	154	123	141
Snyder	146	138	153
Total	742	812	761

The following 200, and over, scores were rolled during the week: Yount, 200; Gustavson, 208; Koperski, 207; Hobbs, 201; Davis, 203; Gorham, 213; Goolsby, 209.

Gatun defeated Empire in a basketball game on December 17. The following players participated:

Gatun—Huber, R. Porter, forwards; C. Porter, center; Shell, Connor, guards.

Empire—Laylander, Eason, forwards; Lyon, center; McCullough, Campbell, guards.

The musical section has received an invitation to repeat the recent sacred concert at the Gatun clubhouse.

GORGONA.

The discussion club "smoker" held on Thursday, December 18, was well attended. The following officers were elected to preside over club discussions: Chairman, C. Patterson; vice-chairman, H. Otis; secretary, F. G. Swanson; directors, E. L. Emery, Ed. Mostyn. A reference library of 40 volumes has been given to the club by the following members: Ed. Mostyn, James Casey, Wm. E. Dickson, Robt. Varenkamp, Fred'k Einerman, C. Patterson, C. S. Boyer, M. J. Lynch, Geo. Lowe, Chas. H. Beetham.

The following 200, and over, scores were bowled during the week ending December 17: Varenkamp, 234; W. J. Humphrey, 221; Jess T. Hopkins, 201; Jas. Stewart, 200; Mrs. Lowe, 201. High average, M. Varenkamp, 203.

GATUN.

The "smoker" held on Saturday night brought out 250 men. Cigars, punch, and sandwiches were served. The program was as follows: Selection, Arnold's orchestra; recitation, H. A. Guerrard; piano solo, Melville Booz; tenor solo, G. R. D. Kramer; patriotic selection, Arnold's orchestra; monologue, H. A. Guerrard; baritone solo, Wm. A. Booz; poetry, A. H. Stevenson; yodel, R. King; Dutch comedy, Robinson and Richardson; Spanish dancing, Señor and Señora Gamonet; farewell impersonations, H. A. Guerrard.

Sixty-five members have been added since the membership campaign was begun, making a total of 445. The date set for 500 is February 1. Chas. E. Wood is chairman of the committee. An electric device announcing the increase of the membership from time to time has been placed over the entrance of the building. This device is the invention of Fred Huber, a member of the committee.

Several new members have been added to the Gatun glee club. With the exception of this week, rehearsals will be held every Thursday night at 8 o'clock. A. B. Dickson, for several years a musician in New York City, is director.

The mechanical drawing class has selected Wednesday as its regular meeting night. R. E. Chatfield of Yale Sheffield scientific school is the teacher.

This week, Thursday night, Cristobal plays basketball at Gatun. There will be music by an orchestra. If Cristobal wins, the championship will be decided. C. C. Carr and C. A. Christopherson will act as referees.

The pool match between Mr. Hirsch of Empire and Mr. DePoorter of Gatun was played on Saturday night before a large audience, Mr. DePoorter winning by a score of 100 to 77. A return match for the championship of the Isthmus will be played in the near future.

CRISTOBAL.

The members' "smoker" on Friday night was well attended. The program was as follows: Monologue, Mr. Sexton; bugle calls, Mr. Yeiser; solo, Mr. Jamison; sketch, "Firestein and Bernstine," Messrs. Manley and DeLong; musical reading, "What a Little Smoke Will Do," Mr Weston; solo, Mr. Bennyhoff; drawings, Mr. Glick; solo, Mr. Weston; three numbers by Señores Enriquez and Gamonet, and Señora Montenegro.

A business meeting of the chess and checker club is called for Tuesday, December 27, at 8 p. m., to elect officers for 1911.

The 200, and over, bowling scores for the week ending December 17, are as follows: Barrett, 212, 223, 204; Blackburn, 213; Bullard, 209, 227, 208, 206, 220, 225, 203, 200; Collins, 206; Howard, 206; Louch, 220, 208, 200, 201; Rigney, 212; Simms, 216; Weston, 207.

Thursday night, December 22, a special train will be run from the Cristobal station to Gatun and return, for the benefit of those wishing to witness the closing game of the basketball league. The Cristobal bowling team will bowl Gatun on the same evening. There will no charge for fare to members, and members accompanied by ladies. Fare for nonmembers, 35 cents.

Cristobal's basketball percentage is 1000 for seven games played.

Stages of the Chagres.

Maximum heights of the Chagres River for the week ending midnight, Saturday, December 17, 1910. All heights are in feet above mean sea level.

OFFICIAL CIRCULARS.

Christmas and New Year's Holidays.

CULEBRA, C. Z., December 19, 1910.

CIRCULAR, No. 363:

As Christmas Day, December 25, 1910, and New Year's Day, January 1, 1911, fall on Sunday, Monday, December 26, and January 2, will be observed as holidays in the Canal Zone, and as far as practicable, all public business will be suspended on those days.

GEO. W. GOETHALS, *Chairman.*

Patterns Sent to Shops.

CULEBRA, C. Z., December 17, 1910.

CIRCULAR No. 197-H:

An article sent to a shop for use as a manufacturing model or pattern will be returned upon the completion of the order, unless it is specifically stated in the work request that the article should not be returned.

GEO. W. GOETHALS,
Chairman, Isthmian Canal Commission.
President, Panama Railroad Company.

Nozzleman.

CULEBRA, C. Z., December 17, 1910.

CIRCULAR No. 299-I:

A maximum rate of $150 a month is authorized for nozzlemen employed on hydraulic excavation work.

GEO. W. GOETHALS.
Chairman and Chief Engineer.

Acting Chief of Police.

ANCON, C. Z., December 15, 1910.

CIRCULAR No. 101:

During the absence on leave of Colonel J. P. Fyffe, Chief of Police, Lieutenant C. W. Barber is designated Acting Chief of Police, effective December 16, 1910.

M. H. THATCHER,
Head of Department of Civil Administration.

Regulations Governing Public Markets of the Canal Zone.

ANCON, C. Z., December 16, 1910.

1. The markets are provided as places for the sale to residents of the Canal Zone of meat, fish, vegetables, fruits, and other articles of food, and the space in them will not be leased for any other purpose; provided that, in the discretion of the Superintendent of Public Works, not more than one-half of the space available in a public market may be leased for the sale of dry goods, groceries, notions, cigars, tobacco, soda water, and other soft drinks, and for use as lunch counters and news stands where no application has been received for the leasing of the space for the sale of food products, but the Superintendent of Public Works shall have authority to cancel the assignment of space leased for the purposes enumerated in this proviso, should application be made for such space for use for the sale of food products; provided further, that when space is leased for the sale of dry goods, groceries, notions, cigars, tobacco, soda water, and other soft drinks, and for use as lunch counters and news stands, the rate of rental shall be twenty (20) per cent, in advance, over that charged when used for the sale of food products.

2. All assignments of space shall be for the period of one month, beginning on the 16th day thereof, and ending on the 15th day of the succeeding month, except that assignments made after the first of any month shall be for a half month, counting from the first of the month, and shall be paid for at one-half the monthly rate; and except also, that this shall not apply to tables and other similar space rented by the day and so indicated on the posted plat.

3. There shall be posted in a conspicuous place in each market a plat signed by the Superintendent of Public Works and Collector of Revenues, showing the sizes and rates of rental of the various stalls and other divisions of space.

4. Application for assignment of space shall be made to the market inspector. If approved, the inspector will issue an assignment, indicating the space assigned, the period of assignment, the purpose for which it is to be used, and the amount of rental to be paid to the Deputy Collector of Revenues. Upon return of the assignment, with the exhibition of the Deputy Collector's receipt, possession of the space will be given.

5. Not more than one stall or other division of space in each market will be assigned to any one person, except by special authority of the Superintendent or Assistant Superintendent of Public Works.

6. Lessees of space will not be permitted to make any changes in the arrangement of partitions, shelves, etc. Requests for desired changes will be made of the market inspector. If approved by him, he will secure an estimate of the cost of the work, and upon deposit with him by the lessee of the amount of the estimate, the work will be done by the Isthmian Canal Commission. The excess of the deposit, if any, over the cost of the work, will be returned to the lessee.

7. All stalls and other divisions of space shall be thoroughly swept at the close of each day. Special attention shall be given to the spaces used for the sale of meat and fish; the counters, blocks, etc., used in them shall be scrubbed with soap and water as often as necessary to keep them in good sanitary condition. All decayed fruits and vegetables, and other dirt and refuse shall be removed and deposited in the sanitary cans provided for that purpose. All articles in bulk shall be kept in bags, barrels, or boxes, so that they can be moved in cleaning. Lessees shall be responsible for the cleanly and sanitary condition of the space assigned them and shall carry out such special instructions to that end as may be given them by the market inspector or his authorized assistant. The market inspector will be responsible for the cleanly and sanitary condition of the market outside of stalls and other space assigned to lessees.

8. Lounging or loitering around the market will not be permitted. Lessees are expected to enforce this prohibition as to the space assigned them.

9. The hour for opening and closing each market shall be fixed by the Superintendent of Public Works, and posted in a conspicuous place in the market.

10. Any complaint respecting a market should be addressed to the Superintendent of Public Works, Ancon, C. Z.

11. Any violation of these regulations by a lessee shall be considered sufficient cause for the cancellation of his assignment, but such cancellation shall not relieve the offending person from prosecution under any penal law or ordinance he may violate.

12. These regulations shall be posted in a conspicuous place in each market.

J. J. REIDY,
Acting Superintendent of Public Works.

Approved: M. H. THATCHER,
Head of the Department of Civil Administration.

Supplies for Canal Work.

The following steamers with supplies for the Isthmian Canal Commission arrived at the ports of Cristobal and Colon during the week ending December 17, 1910:

Prinz Joachim, December 12, from New York, with 16 bales paper for stock.

Abangarez, December 15, from New Orleans, with 307,244 feet yellow pine lumber, 24 pieces gears and pinions, 6 cases castings for Atlantic Division; 5 barrels brake shoes, 950 pieces castings for Mechanical Division; 284 bales straw, 2,416 bales hay, 16 crates slop boxes, 83 rolls cotton duck, 2,000 crates fire brick for stock.

Zacapa, December 15, from New York, with 36 tons lock construction material for Pacific Division; 18 cases paper, 400 cases linseed oil for stock.

Panama, December 16, from New York, with 10 cases electrical machinery for Atlantic Division; 32 carbon diamonds, 84 cases copper tubes, 60 pieces pipe for Pacific Division; 26 pigs tin, 6 cases electrical material for Mechanical Division; 65 cases drugs and sundries for Sanitary Department; 5 cases insulating tape, 15 cases pump parts, 16 cases tackle blocks, 88 cases caustic soda, 300 sacks wood plugs, 47 coils insulated copper wire, 9 reels wire rope for stock; and a miscellaneous cargo, the whole consisting of 1,553 packages, weighing 137 tons.

Pacific Division Sand Service.

A report of sand cars loaded and shipped from Balboa during the month of November, follows:

DESTINATION.	Number of Cars.	Cubic Yards.
Pacific Division	2,571	38,605
Central Division	28	420
Atlantic Division	3	75
Quartermaster's Department	1	25
Panama railroad	3	75
Total	2,606	39,200

Band Concert.

A concert will be given by the Isthmian Canal Commission Band at Culebra, C. Z., on Sunday, December 25, 1910, at 5.45 p. m. The program follows:

1 March—*Midshipman*	Laurendeau
2 Selection—*The Chocolate Soldier*	Straus
3 Flower Song—*Hearts and Flowers*	Tobani
4 Overture—*Poet and Peasant*	Suppe
5 Waltz—*Bad'ner Mad'ln*	Komzak
6 Medley Selection—*Popular Hits*	Alford
7 Song—*The Rosary*	Nevin
8 Intermezzo—*Silver Bell*	Wenrich
9 March—*Columbia Phonograph Co*	Burton

CHAS. E. JENNINGS, *Musical Director.*

The next concert will be given at Gorgona on Sunday, January 1, 1911, at 6 p. m.

LOST—On Sunday evening at Bas Obispo station, or on forward first-class passenger coach on train No. 28, a lady's silver card case containing cards. Reward will be given. C. NIXON, Cristobal, C. Z.

MOVEMENT OF OCEAN VESSELS.

The following is a list of the sailings of the Panama Railroad Steamship Company; of the Royal Mail Steam Packet Company; of the Hamburg-American Line, and of the United Fruit Company's Line, the Panama Railroad Company's dates being subject to change:

NEW YORK TO CRISTOBAL.

THE CANAL RECORD
Ancon, Canal Zone,
Isthmus of Panama.

No communication, either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.

NOTES OF PROGRESS.

Slide at Las Cascadas.

The slide on the east bank of the Canal, opposite Las Cascadas, which first began to give trouble in April, 1908 and increased in area in July, 1909, broke still further to the south and east on December 4, 1910. Before the material from the break of December 4 had been gotten out of the way, a much larger break occurred on December 13. The moving material, consisting of some hard rock, but principally a layer of pure red clay, carried away all tracks on the east half of the Canal and extended slightly beyond the axis of the Canal, blocking the pioneer drainage cut. Up to the date when the slide of December 13 occurred, there had been excavated from the three previous slides in this locality 179,148 cubic yards, and there still remained in motion on December 14, due to slides of December 4 and 13th, 311,634 cubic yards. The area of the slide of April, 1908, was 1.12 acres, which, when augmented by the slide of July, 1909, aggregated 1.38 acres The slide of December 4 increased this area to 2.70 acres, and that of December 13, gave a total area of 7.6 acres.

From the configuration of the surface, it is quite possible that there may be a further break in the future, adding 150,000 cubic yards to the quantity already mentioned, and increasing the total area affected by 2½ acres. The slope of the surface upon which the clay is sliding is about one vertical to six horizontal. Four steam shovels are now at work on the slide, which should be entirely removed by about the end of March. Beyond the possible future addition of 150,000 cubic yards, already mentioned, the configuration of the ground indicates that with the removal of the present slide and this possible addition, no further trouble will be experienced in this vicinity.

Earthquake Disturbances.

Two earthquake shocks were noticeable on the Isthmus on December 20 and 21. The record on the seismic instruments at Ancon observatory shows that the shock of December 20 began at 6.09 a. m. and lasted 23 minutes, the direction registered being from the north, and the distance calculated at about 225 miles. The disturbance of December 21 began at 5.25 a. m. and ended at 6.03 a m.; the distance indicated was about 225 miles, and the direction was also northerly. These are the largest records of any made since the instruments were installed about two years ago, not excepting even those of the Cartago earthquake. The assistant manager of the United Fruit Company at Bocas del Toro reported a disturbance early in the morning of December 21, lasting from 10 to 15 seconds, but no damage was done, other than the shattering of a few plates.

Closing of Relocated Line.

The relocated line of the Panama railroad between Gatun and Gamboa, which was used during the recent high water for main line traffic, will be closed between January 1 and July 1. This will make it possible to carry on the filling without interference from main line traffic and from excursions. The completion of the fills at various points make a change of track layout necessary.

Excavation in Culebra District.

On December 20th, 17 shovels working in the Culebra construction district of the Central Division, excavated 27,199 cubic yards of rock and earth during the working day of eight hours, an average per shovel of 1,600 cubic yards. The shovels were under steam 136 hours and were actually at work 90 hours and 5 minutes, the principal delay being caused by waiting for cars.

Building Operations.

The new Zone schoolhouse at Cruces, the native town on the Chagres River above Gamboa, will be framed at Bas Obispo, transported from there on a car to the dynamite storehouse near the Gamboa bridge, thence moved for a distance of about 150 feet to the river edge, where it will be loaded on a raft, built for the purpose, and towed up the stream to the settlement. It will be 24 by 36 feet in size, will have accommodations for over 50 pupils, and will be located near the village church, now the only frame building in the place. The original church, erected in the early days of the settlement, was constructed of stone and part of its walls still stand, practically enclosing the wooden structure built subsequently. As the only available building in town, the church has also been used for school purposes.

The breakwater settlement at Toro Point will be provided with postal facilities, and a post-office building, containing two rooms, one for the postmaster's use, and the other for the public, has been about completed by the Constructing Quartermaster's forces. It will be 16 by 16 feet in size and will be situated near the dispensary.

A building has been erected at Gorgona shops to house the oxy-acetylene welding plant recently received. It is of frame construction, 20 by 30 feet in size, one story high, and contains one room. It will be completed about January 1, 1911.

Plans have been prepared in the Constructing Quartermaster's office for a small corral building at Miraflores. It will be situated on the side of the hill, convenient to the railroad, and also to the wagon road extending from the station to the commissary. Besides three stalls, there will be room for storing feed, and sleeping quarters for the man in charge.

Steel Barges for Atlantic Division.

Four 600-cubic yard sea going steel barges have recently been added to the transportation fleet of the Atlantic Division, completing an order placed some months ago with the Ellicott Machinery Company of Baltimore. They were towed through Chesapeake Bay to Newport News, Va., where they were loaded with coal and started on their sea voyage, two at a time, in tow of the tug *M. E. Luckenbach.* The first two barges arrived at Cristobal on November 15, and the remaining two on December 7. They will be known as barges *Nos. 15*, *16*, *17* and *18*, and will be placed in service transporting rock and sand from Porto Bello and Nombre de Dios to Gatun docks, although it is intended to use them later in carrying large rock from the Porto Bello quarry to the Colon breakwaters.

The barges have a length over all of 168 feet, which make them 12 feet longer than the other 600-cubic yard barges in the Atlantic Division service. Their other dimensions, however—breadth, 35 feet; height amidship, 12 feet—are practically the same. Each barge contains five watertight tranverse bulkheads, and two watertight longitudinal bulkheads, the latter forming the sides of the cargo enclosure. The deck house in the after part is made of 15-pound steel plates, and is fitted with watertight doors and heavy glass sidelights. The quarters for the crews are furnished with standee bunks, clothes lockers and other conveniences; and are kept supplied with fresh air by means of funnel ventilators extending above deck in the same manner as the furnace room ventilators on steamships, which is a new feature in connection with the barges in the Isthmian service.

Each barge is equipped with a boiler of the single Scotch marine type, with an outside diameter of eight feet, and a working pressure of 110 pounds to the square inch, containing a Morrison corrugated iron suspension furnace, 42 inches in diameter, fitted for burning oil. The engines are of the double cylinder type, 10 inches in diameter, and have a 10-inch stroke. They are used solely for operating the towing machines, one of which is installed on each barge. These machines, manufactured by the American Ship Windlass Company, are similar in most respects to those now in use on other barges in the Isthmian service, and have an automatic winding

NOTES OF PROGRESS.

(Continued.)

device with sufficient capacity to stow 1,500 feet of 1¼-inch steel wire hawser. Each barge is also provided with two 1,600-pound and one 500-pound stockless anchors, and a 16-foot metallic life boat.

Experience has shown that there is a great deal of wear to the bottom plates in the cargo enclosures on barges in the rock and sand service, due to the operation of the excavating buckets, and to minimize the repair cost, the floor of the cargo bin in each barge will be covered with a layer of concrete three inches in thickness. Sounding wells for water and oil tanks, and filling pipes for water tanks will also be added.

Gatun Dam Spillway.

Concrete was placed in the spillway of Gatun Dam during the week ending December 24, as follows:

Date.	Concrete Laid.	Hours worked.	No. Mixers.
	Cu. Yds.		
December 19	248	8:00	1
December 20	328	9:00	2
December 21	206	8:00	2
December 22	280	9:00	1
December 23	246	7:00	1
December 24	278	6:00	1
Total	1,586	47:00	....
Previously reported	111,984		
Grand total	113,570		

The concrete figures for the spillway, for the week ending December 17, have been corrected to read as follows: December 12th, 300 cubic yards; December 13th, 278 cubic yards; December 14th, 294 cubic yards; December 15th, 210 cubic yards; December 16th, 160 cubic yards; December 17th, 222 cubic yards. Total, 1,464 cubic yards.

Pacific Entrance Dredges.

Two of the Pacific Division dredges, the *Marmot* and the *Mole*, are to be equipped with new ladders, one of which has been received. They were manufactured by Lobnitz and Company of Renfrew, Scotland, the builders of the dredges, and are about five feet longer and of a much heavier type of construction than the ones with which the vessels are now fitted. With the new ladders, which are 82 feet long from the center of the hanging shaft to the center of the tumbler shaft, it will be possible to excavate to a depth of 45 feet below low tide.

The dredge *Marmot* is still at work widening and deepening the channel to the proposed new Panama railroad docks. It is excavating as it proceeds to a depth of 31 feet at low tide, and to the required bottom width of 450 feet. The required depth is 40 feet, and the suction dredge *Culebra* will be set at work to complete the channel after the *Marmot* has finished the primary cut. The bank in which the ladder dredge is working is composed wholly of mud and sand, with a total absence of rock even at the required bottom depth. At the rate of progress it has made so far during the month of December, it is expected that the *Marmot* will break all records for the output of a ladder dredge on the Isthmus for one month.

The new tug *Miraflores* has taken the place of the tug *La Boca* in the sand towing service between Punta Chamé and the Balboa sand dock. The latter vessel has been given a thorough overhauling, and was ready for service again on Friday, December 23. It will relieve the tug *Cocoli* in hauling the mud barges out to sea, and the *Cocoli*, in turn, will go on the shipways to receive a general overhauling, the first in two or three years.

The dipper dredge *Cardenas* is on the shipways and is being fitted with a new boom and "A" frame. The work will be concluded early in January.

Of the various units of floating equipment placed in service in the Canal work in the Pacific entrance since the beginning of operations under the American engineers, all are still in commission with the single exception of an old French clapet, which was condemned a short time ago and beached in the marine "graveyard" on the mainland opposite the Canal entrance. The vessel required extensive repairs, and to place it in condition would cost more than it was worth.

Information has been received that the strike of the boilermakers in Scotland, and other parts of the United Kingdom, has been adjusted, and that the men have returned to work. This will enable resumption of the manufacture of the boilers for the new ladder dredge *Corozal*, now under construction at Renfrew, Scotland. It is not believed that the temporary interruption will cause any delay in completing the dredge within the contract period.

CONCRETE WORK IN THE LOCKS.

GATUN LOCKS.

Concrete work in Gatun Locks is over 48 per cent completed, 987,218 cubic yards, out of a total of 2,085,000, having been placed at the close of work on December 24.

A statement of the amount of concrete placed in the locks each day for the week ending December 24, and of the total, follows; and a similar statement for the work in the spillway of Gatun Dam is published elsewhere in this issue. The construction plant works 12 hours daily, and the auxiliary plant 9 hours.

PETITION IS DENIED.

Isthmian Clerical Employes Cannot Be Granted Special Privileges in Classified Service.

A petition was presented to President Taft, during his recent visit to the Isthmus, by a number of clerical employes in the Canal force asking: That employes occupying positions in the classified service under the Isthmian Canal Commission be preferred above all other applicants for positions in the classified service in the United States or the insular possessions; that the age limit on appointments and the year limit on reinstatements be waived in the case of such persons; and that an employe appointed to the position of clerk with knowledge of typewriting, who performs the work of a stenographer, shall be eligible to appointment to positions requiring a knowledge of stenography and typewriting.

The President referred the petition to the United States Civil Service Commission, and the recommendations made by that Commission have been approved by the President. The first request is denied on the ground that the law will not permit such a preferential list, and, because it would be bad policy to give such preference to the detriment of classes of employes now eligible for transfer. The other requests made in the petition are based upon the first request, and they, likewise, are denied. Attention is called to the fact that the Civil Service Commission gave careful consideration to a petition in 1909, that employes, who had served on the Canal force for a period of three years and had passed a noncompetitive examination, should be made eligible for transfer to the classified service in the United States, and that the petition was not granted. Petitioners were advised to enter competitive examinations held on the Isthmus for the purpose of securing eligibles for the classified service in the States. This decision was published in full in THE CANAL RECORD of July 28, 1909. In conclusion, the decision of the Civil Service Commission says: "Employes appointed through competitive examination and those appointed prior to the classification of the service to positions which became classified by extension of the rules thereto, and which have remained competitive, are eligible for transfer under existing rules, and, by an amendment of September 16, 1910, were made eligible for transfer for a period of one year from the date of their separation from the Isthmian Canal service. This amendment was recommended in recognition of the difficulty of arranging transfers at a distance and for the purpose of giving to employes in the Canal Service, who are otherwise eligible. the same consideration as is accorded to employes in the classified Philippine service who have rendered at least three years of meritorious service in the tropics. The Commission is, therefore, of the opinion that the request of the petitioners should not be granted, and that no amendment to the rules applying to transfers is necessary for the benefit of employes of the Isthmian Canal Commission at this time."

Extension to Gorgona Foundry.

An extension of 150 by 70 feet will be made to the iron foundry at Gorgona, and material taken from one of the old shop buildings at Paraiso will be used for this purpose. A traveling crane of 25 tons capacity, purchased for use in the permanent shops, will be installed, and there will be a cleaning gallery with sand blast rigging and other equipment. A track for shipping castings from the foundry, and one for handling pig iron and scrap will be installed.

The United Fruit Company's ships for New Orleans, via Port Limon and Puerto Barrios ceased calling at Bocas del Toro on December 22.

Rates for Coach Hire.

The following ordinance enacted by the Isthmian Canal Commission at its 158th meeting on August 25, 1910, was approved by the Secretary of War on December 3, 1910:

ORDINANCE

Providing for the fixing of rates of charges to be made for the transportation of passengers over the streets and roads of the Canal Zone.

Be it enacted, by the Isthmian Canal Commission, as follows:

Section 1. The Head of the Department of Civil Administration is hereby empowered and directed to fix rates of charges which may be made and collected by persons engaged in the transportation of passengers for hire over the streets and roads of the Canal Zone by means of any automobile, or other motor vehicle of similar construction or operation, or by means of any carriage, surrey, wagon, cart, or other conveyance drawn by horses or mules. He is also empowered and directed, at any time when circumstances may appear to warrant, to revise or change such rates as may have been theretofore fixed by him. Said rates shall be reasonable.

Section 2. Immediately upon fixing such rates of charges, or upon any revision or change thereof being made by him, the Head of the Department of Civil Administration shall promulgate said rates or charges, or any revision thereof, in the following manner, to wit:

(*a*) By publication thereof in two consecutive issues of THE CANAL RECORD;

(*b*) By publication thereof by printed posters posted conspicuously in each of the following places: At the various police stations of the Canal Zone; at the various passenger stations of the Panama railroad in the Canal Zone and in the Republic of Panama; at the post-office buildings in the Canal Zone, and at any other points as may seem to him proper, in order that due notice thereof to the public may be given.

Section 3. The Head of the Department of Civil Administration shall also cause to be printed a sufficient number of cards or pamphlets containing such rates of charges so fixed, or revised by him, as may be necessary to furnish a copy thereof to each person driving or operating any conveyance of the hereinbefore indicated character for the transportation of passengers for hire in the Canal Zone; and it is hereby made the duty of all such persons to secure from the Head of the Department of Civil Administration such copy, and to keep same at all times conspicuously posted or displayed in each such conveyance so used or operated; and a failure so to do will constitute a violation of this ordinance.

Section 4. When rates for such transportation shall have been fixed and promulgated, as by this ordinance directed, any person who shall charge and collect for the transportation of any person over the streets or roads of the Canal Zone in either of the hereinbefore indicated conveyances any sum in excess of such prescribed and promulgated rates, shall be held to have committed a violation of this ordinance; and any person who has received for himself or others such transportation in the Canal Zone, and who fails or refuses to pay therefor the rate thus prescribed and promulgated, shall, likewise, be held to have committed a violation of this ordinance. *Provided, however*, a rate different from that promulgated hereunder may be charged and paid if the parties to the transaction may agree thereon, but if there be any dispute as to such agreement the duly prescribed rate shall prevail.

Section 5. Any person, firm, or corporation who fails to comply with any requirement or provision of this ordinance, or who charges and receives any rate in excess of that prescribed by the Head of the Department of Civil Administration, or who refuses to pay any rate prescribed by the Head of the Department of Civil Administration agreeably to the provisions of this ordinance, shall be held to be guilty of a misdemeanor, and upon conviction, shall be fined for each offense a sum not exceeding twenty-five dollars ($25).

The rates to be charged under this ordinance will be published as soon as they are decided upon.

OFFICIAL CIRCULARS.

Pay of Lidgerwood Engineers.

CULEBRA, C. Z., December 20, 1910.

CIRCULAR No. 299-J:

The rate of pay of Lidgerwood engineers, who have served satisfactorily for a period of one year, may be increased to $137.50 a month.

GEO. W. GOETHALS,
Chairman and Chief Engineer.

Monthly Report of Lubricants.

CULEBRA, C. Z., December 19, 1910.

HEADS OF DEPARTMENTS AND DIVISIONS:

Circulars No. 314 and 314-A direct that a record of oil issued to various pieces of equipment shall be kept by each division and a statement of same compiled monthly, copies of which shall be sent to those directly concerned and to me. So far as the plant and equipment covered by the circulars above mentioned are concerned, copies of such statements have, in most cases, been received.

By January 1, 1911, all plant and equipment of the Isthmian Canal Commission and Panama Railroad Company, including stationary plants, etc., will have been given approved monthly allowances of oils, greases and waste, and, subsequent to that date, it is desired that *two* copies of monthly report of lubricants used on each item of plant, equipment, etc., be forwarded promptly at the close of each month to me.

GEO. W. GOETHALS,
Chairman, Isthmian Canal Commission.
President, Panama Railroad Company.

LABOR FORCE AND QUARTERS IN NOVEMBER.

On November 30, there were 35,641 employes actually at work on the Canal and the Panama railroad, and of that number, 29,690 were Canal employes. The gold force on the Canal work, composed almost entirely of white Americans, was 4,646.

The report of the Chief Quartermaster for November shows that the number of family quarters occupied by "gold" employes was 1,737, which is 6 more than in October, and the occupants numbered 5,430, an increase of 68. Of this number, 1,846 were women, and 1,797 children. Bachelor quarters occupied by "gold" employes numbered 1,930, and the occupants numbered 3,472, of whom 199 were women. The family quarters occupied by European laborers numbered 271, and the occupants, 873; bachelor quarters, 108, and the number of occupants, 5,159; The family quarters occupied by West Indians numbered 1,070, and the occupants, 5,554. bachelor quarters, 230, and the number of occupants, 4,868. A statement of the force actually at work on November 30, follows:

CULEBRA CUT EXCAVATION.

Sizes of Steam Shovel Dippers and Classes of Cars by which Material is Removed.

Two classes of steam shovels are excavating in Culebra Cut, one class equipped with a dipper of 2½ cubic yards capacity, and the other with a 5-yard dipper. These dippers seldom dig to their full capacity, and a car which is loaded in eight operations of the shovel contains about 19 cubic yards of material, the rated capacity of the flat cars used with Lidgerwood unloaders. A cubic yard of material weighs roughly two tons, and, for sake of familiar comparison, is said to represent a two-horse load of earth.

Three classes of cars are used in hauling spoil from the Cut. The wooden flat cars with one high side, so constructed that they may be unloaded by an unloading plow, have a rated capacity of 19 cubic yards. Twenty of these cars are ordinarily hauled in a train, and the spoil on a train would, therefore, be about 380 cubic yards. The next largest cars are the Western and Oliver air dump cars which have a rated capacity of 17 cubic yards, and are used almost exclusively in hauling rock to Gatun Dam. Twenty-seven of these cars compose a train, and the amount of spoil on each train is, therefore, about 459 cubic yards. The small Western and Oliver dump cars, known as the "12-yard dumps" are rated at 10 yards capacity each, and 35 of these cars ordinarily compose a train, the amount of spoil in each train being, therefore, 350 cubic yards.

The capacity of the dump cars is based upon cross section measurements covering a long period. Careful track is kept of the excavation by cars, and each month this is compared with the excavation as determined by cross section measurement. The difference between the two methods of measurement is never great.

The time taken for loading each car varies according to the material in which a shovel is excavating, and to innumerable small delays incident to the excavation and transporting of the spoil. An illustration is the work done by 20 steam shovels in the Culebra construction district on November 11, when 30,077 cubic yards of rock and earth, an average of 1,503 cubic yards per shovel for the 8-hour working day, were excavated. The shovels were under steam 160 hours, were actually digging 109 hours, were waiting for cars 38 hours and 40 minutes, and were delayed the remainder of the time by mining, cleaning track, repairs to shovel, track repairing, and moving the shovels forward. With all conditions favorable a shovel can complete a digging operation in one minute and thus load a 19-yard car in about eight minutes.

Resolution of Sympathy.

Paradise Lodge, No. 6, Knights of Pythias, at a meeting held at Paraiso, passed a resolution of sympathy on the death of Mrs. Smith, the wife of Richard C. Smith, a member of that lodge.

Barge No. 7 Floated.

Atlantic Division barge No. 7, which was driven ashore in front of the Washington Hotel at Colon during the gale of December 2, was pulled off on Monday, December 19, and is now at the Cristobal dry dock undergoing repairs. It was found that in addition to the washing away of the boiler house and living quarters for the crew, some of the hull plates required reriveting, and the after peak tank bulkhead was broken. There were no holes in any of the hull plates. In rebuilding the boiler house and living quarters, it is contemplated making them of steel and to fasten the steel work firmly to the deck of the barge, in order to lessen the liability of their being washed away in case heavy seas sweep over them. It is also probable that a steel house will be constructed over the towing machine, to protect it, as well as the man who is stationed there, following the precedent established on the four new barges recently purchased.

Hines Found Guilty.

The trial of Henry J. Hines, charged with the embezzlement of Government property, was held in the Circuit Court of the First Judicial Circuit on Saturday, December 24. Judge Gudger found the defendant guilty on all six charges preferred against him. Upon the announcement of the verdict, the defendant's attorneys made a motion for a new trial, and the arguments on the motion were heard on Wednesday, December 28. The motion was overruled and Judge Gudger sentenced the defendant to a term of five years in the penitentiary at Culebra.

The trial of F. P. Petersen and Charles Silvers, against whom embezzlement charges have been preferred in connection with the same matter, will be held on January 4.

Porto Bello Crusher.

A statement of the work done at the Porto Bello crusher, by days, for the weeks ending December 17 and 24, follows:

DATE.	Hours worked.	Cubic Yards.
December 12	9:49	2,869
December 13	10:15	3,270
December 14	10:21	3,334
December 15	9:04	3,372

December 24	10:16	3,877
Total	53:52	21,337

Obituary.

W. H. H. Brady, sanitary inspector at Gatun, died at Colon Hospital on December 25, as the result of an accidental fall from the veranda of his house on the evening of December 24. He was born at Bladensburg, Md., was 35 years of age, and had been on the Isthmus since 1905. He is survived by a wife and three children. The funeral services will be held at Ancon chapel, Sunday, January 1, at 2 p. m.

Heavy Rainfall at Monte Lirio.

The rainfall at Monte Lirio during the 24 hours from 8 a. m., December 21, to 8 a. m., December 22, was 6.12 inches, of which 4.84 inches fell between the hours of 8 a. m. and 5 p. m. on December 21.

Post-Office Business.

The report of the Director of Posts for the month of November shows that 17,828 money orders, amounting to $434,905.55, were issued, an increase of $5,693.85 over October. Of the $434,905.55 issued in November, the sum of $337,127.27 was drawn in orders payable in the United States, $97,230.28 in orders payable in the Canal Zone, and $548 in orders payable in Martinique. The fees collected amounted to $1,938.85, and the amount paid and repaid was $99,005.76.

Postal sales for the month amounted to $6,535.05, and newspaper postage amounted to $2.67.

Supplies for Canal Work.

The following steamers with supplies for the Isthmian Canal Commission arrived at the ports of Colon, Cristobal and Balboa during the week ending December 24, 1910:

Ancon, December 18, from New York, with 23,463 barrels cement for Atlantic Division; 121,876 bags cement for Pacific Division.

Sibiria, December 19, from New York, with 9 cases tubes, 200 barrels carbolic acid, 30 drums engine oil for stock.

Hornelen, December 19, from Eagle Harbor, with 331 pieces piling for Atlantic Division; 13 cases blasting caps for stock.

Allianca, December 22, from New York, with 8 cases electrical supplies, 41 reels wire rope for Atlantic Division; 7 cases electrical machinery and supplies for Pacific Division; 370 pieces castings for Mechanical Division; 71 drums lubricating oil, 300 cases sapolio, 92 kegs nuts, 223 kegs bolts, 31 cases bolts, 81 pieces steel bars, 16 cases rubber packing, 37 coils copper wire, 417 bundles shovels for stock; and a miscellaneous cargo, the whole consisting of 1,944 packages, weighing 161 tons.

Atenas, December 22, from New Orleans, with 53 reels wire rope, 197,453 feet yellow pine lumber for Atlantic Division; 374 bales hay, 2,500 crates fire brick, 100 bundles timber carriers and hooks, 71 barrels sea coal facing for stock.

Almirante, December 22, from New York, with 56 tons lock construction material for Pacific Division; 10 bundles brooms, 50 cases paint for stock.

Stages of the Chagres.

Maximum heights of the Chagres River for the week ending midnight, Saturday, December 24, 1910. All heights are in feet above mean sea level.

MECHANICAL IMPROVEMENTS.

Economies Effected by Alterations and Additions to Cars and Dump Machines.

The output of a steam shovel is limited more by the rate at which material it digs can be carried away than by any other factor, and the improvements that have been made in the transportation and disposal of spoil have been, therefore, of prime importance in the excavation of the Canal. Many such improvements have been made since the digging in Culebra Cut was begun, and some of them have a permanent value both for the work on the Isthmus and elsewhere. Working conditions suggested most of these, in fact, the need of overcoming obstacles pointed out the remedy. From the time spoil leaves the shovels until the empty trains return from the dumps the work is in charge of the transportation men, who run the trains, unloaders, spreaders, and track shifters.

Flat cars with one high side and the other side open are used for hauling most of the spoil from Culebra Cut. The high side, permitting of a heavier load on that side of the car than on the other, was found to be the cause of an unequal distribution of weight, and to overcome this the floor has been extended 11 inches on the low side, making it possible to distribute the weight of the load nearer the center line of the trucks, and also enabling the unloading plows to throw the spoil farther away from the tracks when the material is ploughed off. It was found early in the use of these cars that the unloading plow was causing a lot of damage to the high sides by running into them, in passing from one car to another. This cause of trouble and expense has been eliminated by binding the high side of the car with an iron ferrule, known as the "bull nose," which presents a beveled edge to the plow and thus steers it into position as it passes from car to car. These cars were provided with a sheet steel apron so fastened to the end of one car that it could lap over the coupling mechanism and thus make the train continuous. The aprons were so set that the unloading plows frequently tore them off, in fact there is a record of 130 aprons having been torn from the cars in one day. The means of fastening these aprons has been so changed that now they are seldom torn off, half a dozen such accidents in a day being the average.

Trouble was also experienced in the first days of the heavy trains by the coupling breaking and the trains separating. A bridle has been devised which overcomes this difficulty, by holding the cars together in case the automatic coupler parts from any cause, such as a worn knuckle, worn or broken lock, broken knuckle tongue, broken jaw, or even in case a drawbar carrier is down. By using the bridle the cars are held in their original position, even after the coupler has broken, and the parting of the compressed air line is thus obviated. Each train crew is supplied with two of these bridles for emergencies, and twelve hundred of them have been made for the Canal and Panama railroad service. They are especially serviceable in the coupling between a Lidgerwood unloader reel car and its locomotive, where the pipe which carries the steam from the locomotive to the reel engine formerly broke every time a coupling gave way, subjecting anyone near the break to a scalding. At one time it was difficult to persuade men to work near the coupling because of the danger from this source, but now the cars cannot part.

The machines used on the dumps have undergone most improvement, and here the greatest savings in time and labor have been effected. They are the unloaders, spreaders, and track shifters. They are handled by transportation men, with the grade of "qualified conductor," who have been especially trained for this service. The spreader is the most complicated machine, requiring long continued practice on the part of the operator before he becomes thoroughly efficient.

The unloading of flat cars is done by pulling a steel plow from one end of the train to the other by means of a cable attached to a powerful reel. When first used on the Canal work the plow was a skeleton with a plate wing. It was weighted down with from seven to twelve tons of ballast in order to keep it on the bottom of the cars and so prevent it from riding over the spoil. Small rock was continually working under the bottom and over the top of the plow, and, as there was no way for it to escape except by being ground out, it did constant damage to the floor and was continually catching in the aprons. The plow has been covered with sheet steel on the top and bottom and thus the small rock has been excluded, while, by an adjustment of ballast along the share 3½ tons of weight have been found sufficient to hold the plow on the floor, entirely overcoming its tendency to rise.

It was necessary formerly to spend several minutes in digging the end of the cable attached to the plow out of the spoil along the face. This waste of time has been eliminated by forming grommets out of worn-out cable and attaching them to the plows where they are always in plain sight, so that the unloading cable can be coupled to the grommet without any of the work of digging rock and earth away from the face. Another waste of time was that formerly experienced in attaching the cable to the stretching frame, and loosening it after it had been stretched over the train. A slip link has been placed in the chain, which holds the cable to the stretching frame, and a blow from an iron rod opens this link, allowing the cable to fall upon the car without the train even stopping. In this chain there has been placed a soft link with a breaking strain of 1½ tons, and if anything interferes with the plow, which may place an unduly heavy strain on the cable, this link will give way, thus saving the cable stretcher from being wrecked. Not infrequently it is desirable to unload a train on a curve, and under such conditions it is almost impossible to keep the cable on the train, because under the great strain of the unloading it naturally seeks the shortest line. A block to hold the cable in place has been devised. This block is fixed to a 3¾-inch chain eight feet long, on the other end of which is a hook that can be attached to the arch bar of the car truck. The cable runs through this block and is thus held in place.

On one day, about eight months ago, one unloader at Tabernilla unloaded 18 trains of 19 cars to a train, in all 3½ miles of cars. In August, an average of 40 cars a day was unloaded at Balboa, or 13⅓ trains to an unloader; 19 cars of 20 cubic yards to each train.

In handling soft dirt in slides, and other material, where it is necessary to uncouple cars from a train and back them alongside the shovels, the steel aprons that join the cars are thrown back, in order that the couplings may be broken. In the loading, these aprons are frequently covered with a ton or so of spoil, and when it becomes necessary to throw them back into position, so that the plow can pass over them considerable labor is required to take the spoil off the top of the apron. All this work has been obviated by an apron thrower, which consists of a short chain with a hook on one end and a cable grip on the other. The hook is placed under the apron and the grip fixed to the moving unloading cable, and thus the apron is returned to its correct position in advance of the plow.

Fifty-one improvements have been made on the machine used to spread material on the dumps, and each one has added something to efficiency or subtracted from the time spent in operating. This spreader consists of a car on which is erected a machine with steel wings, which reach out 11½ feet from the rails on either side and level off the material dumped from the spoil trains. Two thousand men with shovels could not do so quickly and well the work done by one of these machines when it is operating at its best. The spreader is operated by compressed air. The main reservoir in which the air is stored has been moved from its original position, parallel with the length of the car, and placed in a position where it is less in the way, while all the piping has been rearranged for pressure from this reservoir, instead of from the train air line. An operator's table, under cover, has been erected at the rear of the car, and the operator occupies an elevated position from which he can witness all the movements of the machine. Six air switches in front of him give him complete control. When they arrived on the Isthmus these machines were so constructed that they could not clear one another on the main line of the railroad, even when the spreading wings were folded, and they have been altered so that they now clear. A wheel on the front wing, which ran along the track and frequently caught in and split expansion rails and switches, has been replaced by a shoe which rests on the rail and takes the weight off the wing without in any way interfering with the rails. Shoes have been added along the edge of the wings to take the wear, thus saving the main ploughshare. Other improvements are in minor parts, but each one has added to the efficiency of the spreader.

The system of dumping flat cars by the use of the plow necessitates the constant moving of tracks in order that the dumps may be kept in uniformly level condition. This is done by a shifter devised for work on the Isthmus. It consists of a boom, extending from a flat car out over the track in advance of the car, and tackle, by means of which the track is lifted from its bed. Another boom extending from the car at an angle with the main boom is used for pulling the track to one side or the other. The track shifter has been so improved that track can be thrown nine feet from its original position in one operation, instead of only five feet, as formerly. A change in all the shifters is now in progress by which the engine for running the hoists will take steam from the lcocomotive, and thus make it possible to operate the track shifter more economically, because of a saving in wages and in the amount of fuel used. An example of the work of one of these shifters was that done at Tabernilla dump about eight months ago, when 1¼ miles of track were shifted 12 feet from the original position in 1 hour and 50 minutes.

SOCIAL LIFE OF THE ZONE.

Christmas Festivities.

It is estimated that nearly 2,000 American children participated in the Christmas entertainments held in the Canal Zone villages. Several dances were held on Christmas Eve, including those of the Tivoli Club at Ancon; the Gatun Club at Gatun, and the Paraiso Dancing Club at Paraiso. On New Year's Eve, the Stranger's Club will hold a dance in its club room in Colon, and the Pedro Miguel Card Club will give a card party in the social hall at Pedro Miguel.

The Christmas sale and card party held by the Paraiso Woman's Club on December 14 was well attended. The proceeds amounted to about $35. The next meeting of the club will be held on Wednesday, January 4, when there will be an election of officers for the ensuing six months. Delegates to the January meeting of the Canal Zone Federation will also be elected.

On December 13, an entertainment of moving pictures, with a musical program, was given under the auspices of the Pedro Miguel Woman's Club. About $35 was made for the Christmas fund.

Visit of Bishop Bristol.

Bishop Frank M. Bristol of Washington, D. C., is expected to arrive at Colon on the *Tagus*, on January 1, on his annual visit to the Methodist work on the Isthmus. He will preach at the Methodist Episcopal Church, Panama, on Sunday evening, January 1, 1911. The quarterly communion service will be held at 10 a. m. All are most cordially invited to attend these services.

William W. Gray,
District Superintendent.

Loving Cup for Archdeacon Bryan.

The meeting of the Woman's Altar Guild of St. Luke's Church, Ancon, held at the Tivoli Hotel on Tuesday, December 20, was in the nature of a farewell reception to the Ven. Archdeacon Henry B. Bryan who leaves the Isthmus in January. The guild presented a silver loving cup, the presentation being made by Col. W. C. Gorgas. The cup, a Tiffany design, bears the inscription, "Presented to Archdeacon and Mrs. Bryan as a token of affection by the women of St. Luke's Guild, Ancon, Christmas, 1910." Archdeacon Bryan organized the guild in November, 1907, and has been its advisor and honorary president since that time. Both he and Mrs. Bryan were elected honorary members. Following the business meeting, which was held in the sun parlor, tea was served in the balcony tea room overlooking the Pacific Ocean. There was an attendance of 32, including a number of guests.

Gatun Christian League.

The Gatun Christian League held a semiannual election of officers on Sunday evening, December 25, following the evening service. The league has a present membership of 100.

University Club Excursion.

An excursion over the Canal work will be run by the University Club for its members and women friends on January 1. The special train will leave Empire at 8 a. m., Culebra at 8.10, Corozal at 8.25, arriving at Panama at 8.35. It will leave Panama at 9.30, go to the Naos Island breakwater, enter Culebra Cut at Paraiso, leave the Cut at Gamboa, and run over the relocated line to Barbacoas, thence over the old line to Gatun.

Civil Engineers to Visit Canal.

Two parties made up of members of the American Society of Civil Engineers will visit the Isthmus from March 9 to March 16, 1911. One party will come by way of New York, and the other by way of New Orleans.

Stop-over in Jamaica.

Canal employes purchasing tickets for passage to New York via Kingston, Ja., by the "*Prinz*" steamers of the Hamburg-American Line, sailing fortnightly on Tuesdays from Colon, may, if they desire, stop over at Kingston for four days and continue the trip to New York on the *Albingia* and *Allemannia*, of 5,000 tons, without additional charge.

Missing Men.

Any one having information regarding the whereabouts of Henry G. Higley, an American civil engineer, who is supposed to have come to Panama from Guayaquil, Ecuador, in 1904, is requested to communicate with James C. Kellogg, American Consul, Colon.

If Frank B. Dirveneck will communicate with C. J. Dibowski, Empire, C. Z., he will receive a packet of letters from his father.

I. O. O. F.

Pacific Lodge, No. 4, I. O. O. F., will hold a semiannual election of officers at the Ancon lodge hall on Thursday evening, December 29.

Married.

MATHESON-MASON—On December 27, at St. Luke's Church, Ancon, the Ven. H. B. Bryan officiating, Ethel, daughter of Lieutenant-Colonel and Mrs. Charles Field Mason, to Lieutenant John Roy Douglas Matheson, Corps of Engineers, U. S. A. Residence, Washington, D. C.

BEAM-DRIVER—At Empire, Wednesday, December 21, Lela Mabel Driver, daughter of Mr. and Mrs. John Benjamin Driver, to Walter Irvin Beam, Rev. W. H. Decker officiating. Canal Zone residence, Empire.

BURRELL-GREEN—At Ancon, Saturday, December 17, Avice Green of Pedro Miguel to Joseph Burrell of Pedro Miguel, the Rev. W. W. Gray officiating. Canal Zone residence, Pedro Miguel.

FINCH-GORHAM—On Christmas Eve, in Ancon Hospital Chapel, Zola Gorham to Ernest V. L. Finch, both of Empire, Rev. A. A. Nellis officiating. Canal Zone residence, Empire.

SCHEDULE OF BASEBALL GAMES FOR SEASON OF 1911.

The official schedule of games to be played by the teams composing the Panama Canal Baseball League during the season of 1911 is published below. It provides for 20 games, the season to open on Sunday, January 1, and to close on Sunday, April 23. Ancon and Empire will each play 16 games on the home grounds and four abroad. The Commissary-Subsistence and Atlantic teams each have eleven games at home and nine abroad. Gorgona will play six games at Ancon, six games at Empire, and eight games at Colon. The Marines will play six games at Ancon, eight games at Empire and six games at Colon. There are three holiday dates—January 2, February 22, and April 14.

Date.	Ancon.	Empire.	Colon.	No. of Games
January 1	Ancon-Marines	Empire-Gorgona	Com.-Sub.-Atlantics	1
January 2	Ancon-Marines	Empire-Gorgona	Com.-Sub.-Atlantics	2
January 8	Ancon-Gorgona	Empire-Atlantics	Com.-Sub.-Marines	3
January 15	Ancon-Gorgona	Empire-Atlantics	Com.-Sub.-Marines	4
January 22	Marines-Atlantics	Empire-Ancon	Com.-Sub.-Gorgona	5
January 29	Ancon-Empire	Marines-Atlantics	Com.-Sub.-Gorgona	6
February 5	Ancon-Atlantics	Empire-Com.-Sub.	Gorgona-Marines	7
February 12	Ancon-Atlantics	Gorgona-Marines	Com.-Sub.-Empire	8
February 19	Ancon-Com.-Sub.	Empire-Marines	Atlantics-Gorgona	9
February 22	Atlantics-Gorgona	Empire-Marines	Com.-Sub.-Ancon	10
February 26	Ancon-Marines	Empire-Gorgona	Atlantics-Com.-Sub	11
March 5	Ancon-Marines	Empire-Gorgona	Atlantics-Com.-Sub	12
March 12	Ancon-Gorgona	Empire-Com.-Sub.	Atlantics-Marines	13
March 19	Ancon-Gorgona	Empire-Com.-Sub	Atlantics-Marines	14
March 26	Com.-Sub.-Marines	Empire-Ancon	Atlantics-Gorgona	15
April 2	Ancon-Empire	Marines-Com.-Sub	Atlantics-Gorgona	16
April 9	Ancon-Com.-Sub	Empire-Atlantics	Marines-Gorgona	17
April 14	Ancon-Com.-Sub	Gorgona-Marines	Atlantics-Empire	18
April 16	Ancon-Atlantics	Empire-Marines	Com.-Sub.-Gorgona	19
April 23	Com.-Sub.-Gorgona	Empire-Marines	Atlantics-Ancon	20

The players under contract and on the reserve lists of the clubs in the Panama Canal Baseball League for the 1911 season, are as follows:

Ancon—R. A. Caldwell, R. M. Smith, G. A. Yingling, Victor Nygren, R. B. Tinsley, F. E. Pearman, H. S. Hunter, G. W. Keller, D. K. Steele, L. M. Drennan, R. P. Drennan, W. D. Wrightson, Hulbert Potter, A. G. Snyder, S. C. Russell*.

Empire—G. W. Lyon, Zan Murphy, W. G. Willis, W. F. Polk, C. A. Dixon, Wade H. Moore, C. L. Bryan, W. J. Marshall, F. M. Bell, G. C. McCullough, B. B. Toone, Geo. S. Markley, Harry B. Bryan, J. L. Luttrell.

Gorgona—Wallace Wright, E. L. Emery, Walter Clements, Chesty Herring, John Ridge, Ernest Briggs, Thomas Bailey, H. Massen, Fred Slater, L. F. Fullerton, Chas. Calvitt, Earl Berford, Louis Trotter, Tom Ryan, D. Kenney, Wm. Barney.

Atlantics—R. S. Davis, J. P. Osborne, J. C. Cushing, G. H. Morrell, I. H. Fleischman, G. E. Herring, D. T. Edwards, Jr., S. C. Russell*, T. T. Dougherty, O. S. Farrar.

Commissary-Subsistence—H. F. Hodnett, Jr., Thos. A. Sullivan, Frank Breivogel, N. C. Jones, Joe Curtis, W. H. McCusty, Daniel F. Horrigan, Albert C. Kellogg, J. W. Coffin, Jr., R. S. Mosher.

Marines—R. L. Shepard, W. W. Buckley, J. Cramer, E. Richards, C. H. Guskie, F. P. Myers, J. C. McCabe, P. L. Burns, W. Q. Silke, W. H. Fields, E. L. Maguire, F. H. McKelvey, W. H. Ryan, W. P. Kenyon, H. Munsen, W. F. Kennedy, F. F. Austin, O. E. Jordan.

---

*Claimed by both clubs.

The Ancon baseball club played a team from the U. S. S. *Princeton* at the Ancon park on Christmas morning, the game resulting in a defeat for the visitors by the score of 14 to 2, the home team scoring eight runs in the second inning.

The Ancon second team played a game of ball with a picked team from Corozal on Monday, December 26, which resulted in a score of 12 to 5 in favor of Ancon.

FOUND—A ring which can be had on proof of ownership. R. S. Stiles, house 36-B, Corozal, C. Z.

COMMISSION CLUBHOUSES.

Activities of the Young Men's Christian Association.

CULEBRA.

The standing in the billiard tournament is as follows:

Name.	Won.	Lost.	Name.	Won.	Lost.
Bayne......	1	4	Hall.......	4	1
Case.......	2	2	Hepler.....	2	1
Clark.......	1	2	Silver......	3	2
Conlan.....	2	2	Soderberg..	1	2
Dubois.....	0	3	Thomson...	2	3
French.....	4	0			

Empire won two games from Culebra at Culebra on Thursday evening, December 22, by the following score:

Empire.				Culebra.			
Gustavson..	158	198	161	Cohen....	159	168	165
Potter......	176	173	219	Herrington	138	178	157

EMPIRE.

About 300 children were present at the entertainment on Christmas Eve. The Marine Band played during the entire evening. After the children had rendered a program of music and recitations, Santa Claus in the person of Edward Keeling came down the chimney and each child was presented with a present and a box of candy. Following the program by the children, the following entertainment was given for the older people: Selections by the Marine Band; "Noel" by Mr. Dohrmann, orchestra and chorus; yodeling solo by Owen King; impersonations by Harry Guerard; selections by the Marine Band. Following this entertainment, the ladies served refreshments in the reading room.

The semiannual election of officers of the literary society will be held on Friday evening, January 6.

Members of the musical and dramatic society furnished Christmas music at the chapel on Christmas morning, and at St. Mary's Episcopal Church in the evening.

The following high scores were rolled during the week on the bowling alleys: Snyder, 212; Pearson, 224, 223; Gorham, 210, 204; L. Giavelli, 208.

An informal song service was held at 9 o'clock on Sunday evening, December 25. Most of the lights were turned out, and in the dim light of the Christmas tree, favorite songs and hymns were sung.

GORGONA.

The Christmas cantata "Sleepy Santa Claus," by the children, who were trained by Mrs. Loughery, Mrs. Booz and Melville Booz, attracted a large audience. The Brotherhood of Railway Carmen, Knights of Pythias, Redmen, and the citizens of the town raised a fund to purchase candy, nuts, and fruit for the children. Christmas trees imported from the States were beautifully decorated by the electrical department. The woman's club made, and filled the stockings.

The pool tournament just closed was won by L. P. Robitoy, followed by R. A. Montgomery, L. E. Clarke, and G. H. Pierson.

The following games were rolled on the bowling alleys on Monday, December 19:

Culebra.				Gorgona.			
Cohen......	131	148	169	Roper.....	190	196	182
Mengel.....	159	172	141	Otis......	200	140	171
Fleischman..	131	150	149	White.....	201	174	210
Case.......	214	167	182	Bordt.....	176	197	153
Dougherty*.	201	183	145	M. Var'k'p	194	169	158
Total.....	836	820	786	Total...	961	876	874

On Monday, January 2, at 8 p. m., a musical and literary entertainment will be given to the general public, for which there will be no charge. Refreshments will be served.

CRISTOBAL.

A special train was run to Gatun for the benefit of those wishing to see the closing basketball game in the league series between Gatun and Cristobal on Thursday night. Over 100 people went from Cristobal. The score was 35 to 24 in favor of Cristobal, which gave them the eighth straight game and the championship of the Isthmus. The line-up during the league games was as follows: R. H. Sartor, r. f. 0 A. L. Prather, l. f.; R. M. Vifquain, c.; J. H. Weller, (capt.) r. g.; R. H. Luce, l. g.; M. A. Schwallenberg, sub. g.; W. A. Morton, sub. c.; C. E. Pring, sub. g.

The Cristobal intermediate basketball team won from the Gatun intermediates by a score of 15 to 6. The league bowling team lost to Gatun two out of three games. The second bowling team won three straight games from Gatun. A splendid program was given in the clubhouse hall by the children of Cristobal on Saturday evening. Following the program, the distribution of presents took place, and every child present received a gift. Home made cake, ice cream and punch were served by the ladies.

PORTO BELLO.

"Christmas at the Cross Roads," a short comedy sketch with 12 characters, was "put on" by local talent at the Christmas entertainment held on Saturday. The different characters were played by Mrs. Pflueger, Mr. and Mrs. Van Fleet, Mrs. Werner, Miss Moon; Messrs. W. S. Thomson, Nemec, Everett, Lynch, MacDougal, Washburn, and Geer. Mr. Humburg sang two solos. Walter Thomson acted as Santa Claus and delivered a present to every one in the house. After the distribution of presents, Thomas Lynch played the piano for an informal dance.

Band Concert.

A concert will be given by the Isthmian Canal Commission Band at Gorgona, C. Z., on Sunday, January 1, 1910, at 6 p. m. The program follows:

1 March—*Monstrat Viam*....................Joy

COLON TO BARBADOS, CALLING AT TRINIDAD.

Tagus	R. M.	Tuesday	Jan. 3
Oruba	R. M.	Tuesday	Jan. 17

The next sailing of the Leyland Line will be as follows: *Jamaican*, on or about December 28, for New Orleans, via Kingston, Ja.

Hamburg-American steamers leave for New York every Tuesday at 10 a. m.; for Jamaica every fortnight, connecting there with steamers for all points in Cuba, for Port Limon every Tuesday, direct, or by way of Bocas del Toro.

Royal Mail steamers leave for New York on alternate Mondays at 5 p. m.; for Southampton on alternate Tuesdays at 10 a. m.

United Fruit Company's ships for New Orleans direct leave on Thursday at 3 p. m.; for New Orleans via Port Limon and Puerto Barrios on Thursday at 6 p. m., and for New York on Thursday at 11 a. m.

Sailings of the French line (Cié Générale Transatlantique) for Venezuelan ports, Martinique and Guadeloupe on the 3rd and 20th of each month.

CANAL RECORD

Volume IV. ANCON, CANAL ZONE, WEDNESDAY, JANUARY 4, 1911. No. 19.

The Canal Record

Published weekly under the authority and supervision of the Isthmian Canal Commission.

The Canal Record is issued free of charge, one copy each, to all employes of the Commission and Panama Railroad Company whose names are on the gold roll. Extra copies and back numbers can be obtained from the news stands of the Panama Railroad Company for five cents each.

Isthmus of Panama.

No communication, either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.

NOTES OF PROGRESS.

Removal of Cranes from Pedro Miguel to Miraflores.

A contract will be made with the McClintic-Marshall Company of Pittsburg to dismantle two berm and four chamber cranes, now in use in the concrete operations at the Pedro Miguel Locks, and reerect them at the Miraflores Locks. About 2,000 tons of steel will be dismantled, and 2,100 tons erected; and the price to be paid, $80,532 is, therefore, about $19 a ton. The McClintic-Marshall Company have the contract for building and erecting the lock gates, and this additional work will be carried on in connection with the gate work. The dismantling will be begun in February, and the contractor agrees to have the cranes reerected at Miraflores in three months from that date.

The cantilever cranes at Pedro Miguel consist of two berm cranes, erected in the forebay of the locks, which convey materials from storage piles and mix them into concrete, and deliver the concrete into cars; and four cantilever cranes in the lock chambers, which lift the buckets of concrete from the cars and deliver the material at the points desired. The contractor will dismantle all structural parts and machinery, including concrete mixers, load them on the cars and unload and reerect at Miraflores, placing all machinery in its proper position, without allowing the performance of this work to intefere with the erection of the lock gates.

In detail, the contract provides for: (1) The removal of two cantilever arms and the accompanying machinery from berm crane "G" at Pedro Miguel, and the erection of one each of these on berm cranes "F" and "E", now partly erected at Miraflores; (2) The dismantling of the balance of berm crane "G" at Pedro Miguel and reerecting it at Miraflores with the additional boom provided, at the same time dismantling one cantilever arm of berm crane "E" at Pedro Miguel and attaching it to berm crane "G" at Miraflores, so as to form a complete crane; (3) Dismantling the remainder of berm crane "E" and reerecting it at Miraflores, together with an additional boom and all machinery, so as to make a complete machine; (4) Dismantling two chamber cranes at Pedro Miguel and erecting them complete, one in each chamber of the upper locks at Miraflores; (5) Dismantling the two remaining chamber cranes and reerecting them complete, one in each chamber of the lower locks at Miraflores.

The concrete work at the Pedro Miguel Locks, as shown elsewhere in this issue, was 57 per cent completed on December 31, and it is advancing at the rate of from 10,000 to 12,000 cubic yards a week. The dismantling of the cranes at Pedro Miguel will be done, as indicated above, in order that each unit may be utilized up to the last moment in the concrete work.

Biological Survey.

Prof. H. A. Pittier of the Bureau of Plant Industry, E. A. Goldman of the Biological Survey, and S. F. Hildebrand of the Bureau of Fisheries, all of Washington, and S. E. Meek of the Field Museum of Natural History of Chicago, arrived on the *Colon*, on December 28, to take up the work of making a biological survey of the Isthmus.

Sale of Scrap Iron in 1910.

More scrap iron was sent from the Isthmus to the States during the year 1910 than during all the previous years, as will be seen by the following table:

	Pounds.
1906	2,591,000
1907	3,414,185
1908	302,600
1909	10,638,684
1910	41,673,840

Of the amount shipped in 1910, all was sent to New York, excepting 1,112,540 pounds, which went to San Francisco. Of the amount sent to New York, 15,708,300 pounds consisted of American scrap, and 24,524,000 pounds of French, 329,000 pounds not being segregated. It was sent in 24 shipments, and the average net price received for 16 shipments up to October 10, was $7.27 per ton. The price received for the scrap sold in San Francisco was $7.15 per ton. In 1909, the average net price received per ton was $10.14.

Concrete Flume in Obispo Diversion.

As soon as the dry season is far enough advanced, the wooden flume in the Obispo Diversion at La Pita, a point immediately north of Empire, on the east side of Culebra Cut, will be replaced by a reinforced concrete flume. This is the point at which the diversion broke through its banks early in the rainy season of 1910, and at which a further break occurred during the heavy rains of December. It is planned to excavate from the toe of the slope all the loose material in the slide that caused the break, and to build the new flume on such foundation as may remain, moving the line eastward a short distance, if necessary, in order to avoid the slide. The highest measured flow in the diversion since the American occupation is 2,325 cubic feet per second, and under the French regime, 2,700 cubic feet per second. The capacity of the flume will be over 3,000 cubic feet per second.

Record for Ladder Dredges.

The *Marmot* of the Pacific Division dredging fleet broke all records for the daily, weekly and monthly output of ladder dredges in the Canal service during December. The output for the month was 219,795 cubic yards; for the best week of 6 working days, 47,693 cubic yards, and for the best day—December 14—8,569 cubic yards. The output for the best 10-day period during the month was 77,838 cubic yards, or an average of 7,783.8 cubic yards a day; for a 25-day period, 183,163 cubic yards. The average per working day over the whole month was 7,326 cubic yards. The above figures are based upon place measurement. The dredge was working the entire month in the approach channel to the site of the new docks at the Pacific entrance to the Canal, excavating earth to a depth of 31 feet below low tide. The crew set deliberately to work on December 1 to exceed all previous records, and by request of the men themselves, the dredge was kept at work every day in the month, excepting Christmas Day. All the dredges work night and day.

The best previous record for old French ladder dredges was made by the Atlantic Division dredge, *No. 5*, in July, 1909, which excavated 176,082 cubic yards.

Forged Letters of Recommendation.

Information has been received from the Washington office of the Isthmian Canal Commission that, during the past few months, quite a large number of applicants for employment on the Isthmus have filed with the employment agent at New York fraudulent letters of recommendation. In one case, an applicant counterfeited the letter heads of two different companies and filed letters of recommendation written on such letter heads purporting to be signed by foremen of such companies. In another case, eight applicants for positions as steel car repairers filed letters of recommendation purporting to be signed by master mechanics of two or more railroad companies. It was found upon writing to the companies involved that the men had never been in the employ of such companies, and that the letters were not authentic.

These .papers were transmitted to the Attorney-General with the request that the men filing the same be prosecuted under Section 28 of the Penal Code. Three of the men involved could not be found, including the one who counterfeited the letterheads. One of the others pleaded guilty to the charge of forgery, under Section 28, and was sentenced to six months in the Elmira Reformatory. The others were indicted for conspiracy under

NOTES OF PROGRESS.

(*Continued.*)

Sections 37 and 28, and all except one pleaded guilty, but the sentence was suspended in view of the fact that they were all young fellows and apparently had not been engaged in any wrong-doing theretofore. The other man refused to plead guilty and his counsel argued for the dismissal of the indictment on the ground that the recommendation in the case was not such a writing as could defraud the United States. Judge Hough, before whom the case was tried, held that the writing came within the provisions of Section 28 of the Penal Code, and the man, having been found guilty by the jury, was sentenced to 40 days in New York County prison.

This appears to be the first time the Government has ever instituted prosecutions in cases of this kind. It is, therefore, believed that as wide circulation as possible be given the fact that the filing with the Isthmian Canal Commission of fraudulent letters of recommendation, for the purpose of obtaining employment under the Commission, constitutes a criminal offense against the United States.

Gatun Dam Spillway.

Concrete was placed in the spillway of Gatun Dam during the week ending December 31, as follows:

Date.	Concrete Laid.	Hours worked.	No. Mixers.
	Cu. Yds.		
December 26—Holiday	....	....	....
December 27	60	5:30	1
December 28	192	7:30	1
December 29	138	6:00	2
December 30	114	4:30	1
December 31	138	5:30	1
Total	642	29:00	....
Previously reported	111,984		
Grand total	112,626		

Porto Bello Crusher.

A statement of the work done at the Porto Bello crusher, by days, for the week ending December 31, follows:

Date.	Hours worked.	Cubic Yards.
December 26	....	....
December 27	8:11	3,005
December 28	8:19	3,437
December 29	8:41	3,400
December 30	8:33	3,561
December 31	8:36	2,473
Total	42:20	15,876

Further Prohibition on Labor Recruiting.

The Government of Panama has made a decree providing:

(1) That any person who shall contract or engage skilled or unskilled laborers in the Canal works shall be punishable by deportation for from two to six years, and that accomplices shall undergo two-thirds of the penalty. The penalty shall be imposed after trial by a judge of the Panama Circuit Court, and an appeal may be taken to the Supreme Court. (2) The agent of a steamship company who sells a ticket for passage to any laborer contracted with, contrary to the law, shall be considered an accomplice. (3) Skilled or unskilled laborers of the Canal works may not be sold a passage ticket unless they present a permit issued by the chief political authority of the port of embarkation, which shall be issued only upon presentation of a proper clearance from the Canal authorities. (4) Every person who shall entice and employ laborers to work in agricultural estates, factories, etc., operated in other sections of the Republic, shall be deported from one province of the Republic to another for the period of time provided by Section 1 of this Act.

CONCRETE WORK IN THE LOCKS.

GATUN LOCKS.

One million cubic yards of concrete had been placed in Gatun Locks at the close of work on December 31, and there yet remained to be placed 1,085 000 cubic yards. The work was begun at Gatun on August 24, 1909, and the mixing and handling plant had not thoroughly found itself until January 1, 1910. In the year just closed, the average amount placed each month was over 73,000 cubic yards. All of the wall and floor of the upper lock chambers have been completed, and the concrete laying is advancing in the upper forebay and the lower gate abutments. About 80 per cent of the masonry for this pair of locks is already in place. In the middle locks, the concreteis being placed in the side and center walls, and three of the four cableways are engaged in this work.

Nearly 50 per cent of the concrete for the whole system of three twin locks has been laid, the exact amount in place at the close of work on December 31 being 1,002,609¼ cubic yards, out of a total of 2,085,000.

A statement of the amount of concrete placed in the locks each day for the week ending December 31, and of the total, follows; and a similar statement for the work in the spillway of Gatun Dam is published elsewhere in this issue. The construction plant works 12 hours daily, and the auxiliary plant 9 hours:

Date.	Construction Plant. 2-cubic yard mixers.			Auxiliary Plant. 2-cubic yard mixers.			Large stone.	Total.
	Concrete placed.	Hours worked.	No. of mixers	Concrete placed.	Hours worked.	No. of mixers

PEDRO MIGUEL LOCKS.

Concrete work in the locks at Pedro Miguel is 57 per cent completed, 479,290 cubic yards, out of a total of 837,400, having been placed at the close of work on Saturday, December 31. The record of concrete laid during each of the five 8-hour working days of last week, follows:

Date.	Construction Plant. 2-cubic yard mixers.			Auxiliary Plant. 2-cubic yard mixers.				Total.

CONSOLIDATION OF STORES.

All Storehouses of Commission and Panama Railroad Now Under One Head.

Effective January 1, 1911, the purchasing, issuing, and handling of material for the Panama Railroad Company was turned over to the Quartermaster's Department, in accordance with the recommendation made by the costkeeping accountant of the Canal Commission on December 20, 1910, which was approved by the Chairman and Chief Engineer on December 24, 1910.

This completes the consolidation of the storehouses on the Isthmus, which was begun on January 1, 1910, when the division storehouses and the handling of freight at dock No. 14 in Cristobal were placed under the Quartermaster's Department. It is expected to so reduce stock that there will be the least possible amount in the stores when the work is completed, and this can best be done by having the supplies under one organization. It is believed that the amount of materials and spare parts in stock on July 1, 1911, will be 20 per cent less than on January 1, 1910, and this reduction will have been made without inconvenience to the Canal work.

The method of making settlement, as adopted, provides that actual payment be made to the Panama Railroad Company for the value of all usable material in stock, such payment to be based on an inventory taken under the joint supervision of representatives of the Panama Railroad Company, and the Quartermaster's Department. The plan further provides that only such material as can be used readily in the work of the Panama railroad and the Canal Commission be transferred, and, that a section of the Panama railroad storehouse in Cristobal be set aside for the storage of obsolete material, the ownership of which will remain with the railroad pending final disposition. It was also determined that all surcharges on material used for repair work for the railroad be eliminated in the future.

The inventory was begun on December 30, under the direction of the Panama Railroad Company's storekeeper, and a representative of the Depot Quartermaster, the latter to have charge of all the material transferred. In making the inventory, stock values are based on the original invoices, and, in case of material manufactured at Canal Commission plants, such as the printing plant. the surcharges are dropped. It is expected that the stock taking will be concluded within the next ten days. With the exception of "live" forms and blanks, and usable stationery, the material turned over to the Depot Quartermaster will be retained at the old Panama railroad storehouse, which will be handled as an adjunct to the Depot in the same manner as the dry dock store.

The reimbursement feature of the arrangement provides for the payment by the Panama Railroad Company to the Canal Commission of the lump sum of $6,000 monthly to cover the expenses of purchasing, unloading, handling, and distributing the railroad material on the Isthmus. This amount, it is believed, will compensate the Canal Commission for the service rendered, and it will result in a saving to the railroad company of about $750 a month. Added to this saving, will be the interest on the value of stock formerly carried by the railroad, which, figured on the basis of $500,000 at the rate of four per cent, would amount to $20,000 per annum. The new arrangement will also result in a reduced labor cost.

PERSONAL.

Mr. Elmer Lawrence Corthell, the eminent American engineer. accompanied by Mrs. Corthell, has spent about a fortnight on the Isthmus, during which he has visited all portions of the Canal work. Mr. and Mrs. Corthell sailed for the States on January 3.

Among the visitors on the Isthmus last week were: Colonel C. P. Anderson, U. S. A.; Brig.-Gen. E. S. Godfrey, U. S. A., retired, and daughter; Brig.-Gen. Charles Morton, and Mrs. Morton; the Hon. Scott Ferris, Member of Congress from Oklahoma, and Mrs. Ferris, and the Hon. Joseph F. O'Connell, Member of Congress from Massachusetts, and Mrs. O'Connell.

The Venerable Archdeacon Henry B. Bryan has resigned from the service of the Isthmian Canal Commission, and will sail from Colon on Thursday, January 5, on the *Santa Marta*, for Jamaica, where he will spend a month at Kingston, as the guest of the Archbishop of the West Indies.

The Rev. J. H. Bicknell, who succeeds Archdeacon Bryan as Commission chaplain to Ancon Hospital, and rector of St. Luke's Church, entered upon his duties on January 1.

Obituary.

John S. Dabbs, who was in the employ of the Atlantic Division at Gatun, and who had been on the Isthmus a little over a year, died at Colon Hospital on December 24, after a week's illness. He was 21 years of age, single, and is survived by his father, John S. Dabbs, Sr., who lives at Quitman, Miss.

The death of Fleming Bremner, a naturalized American, who was in the Canal service on the Isthmus from November, 1905, until November, 1908, occurred at Cupar-Fife, Scotland, on November 22, 1910. He was employed in the old Division of Municipal Engineering, but his health failing him, he went to Scotland, where he has since resided. He was about 48 years of age, and is survived by a wife and son, who live in California.

John Crawford, an employe of the Mechanical Division, died at Ancon Hospital on December 26, after an illness extending a little over two weeks. He was 51 years of age, married, and had been on the Isthmus five years, his last residence being at Las Cascadas. He is survived by his wife.

David C. Simons, employed in the Subsistence Department at Cristobal, died at his home on Colon beach on December 26. He was 56 years of age, married, and had been on the Isthmus nearly three and one-half years. He is survived by his son, A. E. Simons, who lives on Colon beach.

Band Concert.

A concert will be given by the Isthmian Canal Commission Band at the Hotel Tivoli, Ancon, C. Z., on Sunday, January 8, 1911, at 7.30 p. m. The program follows:

1 March—*Hudson-Fulton Celebration.*
Arranged by S. Jorge A.
2 Selection—*Madam Sherry*..............Hoschna
3 Caprice—*The Whistler and His Dog*.......Pryor
(By request)
4 Overture—*Stradella*....................Flotow
5 Medley Selection—*My Southern Rose*. .Von Tilzer
6 March—*Tannhauser*...................Wagner
7 Waltz—*Wedding of the Winds*..............Hall
8 Selection—*Carmen*.......................Bizet
9 March—*Festal Day*.......................Roux

CHAS. E. JENNINGS, *Musical Director*.

The next concert will be given at Paraiso on Sunday, January 15, 1911, at 2 p. m.

SOCIAL LIFE OF THE ZONE.

Women's Clubs—Miscellaneous Events.

The January meeting of the Canal Zone Federation of Women's Clubs will be held at the Hotel Tivoli on January 31. The character of the convention will be as usual—Business meeting in the morning; program and addresses in the afternoon. The guest for the occasion will be Miss Helen Varick Boswell, organizer of the Canal Zone clubs and chairman of the child labor and industrial committee of the General Federation of Women's Clubs. Miss Boswell will sail from New York on the steamer *Advance* on January 21, and will arrive on the Isthmus on the 28th. Returning, she will sail on February 23. Mrs. Hiram J. Slifer is also expected to be at the convention to give her report as delegate to the biennial convention at Cincinnati, in June, 1910.

An election of officers was held by the Daughters of Rebekah on Friday evening, December 22, the following being chosen: Noble grand, Mrs. Louise Lots; vice grand, Mrs. Clara Beetham; financial secretary, Mrs. L. M. Cole; treasurer, Mrs. L. Gerstey. Mrs. Annie L. Calvit is past noble grand. An open installation of officers will be held in the near future.

A Canal Zone chapter of the auxiliary order of the Eastern Star is to be organized. Any one wishing to become a member is requested to forward her name to the official organizer, Mrs. S. E. Calvit, Gorgona, before January 18. The first list will be closed on that date. Those eligible to membership are the mothers, wives, sisters, and daughters of master Masons.

Improved Order of Red Men.

Sunday, January 8, the body of Brother Murphy, a member of Cocles Tribe, No. 3, will be brought from Ancon Hospital on the train that leaves Panama at 10 a. m., for burial in Mount Hope cemetery. Funeral services will be held immediately upon the arrival at Mount Hope, about 12 o'clock. Members of all the tribes, visiting Red Men, and members of the Degree of Pocahontas, are requested to attend this funeral in respectful memory of a beloved member of our order. The members may wear the regalia of their ranks, in addition to funeral badges, etc.

The raising of chiefs for the ensuing term, which was to be held on the above date, will be postponed until the following Sunday, January 15. The place and date of meeting will be made known later.

W. H. KROMER, *D. G. I.*
Cristobal, C. Z., January 2, 1911.

I. O. P. K.

At the last regular session of Empire Court, No. 1, I. O. P. K., held at Kangaroo hall, Empire, the following officers were elected to serve for the first half of 1911: Judge, the Rev. W. H. Decker; prosecuting attorney, F. A. Sickler; defendant attorney, C. L. Woodman; chaplain, H. Mitchell; comptroller and clerk, E. W. Stolberg; sheriff, W. H. Bolen. The installation of these officers will take place the second Saturday in January, and all Kangaroos are requested to attend.

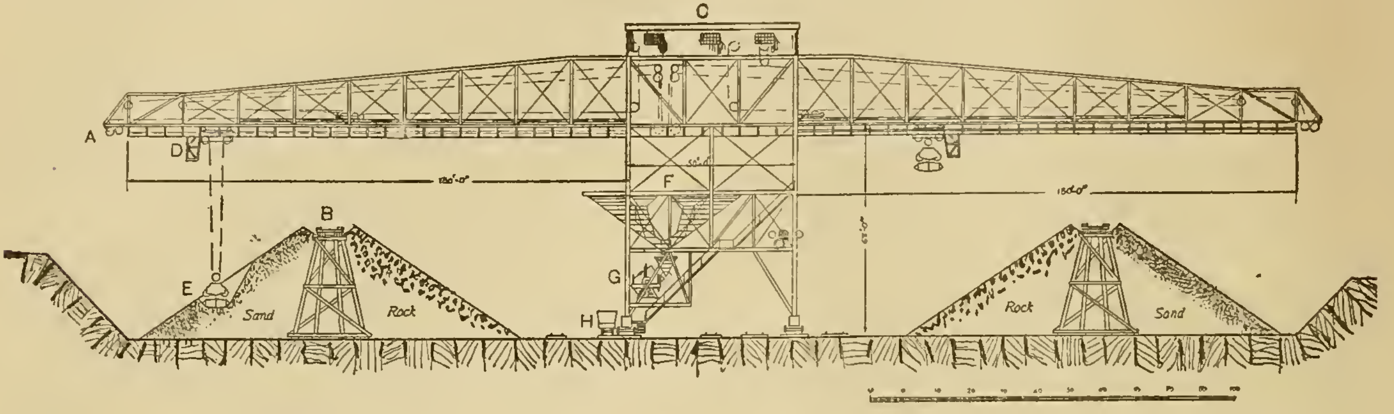
Order of Isthmian Conductors.

The next regular meeting of the O. I. C. will be held at Las Cascadas lodge hall at 2.30 p. m., Sunday, January 8. All members are requested to be there.

PACIFIC LOCKS PLANT.

Concrete Handling and Mixing Cranes—Method of Operation.

The construction plant for building the locks at Pedro Miguel and Miraflores consists of four berm cranes and four chamber cranes. It was manufactured by the Wellman-Seaver-Morgan Company of Cleveland, O., and was primarily designed for the lock work at Miraflores, although equally suited, with the exception of certain modifications in the berm crane structures, to the requirements at Pedro Miguel. The berm cranes are so-called from the fact that they are built to travel on two 5-foot gage tracks, 50 feet from center to center, located on berms outside of, and parallel with, the lock walls. On account of the height and the insecure character of the banks on either side of the lock pit at Pedro Miguel, these cranes could not be placed so as to travel along berms, but were erected in the north forebay, just above the lock chambers. The banks of the upper lock at Miraflores are well adapted for the purpose, and there, the crane tracks parallel the lock site. The same method of installation will obtain when the lower lock is ready for the cranes.



ARRANGEMENT OF BERM CRANES AT PEDRO MIGUEL LOCKS.

Key:
- A—Traveling trolley.
- B—Storage trestle for rock and sand.
- C—Machinery house containing electrical operating apparatus.
- D—Operator's cab.
- E—2½-cu. yd. Hewlett excavating bucket.
- F—Bins for sand and rock.
- G—Two 2-cubic yard concrete mixers.
- H—Small flat cars for transferring buckets of concrete from berm to chamber cranes.

The work of assembling the permanent handling plant at Pedro Miguel, consisting of two berm cranes and four chamber cranes, was begun in October, 1909. On March 15, 1910, one of the berm cranes and one of the chamber cranes were placed in service, and during the following month, the entire west unit, consisting of one berm crane and two chamber cranes, was in operation. The representatives of the contractors on the Isthmus fulfilled their promise to have the entire Pedro Miguel plant ready for service by July 1, 1910, although owing to preliminary trials and to a delay in the completion of the construction trestle in the east chamber of the locks, all of the cranes were not in active service handling concrete until the week beginning July 12.

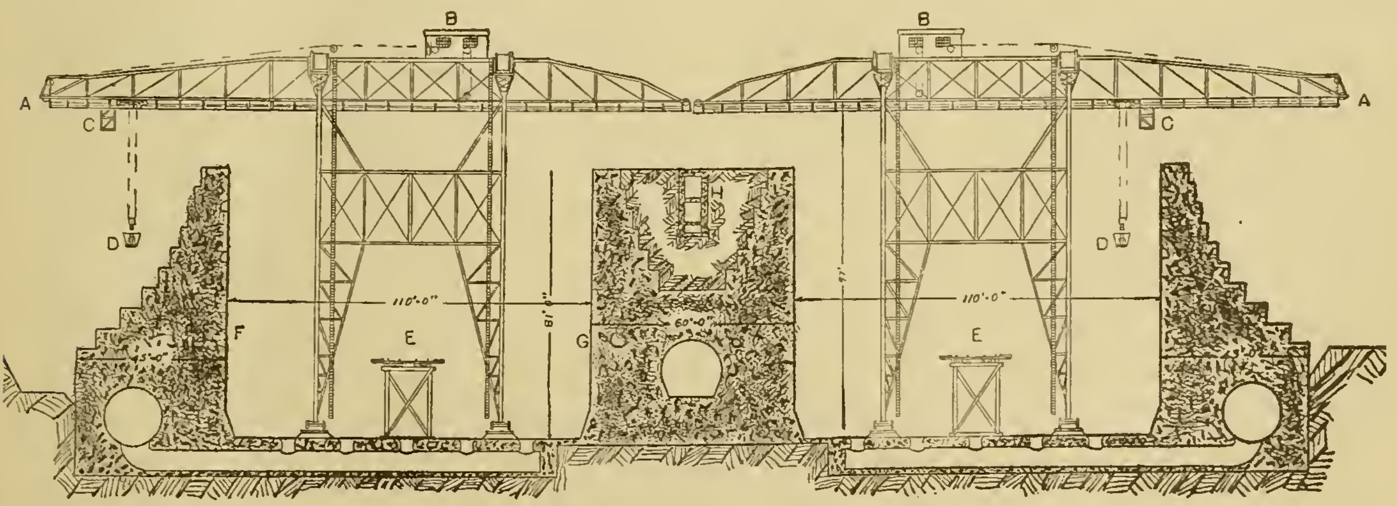
The berm cranes at Pedro Miguel are of the balanced cantilever type, 62 feet 6 inches high from the top of the rail to the bottom of the cantilever and 90 feet to the top of the machinery house, equipped with double fixed cantilevers 150 feet long. The towers which support the cantilever arms are 40 by 50 feet, supported by two box girders, each of which is carried on 16 axles, or 32 wheels per track. The truss in the upper part of the tower supports the operating machinery, the houses enclosing it, and, in conjunction with the cantilever arms, the underhung trolley tracks for conveying the sand and crushed rock. There are two trolleys to each crane and each trolley carries a 2½-cubic yard Hulett excavating bucket of the clamshell type, which supplies sand and crushed rock from storage piles extending along each side of the forebay directly beneath the outer ends of the cantilever arms. Each trolley has a rated capacity of 50 cubic yards of sand and 100 cubic yards of crushed rock an hour delivered to the bins. Each tower is provided with four bins, two for sand and two for crushed rock of 15 cubic yards capacity each, and are so arranged that the buckets will discharge into them without overlapping in their travel.

Underneath the rock and sand bins in each crane is a housed-in platform where the bags of cement are opened and emptied into hoppers. The cement is transferred from box cars to the platform by mean of an elevator and a conveyor, with a capacity of 800 bags an hour. The elevator is operated on a set of cogs in conjunction with the conveyor, and is fitted with lifts about three feet apart, each capable of holding two bags. When the bags reach the floor of the platform, they are dropped on the conveyor, a kind of moving sidewalk, which transports them to bins on the opposite side. While in transit two men sever the strings and place the bags in a flat position convenient for handling by the men who empty them. The measuring hoppers, which supply the concrete mixers, are located directly below the cement room. Each contains three bins, or compartments—for sand, crushed rock, and cement, respectively, with a chute leading into each bin from the storage receptacles above. The chutes are provided with doors, the doors to the cement and sand chutes being operated by turning a wheel, and those to the rock chutes by manipulating a lever. Each of the Pedro Miguel berm cranes is provided with two 2-cubic yard cube concrete mixers, situated in the tower bases. They discharge directly into 2-cubic yard buckets on narrow gage flat cars of two 2-cubic yard buckets capacity each, which are hauled into the lock chambers by Porter locomotives of 36-inch gage. Operators on the mixer platform control the mixer discharges by means of compressed air, and, in addition, work the gates that admit the raw material into the mixers from the measuring hoppers. Water is fed into the mixers from automatic measuring tanks installed in the towers. A time recording instrument, operated by electrical contact, has been installed on one of the berm crane mixers, and the other mixers will be similarly equipped shortly. It records the time consumed in each mixing operation, and also the time occupied in dumping into the concrete buckets. The data is for use in keeping the records in the division office.

The motive power for the machinery on each of the berm cranes is supplied by seven Westinghouse 500-volt direct current motors. Each mixer is belt-driven by a 40-horsepower shunt wound motor, making 615 r. p. m. The traverse motion for the cantilever trolley is operated by a 21-horsepower compound wound motor at a maximum speed of 480 feet a minute. The hoist motion for the cantilever trolley is operated by a 65-horsepower compound wound motor, capable of giving a hoisting speed of 200 feet; a lowering speed of 250 feet, and a speed of bridge travel of 25 feet a minute. The cement elevator and conveyor are driven by a 15-horsepower compound wound motor, making 815 r. p. m. The hoist and trolley motors are controlled by Westinghouse type A magnetic switch crane controllers, and on both of these movements dynamic braking is used. The master switches are located in the operators' cabs which travel with the buckets along the bridge. On the hoist motor switch are three points for hoisting and four points for lowering the bucket; three of the lowering points are for dynamic braking, and the fourth point starts the motor in a downward direction in case the bucket will not descend unaided. The trolley master switches have two points for both forward and reverse movements. Dynamic braking occurs only when the master switch is in the off position and motor is generating sufficient E. M. F. to operate a counter E. M. F. coil, which, in turn, controls a dynamic braking switch.

The berm cranes are moved from place to place along their tracks by means of steel ropes which pass from the travel drums in the machinery house over 36-inch deflecting sheaves in the top and bottom of the tower, thence to deadmen situated at points on the tracks, so as to give 700 feet of travel. One of the hoist motors furnishes the motive power for the tower movement. This motor can be disconnected from the hoisting drum and connected to shaft which operates the movement of the tower, by hand operated clutches. A change-over switch is mechanically connected to the lever which controls the clutches, so that when the motor is connected for tower movement, the hoist master switch in the operator's cab is cut out, and a similar one, situated in the machinery house, is connected in such a manner that it will work the clapperboard used in the regular hoisting operation. The arrangement is such that it is impossible to have the hoist master switch connected when the clutches are set for the tower movement, and *vice versa*. Stop motion switches are provided, which can be set to limit hoist and trolley travel to any point desired.

The chamber cranes are mainly designed to place the concrete in the lock walls but are also extensively used in transferring wood and steel forms from one point to another. Each crane is 97 feet 6 inches high from the top of the rail to the bottom of the cantilever, and about 115 feet high to the top of the machinery house. Each tower is 56 by 40 feet wide, and is supported by four heavy trucks of four wheels each, which travel on two 5-foot gage tracks 40 feet center to center, extending longitudinally through the lock chambers. There are two cantilever arms to each tower, one extended toward the center wall with a length of 53 feet 6 inches, and one extended toward the side wall with a length of 81 feet 6 inches. The arms, together with the tower trusses, support a line of underhung trolley tracks which form a continuous runway of 191 feet. The cranes handle buckets of the double leaf drop-bottom type, having a capacity of two cubic yards each. They are dumped under control of the operator in his cab by means of a hold line, operated by a $3\frac{1}{4}$-horsepower series wound motor located on trolley. The electrical equipment on these cranes is of the same type as that on the berm cranes. The tower movement, however, is operated by a separate motor controlled with a standard hand operated controller located on the end of the tower, so as to be accessible from the operator's cab. The four chamber cranes are designed to pick up the buckets, deliver them to the lock walls, dump their contents and return the empties to the cars at a combined average rate of 320 cubic yards of concrete an hour.



ARRANGEMENT OF CHAMBER CRANES AT PEDRO MIGUEL LOCKS.

Key:

Key:
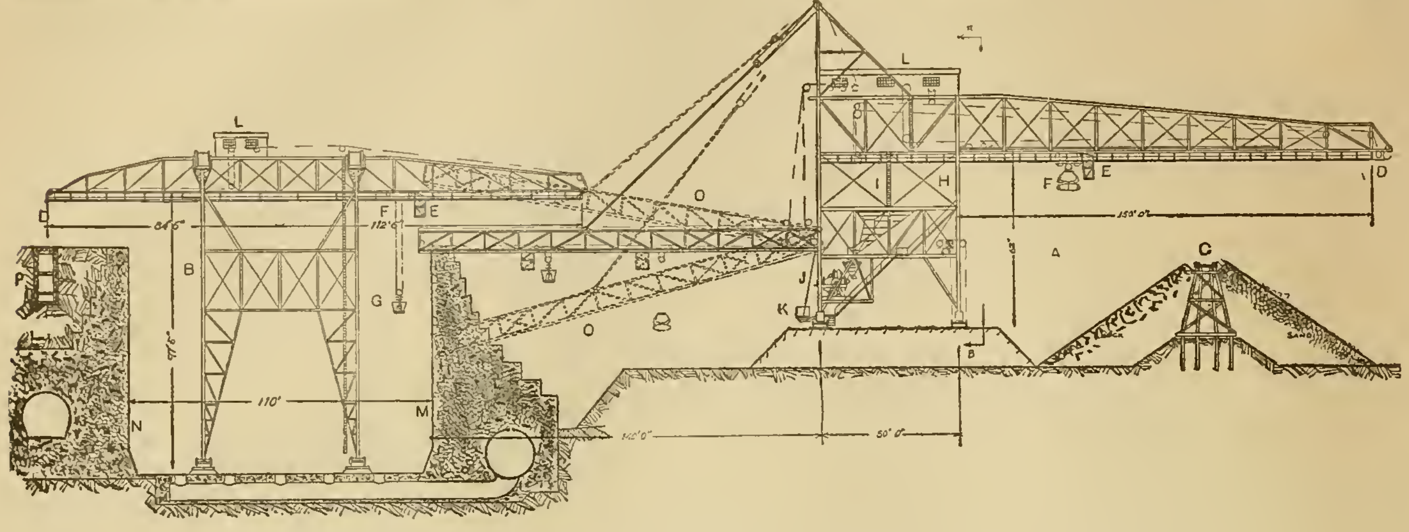
F—Side walls of locks, showing side wall and floor culverts.
G—Center wall and center wall culvert.
H—Operating tunnel.

MIRAFLORES PLANT.

The present plans contemplate the removal of the berm and chamber cranes to Miraflores as soon as all concrete that is massive in character in the locks at Pedro Miguel has been placed, which will probably be within the next four or five months. The arrangement of the chamber cranes at Miraflores Locks will be similar to that at Pedro Miguel, but the positions and method of operating the berm cranes will be quite different. Four berm cranes will be in service there, consisting of the two at Pedro Miguel, which are to be modified when the transfer is made to meet the changed conditions, and of the two recently erected at Miraflores, one on either side of the upper lock. Each crane of the Miraflores type has one fixed cantilever arm 150 feet long extended over the storage pile, but on the side nearest the locks there is a swinging boom 144 feet in length, so hung that it may be operated under full load in a horizontal position; in a position inclined 15 degrees below the horizontal, and in a position inclined 10 degrees above the horizontal. The upper position is required for filling the top courses, or lifts, of the lock walls. The boom can be raised and lowered to provide clearance in passing the chamber cranes, and, in addition, can be made to swing through a horizontal arc either side of the center, so that the outer end will have a movement of 50 feet.

The operation of the cranes along the berms of the locks dispenses with the transportation system in use at Pedro Miguel, and makes it possible for them to place all the concrete in the side walls. It is proposed to use but one mixer to each of the berm cranes, but provision has been made for the installation of two, if desired. The boom trolley will deliver concrete in 2-cubic yard buckets, either into the forms of the outer walls, or to a point of convenient transfer to the chamber crane buckets. In the operation the trolley will deposit a bucket on a swinging platform, which will then be swung horizontally to either side under the mixer spout. After receiving the concrete at the mixer the bucket will be swung back to its original central position, thence hoisted, delivered and emptied. In the construction of the center wall, the concrete from the bucket on the berm crane will be dumped into the bucket of the chamber crane by means of a transfer chute conveniently situated on the outside walls. The spout of the transfer chute is hinged and counterbalanced, and will be swung into position only after the bucket of the chamber crane has been deposited in its proper position to receive the concrete. The chute is also provided with a gate for temporarily retaining the concrete, so that the bucket on the berm crane will not be delayed in case the chamber crane bucket is not in place. The chute is made of steel, mounted on three stiff legs, each having a ball and socket jointed base plate, so as to adjust themselves to any uneven surface. It can be moved from place to place rapidly by the trolley on the chamber crane. Upon receiving the concrete from the transfer chute, the chamber crane bucket will be carried by trolley to the center wall and there emptied. It is estimated that under this arrangement each of the cranes will be capable of handling and delivering concrete to the walls at a maximum rate of 100 cubic yards an hour.

The motive power for the movements of the boom and trolley on each berm crane will be furnished by a 47-horsepower motor. For controlling these movements two master switches, one change-over switch, and one clapperboard will be installed. The trolley master switch will have three different sets of contacts; one set is used when the boom is in a horizontal position; one when the extreme end is below horizontal, and one when it is above horizontal. Three sets of contacts are made necessary on account of the different dynamic braking requirements for



ARRANGEMENT OF BERM AND CHAMBER CRANES AT MIRAFLORES LOCKS.

Key:
A—Berm crane.
B—Chamber crane.
C—Storage trestle for sand and rock.
D—Traveling trolleys.

F—2½-cu. yd. Hewlett excavating bucket.

Key:
G—2-cu. yd. bucket for placing concrete.
H—Rock bin.
I —Sand bin.
J —Two-cubic yard concrete mixers.
K—Swinging platform.
L —Machinery houses containing electrical operating apparatus.

Key:
M—Side wall of lock showing floor and side wall culvert.
N —Center wall of lock showing center culvert.
O —The dotted positions of boom show vertical range at which it may be operated.
P —Operating tunnel.

the different positions of the boom. The remainder of the electrical equipment on the berm cranes, as well as that on the chamber cranes has been previously described.

The work of laying concrete in one of the side walls of the upper lock at Miraflores is already advancing, and by the time the cranes are ready to be transferred from Pedro Miguel, may reach the point where the services of but two of the chamber cranes will be required in this lock, in which case, the two others will be reassembled and made ready for the work in the lower lock. After lock construction in the Pacific Division is completed, provision has been made for converting the berm cranes into dock cranes by omitting two panels and raising the swinging boom to such a position as to form a continuous runway with the tower trusses and cantilever arms, thus allowing the trolley to handle material from vessels to cars and docks.

The summaries for the Empire-Gorgona games were received too late for publication in this week's issue of THE CANAL RECORD.

EMPIRE, C. Z., January, 3, 1911.

Mr. Sam Mills, Gorgona.
Sir:

Having failed to appear and umpire the game of ball at Empire park on yesterday, to which you were assigned, you are hereby dropped from the list of umpires.

Respectfully,
MILTON S. HATHAWAY,
Secretary, Panama Canal Baseball League.
By direction of Executive Committee.

COMMISSION CLUBHOUSES.

Activities of the Young Men's Christian Association.

CULEBRA.

The standing in the bowling tournament follows:

Name.	Won.	Lost.	Handicap.
Bayne	2	4	100
Case	2	3	45
Conlan	4	2	100
Dubois	1	6	100
French	5	1	55
Hall	5	1	45
Hepler	5	3	45
Soderberg	3	3	45
Silver	3	4	81
Thomson	3	4	86
Clark	2	4	45

The following are the winners in the duckpin tournament: Mr. Fredericks won the greatest number of games, and made the high average, and Messrs. Case and Lindsay tied in the second greatest number of games won. Lindsay won in the roll-off.

Bowling scores of 200, or over, during the month of December were made as follows: Case, 226, 223, 211, 211, 203, 200; Huttlemeier, 225, 209, 201; Dougherty, 222, 214, 211, 201; Cohen, 222; Cushing, 215, 208, 201; Fleischman, 211; Anderson, 209; McIlvaine, 203; Herrington, 201; Eberly, 234. Eberly also won the prize for monthly high score, which is a bowling ball.

Scores of 100, or over, during the month in duckpins were made as follows: Case, 104, 101, 106, 101, 104, 109, 110; Cornthwaite, 102, 101, 104, 103, 100; Hill, 101, 136, 105, 115; Hurst, 101, 120, 107, 107; Cushing, 105, 103; McIlvaine, 109, 112; Huttlemeier, 105; Eberly, 105; Lindsay, 108; Kersey, 102, 101; Fredericks, 106, 106, 103; Fleischman, 102, 101; Sickler, 100. The high score for the month was made by Hill, 136.

EMPIRE.

At the meeting of the literary and debating society, held on Friday evening, December 30, the following officers were elected for the coming six months: President, O. Harlan; vice-president, J. R. McNiel; secretary and treasurer, Mark A. Hall; executive committee, Messrs. Harlan, Dickson, Forman; program committee, Messrs. McNiel, Brown, Dohrmann; membership committee, Messrs. Hall, McLean, and Zacharias.

Empire defeated Gorgona in three games on the Empire alleys Saturday night, December 31, by the following scores:

Empire.				Gorgona.			
Gustavson	194	215	159	Roper	150	124	192
Potter	200	139	177	Otis	161	165	134
Bardelson	164	201	160	Peterson	168	151	176
Pearson	198	192	182	Bordt	173	155	139
Huson	189	148	210	Varenkamp	219	161	169
Total	945	895	888	Total	871	756	810

Notice is hereby given all participants in the unfinished pool tournament that the remaining games must be played before January 15.

An informal watch night party was held on Saturday evening, December 31. Light refreshments were served, and favorite songs were sung.

GORGONA.

About 70 new books have been received from the States and are now on the library shelves. The larger portion of these books are late popular fiction.

F. G. Swanson led the discussion club on Wednesday night, January 4, his topic being "The Impracticability of Socialism." All the men in Gorgona are invited to these discussions, which are held every Wednesday night at 7.30 in the game room. If any one has a topic which he would like to have discussed, please hand it to C. Patterson, or H. W. Otis.

The Spanish classes will resume work on Monday night, January 9, at which time, Mr. Cubiluous, the teacher, will have returned from the hospital.

The musical entertainment, which was to have been held on Monday night, January 2, has been postponed until Monday night, January 9, and will be known as the "Home Folks' Musical." All men and women of the town are invited to be present, and children will not be admitted unless accompanied by their parents.

During the month of January, the pool and billiard prizes will be given to the men making the highest continuous run.

On December 28, Mr. McWilliams rolled 139 in duckpins, this being the highest duckpin score ever rolled on the Gorgona alleys.

The high score in tenpins for December was made by Mr. Haggerty-229.

GATUN.

For the benefit of the students of the Spanish classes and any other members of the clubhouse, who desire to learn the common phrases and words of the Spanish language, a "conversation" will be conducted free of charge every Thursday evening in the game room. Jack Kiernan will act as leader.

Mr. Dickson, leader of the glee club, wishes to extend an invitation to members of the clubhouse, who have vocal talent, to join the Gatun Glee Club, which meets every Thursday night.

Apples and cigars were the refreshments served at the "watch party," held by the members at the clubhouse, on New Year's Eve. The program was informal and included the following: Recitations by Mr. O'Brien, Mr. Halleck, and Mr. Masterson; songs by Mr. Ourand, Mr. Hull, and Mr. McHie; humorous stories by Mr. Donahue, Mr. Ludwig, and Mr. Royal; piano solo by Mr. Richardson. In the "Battle of the States and Countries," Messrs. Barte, Harrington, Brown, Royal, Halleck, Ourand, O'Brien, Richardson, Wittrig, and Soule participated. The program concluded with colored views from the miroscope.

A calendar bearing the picture of the Gatun clubhouse has been published by Mr. Healy, a member of the Y. M. C. A.

Resolutions on the death of W. H. H. Brady, an active member of the Gatun Y. M. C A., were signed by a large number of the members and forwarded to the family of the deceased.

A new supply of howling shoes and "gym" suits has been received from the States, and they are now on sale.

One hundred new books were added to the library on Christmas Day.

The clubhouse was decorated during the holiday season with Christmas trees, colored electric lights, and colored crepe paper.

Louis Durand won the gold medal for 3-cushioned billiard tournament. The progressive pool for January will start on the 5th; prize, a handsome cue. Mr. DePoorter of Gatun, and Mr. Hirsh of Empire, will play for the championship of the Isthmus, the game to be 300 balls, 150 to be played at Gatun on Saturday evening, January 7, and the remaining 150 at Empire on January 14. The series will be very interesting as Mr. Hirsh is about the only person in the Zone able to play Mr. DePoorter on even terms.

The membership committee reported 450 members on January 1. The committee is confident of having 500 by February 1.

CRISTOBAL.

In the December "Strawberry" tournament, C. M. Bullard won first, D. F. Rabbitt, second place. Each made a record of having won 38 out of the 48 games bowled. W. A. Blackburn won high average, and F. D. Rabbitt high score—250—for the month.

The 200, or over, scores show 79 made by local members, as follows: Thomas, 234; Schofield, 211; Rabbitt, thirteen 200-scores, highest, 250; Collins, four—high, 227; Bullard, fourteen—high, 227; D. Adams, 200; Herring, three—high, 210; Rigney, four—high, 223; Barrett, seven—high, 223; Rosteck, five,—high, 225; Veen 202; Blackburn, 208,213; T. Burns, 215; Wood, 213; Henry, 201; Russell, 206; Howard, 206; Sims, 216; Louch, seven—high, 220; Jacquez, 204, 206; Grover, 212, 208; Hess, 203; Wheeler, 210, 205; Gibson, 211; Furlong, 201. Wood won the prize for the greatest number of games bowled during the month.

Monday night, Gray's orchestra gave a musical entertainment at the clubhouse.

Rates for Coach Hire.

ORDINANCE

Providing for the fixing of rates of charges to be made for the transportation of passengers over the streets and roads of the Canal Zone.

Be it enacted, by the Isthmian Canal Commission, as follows:

Section 1. The Head of the Department of Civil Administration is hereby empowered and directed to fix rates of charges which may be made and collected by persons engaged in the transportation of passengers for hire over the streets and roads of the Canal Zone by means of any automobile, or other motor vehicle of similar construction or operation, or by means of any carriage, surrey, wagon, cart, or other conveyance drawn by horses or mules. He is also empowered and directed, at any time when circumstances may appear to warrant, to revise or change such rates as may have been theretofore fixed by him. Said rates shall be reasonable.

Section 2. Immediately upon fixing such rates of charges, or upon any revision or change thereof being made by him, the Head of the Department of Civil Administration shall promulgate said rates or charges, or any revision thereof, in the following manner, to wit:

(*a*) By publication thereof in two consecutive issues of THE CANAL RECORD;

(*b*) By publication thereof by printed posters posted conspicuously in each of the following places: At the various police stations of the Canal Zone; at the various passenger stations of the Panama railroad in the Canal Zone and in the Republic of Panama; at the post-office buildings in the Canal Zone, and at any other points as may seem to him proper, in order that due notice thereof to the public may be given.

Section 3. The Head of the Department of Civil Administration shall also cause to be printed a sufficient number of cards or pamphlets containing such rates of charges so fixed, or revised by him, as may be necessary to furnish a copy thereof to each person driving or operating any conveyance of the hereinbefore indicated character for the transportation of passengers for hire in the Canal Zone; and it is hereby made the duty of all such persons to secure from the Head of the Department of Civil Administration such copy, and to keep same at all times conspicuously posted or displayed in each such conveyance so used or operated; and a failure so to do will constitute a violation of this ordinance.

Section 4. When rates for such transportation shall have been fixed and promulgated, as by this ordinance directed, any person who shall charge and collect for the transportation of any person over the streets or roads of the Canal Zone in either of the hereinbefore indicated conveyances any sum in excess of such prescribed and promulgated rates, shall be held to have committed a violation of this ordinance; and any person who has received for himself or others such transportation in the Canal Zone, and who fails or refuses to pay therefor the rate thus prescribed and promulgated, shall, likewise, be held to have committed a violation of this ordinance. *Provided, however*, a rate different from that promulgated hereunder may be charged and paid if the parties to the transaction may agree thereon, but if there be any dispute as to such agreement the duly prescribed rate shall prevail.

Section 5. Any person, firm, or corporation who fails to comply with any requirement or provision of this ordinance, or who charges and receives any rate in excess of that prescribed by the Head of the Department of Civil Administration, or who refuses to pay any rate prescribed by the Head of the Department of Civil Administration agreeably to the provisions of this ordinance, shall be held to be guilty of a misdemeanor, and upon conviction, shall be fined for each offense a sum not exceeding twenty-five dollars ($25).

The rates to be charged under this ordinance will be published as soon as they are decided upon.

Married.

WARR-COLES—At Pleasantville, N. Y., on December 21, Gladys, daughter of Mr. and Mrs. Clinton Conklin Coles, to Walter Hopp Warr. Canal Zone residence, Empire.

Tide Table.

The following table shows the time of high and low tides at Panama for the week ending January 11, 1911. (75th meridian time):

Proposals for Excavation, Gold Hill Line, Relocation, Panama Railroad.

Sealed proposals for railroad grading on the new line of the relocation, Panama railroad, situated on the east side of the Culebra Cut, opposite the towns of Empire and Las Cascadas, will be received until 1 p. m., January 16, at the office of the Chief Engineer, P. R. R., Colon, and then opened.

This excavation consists of two distinct sections, as follows:

The first section, between station 1461 and station 1535, consisting of approximately 90,000 cubic yards.

The second section extends from station 1580 to station 1700, and consists of approximately 110,000 cubic yards.

As time is an essential element, the contract for both of the above sections will not be awarded to any one man.

Bids should be submitted on a flat price per cubic yard of excavation, without classification, and should contemplate finishing the work by August 1, 1911.

Full information will be furnished upon application to the office of Chief Engineer, Panama railroad. The railroad company reserves the right to reject any and all bids.

Envelopes containing proposals should be endorsed "Proposals for Railroad Grading, Gold Hill Line, Relocation, Panama Railroad," and addressed to F. Mears, Chief Engineer, P. R. R., Cristobal, C. Z.

Proposals for Excavation, Obispo Diversion.

OFFICE OF CHIEF QUARTERMASTER,
CULEBRA, C. Z., December 23, 1910.

Sealed proposals for excavation of about 21,942 cubic yards of earth, located between stations 1602 and 1612, on the east bank of the Canal, will be received here until 2 p. m., January 10, 1911, and then opened. Full information will be furnished by the Division Engineer, Empire. Envelopes containing proposals must be endorsed "Proposals for Excavation, Obispo Diversion," and addressed to C. A. Devol, Chief Quartermaster.

Sale of Animals at Public Auction.

There will be sold at public auction by the district quartermaster at Ancon, C. Z., at the old corral, at 2 p. m., Saturday, January 21, 1911, to the highest bidder for cash, the following Isthmian Canal Commission property:

Fifteen (15) mules, American; one (1) pony, native.

The Government reserves the right to accept or reject any or all bids. For further information apply to district quartermaster, Ancon C. Z.

C. A. DEVOL, *Chief Quartermaster*.

OFFICIAL CIRCULARS.

Duties of Inspector of Shops.

CULEBRA, C. Z., December 13, 1910.

CIRCULAR No. 339-A. (Superseding CIRCULAR No. 339):

1. Effective this date, the duties of Maj. T. C. Dickson, Inspector of Shops, are as follows:

2. He will report directly to the Assistant to the Chief Engineer.

3. His jurisdiction covers all shops of both the Isthmian Canal Commission and the Panama Railroad Company.

4. As such he will exercise general supervision over, and inspect the economical distribution of work, employes, and tools among the various shops; the erection of new, and alterations of existing shops; the procurement and installation of new tools and appliances in shops; the adoption of standard shop methods and the use of economical processes in the prosecution of mechanical work; the observance of rules and circulars in shops; the amount of superintendence in each shop, and the competency thereof; and such other duties as may be assigned to him from time to time.

5. He will advise with division and resident engineers in charge of shops, and the General Superintendent of the Panama Railroad Company; and will give instructions to the superintendent of the Mechanical Division in regard to the duties with which he is charged.

6. He will give information to superintendents, master mechanics, and foremen in direct charge of shops in regard to approved shop methods, the use of economical processes, the observance of rules and circulars, proper shop discipline, methods of keeping cost of work, relative competency and amount of supervisory and clerical force, and on matters relating to shop management.

7. He will be furnished with all information and data he may require, which will be obtained in the most direct manner and from original sources of information.

8. In addition to the above duties, his services in an advisory capacity in connection with all mechanical matters are available for use by the division engineers and other officials whenever desired.

GEO. W. GOETHALS,
Chairman, Isthmian Canal Commission.
President, Panama Railroad Company.

Duties of Traveling Engineer.

CULEBRA, C. Z., December 29, 1910.

CIRCULAR No. 266-F:

Effective January 1, 1911, the duties and jurisdiction of Traveling Engineer D. E. Irwin, as outlined in Circular No. 266-D, dated July 11, 1910, are extended to cover all marine equipment of the Isthmian Canal Commission and Panama Railroad Company, except vessels of the latter plying between Cristobal and New York.

GEO. W. GOETHALS,
Chairman, Isthmian Canal Commission.
President, Panama Railroad Company.

Manufacture of Material at Gorgona Shops.

CULEBRA, C. Z., December 12, 1910.

CIRCULAR No. 197-G:

1. In submitting requests for the manufacture of material at the Gorgona shops on form 159 C. E., the following rules in regard to indicating thereon the time of delivery desired will be observed:

(*a*) When the material is required for future use the date on which it should be delivered will be stated on the request for each item.

(*b*) When material is urgently required the word "Rush" will be placed on the request. Such material will be worked on 16 hours per day (Sundays excepted) until completed.

(*c*) When an emergency exists that requires the completion of the material at the earliest possible date, the words ".......... hours overtime per day authorized" will be placed on the request, and if Sunday work is desired, the words "including Sundays" will be added. The overtime authorized per day will be in excess of the 16 hours worked by the day and night shifts.

2. If material cannot be finished by the desired date of delivery, even when worked on 16 hours per day, the superintendent of the Mechanical Division will promptly notify the head of the division or department concerned and request instructions as to whether or not overtime is required.

Upon receipt of each work request the superintendent of the Mechanical Division will determine whether or not the work covered by it can be completed by the date specified for its delivery without delaying the delivery of other work under previous requests. If the work cannot be finished within the time limit without delaying other work beyond the date fixed for its delivery, he will so inform the head of the division or department concerned and arrange for such extension in delivery on that, or on some other work for that division or department, as will enable specified dates of delivery to be met.

3. In case early delivery is required, one copy of form 159 C. E., with drawings, should be sent direct to Gorgona shops, and that fact noted on the remaining copies which will be sent to this office.

4. It is enjoined that future needs be anticipated as much as possible, and that the date of delivery be fixed as far in advance as the uninterrupted prosecution of construction work will permit.

5. While sufficient employes will be kept on the night shift under the Mechanical Division to reduce overtime work to a minimum, it should be borne in mind that night work is generally more expensive than that performed in day time; therefore, rush work should be requested only when necessary. For similar reasons, overtime, including Sunday, work should be required only in case of emergency, or when apparatus cannot be spared for repairs at hours other than during overtime hours and on Sundays.

GEO. W. GOETHALS,
Chairman, Isthmian Canal Commission.
President, Panama Railroad Company.

Lubricants on Locomotives.

CULEBRA, C. Z., January 1, 1911.

CIRCULAR No. 290-A. (Superseding CIRCULAR No. 290):

Effective this date, the rules governing the issue and use of lubricants on locomotives are revised, as follows:

1. Each engine will be furnished with one two-gallon can marked for and containing one gallon of valve oil, and with one two-gallon can marked for and containing one gallon of engine oil. This oil will be considered emergency oil, and will be used only in case of necessity.

2. The regular allowance for engines is, as follows:

Valve oil—	Narrow gage engines	1 pint per day.
	All other engines	1½ pints per day.
Engine oil—	French, narrow gage, and small American engines	2 pints per day.
	Large American engines	3 pints per day.
Headlight oil		1 gallon per month.
Waste		½-pound per day.

Engineers will be expected to exercise economy in the use of oil, and if any saving can be made in the regular allowance, the oil remaining should be put into the emergency cans.

3. The foregoing allowance is based on a standard working day For engines in service a greater number of hours, the regular allowance may be increased in proportion.

4. Any headlight oil, in addition to the regular allowance, required on account of night work, may be issued on ticket signed by the engineer stating reason for which oil is required. Engines equipped with electric headlights will be issued the necessary amount of dynamo oil in one-gallon cans, and the engines will be equipped, in addition, with a one-pint oiler.

5. White lead, graphite, tallow, and soap may be issued in small quantities, when required, only on requisition approved by one of the traveling engineers.

GEO. W. GOETHALS,
Chairman, Isthmian Canal Commission.
President, Panama Railroad Company.

Charges for Electricity.

CULEBRA, C. Z., December 30, 1910.

CIRCULAR No. 336-A. (Superseding CIRCULAR No. 336):

Effective January 1, 1911, and until further notice, charges for electric light and current furnished by the Mechanical Division to all departments and divisions will be as follows:

	Per Month.	Per Kilowatt Hour.
Each 16 c. p. lamp	$0.45	$......
Power and lights on meter basis, where the Mechanical Division does not furnish lamp renewals		.03
Lights on meter basis, where lamp renewals are furnished by the Mechanical Division		.04
Each 15 h. p. motor without meter	50.00	....
Each 10 h. p. motor without meter	30.00	....
Each 5 h. p. motor without meter	15.00	....
Each arc lamp (same as heretofore)	6.00	....

These rates do not apply to nor change the existing charges for current furnished for private consumption.

GEO. W. GOETHALS,
Chairman and Chief Engineer.

Auction Sale of Dairy Cows.

On Wednesday, January 18, at 10 a. m., there will be sold at public sale at the Ancon Hospital dairy, four dairy cows, ranging in age from seven to 10 years. The dairy is located near the insane asylum buildings in the rear of the hospital grounds. The terms of the sale will be cash.

CHAS. F. MASON, *Superintendent.*

Ancon, C. Z., December 28, 1910.

LOST—Thursday, December 29, either in railroad station at Panama, or on the train leaving at 1.30 p. m., a gold brooch set with a small chip diamond. Finder please return to the station agent at Pedro Miguel and receive reward

MOVEMENT OF OCEAN VESSELS.

COLON TO BARBADOS, CALLING AT TRINIDAD.

Oruba	R. M.	Tuesday	Jan. 17

The next sailing of the Leyland Line will be as follows: *Cuban*, on or about January 16, for New Orleans via Kingston, Ja.

Hamburg-American steamers leave for New York every Tuesday at 10 a. m.; for Jamaica every fortnight, connecting there with steamers for all points in Cuba; for Port Limon every Tuesday, direct, or by way of Bocas del Toro.

Royal Mail steamers leave for New York on alternate Mondays at 5 p. m.; for Southampton on alternate Tuesdays at 10 a. m.

United Fruit Company's ships for New Orleans direct leave on Thursday at 3 p. m.; for New Orleans via Port Limon and Puerto Barrios on Thursday at 6 p. m., and for New York on Thursday at 11 a. m.

Sailings of the French line (Cié Générale Transatlantique) for Venezuelan ports, Martinique and Guadeloupe on the 3rd and 20th of each month.

CANAL RECORD

Isthmus of Panama.

No communication, either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.

NOTES OF PROGRESS.

Work on the Lock Gates.

The first shipment of materials for work on the lock gates arrived on the Isthmus last week on the *St. Andrews* from Baltimore, consisting of 400 tons of equipment for handling the steel that will form the gates. This equipment includes two truss bridges, 134 feet 6 inches in length and 11 feet wide, which will be constructed over the lock chambers. On these bridges will be a railroad track, on which locomotive cranes will operate in handling the steel for the gates from the material yard alongside the locks. The bridges will be so constructed that when one set of gates is finished they can be moved from their location over one set of gates to the location of other gates. One 50-ton locomotive crane, and another crane of less capacity, have been erected by the contractors at Gatun, and the preparation of other handling equipment is in progress. The first shipment of steel for the gates is expected to leave the McClintic-Marshall shops near Pittsburg by the 15th of this month, and to arrive on the Isthmus early in February.

Excavation in Approach to Gatun Locks.

Excavation in the approach to the lower lock at Gatun was begun on January 3, when the suction dredge *Sandpiper* passed down the east diversion from the material basin at Gatun, and began work on the 700,000 cubic yards of earth that must be taken from the site of the approach channel. The excavation under the approach wall, which is a continuation of the center wall of the locks, must go down to 50 feet below sea level, and that in the approach channel, to 41 feet below sea level. In order that the dredge may be able to work to this depth, a dike will be built across the entrance from the east diversion channel into the basin, which will be excavated on the site of the approach channel, and the water in this pit will gradually be lowered until the dredge has excavated to the required depth. Explorations by drill show that there is only a small quantity of rock in this section, and that most of the material can be removed by suction dredge. Excavation on the site of the lower, or north locks, at Gatun will be continued by steam shovel, while the suction dredge is working in the approach channel, and the two pits will be separated by a bulkhead constructed for that purpose.

December Excavation in Central Division.

The excavation in the Canal prism for the month of December, in the Central Division, was 1,408,881 cubic yards, making the total output for the calendar year of 1910, 18,552,961 cubic yards, the largest output in any calendar year in this division since the commencement of work by the United States.

The amount of material excavated during the first six months of the calendar year, January 1 to June 30, inclusive, which period included the entire dry season, was 9,574,956 cubic yards. For the period from July 1 to December 31, inclusive, which embraced the rainiest months of the wet season, the output was 8,978,005 cubic yards. For the calendar year ending December 31, 1909, when the next largest output was secured, the amount of material excavated during the first half of the year was 10,052,305 cubic yards, and during the last half, 8,257,221 cubic yards, the total for the year being 18,309,526 cubic yards. It will thus be seen that, as compared with the preceding calendar year, the greatest relative gain in the output in 1910 was made from July 1 to December 31, inclusive.

Dredging in Mindi Excavation Pit.

The suction dredge *Sandpiper* finished work in the Canal basin at Mindi on December 31. This work was originally a steam shovel job, and the lowest shovel had reached a depth of 41 feet below sea level when the pit was flooded during the heavy rains and floods of November, 1909.

Much of the rock was originally overlaid with earth and mud that interfered considerably with the operation of the steam shovels in handling the rock. Prior to the flood, it had been the intention to leave the removal of those portions of the rock, which were covered with the largest amount of earth, to be done by dipper dredges, after the steam shovels were withdrawn. When the pit was flooded, advantage was taken of the opportunity to remove most of the overlying earth with pipe line dredges. Suction dredges have been sent into the flooded pit, and 401,511 yards of earth have been removed. Of this amount, dredge *No. 86* removed 181,847 cubic yards from October 24 up to and including November 13, and the dredge *Sandpiper*, 219,664 cubic yards from November 14 to December 31. There remain now about 510,000 cubic yards of rock to be excavated by steam shovels. An isolated body of rock, containing 41,000 cubic yards, with 200,000 cubic yards of intervening and overlying earth, has been left to be removed by dredges, after the steam shovel work is completed.

A gap from the French canal to the pit will be closed by an earth and rock dike, with sheet pile core, after which pumps will be set at work to unwater the balance. It is expected that steam shovels will be again operated by the first of February.

Records by Porto Bello Crusher.

The rock crusher at Porto Bello accomplished more work in December than in any previous month, the output for the month being 80,244 cubic yards. The plant worked 12 hours a day, and the great increase is due to the installation of the new No. 21 crusher. One result of this increased output is, that the rock storage pile at Gatun Locks contains 50,000 cubic yards of crushed rock, the greatest amount yet accumulated for this work, representing a three weeks' supply.

On January 4, the crusher at Porto Bello established a new daily record, when 4,255 cubic yards of rock were crushed in 12 hours. This record is higher than that of any previous 12 hour or 16 hour day before the large crusher was installed, and is only about 1,200 cubic yards less than the highest previous daily record of 5,435 cubic yards in a day of 24 hours.

The sand storage pile at Gatun on December 31 contained 50,000 cubic yards of Nombre de Dios sand.

A statement of the work done at the Porto Bello crusher, by days, for the week ending January 7, 1911, follows:

DATE.	Hours worked.	Cubic Yards.
January 2—Holiday		
January 3	10:41	3,910
January 4	9:21	4,255
January 5	8:49	4,039
January 6	9:49	4,113
January 7	8:41	3,209
Total	47:21	19,526

Canal Zone Highway at Miraflores.

The section of the Canal Zone highway between Miraflores and the Cardenas River, over the Miraflores dumps, has been laid off, and roadbuilding from the Miraflores end was begun a few days ago. With the closing of this gap, and the completion of the unfinished section of road between Pedro Miguel and Miraflores, there will be a continuous highway between Panama and Gorgona, a distance, measured by this route, of about 20 miles. It is expected that these sections will be ready for traffic by the end of the dry season.

The road south from the Miraflores ridge crosses a flat to the beginning of the dumps and the subgrade through this section was completed two week ago. It continues to the top on a six per cent grade, and from that point to the Cardenas River will cross but one dump track, and the location of this track will not change. For nearly a mile over the top of the dumps, the surface is practically

NOTES OF PROGRESS.

(*Continued.*)

level, and there will be only the ordinary grading to do. Near the south end, there is a high ridge of spoil, which will be cut through and the material utilized in making a fill between the edge of the dumps and the Cardenas River bridge. This bridge will be 35 feet long, out to out, with a floor of reinforced concrete, resting upon two concrete abutments, one on either side of the river bed, with their foundations on rock. The floor of the bridge will be about five feet above the present water level, the extending of a part of the dumps across the old bed of the river at a point below, having forced back the water and caused the formation of a small lake. South of the Cardenas River, the road is completed into Corozal, and will be used for the transportation by wagon of the materials required in the construction of the bridge. Convict labor is employed in this roadbuilding.

The trestles spanning the valleys of the Caimitillo and Camaron rivers, north of Miraflores, over which the Canal road to Pedro Miguel will extend, were completed some time ago, and the dumping of material for the fills is in progress. At the north end of the embankment, the road gradually swings back and joins the relocated line of the Panama railroad near the Pedro Miguel River. For half a mile north of the river, the roadbed parallels the railroad embankment on a berm graded out of it. Before the Pedro Miguel depot is reached, the road again diverges from the berm to the ground level, which is above elevation plus 60 in this vicinity and, therefore, a permanent location so far as the future Miraflores lake level is concerned.

Ancon Crusher.

A report of the rock crushed at Ancon quarry during the weeks ending December 24 and 31, follows:

DATE.	Hours worked.	Cubic Yards.
December 19	8:30	2,771
December 20	11:30	3,825
December 21	9:30	2,893
December 22	10:25	3,320
December 23	9:10	2,651
December 24	7:35	2,073
Total	56:40	17,533

DATE.	Hours worked.	Cubic Yards.
December 26—Holiday		
December 27	10:10	3,480
December 28	9:25	2,516
December 29	8:45	2.927
December 30	9:35	3,060
December 31	7:30	2,184
Total	45:25	14,167

Steam Shovel and Dredge Men.

Local No. 19, I. B. of S. S. and D. M., will hold its monthly meeting on Sunday, January 15, at 12.15 p. m., at the I. C. C. lodge hall, Empire. Important business will be transacted at this meeting. All brotherhood men should use every effort to attend.

WALTER P. TUDOR,
Secretary and Treasurer.
Empire, C. Z., January 7, 1911.

Ladder Dredge Records.

The record of 176,082 cubic yards excavated by Atlantic Division ladder dredge *No. 5*, in July, 1909, was based on 26 working days of 20½ hours per day, a total of 533 working hours, equivalent to an average excavation per hour of over 330 cubic yards. The record of 219,795 cubic yards made by the Pacific Division ladder dredge *Marmot*, in December, 1910, was based on 30 actual working days of 24 hours each, a total of 720 working hours, equivalent to an average excavation per hour of over 305 cubic yards. The best average hourly output for any one month is, therefore, still held by dredge *No. 5*.

Visit of Japanese Training Ships.

The *Asama* and *Kasagi*, two cruisers of the Japanese Imperial Navy, used as training ships for midshipmen, arrived at Panama on January 6, in command of Rear Admiral Yashiro. On January 9 and 10, the officers were taken over the Canal work by the Chief Engineer.

CONCRETE WORK IN THE LOCKS.

GATUN LOCKS.

Nearly 50 per cent of the concrete for the system of three twin locks at Gatun has been laid, the exact amount in place at the close of work on January 7 being 1,017,191½ cubic yards, out of a total of 2,085,000.

A statement of the amount of concrete placed in the locks each day for the week ending January 7, and of the total, follows; and a similar statement for the work in the spillway of Gatun Dam is published elsewhere in this issue. The construction plant works 12 hours daily, and the auxiliary plant 9 hours:

DATE.	CONSTRUCTION PLANT. 2-cubic yard mixers.			AUXILIARY PLANT. 2-cubic yard mixers.			Large stone.	Total.
	Concrete placed.	Hours worked.	No. of mixers	Concrete placed.	Hours worked.	No. of mixers

*Of this amount 25 cubic yards were mixed by a portable ½-yard mixer.

PEDRO MIGUEL LOCKS.

Concrete work in the locks at Pedro Miguel is 58 per cent completed, 487,763 cubic yards, out of a total of 837,400, having been placed at the close of work on Saturday, January 7. The record of concrete laid during each of the five 8-hour working days of last week, follows:

DATE.	CONSTRUCTION PLANT. 2-cubic yard mixers.			AUXILIARY PLANT. 2-cubic yard mixers.				Total.
	Concrete placed.	Hours worked.	No. of mixers	Concrete placed.	Hours worked.	No. of mixers	Large stone.

* Includes 14 cubic yards by hand.
† Includes 13 cubic yards by hand.

COLON BREAKWATER.

Trestle Advanced Nearly One-Half Mile—Post-office Facilities—Electric Plant.

At the close of work on December 31, the double trestle for the Toro Point breakwater had been advanced to a point 2,430 feet from the shore, 352 feet having been driven during the month. Two bents of the trestle were carried away during the "norther" of December 2 and 3, and in a high sea a few days afterward, five more bents gave way. On the last occasion, the pile drivers were set at work opposite a reef over which the water broke with considerable force expending itself upon a bent which had been partly driven. This was finally carried away, and the strain exerted by the stringers upon the other four bents also caused them to go down.

A total of 49,922 cubic yards of material, place measurement, was dumped on the breakwater in December. In addition, 19 acres of ground were cleared for prospective quarry operations, and 4,190 feet of new track were laid, 2,400 feet, consisting of doubling track from the storehouse to hill No. 1, and the remainder, of quarry track.

Work on the installation of the water system, and on the reservoir, continues. A total of 3,415 feet of pipe was laid in December, as follows: 600 feet of 6-inch; 2,500 feet of 4-inch, and 315 feet of 3-inch pipe. The 4-inch pipe line was completed. Operations at the reservoir site consisted in continuing the construction of the three dams required to impound the water, and of the building of the diversion dam at Nombre Falls, near the head of the supply. A total of 6,708 cubic yards of material was placed in the reservoir dams, and 597 cubic yards of clay and rock in the diversion dam, in December.

The new post-office is about completed. It will be run as a branch of the Cristobal office, and there will be two dispatches of mail each way daily. The mail from Cristobal will leave at about 6.30 a. m., and 4.30 p. m., respectively, and the mails at Toro Point will close each time before the boat returns. A money order clerk will visit Toro Point immediately after pay days, to issue money orders to those who desire them, following out the same plan as at Porto Bello.

The installation of an electric light plant was begun this week. The current will be supplied by a 50-kilowatt generator, capacity 800 to 900 lights of 16 c. p., formerly in service at Gatun. Two old boilers, one taken from the machine shop at Tabernilla, and the other from Gatun, where it was used in the operation of a centrifugal pump, will be set up to furnish steam power.

Sanitary conditions continue to improve. A total of 6,939 linear feet of new ditches was dug; 25,500 square yards of pools were oiled, and 2,800 water receptacles were destroyed during December. The engineering and sanitary operations in and around the settlement have involved the removal, under the lease, to January 1, 1911, of 516 fertile, and 465 barren coconut trees.

Information for Panama Railroad Travelers.

Pocket time table No. 8, shortly to be issued by the Panama Railroad Company, will contain, in addition to other information, the following:

Effective February 1, 1911, trains Nos. 2, 5, 6, and 7 will carry an observation parlor car on the rear. Seats may be reserved on application to ticket agents at Panama and Colon, or to the porter in charge of the car.

Guides, for tourist parties desiring to inspect Canal operations on the Isthmus, will be furnished on application to ticket agents at Colon or Panama, at the rate of $7.50, U. S. currency, a day.

Gongs will be sounded at Colon and Panama, indicating starting time of trains, as follows: Five taps, five minutes before the train starts; one tap, one minute, and two taps for starting. Parties desiring to pass through the station gates, with friends leaving on trains, may secure permits upon application to ticket agents.

Packages left on trains, if found by company employes, can be procured upon application to agents. The company, however, assumes no responsibility for such packages.

I. O. O. F. Elections.

At the semiannual election of officers in the several I. O. O. F. lodges on the Isthmus, the following was the result:

Isthmian Canal Lodge, No. 1, of Gorgona—Noble grand. S. J. Boyd; vice-grand, H. L. Greely; secretary, S. E. Goree; treasurer, C. E. Whipple, past grand.

Cristobal Lodge, No. 2, of Cristobal—Noble grand, J. L. Greene; vice-grand, Harry A. Collins; secretary, J. P. Mead, past grand; treasurer, Arthur Cotton.

Canal Zone Lodge, No. 3, of Culebra—Noble grand, Henry N. Rice; vice-grand, Chas. C. Cameron; secretary, Edwin W. Palmer; treasurer, Claude Peters.

Pacific Lodge, No. 4, of Ancon—Noble grand, George C. Ferris; vice-grand, James S. George; secretary, Olin E. Granberry; treasurer, E. M. Keyser.

Gatun Lodge, No. 5, of Gatun—Noble grand, J. Frank Houston; vice-grand, John J. Walsh; secretary, H. N. Tweed; treasurer, Peter Filter.

Isthmian Canal Rebekah Lodge, No. 1, of Gorgona—Noble grand, Mrs. Louisa McLotz; vice-grand, Mrs. Miriam Beetham; recording secretary, Mr. L. N. Cole, past grand; financial secretary, Mrs. Gearste; treasurer, Mr. S. J. Boyd.

District Deputy Grand Sire B. F. Sisson, and suite, will install the newly elected officers, as follows: Canal Zone Lodge, No. 3, Monday evening, January 23; Pacific Lodge, No. 4, Thursday evening, January 19. Gatun Lodge, No. 5, will hold a public installation of officers on Friday evening, January 20, at 8 o'clock. Refreshments will be served and everybody is cordially invited to attend. The officers of Cristobal Lodge, No. 2, were installed on Monday evening, January 9, and those of Isthmian Canal Lodge, No. 1, on Tuesday evening, January 10. Isthmian Canal Rebekah Lodge, No. 1, of Gorgona, will hold a public installation of its officers on Friday evening, January 13. Arrangements are being made for a special train from Colon, and from Panama, for this occasion.

Guilty of Stealing Commissary Stores.

After trial before Justice Owen in the Circuit Court at Ancon on January 4 and 5, F. P. Petersen and Charles Silvers, proprietors of the Hotel Metropole in the city of Panama, were found guilty of abetting and encouraging Henry J. Hines, a Canal employe, in the embezzlement of commissary stores. Hines was found guilty on December 24, and sentenced to five years in the Canal Zone penitentiary. It was shown that the goods embezzled were delivered by Hines, who was in charge of commissary supplies for the floating equipment at Balboa, to the Hotel Metropole wagon, by which they were carried from Balboa to the hotel in Panama. The evidence showed that the embezzlement had been committed about once a week for a period of nine months. On Monday, January 9, Petersen and Silvers were sentenced to two and one-half years each in the Culebra penitentiary at hard labor. An appeal was taken, and the bail was raised from $5,000, to $6,000 each.

Canal Zone Postmaster Absconds.

Bernard L. Kearney, postmaster at San Pablo, absconded on December 29, and an investigation of his accounts showed that he was short approximately $1,750. He was arrested in New Orleans on January 2, and is returning to the Isthmus under custody, on the *Atenas*, due to arrive in Colon on January 12. After his arrival, a formal charge will be made against him, and he will be tried for the offense. The Government is amply protected by his bond.

Notice to Employes.

Employes of the Commission and Panama Railroad Company on the Isthmus are instructed not to advise friends in the States to come to Panama in the hope of procuring employment on the Canal, or railroad forces. Persons wishing employment on the Isthmus should make application to the Washington office, and take their turn on the registers. No one can be sure of employment unless he is sent here by the Washington office, and preference is given to applicants through the employment agencies in the States.

Stages of the Chagres.

Maximum heights of the Chagres River for the weeks ending midnight, Saturday, December 31, 1910, and January 7, 1911. All heights are in feet above mean sea level.

Sale of Animals at Public Auction.

There will be sold at public auction by the district quartermaster at Ancon, C. Z., at the old corral, at 2 p. m., Saturday, January 21, 1911, to the highest bidder for cash, the following Isthmian Canal Commission property:

Fifteen (15) mules, American; one (1) pony, native.

The Government reserves the right to accept or reject any or all bids. For further information apply to district quartermaster, Ancon C. Z.

C. A. Devol *Chief Quartermaster.*

LOST—Sunday, January 1, at Toro Point, or at the hotel at Cristobal, ladies' silver mesh pocket-book, with name "Ethel C. Michaels" engraved on the inner edge. Finder please notify Mrs. L. Dean Thorpe, P. O. box 206, Empire, C. Z.,

SOCIAL LIFE OF THE ZONE.

Women's Clubs.

At the meeting of the Cristobal Woman's Club on Wednesday, January 4, an address was made by Major Eugene T. Wilson on food and food supplies. The attendance was the largest of the season. Miss Eloise Brewer has been elected recording secretary, vice Mrs. I. P. Eppelsheimer, resigned.

The Gatun club held an election of officers on Friday, January 6, the following being chosen: President, Mrs. V. V. Sessions; vice-president, Mrs. Charles H. Stoddard; secretary, Mrs. E. L. Waid; treasurer, Mrs. W. H. Hanna. In the effort to raise money for a playground for the children of Gatun, the club will hold an entertainment within the present month. Bookcases are to be placed in the chapel, and the library will be open for the distribution of books on certain days of the week, when one of the club members will be in charge. There are over 100 juvenile books in the library, and an exchange has been made with the juvenile library of the Cristobal Woman's Club.

At the semiannual election of officers on January 4, the Paraiso Woman's Club added a vice-president and treasurer to the number of officers, Mrs. W. H. Ellenwood being chosen for the former, and Mrs. H. Bain for the latter office. The membership of the club has increased and the organization is on a sound basis. The meetings will be held hereafter on the second and fourth Wednesdays in the month, instead of the first and third Wednesdays, as hitherto. The next meeting will be held on January 25, with Mrs. H. M. Coutermarsh and Mrs. Hopp, as hostesses. It is proposed to devote the remainder of the year to the development of club programs, and to the establishment of a playground in Paraiso.

At the meeting of the Gorgona Woman's Club on Thursday, January 5, a paper on conservation of natural resources in the United States was read. The meeting was held at the home of the president.

There will be a meeting of the Empire Woman's Club at the clubhouse on Thursday, January 12.

A social meeting of the Pedro Miguel Woman's Club was held on Wednesday, January 4, with a good attendance.

Church Notes.

The Rt. Rev. Albion W. Knight, Bishop of Cuba, arrived on the Isthmus on the steamer *Metapan* on Thursday, January 5, and will remain until January 23. On Sunday, January 8, he preached at Trinity Church, Culebra, at 11 a. m.; at St. Mark's, (colored), Culebra, at 3 p. m.; and at St. Mary's, Empire, at 7.30 p. m. On January 11, he confirmed a class at St. Augustine's, Paraiso. Following is the itinerary for the remainder of his visit: January 15, St. James', Empire, 11 a. m.; Ascension, Bas Obispo, 2.30 p. m.; St. Paul's, Panama, 7 p. m.; January 16, Nativity, Tabernilla, 7.30 p. m.; January 18, St. Andrews, Gorgona, 7.30 p. m.; January 19, St. Philip's, Las Cascadas, 7.30 p. m.; January 22, St. Luke's, Ancon, 10 a. m.; St. Steven's, Gatun, 3.15 p. m.; Christ Church, Colon, 7.15 p. m.

The intervening days will be devoted to the administration of affairs pertaining to the Panama mission. During the first week of his stay, Bishop Knight will make his headquarters at Culebra, as the guest of Colonel Goethals; the second week, he will be at Empire with Mr. W. W. Warwick, and the third week, he is expected to be in Ancon, as the guest of Major Henry A. Brown, Chaplain, Engineer Corps, U. S. A. Any one wishing to call upon him is invited to do so at the above named places. On Friday evening, January 6, the Woman's Altar Guild of Christ Church, Colon, held a reception in honor of the bishop at the residence of Mrs. Frederick Mears.

The Woman's Altar Guild of St Mary's Church, Empire, held a social meeting on Thursday afternoon, December 29, at the home of the president, Mrs. A. S. Zinn, when Archdeacon Bryan was the guest of honor. There were 16 present. The new organ for the church has been purchased by the money raised at the recent sale held in the Commission clubhouse.

The Rev. Aquila Lucas, secretary of the International Sunday School Association for the West Indies and South America, spent the last week in December on the Isthmus visiting the various Sunday schools and conferring with the church and Sunday school workers in the Canal Zone. On Christmas Day, he visited the Wesleyan Methodist churches in Colon, Empire, and Panama. On Monday, December 26, he preached at the Baptist Church, Culebra; on Tuesday, December 27, a conference of Sunday school workers was held in Cristobal; on Wednesday evening, he preached at the Commission chapel at Gorgona; on Thursday, he was in Pedro Miguel, and on Friday evening, December 30, he addressed the Christian League at Gatun. New Year's Day was spent in visiting the missions in Gorgona and Matachin, and in the evening, he preached at the Commission chapel in Culebra. He sailed for Kingston on Tuesday, January 3.

The annual convention of the Isthmian Sunday School Association was held at Gorgona on Sunday, January 8. There was an election of officers. An address was made by Mr. H. L. Stuntz, which was followed by a round table discussion. A meeting of the Isthmian Ministers Association was held in the Commission chapel, Gatun, on Monday evening, January 9.

On Wednesday evening, December 21, the Gatun Christian League held a reception in honor of the Rev. Charles O. Purdy. Mr. Edgar Clarke Soule, president of the league presided, and made the address of welcome to the new pastor. Mrs. A. O. Ludwig sang, and addresses were made by the Rev. Carl H. Elliott, who welcomed Mr. Purdy in the name of the chaplains of the Canal Zone; by E. G. Putnam, acting superintendent of Canal Zone clubhouses, who expressed the welcome of the 2,000 members of the Young Men's Christian Association, and by Judge Thomas E. Brown, Jr. Mr. Purdy responded in a short speech. The program was followed by an informal reception, when the pastor was introduced to all present. Refreshments were served. There were about 100 present. The services in the Gatun chapel will be as usual—Sunday morning at 10.30, and evening at 7.45. The Sunday school will meet at 9.30 a.m. Since the arrival of Mr. Purdy on the Isthmus interest in the league and church has increased; the membership has tripled, and the attendance at the services is large.

Christmas at Culebra Penitentiary.

The committee of ladies, who organized the Christmas treat for the inmates of the Culebra penitentiary, were able to send a large number of home made cakes which were donated in response to their solicitation. The sum of $71 was also subscribed, and a portion of this was used for the purchase of fruit, nuts, ice cream, candy, and tobacco. The remainder of the fund will be expended for French and Spanish books for the prison library. The penitentiary chaplain desires to thank all who contributed for this cause, and to state that the gifts were greatly appreciated by the men.

K. of P. Dance.

Paradise Lodge, No. 6, Knights of Pythias, Paraiso, C. Z., will have a public installation of officers, folowed by a dance, on Saturday evening, January 14. All Knights are welcome, and invitations will be issued to the public. Special trains will be run from Las Cascadas and Panama.

I. O. P. K. Meetings.

At Paraiso Court, No. 5, I. O. P. K., Saturday night, January 7, the following officers were installed to serve for the first term of 1911: Honorable judge, W. M. Williams; prosecuting attorney, R. B. Swartevant; defendant attorney, Wm. Claus; chaplain, W. B. Jordan; comptroller and clerk, H. L. Bridges; sheriff, R. B. Leftwich.

The Supreme Court, I. O. P. K., will hold its next regular meeting at the I. C. C. hotel, Las Cascadas, Sunday, January 15, 1911, and all members of Las Cascadas Court, No. 4, are requested to be present, as important business pertaining to that court will be taken up.

I. A. of M. "Smoker."

A "smoker" was given by the members of Empire Lodge, No. 684, I. A. of M., at Empire, on Friday evening, January 6. There was a short entertainment, consisting of a vocal selection, sketches, a reading, and piano selections, after which refreshments were served and speeches given by several of the members.

Eastern Star.

The charter list of the auxiliary order of the Eastern Star is still open, 28 names having been enrolled. The list is circulated in Cristobal, Las Cascadas, and Gorgona. The charter will be closed on January 18.

Missing Men.

Any one having information regarding the whereabouts of relatives of the late Andrew R. Murphy is requested to communicate with T. V. Casanova, Empire.

Any one having information regarding the whereabouts of Thomas Bale, a mechanical engineer, who is supposed to have come to Panama from Staten Island, N. Y., is requested to communicate with Messrs. Dulon and Roe, attorneys, 41 Park Row, New York City.

Any one having information regarding the whereabouts of James Ewart Harley, who is supposed to have come to the Isthmus about two years ago, is requested to communicate with THE CANAL RECORD.

Sale of Horse at Public Auction.

There will be sold at public auction by the Administrator of Estates at the corral in Culebra, C. Z., at 1 p. m., on Monday, January 23, 1911, to the highest bidder for cash, the following property belonging to the estate of the late Willis S. Holstead:

One (1) horse, age 2½ years, 14 hands high, weight about 900 pounds, with white star in forehead.

The Administrator of Estates reserves the right to reject any or all bids. For further information apply to Administrator of Estates, Ancon, C. Z.

TOM M. COOKE, *Administrator of Estates.*

STREET RAILWAY.

Construction Resumed in Panama—License for Canal Zone.

Work has been resumed on the street railway in the city of Panama, which will connect with a similar railway in the Canal Zone, the legal obstacles to the continuance of the construction having been removed. The main line will extend through Central avenue in Panama to and around Cathedral Park in one direction, and along the Sabanas road in another direction, thus passing the railroad station. The Sabanas road line will follow the highway, at the side of the roadway, to the Canal Zone line, and then will enter upon a private right-of-way and parallel the highway to a point near the police station. Three spur branches will extend from this trunk line. The first will run from the Panama railroad station up the Tivoli road to the Hotel Tivoli, skirting DeLessep's Park and from this, a spur will extend past the fire station in Ancon to the laundry, which is at one of the entrances to the hospital reservation. The second branch will run from Central avenue down East 16th and East 15th streets to the old coal wharf of the Panama railroad, where the power house and car barns will be situated. At Northern avenue, a spur will run from this branch parallel with the water front to the public market. The third branch will run from Central avenue at Santa Ana Plaza down C street to West 16th street, thence south one block to the Balboa road, thence to Balboa docks. In the city of Panama the tracks will run on the streets, but in the Canal Zone, although permitted to follow the highway, they may not encroach on the roadbed.

On October 29, 1906, Henry T. Cook obtained from the municipality of Panama a 50-year franchise to operate an electric street railway, and to tear up and occupy the streets of the city for that purpose. He then made application to the Isthmian Canal Commission for a franchise to construct and operate an electric railway on the Balboa and Sabanas roads. The Commission recommended granting a revocable license under practically the terms of that which has been granted. The work in Panama city involved the tearing up of pavements laid by the United States Government, for which full payment had not been made, and as no guarantee had been offered that the pavements would be replaced, the work was stopped by the Government of Panama at the request of the United States. The franchise from the city was contested in the courts of Panama, and a decision was rendered favorable to the grantee. The franchise was then extended on condition that work should be resumed on the project by December 9, and a license for the railway in the Canal Zone were granted. A corporation, known as the Panama Public Utilities Corporation, was organized under the laws of Connecticut on July 18, 1910, with a capital of $500,000, and bonds will be issued to the amount of $300,000 for the purpose of obtaining money to construct the railway. The rights of Mr. Cook will be assigned to this corporation.

The license, under which the railway will operate in the Canal Zone, was granted to Mr. Cook by the President of the United States, under date of December 16, 1910. It provides for the construction, maintenance, and operation of a tramway system for the transportation of passengers for profit between the city of Panama in Panama, and Balboa, the Sabanas, the Hotel Tivoli, and Ancon Hospital grounds in the Canal Zone, along routes to be approved by the Chairman and Chief Engineer of the Isthmian Canal Commission.

Under this license, the location of tracks, poles, wires, and crossings shall be determined by the Chairman and Chief Engineer, and maintained in the manner required by him. The grantee agrees to pay to the Government of the Canal Zone an annual franchise tax of one per cent on the gross earnings of the railway system in the city of Panama and the Canal Zone, and must keep his books at all times at the disposal of the officers of the Canal Zone Government. The property of the railway system shall be subject to the usual taxes imposed on property under the laws of the Canal Zone. The right to regulate the charges and conditions of service of the railway system in the Canal Zone is reserved to the Canal Zone authorities. The license may be revoked by the President of the United States, whenever he deems it necessary to the public interest to terminate the privilege. The rights to acquire private property by purchase, and private property, except that of the Panama Railroad Company, by condemnation, are granted. The license is granted upon the express condition that not more than 300 meters of the pavements in the city of Panama shall be removed at one time, and that not more than 300 meters of the pavement which has been removed shall at any one time be in a state other than complete restoration, this to apply to one whole strip of pavement, or to the sum of the detached sections. The license may be assigned with the consent of the Secretary of War. The grantee gives a bond in the sum of $10,000 for the restoration and maintenance of the pavements taken up or disturbed by him in the city of Panama during a period of eight and one-half years from November 30, 1910.

Lawn Tennis.

The first tournament for the season of 1911 was held by the Isthmian Tennis Association on the courts of the Panama Tennis Club in the city of Panama on Sunday, January 8. The play was in singles, two out of three sets, and the various clubs were represented, as follows:

PRELIMINARIES.

Pulsifer, Empire	6—8
Poole, Tivoli	1—6
Runyon, Ancon	6—9
Fearon, Panama	2—7
Pulsifer, Empire	6—6
Hart, Colon	4—3
Runyon, Ancon	6—6
Wells, Gatun	3—2

FINALS.

Runyon, Ancon	6—6
Pulsifer, Empire	1—3

The tournament schedule for the balance of the season is: February 5, doubles, on courts of Colon-Cristobal club; March 5, singles, on courts of Empire club; April 2, doubles, on courts of the Panama club; May 7, singles, on courts of Colon-Cristobal club; June 4, doubles, on courts of Empire club. The tournament of April 2 will be for the Maduro-Lupi cup. The clubs at present in the association are: Panama, Tivoli, Ancon, Corozal, Empire, Camp Elliott, Gatun, Cristobal, Colon. The clubs at Culebra and Gorgona have signified their intention of joining. The tournament committee for the season is made up as follows: B. C. Poole, chairman, Tivoli and Panama; Dr. W. M. James, Corozal and Ancon; Chase Pulsifer, Empire and Culebra, and Gatun until further notice; Lieut. T. S. Clarke, Camp Elliott and Gorgona; R. W. Hart, Colon and Cristobal. Inquiries should be addressed to the secretary, Chase Pulsifer, Empire.

The Tivoli Lawn Tennis Club has abandoned the courts at the Hotel Tivoli and constructed two earth courts, with crushed stone surfacing, near the gate to the Ancon Hospital reservation.

Personal.

Lieut. Frank O. Whitlock and family, and Mr. W. B. Corse and family, are among the passengers on the *Panama*, which arrived at Cristobal on January 11.

Culebra Red Cross.

A meeting of the Culebra branch, Canal Zone Red Cross, will be held at the Commission clubhouse in Culebra at 8 o'clock, Friday night, January 13. After the meeting, the members will be entertained at a moving picture show.

EDWARD SCHILDHAUER, *Chairman.*

Culebra, C.Z., January 9, 1911.

S. F. and H. I. A.

The next regular meeting of the Steam Fitters and Helpers Local Union, No. 95, will be held at Cristobal lodge hall on Sunday, January 15, at 4 p. m. All members are requested to be present.

Band Concert.

A concert will be given by the Isthmian Canal Commission Band at Paraiso, C. Z., on Sunday, January 15, 1911, at 2 p. m. The program follows:

1 March—*Niebelungen* .... Moses
2 Selection—*Madame Sherry* .... Hoschna
3 Waltz—*Cupid Astray* .... Rolfe
4 Overture—*Lustspeil* .... Keler Bela
5 *Procrastination* .... Cobb
6 Medley Selection—*My Southern Rose* .. Von Tilzer
7 Flower Song—*Hearts and Flowers* .... Tobani
8 Intermezzo—*Silver Bell* .... Wenrich
9 March—*New Colonial* .... Hall

CHAS. E. JENNINGS, *Musical Director.*

The next concert will be given at Gatun on Sunday, January 22, at 2 p. m.

Tide Table.

The following table shows the time of high and low tides at Panama for the week ending January 18, 1911: (75th meridian time):

DATE.	High.	Low.	High.	Low.
	A. M.	A. M.	P. M.	P. M.
January 12	12.35	7.10	1.20	7.35

		P. M.		
January 18	6.00	12.20	6.30	......

Proposals for Excavation, Gold Hill Line, Relocation, Panama Railroad.

Sealed proposals for railroad grading on the new line of the relocation, Panama railroad, situated on the east side of the Culebra Cut, opposite the towns of Empire and Las Cascadas, will be received until 1 p. m., January 16, at the office of the Chief Engineer, P. R. R., Colon, and then opened.

This excavation consists of two distinct sections, as follows:

The first section, between station 1461 and station 1535, consisting of approximately 90,000 cubic yards.

The second section extends from station 1580 to station 1700, and consists of approximately 110,000 cubic yards.

As time is an essential element, the contract for both of the above sections will not be awarded to any one man.

Bids should be submitted on a flat price per cubic yard of excavation, without classification, and should contemplate finishing the work by August 1, 1911.

Full information will be furnished upon application to the office of Chief Engineer, Panama railroad. The railroad company reserves the right to reject any and all bids.

Envelopes containing proposals should be endorsed "Proposals for Railroad Grading, Gold Hill Line, Relocation, Panama Railroad," and addressed to F. Mears, Chief Engineer, P. R. R., Cristobal, C. Z.

BASEBALL.

PANAMA CANAL LEAGUE.

RESULTS OF GAMES, JANUARY 8.

At Ancon— Ancon, 6; Gorgona, 8.
At Empire—Empire, 9; Atlantics, 1.
At Colon— Commissary-Subsistence, 13; Marines, 3

COMMISSION CLUBHOUSES.

Activities of the Young Men's Christian Association.

CULEBRA.

The standing in the billiard tournament is as follows:

Name.	Won.	Lost.	Name.	Won.	Lost.
Bayne......	4	4	Hepler.....	5	4
Case........	4	3	Silver......	4	4
Conlan.....	5	3	Soderberg...	4	4
Dubois.....	1	7	Thomson...	4	4
French.....	6	2	Clark......	2	6
Hall........	5	3			

Motion pictures will be shown on Friday evening, January 13.

All the men interested in the track and field meet to be held at the Empire park on Washington's Birthday, should begin training now. All the standard events will be contested excepting the discus.

The Culebra Glee Club is planning a concert for February 22.

Gorgona and Culebra played their last league basketball game on Saturday night at Culebra. The score was 25 to 27 in favor of Culebra.

There is being organized a topic club on "Life Problems," including social, business, political, and health topics. A meeting of the club will be held every Wednesday evening from 7.30 to 8 o'clock. The leaders for these discussions are Messrs. French, Nellis, Freeman, and Warner.

EMPIRE.

Arrangements have been made by the superintendent of clubhouses whereby films will be rented weekly for each clubhouse from the firm of John Hanna and Company of Panama. This assures a good moving picture show at least once a week. The first set of these films were exhibited on Tuesday evening, January 10.

At a meeting of bowlers held on Monday evening, January 9, it was decided to form a local league to consist of teams from Culebra Cut, Empire shops, Central Division, Examiner's office, Disbursing office, and the post-office. The games will start about February 1.

The following will be the program of the literary and debating society at its meeting on Friday evening, January 13: Biography of Andrew Jackson, J. H. McLean; parliamentary quiz, J. C. Forman; debate, "Resolved that recent political events indicate an early dissolution of the two great political parties of the United States of America." Affirmative, Messrs. Howe and Christopherson; negative, Messrs. Meirowitz and Cheney. No judges will be appointed, but the president will call for a standing vote. Critic, F. P. Wagg.

The high score for duckpins for the week was made by Rodeghiero, who rolled 102. Parkis made the high score in tenpins with 203. Duckpins are rolled Mondays, Wednesdays, and Fridays, and tenpins the remaining days.

Gray's orchestra will give a concert in the clubhouse on Thursday evening, January 12. Both men and women are invited to attend.

On Saturday evening, January 14, Hirsh and DePoorter will play the last half of their match pool game for the championship of the Isthmus.

Out of a population of 541 men eligible, Empire now has a total membership of 370, a percentage of membership, according to population, of 68.

Rehearsals for William Gillette's farce "All the Comforts of Home," will begin on Friday evening, January 13. The play will be under the direction of C. C. Carr.

GORGONA.

Gatun won three games in the league bowling match rolled on Gorgona's alleys on Saturday night, January 7, by the following scores:

Gatun.				Gorgona.			
Severn......	148	146	166	Roper.....	134	145	144
Wolf.......	161	159	190	Otis.......	143	153	157
DeMoll.....	110	168	170	White.....	158	171	166
C.R.Har'ton.	184	182	197	Bordt.....	148	139	175
Barte.......	164	182	175	M.Varen'p.	135	161	189
Total.....	767	837	898	Total...	718	769	831

The following 200, or over, scores were rolled during the week ending January 7: Stoehr, 214; Stewart, 205; Misal, 209; Mrs. Cochran, 200. High score in duckpins was made by James Murray, with 102. High average in tenpins for the week was made by Trotter, 177. Mr. White and Mr. Varenkamp tied for high average during December, both having an average of 174. Mr. White rolled 15 games, and Mr. Varenkamp, 13. Eighty-nine different people used the Gorgona alleys during December. Mr. White has been presented with a silver medal for high score for November, 1910.

About 200 men attended the meeting of the discussion club held on January 4. F. G. Swanson led the discussion. G. W. Griggsby led the discussion at the meeting held January 11, the subject being, "Is Democracy Dead?" These meetings are held every Wednesday night at 7.30 in the game room, and all the men of Gorgona are invited to attend.

At the song service held on January 5, at 6.45, p. m., F. E. Murray gave a short talk. A service of this kind is held every Sunday evening at the same hour, except the fourth Sunday in the month, when the time is 8 o'clock.

On Saturday night, January 12, a stereopticon show will be given by Frank Jackson on the "Ruling Princes and Palaces of India." Mr. Jackson spent four years in India.

GATUN.

The first half of the 300-ball match at continuous pool for the championship of the Isthmus was played at Gatun before an audience of 100 spectators on Saturday evening, January 7. The contestants were Mr. DePoorter of Gatun, and Mr. Hirsh of Empire. Mr. DePoorter took the lead by runs of 31, 29, and two of 15, and the score at the end was: DePoorter, 154; Hirsh, 63. The remaining half will be played at Empire on Saturday, January 14, at 8 o'clock. The winner will receive a handsome gold medal, especially designed to represent the championship of the Isthmus. In order that the medal may become his personal property, the winner must successfully defend it three consecutive times, if challenged, within three months. Should the winner receive no challenge by April 15, the medal becomes his property by forfeit.

The following are the 10 high average men in tenpins for the month of December, 1910: Barte, 168; Luckey, 162; Severn, 162; Kerr, 155; Hodges, 153; C. A. Harrington, 152; Kiernan, 151; O'Meara, 150; Webb, 149; Wilson, 146. Duckpins—Durand, 92; Barte, 92; DeMoll, 88; Severn, 87; Bull, 85; Jones, 82; Luckey, 82; Murray, 82; Myers, 81; Teimer, 80.

Several names have been added to the list of the gymnasium class. Physical Director Ludwig announces that handball and indoor baseball will be given special attention from now on.

A chess tournament will be started in the near future.

A discussion course on "Life Problems," or studies in the native interests of young men, will be started next week.

OFFICIAL CIRCULAR.

Reduction of Stock in Store.

Culebra, C. Z., January 7, 1911.

CIRCULAR No. 355-A:

The material now carried in stock by the Commission is valued at nearly five million dollars. Heretofore, the object of the material and supply branch has been to keep on hand at all places all classes and kinds of stores. The work has now reached a point where, to avoid a large accumulation of material at the completion of the Canal, it becomes necessary to reduce the stock carried, even at the risk of occasionally running short of some article. It is not intended to embarrass the work for lack of material, but on "nonactive" stock it is proposed to resort to substitution and emergency requisitions, when necessary, rather than maintain a large reserve supply of material for which there is only an occasional call.

Division engineers are instructed to cooperate with storekeepers in carrying out this policy, and also in placing their United States and local requisitions for any stock. The consumption records of the Quartermaster's Department should be consulted in such cases, to avoid duplication and the accumulation of unnecessarily large stocks.

GEO. W. GOETHALS,
Chairman, Isthmian Canal Commission.
President, Panama Railroad Company.

Supplies for Canal Work.

The following steamers with supplies for the Isthmian Canal Commission arrived at the ports of Cristobal, Colon, and Balboa during the weeks ending December 31, 1910, and January 7, 1911:

Aldershot, December 24, from Gulfport and Mobile, with 215 pieces piling for Atlantic Division; 71,297 feet yellow pine lumber for Mechanical Division; 431,109 feet yellow pine lumber, 26 coils rope for stock.

Prinz August Wilhelm, December 25, from New York, with 131 cases blasting caps for stock.

Lovland, December 26, from Jacksonville, with 38,568 cross-ties for stock.

Vatalia, December 27, from Baltimore, with 25,000 cases dynamite for stock.

Colon, December 28, from New York, with 22 cases castings, 5 cases electrical supplies 7 reels wire rope, 6 bales rubber belting for Atlantic Division; 8 cases springs, 5 cases dipper tips for Central Division; 8 cases X-ray apparatus, 67 cases drugs and sundries, 40 kegs drugs, 90 kegs soap for Sanitary Department; 20 cases water coolers, 10 cases varnish, 30 kegs nuts, 18 crates brooms and handles, 35 bales hose, 150 cases toilet paper, 32 cases electrical material, 15 bundles black pipe for stock; and a miscellaneous cargo, the whole consisting of 763 packages weighing 160 tons.

Horsley, December 28, from New York, with 5,151 barrels cement for Atlantic Division; 101,336 bags cement for Pacific Division.

Turrialba, December 29, from New Orleans, with 190,165 feet yellow pine lumber for Atlantic Division; 31 pieces cypress piling for Pacific Division; 9 barrels journal bearings, 16 packages castings for Mechanical Division; 41 cases steel castings for Central Division; 45,763 feet oak lumber, 408 bales alfalfa hay, 1,051 bales prairie hay, 400 sacks bran, 30 cases lantern globes for stock.

Santa Marta, December 29, from New York, with 9 crates concrete machinery for Atlantic Division; 25 bundles brooms, 47 packages drift bolts, 100 bales oakum for stock.

St. Andrews, January 3, from Baltimore, with 44,793 pieces steel bars, 44 pieces steel beams, 231 tons lock construction material, 16 crates lock construction material, 60 pieces lock construction material for Atlantic Division; 4,195 pieces steel bars, 968 bundles steel bars, 231 tons lock construction material, 84 crates lock construction material, 54 pieces lock construction material for Pacific Division; 1,263 bundles galvanized corrugated iron, 958 pieces block pipe, 225 tons steel bars, angles, etc., 3,834 pieces sewer pipe, 1,925 car wheels, 215 tons smithing coal for stock.

Sarnia, January 4, from New York, with 200 barrels carbolic acid for stock.

Strathtay, January 4, from Tacoma, with 419 pieces Douglas fir piling, 1,366,026 feet Douglas fir lumber for Atlantic Division; 78,773 feet Douglas fir lumber for Central Division; 23,601 feet Douglas fir lumber for Pacific Division; 583,380 feet Douglas fir lumber, 1,667 Douglas fir cross-ties; 485 pine ties, 13 cases blasting caps for stock.

Advance, January 5, from New York, with 9 cases electrical machinery, 2 pieces dredge parts for Atlantic Division; 38 coils insulated copper wire for Pacific Division; 25 cases drugs for Sanitary Department; 34 barrels rosin, 12 cases electrical material, 66 cases incandescent lamps, 250 kegs bolts, 105 cases bolts, 238 kegs rivets, 100 car wheels, 42 cases cork life preservers, 41 pieces iron pipe-fittings for stock; and a miscellaneous cargo, the whole consisting of 1,218 packages, weighing 190 tons.

Abangarez, January 5, from New Orleans, with 23,563 feet yellow pine lumber, 42 reels wire rope, 8 crates machinery, 6 barrels machinery for Atlantic Division; 132,684 feet yellow pine lumber, 250 crates fire brick, 240 sacks cotton seed meal for stock.

Metapan, January 5, from New York, with 18 crates machinery for Atlantic Division; 218 crates handles, 10 cases copper wire, 55 reels copper wire, 100 cases tallow candles for stock.

Misdirected Letters.

Ancon, C. Z., January 7, 1910.

COLON TO BARBADOS, CALLING AT TRINIDAD.

Oruba	R. M.	Tuesday	Jan. 17

The next sailing of the Leyland Line will be as follows: *Cuban*, on or about January 16, for New Orleans via Kingston, Ja.

CANAL RECORD

Volume IV. ANCON, CANAL ZONE, WEDNESDAY, JANUARY 18, 1911. No. 21.

The Canal Record

Published weekly under the authority and supervision of the Isthmian Canal Commission.

The Canal Record is issued free of charge, one copy each, to all employes of the Commission and Panama Railroad Company whose names are on the gold roll. Extra copies and back numbers can be obtained from the news stands of the Panama Railroad Company for five cents each.

Address all Communications
THE CANAL RECORD
Ancon, Canal Zone,
Isthmus of Panama.

No communication, either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.

NOTES OF PROGRESS.

Tabernilla Dump Abandoned.

The dump at Tabernilla, the largest on the Canal work, has been abandoned and will be used henceforth only in case the other dumps become congested, or are temporarily out of use. Spoil from the north of Culebra Cut will be dumped on the relocation of the Panama railroad, and on Gatun Dam. Spoil from the excavation in the Canal prism between San Pablo and Culebra Cut will be wasted on the river dumps.

The dump at Tabernilla was opened in 1906, the location being chosen because of its proximity to the main line of the Panama railroad, and of the large level area for dumping which it afforded, the plot of low ground containing about two square miles. An article in THE CANAL RECORD of October 12, 1910, contained a description of the method used, and a comparison of this dump with others on the Canal work. At that time it was proposed to doubledeck the dump; that is, to build an entirely new dump upon the old one, but on January 1, the site was definitely abandoned. Since the opening in 1906, there have been dumped at this place about sixteen million cubic yards of miscellaneous spoil, and the surface is from 20 to 25 feet above the natural level of the surrounding country. Since the fall of 1909, spoil trains have been gradually diverted from Tabernilla to the relocation of the Panama railroad, where the material is utilized in filling the trestles beween Frijoles and Gamboa. The number of trainloads dumped there each day was reduced from 60 in 1909, to 20 at the time the dump was abandoned.

Canal Work In December.

The grand total of Canal excavation to January 1 was 126,407,064 cubic yards, leaving to be excavated 56,130,702 cubic yards. The total for December was 2,946,404 cubic yards, as compared with 2,811,681 cubic yards in December, 1909, and 3,261,673 cubic yards in December, 1908. Of the total, 2,448,097 cubic yards were "work excavation" and 498,307 cubic yards were "plant excavation." The dry excavation amounted to 1,514,552 cubic yards and was principally by steam shovels. The dredges removed 1,431,852 cubic yards in addition to the amount pumped into Gatun Dam by suction dredges. The progress on the locks at Gatun, Pedro Miguel and Miraflores is referred to elsewhere in this issue.

In the Atlantic Division, the total excavation was 852,912 cubic yards. Of this total, 97,702 cubic yards were dry excavation, and the remainder was removed by the dredges in the Atlantic entrance.

The total excavation in the Central Division was 1,408,881 cubic yards, and further reference to this work is published elsewhere in this issue.

In the Pacific Division, the total excavation was 704,611 cubic yards, 606,829 cubic yards of which were taken out by the dredges at the Pacific entrance.

A detailed statement of the excavation and a summary of the work on the locks and dams, follow:

ATLANTIC DIVISION.

Mean rainfall along Canal (eleven stations) 14.43 inches.

By "Work" Excavation is meant excavation actually made for one of the constituent parts of the Canal, such as Prism, Diversions, or Locks, etc.; that is, it represents material taken from the area to be occupied by the Canal, and constitutes excavation useful for the completed Canal.

By "Plant" Excavation is meant excavation outside of any of the constituent parts of the Canal, such as Prism, Diversions, or Locks, etc. It includes material necessary to be excavated for construction purposes only and is chargeable against the particular plant item for which it is performed, such as Prism, Diversions, Locks, etc.

French Dredges to be Scrapped.

The four old French dredges in the Canal prism at Gorgona and Mamei will be broken up and sold as scrap iron. Three of them are of the Belgian ladder type, and they have been stripped of their engines, chains, brasses, ladders, davits, and other repair parts, which are in use, or will be used, for repairs on the Pacific Division ladder dredges. One of them is a suction dredge, and such parts of it as can be utilized elsewhere will be saved in the scrapping. The excavation in the Canal prism has been carried on around the old hulls, and it was intended at one time to repair such holes as might be found below the water line, and float the dredges after the water in the lake had reached sufficient depth. It has been found that the repairs would be expensive, and, on this account, and, because there will probably be no market for the hulls after the completion of the Canal, when a large part of the present floating equipment will be on the market, it has been decided to break up and remove them from the prism while the construction tracks used in the excavation are still available. The work will be done during the present dry season.

Work Resumed on Colon Storm Sewer.

Work on the D street storm sewer in Colon, which was suspended during the months of November and December on account of the heavy rains, was resumed shortly after January 1. At the time the work was shut down, construction of the sewer had been completed from its north outlet to a point midway between 13th and 14th streets, a distance of 4,800 feet. Excavation of the trench had been advanced as far as 14th street, but in making the hydraulic fill by suction dredge in this part of the city, it was entirely filled in. The total length of the sewer, when completed, will be 6,800 feet, and there remain 2,000 feet to be built, which will probably be accomplished before the end of the dry season. It is a little over seven feet in size from the beach outlet to 3d street; six feet four inches from 3d to 6th streets, the summit elevation; five feet three inches from 6th to 11th streets, and a little over seven feet from 14th street to its

NOTES OF PROGRESS.

(*Continued.*)

south outlet in Folks River. The sea outlet has been practically finished, and during the November rains, that part of the sewer from 6th street to the beach, where a 6-foot head is developed, carried off the water rapidly from sections of the streets in that locality, formerly subject to inundation. Most of the excavation for the sewer has been in a coral rock formation, but between 13th and 14th streets, it was entirely in soft mud, making the digging unusually difficult. This part of the street was at one time under water, and was filled in when the city began to extend in this direction.

Drainage of Culebra Cut.

The central drainage ditch, which carries water from the north side of the summit of Culebra Cut at Empire into the sump at the Gamboa pumping plant, will be deepened during the present dry season sufficiently to take care of the drainage until next year. At Gamboa, the ditch will be at 26 feet above sea level, which is 14 feet below the bottom of the Canal, and the plan is eventually to deepen it to 36 feet above sea level at the summit, near Empire bridge. Only so much of the work as will be necessary to take care of the drainage during the coming wet season will be done this year.

Gatun Dam Spillway.

Concrete was placed in the spillway of Gatun Dam during the weeks ending January 7 and 14, as follows:

DATE.	Concrete Laid.	Hours worked.	No. Mixers.
	Cu. Yds.

New Train Schedule on Balboa Branch.

A new schedule for the operation of trains on the Balboa branch of the Panama railroad went into effect on January 2, 1911. Three trains have been added to the daily service each way. These leave Panama at 10.40 a. m., 1.50 p. m., and 6.45 p. m., respectively; and Balboa at 10.20 a.m., 1.15 p. m., and 7.25 p. m., respectively. In addition, a train leaves Panama at 10.50 p. m., and returning, leaves Balboa at 11.25 p. m., on working days. On Sundays and holidays, a train leaves Panama at 9.30 p. m., and returning, leaves Balboa at 9.50 p. m. The new schedule makes a change of a few minutes in the time of the arrival and departure of trains at Panama and Balboa, which will be noted in the time table published on another page of this issue of THE CANAL RECORD.

CONCRETE WORK IN THE LOCKS.

GATUN LOCKS.

Nearly 50 per cent of the concrete for the system of three twin locks at Gatun has been laid, the exact amount in place at the close of work on January 14 being 1,033,708 cubic yards, out of a total of 2,085,000.

A statement of the amount of concrete placed in the locks each day for the week ending January 14, and of the total, follows; and a similar statement for the work in the spillway of Gatun Dam is published elsewhere in this issue. The construction plant works 12 hours daily, and the auxiliary plant 9 hours:

DATE.	CONSTRUCTION PLANT. 2-cubic yard mixers.			AUXILIARY PLANT. 2-cubic yard mixers.			Large stone.	Total.
	Concrete placed.	Hours worked.	No. of mixers	Concrete placed.	Hours worked.	No. of mixers		
	Cu. Yds.			*Cu. Yds.*			*Cu. Yds.*	*Cu. Yds.*

Grand total	....	....	......	....	....	......	....	1,033,708¼

*The 239 yards shown for the portable ½-yard mixer were placed as follows: January 9th, 45 yards; January 10th, 52 yards; January 11th, 10 yards; January 12th, 32 yards; January 13th, 44 yards; January 14th, 56 yards.

PEDRO MIGUEL LOCKS.

Concrete work in the locks at Pedro Miguel is about 60 per cent completed, 497,804 cubic yards, out of a total of 837,400, having been placed at the close of work on January 14. Operations have reached the point where the maximum output of all four of the berm crane mixers cannot be utilized, and, therefore, only two of them are kept at work continuously. On the other hand, the installation of the steel work for the lock machinery is assuming greater proportions as the work advances towards the ends of the lock. In the upper part of the lock, the construction of the west wall is being continued to the point of junction with the wing wall, and excavation for the center wall extension has been resumed. Work on the east wall extension is temporarily suspended. At the south end, construction is proceeding on all three walls, and, in addition, one chamber crane is engaged in placing concrete in the extension of the guide wall to its farthest point north. The placing of the steel castings for the two sluice gates at the south end of the center wall is about completed. These castings form the division and side walls of the gates, the division wall employing three and the side walls two. Each casting occupies a vertical position, is 22 feet high, and weighs a little over 24,000 pounds. In addition, two smaller castings are placed a few feet away, one in front and the other in the rear of the gates, which will serve as a cutwater in the flow from the culvert. Work is also in progress on the installation of two of the Stoney gate valves.

The record of concrete laid during each of the six 8-hour working days of last week, follows:

DATE.	CONSTRUCTION PLANT. 2-cubic yard mixers.			AUXILIARY PLANT. 2-cubic yard mixers.				Total.
	Concrete placed.	Hours worked.	No. of mixers	Concrete placed.	Hours worked.	No. of mixers	Large stone.

*Includes 5 cubic yards by hand. †Includes 7 cubic yards by hand. **Includes 3 cubic yards by hand. ††Includes 5 cubic yards by hand.

Over 100,000 cubic yards of concrete have been placed in the upper lock at Miraflores, and the most of it has been used in the floor and floor culverts, and in the east wall. The steel work for the sluice gates in the east wall is in position, and has been partly concreted in. Sections of this wall have been completed, and the foundation has been extended to within 20 feet of the lower end. Two stationary mixers set up on the east bank, and the two 2-cubic yard trestle mixers, furnish the concrete for the east wall construction. The batter section of the center wall has been extended about half the length of the lock, and the excavation for the remaining distance is well advanced. Excavation by steam shovel for the west wall continues, but no concrete has been laid as yet. Work on the west storage trestle is also in progress.

Teachers of the Colored Schools.

On Friday and Saturday of last week, January 13 and 14, an institute for the teachers of the Canal Zone colored schools was held. On the first day nearly all of the schools for colored children were closed in order to allow the teachers an opportunity to visit, in company with the supervisors, the schools for white children. The schools at Ancon, Culebra, Empire, Balboa, and Cristobal were visited to allow the teachers to observe methods and receive general instruction in classroom work. On Saturday, two all-day sessions were held in Ancon. A morning meeting beginning at 8.30 was held in Ancon hall, when there was a program consisting of papers and informal talks. The superintendent of schools, Mr. Frank A. Gause, spoke on schoolroom problems; Miss Anna Irvin on the ethical value of literature in the school; Mr. C. C. Carr, principal of the Canal Zone high school, on Panama in history; Miss Alice Alexander, supervisor of primary grades, on composition writing. The program ended with a practical talk on sanitation by Col. W. C. Gorgas.

The afternoon session was held in the Ancon schoolbuilding, when papers were read by the colored teachers, some of the subjects being the methods of teaching reading, the preparation of the reading lesson, and some difficulties in English grammar. A discussion was conducted by the superintendent of schools, and an address on the opportunity and responsibility of the teacher was delivered by the Hon. Maurice H. Thatcher. The sessions were attended by 24 men.

The organization of the schools for colored children is the same as that of the primary schools for American children. There are 15 schools, the largest of these being at Cristobal, Empire, and Culebra. The entire enrollment is approximately 1,500. There is a staff of 25 negro teachers, and a supervisor visits each school frequently. During the summer vacation, the superintendent paid a visit to Mr. J. R. Williams, inspector of schools in Kingston, Jamaica, and through his cooperation, the appointment of first-class teachers for these schools was possible. It is the policy of the department of schools to assist and raise the standard of these teachers by every means possible. To that end, arrangements are made for them to visit the schools of the white teachers, and frequent conferences are held, in addition to the monthly teachers' meetings.

Careful attention has been paid to the equipment of the schools; steel desks are furnished, and the entire working apparatus is considered up to the standard of the average school in the United States. New schoolbuildings are being constructed at Cruces, and at Pedro Miguel.

Ancon Rock Crusher.

A statement of the rock crushed at Ancon quarry during the week ending January 7, follows:

DATE.	Hours worked.	Cubic Yards.
January 2—Holiday		
January 3	9:15	2,585
January 4	9:20	2,684
January 5	9:40	2,652
January 6	8:20	2,353
January 7	11:05	4,133
Total	47:40	14,407

Red Cross Finances.

A statement of the financial condition of the Canal Zone Chapter, American National Red Cross, follows:

RECEIPTS.		
December 1. Balance on hand	$1,948.80	
December 1 to 31. Membership dues	31.00	
		$1,979.80
DISBURSEMENTS.		
December 1. Relief of man at Las Cascadas	$5.00	
December 2. Notices of election of officers, printing	2.49	
December 2. Coach hire	.20	
December 5. Relief of man at Ancon, deported to the States.	50.00	
December 13. Relief of man at Ancon Hospital, deported to the States	40.00	
December 15. Ballots for election of officers, printing	7.10	
December 17. Deportation of young lady to England	120.00	
December 19. Coach hire	.20	
December 20. Relief of lady at Pedro Miguel	50.00	
December 29. Stationery, printing	6.49	
Total disbursements		$281.48
December 31. Balance on hand		$1,698.32

JOHN L. PHILLIPS, *Treasurer*.

Approved:

C. A. DEVOL, *Chairman*.

During the year 1910, the Canal Zone Chapter paid to beneficiaries $1,925.82, including $1,200 furnished for relief of Cartago earthquake sufferers.

Obituary.

Edwin E. Frank of Memphis, Tenn., mate on pipe line dredge *No. 82*, working at Gatun, was drowned in Gatun Lake on January 12, and it is believed he committed suicide. He was 28 years of age, a native of Louisville, Ky., and had been at work in the United States dredging fleet at Memphis prior to coming to the Isthmus. He had been in the employ of the Canal Commission since March, 1910. His brother, William Frank, a dredge captain in the Atlantic fleet, and his wife living in Memphis, survive him.

Spanish War Veterans.

A communication has been received from the National Commander-in-Chief of the Spanish War Veterans stating that a delegation of national officers, headed by Past Commander-in-Chief Col. E. J. Gihon, will come to the Canal Zone after attending the memorial services to be held over the battleship *Maine* in Havana Harbor. They will arrive on the Isthmus about February 20, for the purpose of establishing four camps of Spanish War Veterans. All who are interested in this movement should communicate with Charles C. Cameron, Culebra, C. Z.

Army and Navy Union.

The officers and comrades of Garrison No. 106 of the Army and Navy Union , U. S. A., will hold a reception at Kangaroo hall, Empire, on Saturday, January 21, at 8 p. m. All members are requested to be present in uniform. A cordial invitation is extended to all veterans of the Civil War, Indian campaigns, and the Spanish-American War, who reside on the Isthmus. There will be a musical program, dancing, and light refreshments.

Tide Table.

The following table shows the time of high and low tides at Panama for the week ending January 25, 1911 (75th meridian time):

DATE.	Low.	High.	Low.	High.
	A. M.	A. M.	P. M.	P. M.
January 19	12.45	6.45	1.05	7.15

LUBRICATING OIL.

Consumption at Electric and Compressor Plants Shows a Reduction.

The report of the use of lubricating oil in the electric and air compressor plants during the month of November shows a marked advance in economy in the use of oil in these plants, and a favorable record as compared with lubrication of similar plants in the States.

In the air compressor plants at Rio Grande, Empire and Las Cascadas there are 14 compressors; rated horsepower of each compressor, 425; steam pressure, 125 pounds, steam end of engines, double cylinder, simple; air end, double cylinder, cross compound; area of two steam cylinders, 9.42 square feet; area of high pressure air cylinders, 9.42 square feet; area of low pressure cylinders, 15.17 square feet; speed of compressors, from 127 to 137 revolutions per minute. All engines are equipped with individual lubricators on steam cylinders, and on each valve on the air end. The return oiling system is in use on all bearings, and engine oil is filtered before returning to the supply or pressure tank. The reports for each plant show:

Rio Grande—Valve oil used, 27¼ gallons; revolutions per gallon, 275,332; square feet of area rubbed over per pint of oil, 1,296,752. Air compressor oil used, 37 gallons; revolutions per gallon of air compressor oil, 202,770; square feet of area rubbed over per pint of oil, 1,246,516. Stationary engine oil used, 33¾ gallons; revolutions per gallon of stationary engine oil, 222,481. Plant of five compressors runs 10½ hours per day, except Sunday.

Empire—Valve oil used, 71 3-10 gallons; revolutions per gallon of valve oil, 256,577; square feet of area rubbed over per pint of valve oil, 1,208,492. Air compressor oil used, 73½ gallons; revolutions per gallon of air compressor oil, 248,723; square feet of area rubbed over per pint of air compressor oil, 1,529,064. Stationary engine oil used, 84½ gallons; revolutions per gallon of oil, 216,346. Plant of five compressors runs 22½ hours per day.

Las Cascadas—Valve oil used, 25 gallons; revolutions per gallon of valve oil, 256,732; square feet of area rubbed over per pint, 1,209,188. Air compressor oil used, 28 gallons; revolutions per gallon, 229,224; square feet of area rubbed over per pint of oil, 1,409,154. Stationary engine oil used, 40 gallons; revolutions per gallon, 160,456. Plant of four compressors runs 10½ hours per day, except Sunday.

The consumption of oil at Balboa and Empire electric plants was: Balboa—Valve oil, 33 gallons; stationary engine oil, 20 gallons; air compressor oil, 10 gallons. Empire—Valve oil, 17 gallons; stationary engine oil, 15 gallons.

Accidents at Toro Point.

A premature explosion of dynamite occurred at the quarry on Toro Point about 3 o'clock on Tuesday afternoon, January 10, causing injuries to four West Indian workmen, which resulted fatally in the cases of A. Bowman, check No. 31563, and John Aaron, check No. 107621, after their removal to Colon Hospital. The men were tamping a charge of 30 pounds of explosive when the loading stick they were using broke. Another one was substituted, leaving a part of the broken stick in the hole, and the two pieces of wood scraping against each other and the dynamite, is believed to have caused the latter to ignite. The powder foreman noticed the odor, called a warning, and ran, reaching a point about 20 feet distant from the spot, but the dynamite exploded before workmen could reach a place of safety.

Gordon Grant, a West Indian, check No. 48040, employed on a construction train at Toro Point, was caught between a car and a pile driver on the breakwater trestle on Wednesday, January 11, and almost instantly killed.

Unloading Record in Pedro Miguel District.

On January 7, six unloaders, working in the Pedro Miguel district of the Central Division, unloaded 80 Lidgerwood trains, and, in addition, there were unloaded seven Western dump trains, containing a total of 32,850 cubic yards of rock and earth. The Lidgerwood trains were composed of 20 cars, each car containing 19 cubic yards of material, the Western dump trains being composed of 35 cars, each car containing 10 cubic yards. The material contained in these cars was wasted on the Miraflores and Balboa dumps.

Record Excavation in Culebra District.

On January 11, eighteen steam shovels of the 200-ton class, working in the Culebra construction district of the Central Division, excavated 36,009 cubic yards of rock and earth, or an average of 2,000½ cubic yards per shovel, for the working day of eight hours. The shovels were under steam 144 hours, were actually at work 109 hours and 15 minutes, were delayed 23 hours and 10 minutes waiting for cars, the other delays being on account of mining, cleaning track, repairing shovel, moving back, etc. This is the highest yardage ever excavated in any district of the Central Division, in one day.

On January 5, twenty steam shovels of the 200-ton class, working in the Culebra construction district, excavated 34,985 cubic yards of material in the 8-hour working day, or an average of 1,749 cubic yards per shovel, for the day. The shovels were under steam 160 hours, were actually working 112 hours, the principal delay being on account of waiting for cars, amounting to 37 hours and 5 minutes. The other delays were on account of mining, cleaning track, repairing shovel, moving back, etc.

On January 3, twenty shovels, working in the Culebra construction district, excavated 33,099 cubic yards of rock and earth in the working day of eight hours. The shovels were under steam 160 hours, and were actually at work 113 hours and 25 minutes, waiting for cars 35 hours and 20 minutes, the rest of the time being lost in mining, cleaning track, repairing shovels, moving back, etc. The average per shovel, per day, was 1,655 cubic yards.

Porto Bello Crusher.

A statement of the work done at the Porto Bello crusher, by days, for the week ending January 14, follows:

DATE.	Hours worked.	Cubic Yards.
January 9	5:50	1,739
January 10	9:03	3,362
January 11	9:08	3,549
January 12	6:59	2,550
January 13	8:42	3,829
January 14	7:46	3,049
Total	47:28	18,078

Bids for Lease of Buildings.

Bids will be received by the Collector of Revenues up to and including January 25, 1911, for the leasing to the highest bidder, from February 1, 1911, for a period of not more than three years, of building No. 30 at Paraiso, owned by the Canal Zone Government. The building is of French construction, one story, contains two rooms, and one oven. Bids should be enclosed in envelopes addressed to the Collector of Revenues, marked "Bids for a lease to Building No. 30 at Paraiso." TOM M. COOKE, *Collector of Revenues.*

Bids will be received by the Collector of Revenues, up to and including January 25, 1911, for the leasing to the highest bidder, from February 1, 1911, for a period of not more then three years, of building No. 16 at Empire, owned by the Canal Zone Government. The building is of French construction, two stories, and contains, in all, 12 rooms. Bids should be in envelopes marked "Bids for a lease to Building No. 16 at Empire."

TOM M. COOKE, *Collector of Revenues.*

LABOR FORCE AND QUARTERS IN DECEMBER.

On December 28, there were 35,132 employes actually at work on the Canal and the Panama railroad, and of that number, 29,088 were Canal employes. The gold force on the Canal work, composed almost entirely of white Americans, was 4,705.

The report of the Chief Quartermaster for December shows that the number of family quarters occupied by "gold" employes was 1,740, which is three more than in November, and the occupants numbered 5,551, an increase of 121. Of this number, 1,878 were women, and 1,841 children. Bachelor quarters occupied by "gold" employes numbered 2,021, and the occupants numbered 3,418, of whom 196 were women. The family quarters occupied by European laborers numbered 282, and the occupants, 916; bachelor quarters, 108, and the number of occupants, 5,310. The family quarters occupied by West Indians numbered 1,061, and the occupants, 4,490; bachelor quarters, 252, and the number of occupants, 4,700. A statement of the force actually at work on December 28, follows:

SOCIAL LIFE OF THE ZONE.

Miscellaneous Events.

The annual meeting of the Grand International Auxiliary, B. of L. E., Las Cascadas, was held in the lodge hall on Friday afternoon, January 13. Following the business meeting, the members adjourned to the home of Mrs. Charles R. Lingo, where a social hour was spent, refreshments being served. The order was organized in 1909, and has a membership of 47. Mrs. C. R. Lingo is a secretary of the B. of L. E. journal.

There will be a meeting at the Gorgona lodge hall on Sunday afternoon, January 22, at 2 o'clock, for the purpose of preparing the petition for the charter for a Canal Zone chapter of the Order of the Eastern Star. It is desired that all those who have expressed their intention of joining the chapter should be present at the meeting. The number of signatures already secured is more than 50.

The Las Cascadas Dancing Club is an organization recently formed in Las Cascadas. Dances are held on the second and fourth Thursday evenings in each month. Special trains will be run for any dance upon request of a club, or a sufficient number of persons to warrant the expense. The club has a membership of 55.

The Army and Navy Union will hold an entertainment and dance at the lodge hall, Empire, on Saturday evening, January 21.

Cristobal Dancing Club.

The first of a series of monthly dances by the newly organized Cristobal Dancing Club was given at the Cristobal clubhouse on the evening of January 14. The club is composed of the younger element of Cristobal, the board of governors being: President, L. E. Burdge; vice-president, W. H. Marsh; secretary and treasurer, W. T. Sexton; other members, E. E. Rigney and G. K. Weston. The next dance will be held on February 11.

Church Notes.

A meeting of the Isthmian Ministers' Association will be held in the Methodist College, Panama, on Monday, February 6, at 3 o'clock. The president, the Rev. W. W. Gray will preside, and an address will be made by the Hon. Maurice H. Thatcher. The Rev. S. Moss Loveridge of Culebra is vice-president of the association; the Rev. A. A. Nellis of Culebra, secretary, and the Rev. E. J. Cooke of Colon, treasurer.

At the meeting of the Isthmian Sunday School Association held at Gorgona on Sunday, January 8, the following officers were elected for the ensuing year: President, Rev. A. A. Nellis; vice-president, H. L. Stuntz; secretary, E. J. Putnam; treasurer, Judge J. B. Marsh. An address by H. L. Stuntz on Sunday school work in the Canal Zone was followed by a discussion. It was suggested that an appeal be made to enlist the sympathy and cooperation of the various chaplains in the Commission service in Sunday school work. The association is planning an outing for the pupils of the federated Sunday schools to be held some time in the dry season.

On Wednesday evening, January 11, the Woman's Altar Guild of Trinity Church, Culebra, held a musicale at the home of Colonel and Mrs. D. D. Gaillard. Those who assisted in the program were: Mrs. T. C. Dickson, Mrs. A. O. Ludwig, Mrs. Adolf Faure, Mrs. Nelson Jacobs, and Mr. A. B. Dickson. Souvenir programs were presented to the 50 guests present.

The Woman's Altar Guild of St. Luke's Church, Ancon, will hold a reception in honor of Bishop Albion W. Knight at the residence of Major and Mrs. Henry A. Brown on Saturday evening, January 21, from 8.30 to 10 o'clock. All members of the congregation, and residents of Ancon, are invited to attend.

A Masonic service will be held at the lodge hall, Paraiso, on Wednesday evening, January 18. The Rev. A. A. Nellis is the chaplain in charge.

Colon Humane Society's Christmas Treat.

The cash contributions for the Christmas tree and entertainment given the poor children of Colon, under the direction of the Humane Society, on the afternoon of December 24, amounted to $362.25. The disbursements aggregated $297.22, leaving an unexpended balance of $65.03.

Boy Scouts in the Canal Zone.

An organization of boy scouts has been effected in Gorgona, with 16 American boys between the ages of six and 16 as members. There is a scout council, composed of T. S. Booz, W. H. Stevens, Harry Otis, Samuel Paulus and Jess T. Hopkins, scout master. The boys are divided into two patrols called the hounds and the horses. Melville Booz is leader of the former, and Harry Otis of the latter patrol. There are two corporals, Eddie Otis and Hartman Stevens. The organization of the Boy Scouts of America is followed in the local organization, and the official handbook, by Lieut.-Gen. Sir Robert Baden-Powell, and Ernest Seton Thompson, is used as the authority. The boys pass an examination in this text book for entrance as tenderfeet, and work from that to second, and then to first class scouts, by examinations and tests. The field activities are somewhat limited, owing to conditions, but several trips have been made into the jungle, when one patrol in advance has marked out the trail by scout signs for the others to follow. Trips for observation are also made. The boys make reports of these trips at their weekly meetings, held in the clubhouse, and points are given according to the number of animals sighted and correctly reported. The scout uniform is khaki shirt and trousers, tan shoes and canvas leggings, and a wide brimmed felt hat. The corporals wear a white V on the left sleeve. The scouts have a patrol pennant, and the American flag is used as their standard.

PERSONAL.

Lieut-Col. Wm. L. Sibert and family, and Capt. F. W. Altstaetter, Corps of Engineers, are on the *Ancon*, which left New York on January 12, and is due to arrive at Cristobal on January 18.

Major Smedley D. Butler, U. S. Marine Corps, in command at Camp Elliott, returned to the Isthmus on the *Alliança*, which arrived at Cristobal on the 16th.

Anti-Cigarette League.

The meetings of the two sections of the Boys' Anti-Cigarette League of Gorgona continue to be held with the usual number present. In the absence of Mrs. A. L. Hackenberg, director of section No. 1, the meetings are held under the direction of her daughter, Miss Ruth Hackenberg. Section No. 2 held a Christmas party in December, and a magic lantern show was the feature of the meeting held in Christmas week. The membership of this section has increased to 13.

An anti-cigarette league was organized at Gatun on January 11, by Mrs. March from Gorgona. Twelve boys enrolled.

A delegation of members of the Association of Mexican Engineers contemplates a visit to the Canal work in the near future. It is expected that about 50 persons, including the Hon. Leandro Fernandez, Minister of Communication and Public Works of Mexico, will make up the delegation.

Alumni and former students of the Pennsylvania State College, now on the Isthmus, are invited to be present at a reception and smoker at the Hotel Tivoli on Saturday evening, January 21.

At a meeting of Gatun Court, No. 6, I. O. P. K., resolutions of sympathy were passed on the deaths of W. H. H. Brady and J. S. Dabbs, Jr.

Band Concert.

A concert will be given by the Isthmian Canal Commission Band, at Gatun, C. Z., on Sunday, January 22, 1911, at 2 p. m. The program follows:

1	March—*Niebelungen*	Moses
2	Selection—*Madame Sherry*	Hoschna
3	Flower Song—*Hearts and Flowers*	Tobani
4	Overture—*Stradella*	Flotow
5	Medley Selection—*My Southern Rose*	Von Tilzer
6	Waltz—*Wedding of the Winds*	Hall
7	*Procrastination Rag*	Cobb
8	Selection—*Carmen*	Bizet
9	March—*New Colonial*	Hall

Chas. E. Jennings, *Musical Director.*

The next concert will be given at Empire on Sunday, January 29, at 6 p. m.

COMMISSION CLUBHOUSES.

Activities of the Young Men's Christian Association.

CULEBRA.

Culebra won three bowling games from Gorgona on Saturday night, January 13, as follows:

Culebra.				Gorgona.			
Herrington..	175	199	162	Halderman	154	118	151
Fleischman..	152	173	149	Otis......	153	177	153
Huttlemeier.	186	156	140	White.....	192	162	139
Mengel.....	170	161	185	Bordt.....	139	161	200
Case.......	174	184	167	Varenkamp	150	130	134
Total.....	857	873	803	Total...	788	748	777

High scores in duckpins during the week were made by Dakin, 104; Case, 102; bigpins, Mengel 200; Case, 201 twice.

The standing in the chess tournament is as follows:

Name.	Won.	Lost.	Name.	Won.	Lost.
Bayne......	5	5	Hepler.....	6	4
Case.......	6	3	Silver......	4	9
Conlan.....	6	3	Soderberg...	5	4
Dubois.....	2	8	Thomson...	5	5
French.....	7	3	Clark......	2	8
Hall........	5	5			

A simultaneous chess tournament will be held on the night of January 27, when Mr. Dubois will play all comers.

The next in the series of informal "socials" will be held at the clubhouse on Friday evening, January 20, at 8 o'clock. A splendid program has been arranged for the enjoyment of every family and bachelor in Culebra. The Hon. Maurice H. Thatcher will take part in the program. An opportunity will be given at the close of the program to become personally acquainted with Mr. and Mrs. Thatcher.

The organization of the topic club has been completed, and the first session will he held on Wednesday evening. The leader of the first three sessions will be H. F. French. The topic to be discussed is "Choosing a vocation for life."

The glee club concert announced in the last issue will be held on February 2, instead of February 22.

EMPIRE.

Last Saturday night, DePoorter of Gatun defeated Hirsh of Empire at pool by a score of 150 to 85. Hirsh will challenge DePoorter again during the next two months.

At the literary society meeting held on the 13th, the debate, "Resolved that recent political events indicate an early dissolution of the two great political parties," was won by the negative.

Six teams are entered in the local bowling league.

At the meeting of the literary society on the 20th, there will be a discussion on "Home reading." The discussion will be led by Mark Hall.

Gray's orchestra of Colon presented an attractive program before a good-sized audience on Monday evening, January 16.

The next moving picture entertainment will be on Thursday evening, January 19.

Physical Director Warr sailed for the Isthmus on the 16th. Immediately upon his return, he will make plans for reopening the gymnasium classes.

"Men of steel" is the title of a course in Bible study to be opened on Sunday morning, January 22, at 9 o'clock. The course will be taught by the secretary of the clubhouse.

The clubhouse has purchased a small phonograph for use during such times as the Victrola is being repaired.

GORGONA.

A new beginners' class in Spanish will be formed on Thursday night, January 19, at 7 p. m. The intermediate class will meet from 8 to 9 p. m., Monday and Thursday; the beginners' class from 7 to 8, Monday and Thursday; the advanced class, Tuesday and Thursday from 7.15 to 8 p.m. A class will be formed for men and women who want to learn the language.

A moving picture show will be held Friday, January 20, in the game room at 8.15 p. m. Admission 25 cents; members free.

The discussion club will hold an open meeting for men and women on Wednesday night at 7.30 p. m. The discussion will be "Should women vote." Mr. Bennick of Corozal will lead.

The lecture by Mr. Frank E. Jackson on the "Princes and ruling chiefs and their palaces in India," was well attended. The pictures shown were taken by Mr. Jackson during a four year stay in India.

E. C. Soule of Gatun will give an address on "Universal peace" at the monthly song service on January 22, at 8.15 p. m. Admission is free.

GATUN.

There will be a meeting of the citizens of Gatun at the clubhouse on Saturday night, January 21, at 8 o'clock, to consider the proposition of providing a playground and athletic field in Gatun. The various organizations, clubs, and fraternal societies are invited to send representatives.

The membership committee has decided to continue its weekly meetings until after the campaign closes on February 1, when its meetings will be held bimonthly.

Three new members were added to the glee club, and two new members were added to the mechanical drawing class, during the past week.

Messrs. Huber, Wilson, Phillips, Purdy, Collier, and McHie are especially interested in wrestling. There will be some interesting bouts in the near future.

In the two-man duckpin tournament, the teams having a score of 550, and over, are as follows: DePoorter and Barte, 569; Bull and Barte, 569; Durand and DeMoll, 564, Duryea and Barte, 561; C. R. Harrington and DeMoll, 555; Luckey and Barte, 551; Severn and Barte, 550; Dillon and Barte, 555.

Ten sets of Staunton chessmen recently ordered from the States have arrived and a tournament will be started this week.

CRISTOBAL.

An effort will be made by the membership committee of the Cristobal association to increase the membership to 450. The men who enjoy bowling are especially interested in this movement, for the reason that two additional alleys will be authorized for the Cristobal association, when the membership passes the 450 mark.

The glee club of the Cristobal association, under the leadership of A. B. Dickson, meets every Tuesday at 8 p. m. The average attendance has been about 18, but there is room for more voices.

On Thursday evening, January 19, there will be a meeting of all those interested in the field and track meet which will be held at Empire on February 22. All interested in athletics should be present at this meeting.

Cristobal bowlers won two out of three games from the Gatun team on Saturday night, January 14. Following are the scores:

Cristobal.				Gatun.			
Barrett.....	211	198	171	Severn....	188	190	146
Blackburn...	170	163	173	Wolf......	145	176	187
Burns......	184	159	135	DeMoll...	184	151	177
Bullard.....	158	160	188	Harrington	137	173	153
Thomas.....	161	160	186	Barte.....	215	208	175
Total.....	884	840	853	Total...	869	898	838

PORTO BELLO.

Thursday night, a class was started in the study of "Life problems." The discussion was on "The value of work," and "The choice of a life work." The attendance was 33.

Anchorage posts have been driven on each side of the dock at the clubhouse. Ropes and pulleys have been supplied for the use of those who own a boat or cayuco.

A. C. Cornelison has been appointed to fill a vacancy on the local council.

For two months and a half, the Sunday evening song service has been a feature at the clubhouse. Thirty-five people attended last Sunday.

OFFICIAL CIRCULARS.

Restriction on Use of Water.

CULEBRA, C. Z., January 14, 1911.

CIRCULAR No. 365:

A necessity exists for restricting the use of water from the Camacho, Rio Grande and Cocoli reservoirs during the dry season.

The use of garden or other hose for watering plants and flowers is prohibited except by authorized gardeners and employes of the Quartermaster's Department.

District quartermasters are directed to report all leaks in faucets or pipes, and all violations of this order.

GEO. W. GOETHALS,
Chairman.

Sale or Transfer of Commissary and Hotel Books.

CULEBRA, C. Z., May, 17, 1907.

CIRCULAR No. 122, (Republished):

The transfer of commissary and hotel books issued by the Isthmian Canal Commission for the benefit of its employes, or the sale or other disposal of same is strictly prohibited. Any violation of this order should be reported to the Chairman, and will be considered cause for the employe's discharge.

GEO. W. GOETHALS, *Chairman.*

Auction Sale of Dairy Cows.

The auction sale of dairy cows which was to be held on January 18, at the Ancon Hospital dairy, has been postponed until Saturday, January 21, at 2 p. m., and will take place at the Ancon corral.

Sale of Animals at Public Auction.

There will be sold at public auction by the district quartermaster at Ancon, C. Z., at the old corral, at 2 p. m., Saturday, January 21, 1911, to the highest bidder for cash, the following Isthmian Canal Commission property:

Fifteen (15) mules, American; one (1) pony, native.

The Government reserves the right to accept or reject any or all bids. For further information apply to district quartermaster, Ancon C. Z.

C. A. DEVOL, *Chief Quartermaster.*

Runs—Ancon: R. Drennan, L. Drennan (2), Nygren, James, Murray; Gorgona: Briggs, Ridge, Wright, Clement, Tretter. Runs earned—Ancon, 1; Gorgona, 1. Two base hit—Potter. Home run—Tretter. Sacrifice hits—Smith, Nygren, Barney. Sacrifice fly—Emery. Stolen bases—Barney, Clement, Wright, James. Bases on balls—Off Murray, 2. Struck out—By Tretter, 7; by Murray, 5. Hit by pitcher—By Murray, 1; by Tretter, 1. Left on bases—Ancon, 2; Gorgona, 6. Double play—Murray to Pearman. Wild pitch—Tretter. Passed ball—Barney. First base on errors—Gorgona, 3; Ancon, 1. Umpire—Freel. Time of game—2.00. Scorer—B. W. Payne.

Sale of Horse at Public Auction

There will be sold at public auction by the Administrator of Estates at the corral in Culebra, C. Z., at 1 p. m., on Monday, January 23, 1911, to the highest bidder for cash, the following property belonging to the estate of the late Willis S. Holstead:

One (1) horse, age 2½ years, 14 hands high, weight about 900 pounds, with white star in forehead.

The Administrator of Estates reserves the right to reject any or all bids. For further information apply to Administrator of Estates, Ancon, C. Z.

TOM M. COOKE, *Administrator of Estates*

COMMISSARY DEPARTMENT.

The hours during which commissaries are open are as follows:

Cristobal and Culebra, 8 a. m. to 12.30 p. m.; 2 p. m. to 7 p. m.

All other commissaries, 8 a. m. to 1 p. m.; 3 p. m. to 7 p. m.

Retail prices of cold storage provisions for the week beginning January 16.

FRESH MEATS.

	Price.
Mutton—Stewing, per pound	6
Shoulder, neck trimmed off, (4 lbs. and over), per pound	9
Entire forequarter (not trimmed) 10 pounds and over, per pound	8
Leg, (8 to 10 pounds), per pound	17
Cutlets, per pound	18
Short cut chops, per pound	20
Lamb—Stewing, per pound	6
Entire forequarter, neck trimmed off, per pound	9
Leg (5 to 8 pounds), per pound	20
Chops, per pound	24
Cutlets, per pound	24
Veal—Stewing, per pound	8
Shoulder for roasting (not under 4 pounds), per pound	14
Loin for roasting, per pound	19
Chops, per pound	24
Cutlets, per pound	28
Pork cuts, per pound	*16
Beef—Suet, per pound	2
Soup, per pound	5
Stew, per pound	9
Corned, per pound	12, 14, 16
Chuck roast, (3 pounds and over), per pound	13
Pot roast, per pound	15
Rib roast, second cut (not under 3½ pounds), per pound	18
Rib roast, first cut (not under 3 pounds), per pound	20
Sirloin roast, per pound	21
Rump roast, per pound	21
Porterhouse roast, per pound	21
Steak, Chuck, per pound	14
Round, per pound	15
Rib, per pound	20
Sirloin, per pound	21
Porterhouse, per pound	21
Rump, per pound	21
Tenderloin, per pound	24

MISCELLANEOUS.

Livers—Beef, per pound	10
Calf, each	60
Half, each	30
Sausage—Pork, per pound	17
Bologna, per pound	12
Frankfurter, per pound	14
Leberwurst, per pound	13
Sweet bread—Veal, per pound	1.20
Beef, per pound	25
Eggs, fresh, dozen	40
½ dozen only	26
Bluefish, fresh, per pound	16
Cod, fresh, per pound	10
Halibut, fresh, per pound	15
Oysters, in 1-qt. kegs, keg	50

POULTRY AND GAME.

Chickens—Fancy roasting, large, each	1.50
medium, each	1.30
Fowls, each	70, 82, 93, 1.04, 1 15
Ducks, large, each	1 50
medium, each	1 30
Broilers, each	75
Turkeys, per pound	30
Squabs, each	35
Capons, each	2.60
Pheasants, each	70, 1.00
Partridges, each	50
Grouse, each	85

CURED AND PICKLED MEATS.

Ham—English York Cut, per pound	30
German, Westphalia, per pound	36
Sugar cured, per pound	20
Sliced, per pound	23
Half, for boiling, per pound	21
Boiled, per pound	25
Hocks, per pound	‡08
Bacon—Breakfast, whole piece, per pound	27
Breakfast, sliced, per pound	28
Beef, salt, family, per pound	9½
Pork, salt, family, per pound	14
Ox tongues, each	80
Pigs' feet, per pound	10
Tongues, per pound	16
Mutton, mess, per pound	7

DAIRY PRODUCTS.

Butter—Creamery special, per pound	40
Cheese—Roquefort, per pound	38
Philadelphia Cream, cake	10
Young America, per pound	22
Swiss, per pound	26
Edam, each	1.00
Camembert, in large tins, tin	38
Camembert, in small tins, tin	14
Neufchatel, each	6
Gouda, per pound	34
Milk, Briarcliff, bottle	**25
Buttermilk, bottle	**15

	Price.
Ice cream, quart	‡25
Ice cream, ½-gallon	‡50

VEGETABLES AND FRUITS.

Beets, per pound	3
Celery, per head	6
Carrots, per pound	3
Cabbage, per pound	3
Cucumbers, per pound	10
Lettuce, per pound	*15
½ pound	*8
Onions, per pound	3
Potatoes, white, per pound	3
Sweet, per pound	2½
Squash, per pound	4
Turnips, per pound	3
Yams, per pound	3½
Apples, per pound	5
Cranberries, per pound	10
Grapefruit, each	4
Lemons, dozen	24
Limes, per 100	80
Oranges, per dozen	12

*Indicates reduction from last list.

**Indicates 5 cents allowed for return of bottle.

†Indicates advance on last list.

‡Sold only from commissaries; no orders taken for delivery.

Supplies for Canal Work.

The following steamers with supplies for the Isthmian Canal Commission arrived at the ports of Cristobal and Colon during the week ending January 14, 1911:

Haakon VII, January 9, from Jacksonville, with 1,583,000 feet yellow pine lumber for Mechanical Division.

Cristobal, January 10, from New York, with 24, 925 barrels cement for Atlantic Division; 116,300 bags cement for Pacific Division.

Panama, Janauary 11, from New York, with 10 pieces steel plate for Atlantic Division; 19 packages drill outfits for Pacific Division; 578 pieces malleable iron castings,7 cases machinery for Mechanical Division; 33 cases drugs and sundries, 43 barrels alcohol for Sanitary Department; 32 crates iron pails, 20 bundles galvanized anchor rods, 10 barrels iron anchors, 10 cases paint, 10 iron water gates, 14 cases railroad torpedoes, 10 packages lubricators for stock; and a miscellaneous cargo, the whole consisting of 897 packages, weighing 93 tons.

Atenas, January 12, from New Orleans, with 248 pieces washers, 2 barrels washers, for Atlantic Division; 44 cases castings for Mechanical Division; 250 crates fire brick, 20 pieces rail benders, 84 packages push carts for stock.

Zacapa, January 12, from New York, with 25 tons lock construction material for Atlantic Division: 315 coils rope, 40 bundles brooms, 24 cases tape fuse for stock.

Misdirected Letters.

Ancon, C. Z., January 14, 1911.

The following insufficiently addressed letters, originating in the United States and its possessions, have been received in the office of the Director of Posts, and may be secured upon request of the addressee:

Ayers, Mrs. Francis
Beam, Mrs. M. T., care Irwin Beam
Bentley, L. E. (registered)
Bowles, James T. (j)

COLON TO BARBADOS, CALLING AT TRINIDAD.

Magdalena	R. M.	Tuesday	Jan. 31
Orotava	R. M.	Tuesday	Feb. 14

The next sailing of the Leyland Line will be as follows: William Cliff on or about January 28, for New Orleans via Kingston, Ja.

Hamburg-American steamers leave for New York every Tuesday at 10 a. m.; for Jamaica every fortnight, connecting there with steamers for all points in Cuba; for Port Limon every Tuesday, direct, or by way of Bocas del Toro.

Royal Mail steamers leave for New York on alternate Mondays at 5 p. m.; for Southampton on alternate Tuesdays at 10 a. m.

United Fruit Company's ships for New Orleans direct leave on Thursday at 3 p. m.; for New Orleans via Port Limon and Puerto Barrios on Thursday at 6 p. m., and for New York on Thursday at 11 a. m.

Sailings of the French line (Cié Générale Transatlantique) for Venezuelan ports, Martinique and Guadeloupe on the 3d and 20th of each month.

LAWS GOVERNING NAVIGATION

OF THE

PANAMA CANAL

(Part II of The Canal Record, January 18, 1911.)

Rules for the Navigation of the Panama Canal and Approaches thereto, Including all Waters under the Jurisdiction of the Isthmian Canal Commission.

In the following rules every steam vessel, which is under sail and not under steam, is to be considered a sailing vessel, and every vessel under steam, whether under sail or not, is to be considered a steam vessel.

The words *steam vessel* and *steamer* shall include any vessel propelled by machinery.

A vessel is *under way*, within the meaning of these rules, when she is not at anchor, or made fast to the shore, or aground.

Risk of collision can, when circumstances permit, be ascertained by carefully watching the compass bearing of an approaching vessel. If the bearing does not appreciably change, such risk should be deemed to exist.

Signals.

The whistle *signals* provided in these rules shall be sounded on an efficient whistle or siren sounded by steam or by some suitable substitute for steam.

A *short blast* of the whistle shall mean a blast of about one second's duration.

A *prolonged blast* of the whistle shall mean a blast of from four to six seconds' duration.

One short blast of the whistle signifies intention of or assent to steamer first giving the signal to direct course to own starboard, except when two steamers are approaching each other at right angles or obliquely, when it signifies intention of steamer which is to starboard of the other to hold course and speed.

Two short blasts of the whistle signify intention of or assent to steamer first giving the signal to direct course to own port, except when two steamers are approaching each other at right angles or obliquely, when the signal signifies desire of or assent to steamer which is to the port of the other to cross the bow of steamer to starboard.

Three short blasts of the whistle shall mean, "My engines are going at full speed astern."

When vessels are in sight of one another, a steam vessel under way whose engines are going at full speed astern shall indicate that fact by *three short blasts* on the whistle.

Rule 1. If, when steam vessels are approaching each other, either vessel fails to understand the course or intention of the other, from any cause, the vessel so in doubt shall immediately signify the same by giving several short and rapid blasts, not less than four, of the steam whistle, the *danger signal.*

Whenever the *danger signal* is given, the engines of *both steamers shall be stopped and backed* until the headway of the steamers has been fully checked; nor shall the engines of either steamer be again started ahead until the steamers can safely pass each other, and the proper signals for passing have been given, answered, and understood.

Rule 2. Steam vessels are forbidden to use what has become technically known among pilots as *"cross signals"*—that is, answering one whistle with two, and answering two whistles with one. In all cases, and under all circumstances, a pilot receiving either of the whistle signals provided in these rules, which, for any reason he deems injudicious to comply with, instead of answering it with a cross signal, shall at once sound the *danger signal* and observe the rule applying thereto (Rule 1).

Rule 3. The *signals for passing*, by the blowing of the whistle, shall be given and answered by pilots, in compliance with these rules, not only when meeting "head and head," or nearly so, but at *all times*, when the steam vessels are in sight of each other, when passing or meeting at a distance within a half mile of each other, and whether passing to the starboard or port.

The whistle signals provided in the rules for steam vessels meeting, passing, or overtaking, are never to be used except when steamers are in sight of each other, and the course and position of each can be determined in the day time by a sight of the vessel itself, or by night by seeing its signal lights. In fog, mist, or heavy rain storms, when vessels cannot see each other, fog signals only must be given.

Situations

Rule 4. When steam vessels are *approaching each other head and head—that is, end on, or nearly so*, it shall be the duty of each to pass on the port side of the other; and either vessel shall give, as a signal of her intention, one short and distinct blast of her whistle, which the other vessel shall answer promptly by a similar blast of her whistle, and thereupon such vessels shall pass on the port side of each other. But if the courses of such vessels are so far on the starboard of each other as not to be considered as meeting head and head, either vessel shall immediately give two short and distinct blasts of her whistle, which the other vessel shall answer promptly with two similar blasts of her whistle, and they shall pass on the starboard side of each other.

The foregoing only applies to cases where vessels are meeting end on, or nearly end on, in such manner as to involve risk of collision; in other words, to cases in which, by day, each vessel sees the masts of the other in a line, or nearly in a line, with her own, and by night, to cases in which each vessel is in such a position as to see both the side lights of the other.

It does not apply by day to cases in which a vessel sees another ahead crossing her own course, or by night to cases where the red light of one vessel is opposed to the red light of the other, or where the green light of one vessel is opposed to the green light of the other, or where a red light without a green light or a green light without a red light, is seen ahead, or where both green and red lights are seen anywhere but ahead.

Rule 5. Whenever a steam vessel is *nearing a short bend or curve in the channel*, where, from the height of the banks or other cause, a steam vessel approaching from the opposite direction cannot be seen for a distance of half a mile, such steam vessel, when she shall have arrived within half a mile of such curve or bend, shall give a signal by one long blast of the steam whistle, which signal shall be answered by a similar blast, given by any approaching steam vessel that may be within hearing. Should such signal be answered by a steam vessel upon the farther side of such bend, then the usual signals for meeting and passing shall immediately be given and answered; but, if the first alarm signal of such vessel be not answered, she is to consider the channel clear, and govern herself accordingly.

When steam vessels are moved from their docks or berths, and other boats are liable to pass from any direction toward them, they shall give the same signal as in the case of vessels meeting at a bend, but immediately after clearing the berths so as to be fully in sight, they shall be governed by the steering and sailing rules.

Rule 6. *When steam vessels are running in the same direction*, and the vessel which is astern shall desire to pass on the right or starboard hand of the vessel ahead, she shall give one short blast of the steam whistle, as a signal of such desire, and if the vessel ahead answers with one blast, she shall put her helm to port; or if she shall desire to pass on the port or left side of the vessel ahead, she shall give two short blasts of the steam whistle as a signal of such desire, and if the vessel ahead answers with two blasts, shall put her helm to the starboard; or if the vessel ahead does not think it safe for the vessel astern to attempt to pass at that point, she shall immediately signify the same by giving several short and rapid blasts of the steam whistle, not less than four, and under no circumstances shall the vessel astern attempt to pass the vessel ahead until such time as they have reached a point where it can be safely done, when said vessel ahead shall signify her willingness by blowing the proper signals. The vessel ahead shall in no case attempt to cross the bow or crowd upon the course of the passing vessel.

All steamers under way in the channel of the Canal shall proceed, either up or down the channel, as close to the starboard or right hand side of said channel as safety will allow. Vessels overtaking above named craft shall blow two blasts of the steam whistle, and upon receiving the proper response, shall pass the overtaken vessel on the port or left hand side, leaving the overtaken vessel on the starboard or right side

Every vessel coming up with another vessel from any direction more than two points abaft her beam—that is, in such a position with reference to the vessel which she is overtaking that at night she would be unable to see either of that vessel's side lights, shall be deemed to be *an overtaking vessel*; and no subsequent alteration of the bearing between the two vessels shall make the overtaking vessel a crossing vessel within the meaning of these rules, or relieve her of the duty of keeping clear of the overtaken vessel until she is finally passed and clear. As by day the overtaking vessel cannot always know with certainty whether she is forward of or abaft this direction from the other vessel she should, if in doubt, assume that she is an overtaking vessel and keep out of the way.

Rule 7. When two steamers are approaching any bend in the channel of the Canal or its harbors or approaches, side by side, or nearly so, running in the same direction, the steamer on the right or starboard side of the other shall have the right of way, and the steamer on the left or port side shall check her way and drop astern, and the steamer on the port side of the other shall keep at a safe distance astern (not less than three lengths) until both steamers have fully passed the bend and are again in the straight channel.

Rule 8. When two steamers are *approaching each other at right angles or obliquely so as to involve risk of collison*, other than when one steamer is overtaking another, the steamer which has the other on her own port side shall hold her course and speed; and the steamer which has the other on her own starboard side shall keep out of the way of the other by directing her course to starboard so as to cross the stern of the other steamer, or, if necessary to do so, slacken her speed, or stop, or reverse. The steamer having the other on her own port bow shall blow one blast of her whistle as a signal of her intention to cross the bow of the other, holding her course and speed, which signal shall be promptly answered by the other steamer by one short blast of her whistle as a signal of her intention to direct her course to starboard so as to cross the stern of the other steamer or otherwise keep clear.

If from any cause whatever the conditions covered by this situation are such as to prevent immediate compliance with each other's signals, the misunderstanding or objection shall at once be made apparent by blowing the danger signal, and both steamers shall be stopped and backed, if necessary, until signals for passing with safety are made and understood.

Rule 9. When a *steam vessel and a sailing vessel* are proceeding in such directions as to involve the risk of collision, the steam vessel shall keep out of the way of the sailing vessel.

Rule 10. Every steam vessel which is directed by these rules to *keep out of the way* of another vessel, shall, if the circumstances of the case permit, avoid crossing ahead of the other.

Rule 11. *In narrow channels* every steam vessel shall, when it is safe and practicable, keep to that side of the fairway or midchannel which lies on the starboard side of such vessel.

Rule 12. In obeying and construing these rules due regard shall be had to all *dangers of navigation and collision*, and to any *special circumstances* which may render a departure from the above rules necessary in order to avoid immediate danger.

Sound signals in fogs, etc.

Rule 13. In fog, mist, or heavy rainstorms, whether by day or night, signals shall be given as follows:

A steam vessel under way, except when towing other vessels, or being towed, shall sound, at intervals of not more than one minute, on the whistle or siren, a prolonged blast.

A steam vessel when towing other vessels shall sound, at intervals of not more than one minute, on the whistle or siren, three blasts in succession, namely—one prolonged blast followed by two short blasts.

Sea-going dredges when dredging in a fog shall give four blasts in succession—one prolonged blast followed by three short blasts.

A vessel towed may give, at intervals of not more than one minute, on the fog horn, a signal of three blasts in succession, namely—one prolonged blast followed by two short blasts, and she shall not give any other.

A vessel when at anchor shall, at intervals of not more than one minute, ring the bell rapidly for about five seconds.

Speed to be moderate in fog, etc.

Rule 14. Every steam vessel shall, in a fog, mist, or heavy rainstorm, go at a *moderate speed*, having careful regard to the existing circumstances and conditions.

A steam vessel hearing, apparently forward of her beam, the fog signal of a vessel, the position of which is not ascertained, shall, as far as the circumstances of the case admit, stop her engines, and then navigate with caution until danger of collision is over.

Posting of rules.

Rule 15. On steam and other motor vessels of over 100 gross tons, two copies of the placard form of these rules (Form B. L. I.) shall be kept posted up in conspicuous places in the vessel, one copy of which shall be kept posted up in the pilot house. On steam and other motor vessels of 25 gross tons and not over 100 gross tons, two copies of the placard form of these rules shall be kept on board, one copy of which shall be kept posted in the pilot house. On steam and other motor vessels of 25 gross tons and under, and of more than 10 gross tons, two copies of the placard form of the rules shall be kept on board, and, where practicable, one copy thereof shall be kept conspicuously posted up in the vessel. On steam and other motor vessels of not more than 10 gross tons, two copies of the pamphlet form of the rules shall be kept on board, and, where practicable, one copy thereof shall be kept conspicuously posted up in the vessel.

Lights to be carried by ferry boats on all waters under the jurisdiction of the Isthmian Canal Commission.

Rule 16. Ferry boats, propelled by machinery, and navigating the waters of the Canal Zone, shall carry the range lights and the side lights required by law to be carried on steam vessels.

Lights to be carried by barges, Canal boats, scows, and lighters being towed astern of steam vessels.

Rule 17. Barges, canal boats, scows, and lighters being towed astern of steam vessels, when towing singly or what is known as tandem towing, shall each carry a white light on the bow and a white light on the stern.

When towed with a hawser two or more abreast, when in one tier, they shall carry a white light on the bow and a white light on the stern of each of the outside boats; when in more than one tier, each of the outside boats shall carry a white light on its bow; and the outside boats in the last tier shall each carry, in addition, a white light on the outer after part of the stern.

Barges, etc., towed alongside a steam vessel, if on the starboard side of said steam vessel, shall display a white light on her own starboard bow, and if on the port side of said steam vessel, shall display a white light on her own port bow; and if there is more than one barge or canal boat alongside, the white lights shall be displayed from the outboard side of the outside barge or canal boat.

When barges, etc., are in tiers and towed at a hawser, there shall be carried on the forward port side of each tier a white light, and on the forward starboard side of the starboard boat in each tier a white light, and on the after port side of the port boat in the stern tier a white light, and on the after starboard side of the starboard tier a white light.

Rule 18. Rafts propelled by hand power, or by the current of the river or tide, or which shall be anchored or moored in or near the channel or fairway, or proceeding in tow of a steam vessel, shall carry one white light on each outside corner of the raft, making four lights in all.

Row boats and cayucos, whether under oars or sail, shall carry a white light, visible all around the horizon, at an elevation above the surface of the water of at least three (3) feet.

The white light required by these rules for rafts and other water craft shall be carried from sunset to sunrise, in a lantern so constructed as to show a clear, uniform, and unbroken light, visible all around the horizon, and of such intensity as to be visible on a dark night with a clear atmosphere at a distance of at least one mile. The lights for rafts shall be suspended so that the lights shall not be less than eight (8) feet above the surface of the water.

Rule relating to the use of searchlights.

Rule 19. Any master or pilot of any steam vessel who shall flash or caused to be flashed the rays of the searchlight into the pilot house of a passing vessel shall be deemed guilty of misconduct and shall be liable to have his license suspended or revoked.

Rule prohibiting unnecessary sounding of the steam whistle.

Rule 20. Unnecessary sounding of the steam whistle is prohibited within any harbor limits of the Canal Zone. Whenever any licensed officer in charge of any steamer authorizes or permits such unnecessary whistling, upon conviction thereof before the board of local inspectors having jurisdiction, such officer shall be suspended from acting under his license as the inspectors trying the case deem proper.

Rules concerning lights, etc.

Rule 21. The word "visible" in these rules, when applied to lights, shall mean visible on a dark night with a clear atmosphere.

Rule 22. The rules concerning lights shall be complied with in all weathers from sunset to sunrise, and during such time no other lights which may be mistaken for the prescribed lights shall be exhibited.

Rule 23. A steam vessel when under way shall carry:

(*a*) On or in front of the foremast, or, if a vessel without a foremast, then in the fore part of the vessel, a bright white light so constructed as to show an unbroken light over an arc of the horizon of twenty points of the compass, so fixed as to throw the light ten points on each side of the vessel, namely—from right ahead to two points abaft the beam on either side, and of such a character as to be visible at a distance of at least five miles.

(*b*) On the starboard side a green light so constructed as to show an unbroken light over an arc of the horizon of ten points of the compass, so fixed as to throw the light from right ahead to two points abaft the beam on the starboard side, and of such a character as to be visible at a distance of at least two miles.

(*c*) On the port side a red light so constructed as to show an unbroken light over an arc of the horizon of ten points of the compass, so fixed as to throw the light from right ahead to two points abaft the beam on the port side, and of such a character as to be visible at a distance of at least two miles.

(*d*) The said green and red side lights shall be fitted with inboard screens projecting at least three feet forward from the light, so as to prevent these lights from being seen across the bow.

(*e*) A sea-going steam vessel when under way shall carry an additional white light similar in construction to the light mentioned in subdivision (*a*). These two lights shall be so placed in line with the keel that one shall be at least 15 feet higher than the other, and in such a position with reference to each other that the lower light shall be forward of the upper one. The vertical distance of these lights shall be less than the horizontal distance.

Rule 24. A steam vessel when towing another vessel shall, in addition to her side lights, carry two white bright lights in a vertical line one over the other, not less than three feet apart, and when towing more than one vessel, shall carry an additional bright white light three feet above or below such lights, if the length of the tow measuring from the stern of the towing vessel to the stern of the last vessel towed exceeds 600 feet. Each of the lights shall be of the same construction and character, and shall be carried in the same position as the white light mentioned in Rule 23.

Such steam vessel may carry a small white light abaft the funnel or aftermast for the vessel towed to steer by, but such light shall not be visible forward of the beam.

Rule 25. A sailing vessel under way or being towed shall carry the same lights as are prescribed by Rule 23 for a steam vessel under way, with the exception of the white lights mentioned therein, which they shall never carry.

Rule 26. Whenever, as in the case of vessels of less than 10 gross tons under way during bad weather, the green and red side lights cannot be fixed, these lights shall be kept at hand lighted and ready for use; and, shall, on the approach of or to other vessels be exhibited on their respective sides in sufficient time to prevent collision, in such manner as to make them most visible, and so that the green light shall not be seen on the port side nor the red light on the starboard side, nor, if practicable, more than two points abaft the beam on their respective sides. To make the use of these portable lights more certain and easy, the lanterns containing them shall each be painted outside with the color of the light they respectively contain, and shall be provided with proper screens.

Rule 27. Pilot vessels when engaged on their station on pilotage duty shall not show the lights required for other vessels, but shall carry a white light at the masthead, visible all around the horizon, and shall also exhibit a flare-up light or flare-up lights at short intervals, which shall never exceed 15 minutes.

A steam pilot vessel when engaged on pilotage duty and not at anchor shall, in addition to the lights required for all pilot vessels, carry at a distance of eight feet below her white masthead light a red light, visible all around the horizon and of such a character as to be visible on a dark night with a clear atmosphere at a distance of at least two miles, and also the colored side lights required to be carried by vessels when under way.

When engaged on her station on pilotage duty and at anchor, she shall carry in addition to the lights required for all pilot boats, the red light above mentioned, but not the colored side lights

Rule 28. (*a*) Fishing vessels having less than 10 gross tons when under way, and not having their nets, trawls, dredges or lines in the water, shall carry the usual white light eight feet above the deck and shall have ready at hand a lantern with a green glass on one side and a red glass on the other side, and on approaching to or being approached by another vessel, such lantern shall be exhibited in sufficient time to prevent collision, so that the green light shall not be seen on the port side nor the red light on the starboard side.

(*b*) All fishing vessels and fishing boats of ten gross tons or upward, when under way and when not having their nets, trawls, dredges, or lines in the water, shall carry and show the same lights as other vessels under way.

(*c*) All vessels, when trawling, dredging, or fishing with any kind of dragnets or lines, shall exhibit, from some part of the vessel where they can be best seen, two lights. One of these lights shall be red and the other shall be white. The red light shall be above the white light, and shall be at a vertical distance from it of not less than six feet and not more than 12 feet; and the horizontal distance between them, if any, shall not be more than 10 feet. These two lights shall be of such a character and contained in lanterns of such construction as to be visible all around the horizon, the white light a distance not less than three miles and the red light of not less than two miles.

Rule 29. A vessel which is being overtaken by another shall show from her stern to such last mentioned vessel a white light or a flare-up light.

Rule 30. A vessel under 150 feet in length when at anchor, shall carry forward, where it can best be seen, but at a height not exceeding 20 feet above the hull, a white light in a lantern constructed so as to show a clear, uniform, and unbroken light visible all around the horizon at a distance of at least one mile.

A vessel of 150 feet or upwards in length when at anchor shall carry in the forward part of the vessel, at a height of not less than 20 and not exceeding 40 feet above the hull, one such light, and at or near the stern of the vessel, and at such a height that it shall be not less than 15 feet lower than the forward light, another such light.

The length of the vessel shall be deemed to be the length appearing in her certificate of registry.

Rule 31. Every vessel may, if necessary, in order to attract attention, in addition to the lights which she is by these rules required to carry, show a flare-up light or use any detonating signal that cannot be mistaken for a distress signal.

Rule 32. Nothing in these rules shall interfere with the operation of any special rules made by the government of any nation with respect to additional station and signal lights for two or more ships of war or for vessels sailing under convoy, or with the exhibition of recognition signals adopted by shipowners, which have been authorized by their respective governments, and duly registered and published.

Rule 33. A steam vessel proceeding under sail only, but having her funnel up, may carry in daytime, forward, where it can best be seen, one black ball or shape two feet in diameter.

Sea-going suction dredges when under way and dredging, shall carry besides the lights prescribed for steamers under way, between the two masts where they can best be seen, two red lights, approximately the same height as the masthead light of a steamer, in a vertical line one over the other, not less than six feet apart and of such a character as to be visible all around the horizon at a distance of at least two miles; and shall by day carry between the two masts where they can best be seen, in a vertical line one over the other not less than six feet apart, two black balls or shapes, each two feet in diameter.

Sea-going suction dredges, when dredging is stopped, and the dredge is proceeding either to or from her dumping ground, either loaded or light, shall at night extinguish the two red lights, and by day, lower the black balls.

Sea-going suction dredges, while actually engaged in dredging, as shown by the black balls or red lights, above, shall have right of way over all other vessels; but when not dredging, as shown by the absence of the black balls or red lights, shall observe all rules, and have no special privilege.

Rule 34. All boats of whatever character conveying high explosives shall carry a red flag in the day time and a red light at night, in addition to the regular lights.

Sound signals for fog, and so forth.

Rule 35. All signals prescribed by this article for vessels under way shall be given:

1. By "steam vessels" on the whistle or siren.
2. By "sailing vessels" and "vessels towed" on the fog horn.

The words "prolonged blast" used in this article shall mean a blast of from four to six seconds' duration.

A steam vessel shall be provided with an efficient whistle or siren, sounded by steam, or by some substitute for steam, so placed that the sound may not be intercepted by any obstruction, and with an efficient fog horn; also with an efficient bell. A sailing vessel of twenty tons gross tonnage or upward shall be provided with a similar fog horn and bell.

In fog, mist, or heavy rain storms, whether by day or night, the signals prescribed in this article shall be used as follows, namely:

(*a*) A sailing vessel under way shall sound, at intervals of not more than one minute, when on the starboard tack, one blast; when on the port tack, two blasts in succession, and when the wind is abaft the beam, three blasts in succession.

(*b*) A steam vessel when towing, shall, instead of the signals prescribed in subdivision (*a*) of this article, at intervals of not more than one minute, sound three blasts in succession, namely—one prolonged blast followed by two short blasts. A vessel towed may give this signal and she shall not give any other.

(*c*) All rafts or other water craft, not herein provided for, navigated by hand power, horse power, or by current of the river, shall sound a blast of the fog horn, or equivalent signal, at intervals of not more than one minute.

Steering and Sailing Rules.

Rule 36. *Preliminary—Risk of collision.* When two sailing vessels are approaching one another, so as to involve risk of collision, one of them shall keep out of the way of the other, as follows, namely:

(*a*) A vessel which is running free shall keep out of the way of a vessel which is close-hauled.

(*b*) A vessel which is close-hauled on the port tack shall keep out of the way of a vessel which is close-hauled on the starboard tack.

(*c*) When both are running free, with the wind on different sides, the vessel which has the wind on the port side shall keep out of the way of the other.

(*d*) When both are running free, with the wind on the same side, the vessel which is to the windward shall keep out of the way of the vessel which is to the leeward.

(*e*) A vessel which has the wind aft shall keep out of the way of the other vessel.

Rule 37. Where, by any of these rules, one of the two vessels is to keep out of the way, the other shall keep her course and speed.

Rule 38. Every steam vessel which is directed by these rules to keep out of the way of another vessel shall, on approaching her, if necessary, slacken her speed or stop or reverse.

Rule 39. Notwithstanding anything contained in these rules every vessel, overtaking another, shall keep out of the way of the overtaken vessel.

Rule 40. Sailing vessels under way shall keep out of the way of sailing vessels or boats fishing with nets, or lines, or trawls. This rule shall not give to any vessel or boat engaged in fishing the right of obstructing a fairway used by vessels other than fishing vessels or boats.

Rule 41. Nothing in these rules shall exonerate any vessel, or the owner or master or crew thereof, from all the consequences of any neglect to carry lights or signals, or of any neglect to keep a proper lookout, or of the neglect of any precaution which may be required by the ordinary practice of seamen, or by the special circumstances of the case.

Distress signals.

Rule 42. When a vessel is in distress and requires assistance from other vessels or from the shore, the following shall be the signals to be used or displayed by her, either together or separately, namely:

In the day time.

A continuous sounding with any fog-signal apparatus, or firing a gun.

At night

First. Flames on the vessel as from a burning tar barrel, oil barrel, and so forth.

Second. A continuous sounding with any fog-signal apparatus, or firing a gun.

Third. Rockets or shells showing stars, fired one at a time at short intervals.

Rules for Government of Craft on the Navigable Waters of the Canal Zone, including all waters under the Jurisdiction of the Isthmian Canal Commission.

Rule 43. Every barge, lighter, canal boat, or scow that is moored alongside of any ship or another barge, or to the side of the Canal, or to any wharf, or lying at anchor on navigable waters of the Canal Zone, shall show between the hours of sunset and sunrise, a white light on the bow and stern, at least three feet above the deck of said vessel, and not less than eight feet from the bow and stern thereof.

Rule 44. When lighters, barges, scows, or canal boats are tied or moored along any wharf, or along the shore in any channel in the navigable waters of the Canal Zone, including the Canal and approaches thereto, it shall be unlawful to moor them more than two deep, thereby obstructing the channel.

Rule 45. When it becomes necessary to moor or tie any barge, lighter, scow, or canal boat alongside a ship or another barge in the navigable waters of the Canal Zone, for the purpose of transhipping cargo to or from the ship or barge, it shall be unlawful to moor or tie more than one barge deep alongside said ship or other barge, thereby obstructing the channel.

Provided, That power hoists in addition may tie alongside the barges aforesaid, while actually engaged in transhipping cargo. Nothing in this rule shall be construed as affecting the right of the Constructing Engineer to moor barges used in Canal construction in any manner he may deem proper.

Rule 46. Every piece of plant, whether dredge, rock breaker, or drill barge, that is engaged in excavating or preparing to excavate the Canal, whose position is stationary, or moving from time to time, over the face of the shoal, that it is working on or removing, shall have the prior right to such position, and it shall be unlawful for any person or persons, navigating a ship or otherwise, to foul above-named plant or its moorings in any way whatever.

Rule 47. Any piece of plant, whether dredge, rock breaker, or drill barge, that is operated by means of fore, aft, and side chains, shall carry when said fore, aft, and side chains are taut, a black ball on each side of the dredge, in some conspicuous place, at least eight (8) feet above the deck, and near the position of the side chains; at night these balls shall be replaced by a red light and which shall show all around the horizon and be plainly visible at a distance of one mile.

Rule 48. When a steamer wishes to pass the dredge, drillboat, or rockbreaker, at a point where it might foul its side chains, it should ask permission to pass, by using the usual signal for port or starboard, as provided in the foregoing rules, and the dredge, rockbreaker, or drillboat shall immediately lower its chain on the side asked for by the steamer, indicating its fulfillment of this by, in the daytime, lowering the ball; in the night, putting out the red light.

Rule 49. If the dredge, drillboat, or rockbreaker, is unable to lower its side chain, or should consider it dangerous for the steamer to pass on the side asked for, the dredge, drillboat, or rockbreaker, will blow the danger signal when the steamer will stop until the ball or light signal given above shall be shown.

Rule 50. All barges moved from berth to berth along wharves or banks of the Canal shall be moved by being handled by proper towboat for same, and it shall be unlawful to move barges by handpower in the navigable fairway of the Canal, unless to preserve life or property in peril.

Rule 51. No coal, ashes, or rubbish shall be thrown overboard by any vessel, or any person, at any wharf, or in the channel of the Canal.

Rule 52. No vessel shall make fast to any marking buoy, and will be only allowed to use for hauling or making fast the buoys placed for that purpose.

Rule 53. Any vessel arriving at the ports with gunpowder or other explosives on board will not be admitted to the wharves or allowed to land the same until a report is made to the proper authority and an arrangement entered into for the immediate disposal of the explosives.

Rule 54. Vessels should not lie at anchor in the channel of the Canal, or its approaches, unless in case of a vessel being in distress, when assistance should be at once asked for, and given.

Provided, That for special reasons permission may be given to anchor in the channel for a limited time by the engineer in charge of construction.

Rule 55. Vessels will be held liable for all damages done to the Canal or the plant of the Isthmian Canal Commission, of any character or description, whether the damage is done to the floating equipment, to the wharves, or banks of the Canal; and in the case of the sinking of any floating or other equipment belonging to private persons, or corporations in the channel of the Canal, or its approaches, or its side channels or along its wharves, that create or tend to create an obstruction in the Canal or its approaches, side channels, or along its wharves, the person or company owning the sunken equipment shall be given thirty days to remove the same; and on his or their failure to do so, the construction engineer shall remove the obstruction; and the persons or corporation owning the same shall pay all the expenses and cost of the removal of the obstruction, to be collected by a civil suit in the Zone courts and a levy and sale of any property of the persons or corporations found in the Canal Zone, or its harbors.

Provided, That the Chief Engineer of the Panama Canal may order the construction engineer to remove the obstruction at once, without waiting on the persons or corporations owning the same, and the costs of such removal shall be taxed and collected as mentioned above.

Rule 56. All masters of vessels not engaged in coastwise trade or employed by the Isthmian Canal Commission or Panama Railroad Company in harbor or Canal work or construction, are forbidden to allow their vessels to be boarded by any one, except the pilot and such other officers of the port as are required to do so by the nature of their duties, and also the agent of the vessel if he has the consent of the quarantine officer. Any person going aboard prior to the issuance of free pratique shall be subject to the same restrictions as the personnel of the vessel if, in the opinion of the quarantine officer, this is necessary for the protection of the public health.

Rule 57. Every vessel not engaged in the coastwise trade entering the harbor of any port in the Canal Zone, shall proceed to the quarantine ground designated by the quarantine officer.

Rule 58. Vessels wishing to unload or load ballast will be assigned anchorage by the captain of the port, and must have a proper chute, so arranged as to prevent ballast from falling overboard, if said anchorage is in the channel of the Canal or along its wharves or on the anchorage ground, assigned by the quarantine officer, or port captain.

Rule 59. No warp or line shall be passed across any channel or dock so as to obstruct the passage of vessels or cause any interference with the discharging of cargoes.

Rule 60. If any damages shall be caused by vessels or the mooring cables to the works of any harbor, the parties responsible for same shall pay the costs for the necessary repairs, and the same may be recovered in the Circuit Courts of the Canal Zone.

Rule 61. Steamers on entering or leaving a port shall proceed at a speed not exceeding six knots per hour.

Rule 62. If a vessel occupying a berth at a wharf or pier, with or without the consent of the port captain, fails to vacate such berth when ordered by the port captain, or when not loading or unloading, fails to make way for another vessel that wishes to load or unload, the port captain shall then cause such vessel to be moved to some other berth, or be anchored in the stream, and the expense of such removal shall be paid by the master, agents, or owners of such vessel, and in case of their neglect or refusal to pay such expense upon demand, it may be recovered in an action before any court having jurisdiction.

Rule 63. No vessel shall be entitled to a berth until application has been made by the master, owner, or consignee of the vessel to the captain of the port, and such application must state the length, draught, and kind of cargo. No one but the captain of the port has authority to assign berths to vessels. No vessel, whether at anchor or lying at wharf, shall shift its berth, without permission from the captain of the port.

Rule 64. All goods, merchandise, and material of every kind, landed or placed on any pier, bulkhead, or other wharf property, or upon reclaimed land, must be removed therefrom within 36 hours: *Provided*, That the captain of the port for good cause may extend the time. All goods, merchandise, and materials of every kind encumbering any pier, bulkhead, or other wharf structure, or reclaimed land, after the time designated for the removal thereof shall have expired, will be liable to be removed by the captain of the port to any warehouse or yard, at the sole risk and expense of the owner of any such goods, merchandise, or materials, and all expense incurred for such removal and storage, or otherwise, shall be and become a lien thereon, and such goods, merchandise, and materials will not be delivered to the owner until the expense of such removal and storage has been paid.

Rule 65. It shall not be lawful for the owners, lessees, or occupants of any pier, wharf, or bulkhead, which has been covered with a shed, to use such shedded pier, wharf, or bulkhead for the permanent storage of goods, merchandise, cargo, or material of any kind which may be discharged or placed thereon.

Rule 66. Piers, wharves, and bulkheads thus shedded are designated for the protection of merchandise and cargo, in transit, and such merchandise and cargo must be removed therefrom in 36 hours: *Provided*, That the captain of the port may for good cause extend the time.

Rule 67. The captain of the port shall prevent any accumulation of material upon all piers, wharves, bulkheads, and reclaimed land, and whenever any pier, wharf, bulkhead, or reclaimed land shall be encumbered or obstructed in its free use by any vessel, merchandise or material, or by any structure, encumbrance, or obstruction not authorized or permitted, the captain of the port is authorized to require the owner, agent, consignee, or person occupying or in charge of such merchandise or obstruction, to remove the same without delay. Upon receiving said order, the owner, agent, consignee or person in charge of vessel, merchandise, material, structure, encumbrance, or obstruction, in reference to which said order or direction was given, shall comply with the same without delay, and upon his refusal or failure to do so, shall be punished by a fine or imprisonment or both, as is hereinafter provided.

Rule 68. No fishing nets will be allowed in any place in the Canal, along its wharves, or in its channels wherever in the opinion of the Construction Engineer, or the captain of the port, such nets interfere or might interfere with navigation, and it shall be the duty of the owner thereof, upon notification, to remove them immediately.

Rule 69. No vessel shall leave the quarantine ground until the requirements of the rules in regard to examination by the quarantine officer have been complied with.

Rule 70. Vessels must not anchor in the harbors in any location which will interfere with the navigation of all the channels.

Rule 71. Vessels must not anchor on the range line of any range lights.

Rule 72. All vessels are forbidden to moor to any beacon, buoy, or other harbor mark or to make use of the same for warping.

Rule 73. Pilots finding any buoy out of position, or lights not working properly shall immediately report same to captain of the port, and to the construction engineer.

Rule 74. Steamers while within a harbor must take all precautions to avoid the issue of sparks. Vessels will be liable for all damages resulting from neglect of this rule.

Rule 75. No pitch, tar, turpentine, or other combustible shall be boiled on any wharf, or on board any vessel without permission of the captain of the port.

Rule 76. In case of fire on board a vessel, all masters of other vessels shall render such assistance as may be in their power.

Rule 77. A vessel anchored or moored in the harbor or lying at dock must at all times, night or day, have on board a sufficient number of men to take care of such vessel.

Rule 78. No vessel shall unload lumber, timber or piles in the waters of a harbor without permission from the captain of the port, who shall designate where such lumber shall be rafted, so as to avoid obstructing or hindering the movement of vessels.

Rule 79. Lighters, barges, scows and other vessels belonging to persons or corporations of any and all descriptions shall be anchored in such places as the captain of the port may direct, and shall be at all times under his supervision and direction.

Rule 80. The captain of the port shall keep in his office records of all his proceedings, with statements of the results of all examinations and inquiries made by him, which records may be inspected by interested parties.

Rule 81. All notifications and requests to the captain of the port shall be made at his office in writing, and shall be duly entered and filed by him.

Rule 82. No vessel shall leave the harbor until the payment of all charges and fines imposed hereunder have been made.

Rule 83. It shall be unlawful for any person, without first having secured a pilot's license from the government of the Canal Zone, to navigate any steam vessel with a net tonnage of more than 15 tons burden in Canal Zone waters.

Rule 84. It shall be the duty of the captain of the port to enforce and superintend the execution of all rules and regulations of the port for preventing nuisances at the wharves, for regulating and stationing all ships or vessels in the harbor; for removing from time to time ships and vessels, in order to accomodate and make room for others and for compelling the masters and captains of ships and vessels to accomodate each other, so that ships and vessels arriving from sea, shall, for a reasonable time, be entitled to berths next to the wharf until they have landed their cargoes.

Rule 85. All vessels moored to wharves, whether loading or unloading cargo, or in the ordinary way of business, shall be moored to the wharves with rope hawsers only, and it shall be unlawful for chain or wire hawsers to be used on any public wharf in the Canl Zone without the specific permission of the port captain.

Rule 86. All vessels, whether commercial or otherwise, moored to wharves in the Canal Zone, shall be compelled to keep watch at night and to have suitable fire-fighting apparatus on hand.

Rule 87. Whenever it shall become necessary to remove any especially inflammable cargo from commercial ships, or ships at public wharves of the Canal Zone, such as oils, gasoline, naphtha, petroleum, etc., it shall be necessary for notice to be given to the port captain at least two hours before such cargo shall be discharged on the wharf, so that proper means can be provided to dispose of this class of material at the earliest possible moment.

Rule 88. The provisions in regard to wharves are to apply to the public wharves of the Canal Zone and not to the construction wharves belonging to the Isthmian Canal Commission under the control of the construction engineer, who alone shall have charge of all construction wharves in his respective district and all United States vessels employed in construction are exempt from the rules laid down, as far as being under the direction and control of the port captain is concerned, and are solely responsible to the construction engineer in their respective districts; Isthmian Canal Commission wharves, under the charge of and operated by the Chief Quartermaster, are also exempt from the operation of these rules, and are solely under the direction of the Chief Quartermaster.

Rule 89. It shall not be lawful for any person or persons, navigating a vessel or otherwise, to take possession of or make use of for any purpose, or build upon, alter, deface, destroy, move, injure, obstruct by fastening vessels thereto or otherwise or in any manner whatever, impair the usefulness by delay or otherwise of any seawalk, bulkhead, jetty dike, levee, wharf, pier or other work built by the Isthmian Canal Commission, or any piece of plant, floating or otherwise, used in the construction of such work, under the control of the Isthmian Canal Commission, in whole or in part, made or used for the preservation and improvement of the Panama Canal or its channels, or approaches.

Rule 90. The board of local inspectors shall issue certificates of seaworthiness to any launch or boat of any description, whether propelled by machinery, sail, or oars, of less than 15 tons net, which is engaged in carrying passengers in any parts of the waters of the Canal Zone, and shall state in such certificate the number of passengers allowed to be carried. Any vessel over 15 tons net, whether propelled by machinery or sail and carrying passengers on any parts of the waters of the Canal Zone, shall be under the supervision of the board of local inspectors as regards to her seaworthiness and equipment and the number of passengers to be carried.

Rule 91. The territory over which these rules and sections are effective, are all waters in Limon Bay, and waters entering it situated south of a line running due west from the base of the statue of Christopher Columbus as now standing on Cristobal Point, and such portion of the Caribbean terminus of the Isthmian Canal as may be used for harbor purposes, and that portion of Panama Bay lying west of a line running due north from the east end of Naos Island and north of a line running due west from the same point, also such portions of the Pacific terminus of the Isthmian Canal as may be used for harbor purposes, also any portion of the Panama Canal that may be used by construction boats or plant of the Isthmian Canal Commission, or that may be opened to public use from time to time. And any boat, vessel, scow, raft, or other craft, used or employed in violating any of the provisions of Rules 33, 46, 49, 51, 60, and 89 shall be liable for all damages that may be done to the plant of the Isthmian Canal Commission, and said, boat, scow, raft, or other craft may be proceeded against summarily by way of libel in the Canal Zone Circuit Courts.

Rule 92. These rules and sections hereinbefore named shall become effective when approved by the proper authorities, and when they have been published by printing in a newspaper of public circulation in the Canal Zone.

Rule 93. These rules shall apply to and govern the navigation and use of the waters of the Panama Canal, as the canal is now, or hereafter may be constituted, as well as all Canal channels, lakes, harbors, and other auxiliary waters as may now or hereafter be deeemed necessary for Canal purposes or aids, or which may now or hereafter be under the jurisdiction of the Isthmian Canal Commission or the Canal Zone Government.

Rule 94. Any person who fails or refuses to comply with any provision or requirement in these rules set forth, shall be deemed guilty of a misdemeanor, and upon conviction thereof shall be punished agreeably to the provisions of Section 2 of the Executive Order of July 25, 1910; namely, by a fine not to exceed $500 or by imprisonment in the district jail of not more than six months, or by both such fine and imprisonment, in the discretion of the court.

Approved: J. M. DICKINSON, *Secretary of War.*

WAR DEPARTMENT, December 21, 1910.

CANAL RECORD

Volume IV. ANCON, CANAL ZONE, WEDNESDAY, JANUARY 25, 1911. No. 22.

The Canal Record

Published weekly under the authority and supervision of the Isthmian Canal Commission.

The Canal Record is issued free of charge, one copy each, to all employes of the Commission and Panama Railroad Company whose names are on the gold roll. Extra copies and back numbers can be obtained from the news stands of the Panama Railroad Company for five cents each.

THE CANAL RECORD
Ancon, Canal Zone,
Isthmus of Panama.

No communication, either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.

NOTES OF PROGRESS.

Chairman's Monthly Report.

The report of the Chairman of the Isthmian Canal Commission for the month of December is published in full in other columns of this issue of THE CANAL RECORD. It gives a detailed account of the progress of Canal work in all departments and divisions.

It will be noted that there is a difference of 343,198 cubic yards in the amount of material excavated during the month of December shown in the excavation table published in THE CANAL RECORD of January 18, and the monthly report to the Secretary of War, which appears in this issue. This difference arises from the fact that 123,403 cubic yards of material removed by the Atlantic Division, and 219,795 cubic yards removed by the Pacific Division were improperly charged to "plant" excavation.

The material removed by the Atlantic Division consisted of 23,199 cubic yards "dry" excavation for Gatun Dam, and 97,731 cubic yards "wet" excavation for the Colon fill. The material removed by the Pacific Division consisted of 219,795 cubic yards "wet" excavation for the channel to the Panama railroad lumber dock. The material in question was removed by Commission equipment, but should have been charged to the items of work necessitating the excavation.

Another Break in Culebra Slide.

The west bank of the Canal, at a point opposite the Culebra hotel, began to move into the Cut between 8 and 9 p. m., on Wednesday, January 18, involving from 200,000 to 250,000 cubic yards of material, and completely covering the 35-foot berm on the 135-foot level, which was secured only a short time previously. The movement did not encroach on the lower tracks in the Cut to any extent, and the regular operations there were not interfered with. A break in the bank was expected at this point during the present year, but came a little sooner than was anticipated. All of the material, however, is included in previous estimates, and, therefore, does not affect excavation figures.

The break extended back and included a part of the street known as "Steam shovel row." A number of houses on this street situated nearest the danger zone, have been removed from time to time during the past year, and those remaining were not involved in the recent slide, although the bank broke sharply within 15 feet of one of the buildings. In view of a possible future break in this locality, however, a force of men were set at work immediately dismantling eight type-15 quarters, four of which will be reerected in another part of the village; two will be taken to Pedro Miguel, and the remaining two to Gorgona.

The break in the west bank at Culebra extends for a distance of about a mile. The first important break occurred on November 16, 1909, and since that time, a number of movements have taken place. In view of the fact that another slip may be expected at any time in a section of the bank, south of the recent break, and to diminish any further annoyance therefrom, the Chief Engineer has authorized immediate excavation along the upper level from Culebra to Rio Grande. A steam shovel began this work on Monday, January 23, utilizing the old Panama railroad track which runs along this level in making the pioneer cut, and another shovel commenced work on January 24. The spoil will be wasted on the old dump in the vicinity of the Culebra railroad station, and dirt trains will be run over the old Panama railroad track, through Rio Grande and Enterprise and the old Rio Grande quarry to this dump. It is estimated that over 200,000 cubic yards of material will be removed at this point.

Closing of Gatun River.

The closing of the Gatun River, near Mitchellville on the Panama railroad relocation, made necessary by the construction of the railroad embankment over the valley, was authorized by the Chief Engineer on January 23. The building of a bridge where the old bed of the stream crosses the relocation was found to be impracticable for lack of a suitable foundation, and a new site was selected a short distance south, but on a higher level. The damming of the old channel will cause the water to rise to the 45-foot level, and will submerge a considerable area east of the railroad track. The Counsel of the Commission has been authorized to adjust the claims of occupants for the value of their improvements.

Temporary Use of French Dump Cars.

In order to obtain a supply of gravel from the Chagres River during the present dry season, and because no other cars were available, President Taft on January 16 granted permission to the Panama railroad to use 25 of the old French 6-meter dump cars for the short haul from the gravel bed to the storage pile. The President's consent was necessary for the use of these cars, as they are not equipped with safety appliances, and their operation would have been contrary to Executive Orders Nos. 1002 of January 6, 1909. and 1085 of June 11, 1909, making the provisions of the safety appliance act effective in the Canal Zone. Permission to use the cars is accorded only to July 1, 1911.

Economy in Use of Dynamite.

Less than two-thirds of the quantity of dynamite used in blasting in the Central Division during the months of October, November, and December, 1909, were used during the same months of 1910, although the quantity of rock excavated during these months, in 1910 was almost identical with 1909. A statement showing the amounts by months, and the cubic yards of material excavated per pound of dynamite, follows:

MONTHS.	Dynamite used.		Rock excavated.	
	1909	1910	1909	1910
	Pounds.	*Pounds.*	*Cu. Yds.*	*Cu. Yds.*
Oct...	806,700	481,750	1,196,297	1,076,678
Nov..	659,600	391,500	968,246	1,053,077
Dec...	439,350	427,800	1,005,088	1,008,998
Total.	1,905,650	1,301,050	3,169,631	3,138,753

	1909	1910
Cubic yards of material per pound of dynamite..................	1.66+	2.41+
Pounds of dynamite per cubic yard of material..................	0.60+	0.41+

Dredging in Pacific Entrance.

The dredged channel at the Pacific entrance to the Canal will extend over a distance of seven and one-half miles, or from the end of the cut out at sea, to a point nearly opposite Corozal, beyond which it is proposed to accomplish the excavation by hydraulic plant, and by steam shovels. The channel has been entirely excavated for over four and one-half miles of the distance, and at the present time, the operations of the dredging fleet are principally confined to that part north of the Panama railroad wharf. A few days ago the cut at the farthest limit north had been sufficiently widened and deepened by ladder dredges to permit the suction dredge *Culebra* to operate there, but this is only possible at high tide, as a water pipe line extends across the Canal a short distance below, which would obstruct the passage of the dredge at mean or low tides.

There is an open channel of an average width of about 720 feet top and 500 feet bottom, except in three instances, and an average depth of over 30 feet, up the Canal from Balboa. In places the excavation is down to the bottom depth of 45 feet. The above water excavation along the east bank is nearly completed, only one rock projection remaining to be removed on which drillers are now at work. On the

NOTES OF PROGRESS.

(*Continued.*)

west bank there are two projections composed of rock and clay, with rock preponderant, to be taken out, and the ladder dredge *Badger* and dipper dredge *Cardenas* are engaged in excavating one of these, the former digging to a depth of 42 feet, and the latter to the full depth of 45 feet. The other point, situated one-fourth of a mile south, is being drilled and mined. It will be broken up into two sections, with 40 holes drilled to a depth of 60 feet to each section, each hole containing a charge of 250 pounds of dynamite. The one blasting operation will involve the use of 10,000 pounds of dynamite. When this point has been broken up, practically all of the above water drilling and blasting from Corozal to the sea will have been completed.

The ladder dredge *Mole*, which has recently been fitted with a new and longer ladder, was set at work on Monday, January 23, cleaning the last breaking of rock on shoal 2285; this shoal before the last breaking showed a depth of 41.1. The *Marmot* is continuing the excavation for the approach channel to the new freight dock, and at present is making an angle cut across this channel, heading for the east bank, which it will enter. As much material as possible in this bank will be excavated by the dredge, without interfering with the track leading from the sand dock.

Gatun Dam Spillway.

Concrete was placed in the spillway of Gatun Dam during the week ending January 21, as follows:

Date.	Concrete laid.	Hours worked.	No. Mixers.
	Cu. Yds.		
January 16	56	3:30	1
January 17	80	6:30	1
January 18	48	3:00	1
January 19	40	3:30	1
January 20	....	....	....
January 21	....	....	....
Total	224	16:30	
Previously reported	113,862		
Grand total	114,086		

Ancon Rock Crusher.

A statement of the rock crushed at Ancon quarry during the week ending January 14, follows:

Date.	Hours worked.	Cubic Yards.
January 9	9:45	3,368
January 10	9:55	3,198
January 11	6:45	2,678
January 12	9:30	2,771
January 13	6:35	2,432
January 14	10:30	3,623
Total	53:00	18,070

Interlocking Plant at Mount Hope.

An interlocking plant will be installed by the Panama railroad at Mount Hope to operate the cross-over from the yard track of the Depot Quartermaster's material stores to the main line. The outfit will consist of a 6-lever machine, with accessories, and its method of operation will be the same as the other interlocking plants of the railroad company. It is designed to insure the safe passing of trains at this point, where two accidents have occurred, one recently. The plant will be attended by the Mount Hope operator. The old cabin is too small, and the waiting pavilion for first-class passengers close by is being extended and partially enclosed, which will provide space for a ticket office, and also for the lever mechanism.

Record Output at Gorgona Foundry.

The output of the foundries at Gorgona during December was the largest in their history. The iron foundry turned out 795,958 pounds of iron castings, and the brass foundry 48,350 pounds of brass castings. The output was twice that of December, 1909.

Lights at Toro Point.

Notice has been sent to the Government of Panama, and the interested bureaus of the United States Government, that one red and one white light have been placed at the end of the trestle that is being built in Limon Bay from Toro Point for the construction of the breakwater. The position of the lights will change as the building of the trestle advances.

CONCRETE WORK IN THE LOCKS.

GATUN LOCKS.

Over 50 per cent of the concrete for the system of three twin locks at Gatun has been laid, the exact amount in place at the close of work on January 21, being 1,051,723½ cubic yards, out of a total of 2,085,000.

A statement of the amount of concrete placed in the locks each day for the week ending January 21, and of the total, follows; and a similar statement for the work in the spillway of Gatun Dam is published elsewhere in this issue. The construction plant works 12 hours daily, and the auxiliary plant 9 hours:

Date.	Construction Plant. 2-cubic yard mixers.			Auxiliary Plant. 2-cubic yard mixers.			Large stone.	Total.
	Concrete placed.	Hours worked.	No. of mixers	Concrete placed.	Hours worked.	No. of mixers

*The 447½ yards shown for the portable mixers were placed on the following days: January 16tb, 19½ yards; January 17th, 21½ yards; January 18th, 86 yards; January 19th, 98 yards; January 20th, 103 yards; January 21st, 119½ yards.

PEDRO MIGUEL LOCKS.

Concrete work in the locks at Pedro Miguel is over 60 per cent completed, 507,361 cubic yards, out of a total of 837,400, having been placed at the close of work on January 21. The record for each of the six 8-hour working days of last week, follows:

Date.	Construction Plant. 2-cubic yard mixers.			Auxiliary Plant. 2-cubic yard mixers.				Total.
	Concrete placed.	Hours worked.	No. of mixers	Concrete placed.	Hours worked.	No. of mixers	Large stone.

MIRAFLORES LOCKS.

Over eight per cent of the concrete for the system of locks at Miraflores has been laid, the amount in place at the close of work on January 21, aggregating 113,091 cubic yards, out of a total of approximately 1,362,000. The record for each of the six 8-hour working days of last week, follows:

Date.	Auxiliary Plant.										Total.
	2-cubic yard mixers.			½-cubic yard mixers.			¼-cubic yard mixer.

SOCIAL LIFE OF THE ZONE.

Women's Clubs.

The meeting of the Canal Zone Federation of Women's Clubs will be held at the Hotel Tivoli on Tuesday, January 31. Delegates and alternates accredited from the federated clubs are expected to arrive at Ancon on the morning train and be present at the business meeting which will convene in the ballroom of the hotel at 9 o'clock. Through the courtesy of the officials of the Panama Railroad Company, a special car will be placed at the rear of the morning train for the clubwomen, and also on the train leaving Colon at 10.30. Returning, the two cars will be added to the train leaving Panama at 5.30. Cards for transportation will be issued to all club members. These cards will be signed with the bearer's name and countersigned by the secretary of the club to which she belongs. They are not transferable. The delegates and alternates are requested to present their credentials to the chairman of the credentials committee, who will receive them on the train en route to Panama. The afternoon session will begin at two o'clock and will consist of addresses and a short program, followed by a reception. All women, who are interested in club work, as well as those who wish to meet Miss Boswell, are cordially invited to be present.

At the meeting of the Gorgona Woman's Club on Thursday, January 12, the president of the federation, Mrs. Thomas E. Brown, Jr., was the guest, and made a short address on club work.

The Cristobal Woman's Club has extended an invitation to the women of Cristobal and Colon to hear an address by Miss Helen Varick Boswell at the clubhouse on Wednesday afternoon, February 1, at 3 o'clock.

Miscellaneous Events.

The Gatun Sunshine Society has been reorganized and meetings are held in the lodge hall on the first and third Wednesdays in each month. Mrs. Harry Porter is president; Mrs. Nat Johnson, vice-president; Mrs. Forbes, secretary, and Mrs. Farrow, treasurer. It has not yet been decided what the special work for the season will be. The membership is good, and the interest in the work is increasing.

Gatun Lodge, No. 5, Independent Order of Odd Fellows, held a public installation of officers on Friday evening, January 20. Following the installation, there was an informal reception, and refreshments were served.

A dance for the benefit of the church of the Holy Redeemer, Roman Catholic, now under construction at Culebra, was held in the lodge hall on Thursday evening, January 19. The services of the Marine Band were given through the courtesy of Major Smedley D. Butler, Commandant at Camp Elliott. The receipts amounted to about $150.

On Friday evening, January 20, the second of a number of subscription dances that are being given by residents of Culebra, was held in the clubhouse. The Culebra Dancing Club held its dance on Saturday evening, January 22.

The N. A. D. T. Club will give a dance at Ancon Hall on Friday evening, January 27. A valentine party and dance will also be given by the club on Friday evening, February 10.

Humane Society Notes.

Seventy-five boys from the Panama orphan asylums, accompanied by several Brothers from one of the ecclesiastical orders, were guests of the Canal Zone Humane Society on January 2, and were given a day's outing at Colon. Two additional cars were placed on the morning and evening trains for their accommodation. The society donated the boys the sum of $65 gold, with which to purchase their lunch, and the day was spent in visiting the boys of the Colon asylum, where games were played, and where the boys' band from the asylum on the Sabanas road furnished music.

The humane society has authorized the placing of a sign on the Sabanas road at the Canal Zone boundary, on which will be printed a warning, in English and Spanish, to all drivers that the humane laws will be enforced. It will be visible on approaching from either side, and, by the order of the President of the Republic, will be stationed on Panamanian territory. In recognition of his sympathy and cooperation with the work, President Arosemena has been elected honorary president of the Canal Zone Humane Society.

Sale of American Red Cross Christmas Seals in the Canal Zone.

The sale of Red Cross Christmas seals in the Canal Zone during the recent season numbered 6,308. They sell at one cent each, and this was the first time they have been sold on the Isthmus. Twelve and one-half per cent of the money received is forwarded to the American Red Cross Society. The remainder is to be applied to local anti-tuberculosis work, in accordance with the plans previously approved by the Red Cross.

Embezzlement Cases.

A motion made by the assistant prosecuting attorney to have vacated the bail of $6,000 granted each of the defendants in the case of the Government against F. P. Petersen and Charles Silvers for aiding and abetting an embezzlement, was overruled by Judge Owen on January 20. Sentence of one year imposed on Carlos Rodriguez, a Panamanian, for his connection with the same case, was suspended by Judge Gudger on January 23. Arguments in a motion made by defendant's counsel for the issuance of a certificate of probable cause in the case of H. J. Hines, who was sentenced to five years in connection with the above embezzlement, were heard on January 25.

Obituary.

Louis R. White, employed in the Atlantic Division, died on January 18, as the result of being struck by a Panama railroad train. His body was found near New Gatun station. He was 35 years of age, single, and had been on the Isthmus five years, coming here from Lexington, Ky.

Married.

JONES-McCOURT—On Christmas Day, at Culebra, Elizabeth Irene McCourt to Christopher George Jones, the Rev. Henry Collins officiating.

Band Concert.

A concert will be given by the Isthmian Canal Commission Band at Empire, C. Z., on Sunday, January 29, 1911. The program follows:

1. March—*Victorious Phalanx*..............Morse
2. Selection—*Madame Sherry*..............Hoschna
3. Serenade—*La Paloma*..................Xradier
4. Overture—*Stradella* (By request).........Flotow
5. March—*Tannhauser*....................Wagner
6. Medley Selection—*My Southern Rose*..Von Tilzer
7. Waltz—*Wedding of the Winds*..............Hall
8. Selection—*Carmen*.......................Bizet
9. March—*Niebelungen*....................Moses

CHAS. E. JENNINGS, *Musical Director.*

The next concert will be given at Las Cascadas on Sunday, February 5, at 6 p. m.

The Atlantic second team would like to hear from all organized and picked baseball teams on the Isthmus. Address E. S. McSparran, Manager, Cristobal, C. Z.

A cable has been received advising that Bernard L. Kearney, formerly postmaster at San Pablo, who absconded on December 29, is returning to the Isthmus, in custody, on the *Abangarez*, due to arrive at Colon on January 26.

CANAL WORK IN DECEMBER.

Monthly Report of the Chairman and Chief Engineer to the Secretary of War.

CULEBRA, C. Z., January 16, 1910.

The Honorable the Secretary of War,
Washington, D. C.

SIR: I have the honor to submit the following report of operations on the Isthmus for the month of December, 1910:

Department of Construction and Engineering.

The following table summarizes the principal items of construction work accomplished by the Atlantic, Central and Pacific Divisions during the month:

ITEM.	Unit.	Atlantic.	Central.	Pacific.	Total.
Work excavation, dry	Cubic yards	72,030	1,387,749	29,101	1,488,880
Work excavation, wet	Cubic yards	482,370	21,132	455,715	959,217
Total work excavation	Cubic yards	554,400	1,408,881	484,816	2,448,097
Plant excavation, dry	Cubic yards	....	....	....	....
Plant excavation, wet	Cubic yards	155,109	....	....	155,109
Total Canal excavation	Cubic yards	709,509	1,408,881	484,816	2,603,206
Material placed in dams	Cubic yards	412,696	....	107,905	520,601
Concrete laid	Cubic yards	85,809	....	64,367	150,176
Explosives used	Tons (Gross)	59.43	192.18	21.79	273.40
Rock drilled	Feet	72,651	381,453	39,811	493,915
Tracks removed	Miles	....	5.60	....	5.60
New tracks laid	Miles	2.52	18.02	1.92	22.46
Rock crushed	Cubic yards	80,400	431	69,673	150,504
Cement used	Barrels	87,731	54	65,612	153,397
New roads built	Miles	0.29	....	1.21	1.50
Water mains laid	Feet	3,997	4,405	9,910	18,312
Sewers laid	Feet	620	124	25	769
New drains and ditches dug	Feet	....	....	2,282	2,282
Average daily force	....	8,046	8,752	4,270	21,068
Average rainfall	Inches	18.92	15.49	10.10	14.43

Atlantic Division.

GATUN LOCKS.

Excavation—Shovel excavation during the month was carried on in the lower chamber, and on a hill north of the machine shop. This hill is being excavated in order to furnish impervious material for the back fill south of the intermediate gate of the upper lock. A total of 76,741 cubic yards of material was removed. Of this quantity, 23,199 cubic yards were excavated for back fill. On December 31, the total material removed amounted to 5,577,910 cubic yards, of which 4,845,909 cubic yards had been removed from the Canal prism. The shovel excavation in the locks was 95 per cent completed, and the channel excavation in the lower chamber 33 per cent completed.

Back Fill—Back filling behind the walls of the upper lock was continued, a total of 49,344 cubic yards being placed during December, increasing the total to 194,128 cubic yards. On December 31, the back fill was 16.09 per cent completed.

Receiving and Issuing Material—The receipts of material during the month were satisfactory, and, with the exception of cement, exceeded the consumption.

Mixing and Placing Plants—These plants were kept in satisfactory operation during the month. Work with the auxiliary plant was partially suspended December 31, until the work in the lower chamber is sufficiently advanced to resume the dumping of concrete from cars.

Power Plant and Pumps—The operation of the power plant and pumps during the month was satisfactory. Power was produced at a lower figure than during any previous month.

Iron and Steel Work—During the month the setting of the sills for the lower gates of the upper lock in the east chamber was completed, and partially completed for the lower gates of the west chamber. The setting of the castings in the chamber of one Stoney gate valve on the west wall was completed, and the steel concreted in.

Concrete Work—There was an increase of 5,060 cubic yards in the amount of concrete laid, as compared with the figures for the preceding month. The daily average for the 26 working days was 3,085 cubic yards. The total amount of concrete placed during the month was 80,212 cubic yards, including 6,840¼ cubic yards of large stone. The place measurement exceeded the bucket measurement by 309¼ cubic yards. Of the total new concrete, 20,826½ cubic yards were placed in the upper lock, 59,361½ cubic yards in the middle lock, and 24 cubic yards in the lower lock. The concrete work in the upper lock was 80 per cent completed, and the concrete work for the entire lock system 48.1 per cent completed at the end of December.

OPERATION OF THE PERMANENT AND AUXILIARY CONCRETE CONSTRUCTION PLANTS, GATUN LOCKS.

	Permanent Plant.	Auxiliary Plant.
Length of working day (hours)	12.00	8.50
Average number of hours per day worked per strand of cableway laying concrete and large stone (actual working time)	7.34	....
Average number of mixers per day	6.00	2.00
Average hourly output per mixer, (actual working time) cu. yds.	59.12	77.36
Average amount of concrete and large stone laid per hour, per strand of cableway, (actual working time) cu. yds.	33.72	....
Large rock laid, cu. yds.	4,254½	2,586
Concrete laid, cableways, cu. yds.	48,859	....
Concrete laid, derrick, cu. yds.	454	....
Concrete laid, derrick, dumping and lift, cu. yds.	....	23,748
Concrete laid, portable ½-yard mixer	....	271
Total amount concrete and large rock laid, cu. yds.	53,567½	26,335

Concrete from the auxiliary plant is placed by derricks, dumping, and a lift. It is therefore impracticable to estimate the average amount placed per hour by each of these units.

GATUN DAM.

Construction during the month increased the total fill, as determined by cross sections of the material in place, by 412,696 cubic yards, making the total amount in place 11,332,655 cubic yards.

Hydraulic Fill—The dredges increased the hydraulic fill by 243,121 cubic yards. The total hydraulic fill in place December 31 was 5,777,235 cubic yards.

Dry Fill—The material received from the Central Division, the locks, the spillway and the plant excavation, amounting to 169,575 cubic yards was placed on the north and south toes of the dam, east and west of the spillway, making the total dry fill in place 5,555,420 cubic yards.

GATUN SPILLWAY.

Concrete—The construction of the east and west approach walls was continued, 5,597 cubic yards of concrete being placed, which increased the total to 113,268 cubic yards.

Excavation—The material excavated during the month amounted to 18,488 cubic yards, increasing the total spillway excavation to 1,565,489 cubic yards. Excavation for the foundation for the east wing of the dam was commenced December 23, most of the material being removed by hand and loaded into narrow gage cars with a crane.

HARBOR AND CHANNEL SECTION.

Excavation below Sea Level at Mindi—The dredge *Sandpiper* removed 147,346 cubic yards of earth from Mindi cut and then moved to mile post 6 plus 2,700 feet.

Dredging from the Ocean to Mindi—Five dredges removed 274,088 cubic yards of earth and 60,936 cubic yards of rock from the Canal prism. In addition, the dredge *Caribbean* removed 155,109 cubic yards of earth from the channel leading to Dock 14. On December 31st, 40 feet of water could be carried to zero plus 2,200 feet; 30 feet to mile 5 plus 2,000 feet; and 20 feet to mile 5 plus 2,550 feet, the end of the cut.

PORTO BELLO.

PERFORMANCE OF ROCK CRUSHER PLANT.

	Hours.
Length of working day—hours	12:00
Average number of hours worked per day	9:17
	Cu. Yds.
Average output per hour of working day	257
Average hourly output for possible working time of 280 hours and 24 minutes	286
Average output per working hour	333
Total for month	80,244
Maximum day's output	3,877

SAND, STONE AND CEMENT SERVICE.

In connection with this service, plant steamed 12,675 miles, handled 831 barges, and carried 2,337 passengers.

TORO POINT.

Colon Breakwater—At Toro Point, 44,758 cubic yards of material were excavated, of which amount 5,760 cubic yards were placed in track fill, and 38,998 cubic yards in breakwater fill. The double track trestle was extended 352 linear feet.

NOMBRE DE DIOS.

During the month, 87 barges containing 42,813 cubic yards of sand, were shipped to Gatun.

MUNICIPAL ENGINEERING.

The reservoirs, water mains, sewers, roads, and oil pipe lines were maintained and extended as required to facilitate construction work. Work was continued on the Colon municipal improvements.

Central Division.

During the month of December, the total amount of material excavated in the Central Division was 1,408,881 cubic yards, of which 399,883 cubic yards were classified as earth and 1,008,998 cubic yards as rock. Of this quantity, 1,386,753 cubic yards were removed by steam shovels, and 8,296 cubic yards were blasted and washed away. Contractors removed 11,840 cubic yards by sluicing, 996 cubic yards by hand, and 996 cubic yards by blasting and washing away. Of the total, 1,408,881 cubic yards consisted of primary excavation for the Canal prism.

The daily average number of steam shovels at work during the month was 45.58 and the total number of shovel days was 1,185, as compared with 49.13 shovels at work during the month of November, with 1,179 working days.

For comparison with the work done by steam shovels during the corresponding month of the previous year, the following table has been prepared:

Period.	Excavated by shovels.	Classification of material.		Av. No. of shovels at work.	W'kg days.	Av. yards per shovel day.
		Rock.	Earth.			
1909:	Cu. Yds.	Cu. Yds.	Cu. Yds.			C. Y.
Dec.	1,250,357	1,005,088	245,269	43.15	26	1,114.6
1910:						
Dec.	1,386,753	1,008,998	377,755	45.58	25	1,170.3

Rainfall at Empire: 1909, 9.44 ins.; 1910, 9.06 ins.

The above table shows the average output per shovel to be five per cent greater in December, 1910, than in the corresponding month of the previous year.

The total amount of material excavated from the prism in the Culebra section of the Central Division in December, 1910—1,211,400 cubic yards—was the highest record in that section for the month of December, the previous high record for the month having been in December, 1908, when 1,210,046 cubic yards were removed.

The total estimated amount of material to be removed in the Central Division was 97,125,018 cubic yards, and up to January 1, 1911, 67,792,855 cubic yards had been removed, leaving 29,332,163 cubic yards to be removed in order to complete all excavation in the Central Division. From these figures it will be seen that 69.70 per cent of all excavation in the Central Division had been completed up to the close of the month of December and 30.30 per cent remained uncompleted.

Considering the two sections which compose the Central Division, the excavation completed and that to be completed at the close of December operations, was as follows:

CULEBRA SECTION.

	Cubic Yards.
Completed	56,905,933
To be completed	27,280,791

CHAGRES SECTION.

Completed	10,886,922
To be completed	2,051,372

From the above figures it will be seen that the Culebra section, locally known as the Culebra Cut, was 67.60 per cent completed, with 32.40 per cent to be completed; the Chagres section was 83.97 per cent completed, with 16.03 per cent to be completed.

During the month, 12,330 cubic yards of material were hauled from the Canal prism and dumped in the embankment for the roadbed of the relocated Panama railroad in the vicinity of Pedro Miguel, and 2,596 cubic yards in the vicinity of Frijoles. The total amount of spoil from the Central Division used for this purpose at the close of the month was 3,733,174 cubic yards. The Central Division also delivered at Gatun 137,905 cubic yards of rock and earth for use in the construction of the dam, making the total for this purpose at the end of December 2,505,557 cubic yards.

The daily average number of laborers at work on the whole division during the month was 7,858, and the daily average number of gold employes 894.

Pacific Division.

DISTRICT NO. 1—LOCKS AND DAMS.

The total excavation during the month amounted to 29,101 cubic yards. During December, no dry filling was added to the prism of the west dam at Pedro Miguel, the total amount of material in place at the close of the month remaining at 260,852 cubic yards, as previously reported. The back fill at Pedro Miguel was increased by 7,989 cubic yards, the total in place at the end of the month amounting to 30,087 cubic yards.

At Miraflores, 39,224 cubic yards were added to the dry fill in the toes, and 66,681 cubic yards to the hydraulic fill in the core of the west dam, making the totals at the end of the month 609,863 cubic yards and 294,712 cubic yards, respectively. No material was added to the back fill, leaving the total amount in place at the end of the month 133,545 cubic yards.

PEDRO MIGUEL LOCKS.

The excavation at the south end of the center wall was completed, and excavation was resumed at the center wall in the forebay. Concrete laying was commenced on the west side wall of the forebay, and track was laid for back filling the west wall.

The concrete work at Pedro Miguel for December showed a decrease of 21,414 cubic yards over the figures for November. The total amount placed was 42,384 cubic yards, including 262 cubic yards of large stone. The concrete was placed as follows: 14,692 cubic yards in the east wall; 432 cubic yards in the west head wall; 12,349 cubic yards in the center wall; 11,635 cubic yards in the west wall; 754 cubic yards in the floor; and 2,972 cubic yards in the sills.

OPERATION OF THE PERMANENT AND AUXILIARY CONCRETE CONSTRUCTION PLANTS AT PEDRO MIGUEL.

	Permanent Plant.	Auxiliary Plant.
Length of working day, (one day of 12 hours) hours	8.00	8.00
Average number of hours per day worked laying concrete and large stone (actual working time)	4.90	4.77
Average number of mixers per day	3.58	2.42
Average hourly output per mixer (actual working time)	Cu. Yds. 72.07	Cu. Yds. 41.28
Average amount of concrete and large stone laid per hour, per chamber crane (actual working time)	66.55	....
Large rock laid	211.00	51.00
Concrete laid	30,810.00	11,762.00
Total concrete laid	30,021.00	11,813.00

Average number of cranes and derricks per day placing—2.88.

MIRAFLORES UPPER LOCK.

Work on the west storage trestle at Miraflores was continued during the month. The total of concrete and large stone laid was 21,533 cubic yards, as compared with 23,871 cubic yards during November. The concrete was placed as follows: 14,965 cubic yards in the east wall; 2,319 cubic yards in the center wall, and 4,249 cubic yards in the floors.

OPERATION OF THE PERMANENT AND AUXILIARY CONCRETE CONSTRUCTION PLANTS AT MIRAFLORES.

	Permanent Plant.	Auxiliary Plant.
Length of working day, (one day of 12 hours) hours	8.00	8.00
Average number of hours per day worked laying concrete and large stone (actual working time)	7.05	6.12
Average number of mixers per day	....	6.15
Average hourly output per mixer (actual working time)	Cu. Yds.	Cu. Yds. 12.77
Average amount of concrete and large stone laid per hour per berm crane (actual working time)	56.67	....
Large rock laid	204.00	234.00
Concrete laid	10,184.00	10,911.00
Total concrete laid	10,388.00	11,145.00

Auxiliary mixing plant consists of two 2-yard mixers, five ⅓-yard mixers, and one ¼-yard mixer.

Auxiliary placing plant consists of one locomotive and dump car in service six days, and five small mixers dumping directly into form, averaging 4.15 mixers per day.

Permanent plant consists of one berm crane operating one boom only, on placing.

DISTRICT NO. 2—DREDGING.

The following is a statement of the output of the five dredges which were in operation during the month, and of the amount of material excavated hydraulically:

DREDGE.	Type.	WORK.		PLANT.		Total.	Remarks.
		Earth.	Rock.	Earth.	Rock.		
		Cu. Yds.	Cu. Yds.	Cu. Yds.	Cu. Yds,	Cu. Yds.	
Cardenas	Dipper	22,312	....	....	....	22,312	Place measurement
Marmot	Ladder	....	....	219,795	....	219,795	Place measurement
Mole.	Ladder	17,007	3,900	....	....	20,907	Place measurement
Badger	Ladder	63,641	....	....	....	63,641	Place measurement
Culebra	Suction	280,174	....	....	....	280,174	Scow measurement

Hydraulic excavation	....	*68,681	....	....	....	68,681	Place measurement
Grand Total	....	451,815	3,900	219,795	....	675,510	

*Excavated from lower lock site at Miraflores.

CHAMÉ SAND EXCAVATION.

Approximately 48,100 cubic yards of sand were excavated at Punta Chamé and delivered at Balboa.

HYDRAULIC EXCAVATION PLANT.

The work of the hydraulic excavation plant was continued during the month in the lower lock site, and completed to within the barrier between the upper and lower lock sites. The plant was moved southward. Work was continued on the coffer dam immediately in front of the central pumping station.

DISTRICT NO. 3—MUNICIPAL AND SANITARY IMPROVEMENTS.

The reservoirs, water mains, sewers, and oil pipe lines were maintained, and work was continued on the municipal improvements in the city of Panama.

DISTRICT NO. 4—ANCON QUARRY.

PERFORMANCE OF ROCK CRUSHER PLANT.

	Hours.
Length of working day	12:00
Average number of hours per day (actual working time)	8:89
	Cu. Yds.
Average amount crushed per hour of working day	223.31
Average amount crushed per working hour	301.35
Total output for the month	69,673

To supply the increasing demands for crushed stone, the crushers were operated

12 hours per day during the entire month. The screenings produced amounted to 2,648 cubic yards.

Relocation of Panama Railroad.

During the month, 238,410 cubic yards of material were excavated, making the total amount at the close of the month 5,257,767 cubic yards, and 271,230 cubic yards of material were placed in embankment, making a total of 10,613,608 cubic yards for this purpose.

For comparison with the work done by steam shovels during the preceding month, and during the corresponding month of the previous year, the following table has been prepared:

Period.	Excavated by Shovels.	Classification of material.		Av. No. of shovels at work.	W'kg days.	Av. yards per shovel day.
		Rock.	Earth.			
1909:	*Cu. Yds.*	*Cu. Yds.*	*Cu. Yds.*			
Dec.....	162,115	107,139	54,976	8.26	26	755
1910:						
Nov....	227,510	125,265	102,245	6.00	24	1,580
Dec.....	233,720	132,380	101,340	6.00	26	1,498

During the month, 442 linear feet of temporary trestle were driven. No permanent track was laid during December. The total force averaged 1,472 men.

Quartermaster's Department.

Labor—A large number of boilermakers and machinists were recruited and brought to the Isthmus during December. No unskilled labor was recruited.

Materials and Supplies—Requisitions for emergency dam machinery, Stoney valves, lock gate recess covers, locomotives and track material were forwarded during the month to the amount of $4,841,999. Stock requisitions and requisitions for material covered by annual contract were the smallest placed so far during the fiscal year.

Supplies during the month were received in 31 vessels, with cargo aggregating 33,434 tons. In addition, 3,060,428 feet, board measure, of lumber, 46,665 linear feet of piling, and 38,568 cross-ties were received. The value of all material received was $947,622.26.

Subsistence Department.

The operation of the European laborers' messes, the colored laborers' kitchens, and the line hotels showed a net profit of $860.85; the operation of the Hotel Tivoli showed a net profit of $804.33, and there was a net profit on restaurants and penitentiary of $217.46. The net profit on subsistence operations was $1,882.64.

The earnings of the Hotel Tivoli, though apparently small, were satisfactory, the sum of $1,546.60 having been charged against the hotel for renewal of table linen, mirrors, desks, carpet, stair treads, runners, etc. There was also a charge of $215.89 for the screening of porches, and for changing equipment in the kitchen to provide for *a la carte* service.

Department of Civil Administration.

COURTS.

Three civil and 25 criminal cases were disposed of in the Circuit Courts of the Canal Zone; and 74 civil and 544 criminal cases in the District Courts.

DIVISION OF POSTS, CUSTOMS AND REVENUES.

Money order sales for December amounted to $472,889.69, and the fees to $2,201.86. Receipts from card and stamp sales, and newspaper postage aggregated $8,959.65. The total collection of revenues made by the division was $57,144.91, and the collection on account of court fines, costs and fees, $2,228.50.

Twenty-one vessels entered at and 22 vessels cleared from the port of Ancon; and 24 vessels entered at and 23 vessels cleared from the port of Cristobal.

DIVISION OF POLICE AND PRISONS.

The total number of persons arrested was 545, of whom 511 were men and 34 women. Forty-four nationalities were represented. The total number of arrests for the month was an increase of 74 over November. Five convicts were committed to the penitentiary and nine were discharged, leaving 149 in confinement at the close of the month. The cost of guarding and subsisting the convicts was $2,545.31, and the value of their work on the Canal Zone roads $2,193.95.

DIVISION OF FIRE PROTECTION.

Fifteen fires were reported in the Canal Zone during the month, the damage to the Commission property being $111.23, and to Panama railroad property $190.

DIVISION OF PUBLIC WORKS.

In the city of Panama the average daily consumption of water was 1,211,595 gallons, and in Colon, 1,016,652 gallons.

The usual inspection and maintenance work of this division was performed during the month.

DIVISION OF SCHOOLS.

The total enrollment in the white schools during the month was 1,023, and the average daily attendance, 865, or 84 per cent of the enrollment; and in the colored schools the total enrollment was 893, and the average daily attendance, 528, or 59 per cent. Thirty-eight white and 24 colored teachers were employed in the division on December 31.

Department of Sanitation.

The total number of deaths from all causes among employes was 44. These were divided, as follows: From disease, 32, and from violence, 12, giving the annual average per thousand of 10.91 for all causes. Dividing the causes of death into disease and violence, an annual average per thousand of 7.94 and 2.97, respectively, is shown for the month.

The annual average death rate per thousand among employes for the month of December in previous years since American occupation was, as follows:

1904	19.44
1905	43.73
1906	30.27
1907	18.11
1908	25.03
1909	13.84

The annual average death rate per thousand in the cities of Panama, Colon, and the Canal Zone, including both employes and civil population, was 25.16

The annual average death rate per thousand for the month of December among the same class of population for previous years was, as follows:

1904	44.75
1905	58.78
1906	39.21
1907	23.50
1908	26.15
1909	21.50

Segregating the whites from the blacks, the annual average death rate per thousand from disease among employes was for whites 5.59, blacks, 8.79, giving a general average of 7.94. For the same month during 1908, the annual average death rate per thousand from disease was whites, 9.85, blacks, 14.05, giving a general average of 12.81; and for the same month during 1909, whites, 8.39; blacks, 10.67, giving a general average of 10.13.

Among employes during December, 1910, deaths from the principal diseases were as follows: Nephritis, 6; lobar pneumonia, 7; malaria fever, E. A., 2; haemoglobinuric fever, 1; tuberculosis of the lungs, 4; organic disease of the heart, 2; leaving a balance of 10 deaths from all other diseases, and 12 deaths from external violence.

No cases of yellow fever, smallpox, or plague were brought to, or originated on the Isthmus, during the month.

Respectfully,
Geo. W. Goethals,
Chairman and Chief Engineer.

Missing Men.

Any one having information regarding the whereabouts of William Clise, who is supposed to be on the Isthmus of Panama, is requested to communicate with his sister, Mrs. Emma Goodwich, 16 Carlyle street, Battle Creek, Mich.

Any one having information regarding the whereabouts of Earl Bown, an electrician, who is supposed to have come to the Isthmus some time in September, 1910, from Atlanta, Ga., is requested to communicate with The Canal Record.

Any one having information regarding the whereabouts of Walter Jennings, who is supposed to be on the Isthmus of Panama, is requested to communicate with The Canal Record.

Any one having information regarding the whereabouts of Wm. E. Daugherty, who is supposed to be on the Isthmus of Panama, is requested to communicate with Walter Bray, Paraiso, C. Z.

Any one having information regarding the whereabouts of Ed. O'Neil, who is supposed to be on the Isthmus, will please communicate with Jos. L. Donahue, Gorgona, C. Z.

Porto Bello Crusher.

A statement of the work done at Porto Bello crusher, by days, for the week ending January 21, follows:

Date.	Hours worked.	Cubic Yards.
January 16	8:21	3,351
January 17	6:21	2,880
January 18	8:17	3,416
January 19	7:20	3,191
January 20	7:33	3,599
January 21	7:06	3,205
Total	44.58	19,642

Tide Table.

The following table shows the time of high and low tides at Panama for the week ending February 1, 1911: (75th meridian time):

Date.	High.	Low.	High.	Low.
	A. M.	A. M	P. M.	P. M.
January 26	12.40	7.10	1.40	7.35
January 27	1.38	8.00	2.25	8.25
January 28	2.25	8.45	3.05	9.10
January 29	3.08	9.27	3.40	9.43
January 30	3.45	10.05	4.15	10.25
January 31	4.25	10.40	4.50	11.00
February 1	5.00	11.20	5.25	11.40

The following vessels arrived at and departed from the port of Balboa during the week ending January 21, 1911:

Arrivals—January 14, *Henry Villard*, and *Riverside* from San Francisco; January 16, *Ecuador*, from Guayaquil; January 17, *Ucayali*, from Callao; January 20, *Aysen*, from Valparaiso.

Departures—January 16, *Peru* (P.S.N.Co.), to Callao; January 18, *Strathtay*, to Puget Sound; January 19, *Acapulco*, to San Francisco.

OFFICIAL CIRCULARS.

Leave for Hourly and Monthly Employes.

CULEBRA, C. Z., January 1, 1911.

CIRCULAR No. 297-B (Superseding CIRCULARS Nos. 297 and 297-A):

1. By direction of the President of the United States, hourly employes on the gold roll of the Isthmian Canal Commission and of the Panama Railroad Company, who are not accustomed to a tropical climate, will be allowed four weeks' leave with pay for each year's continuous satisfactory service after January 1, 1911.

2. This leave will be computed as 28 consecutive days of eight hours each, to be at the rate of pay per hour received at the time leave is taken.

3. Employes, who have rendered satisfactory service for six months or longer subsequent to January 1, 1911, who resign or who are discharged, except when services are terminated for cause, will be granted leave on account of such service at the rate of two and one-third days for each full month, total not to exceed 56 days; but no leave will be granted to an employe who resigns, or is discharged after less than six months' service.

4. In computing leave earned by service in both 1910 and 1911, or on both the hourly and monthly rolls, the following rules will govern:

(*a*) Leave will be due any time after 10 months' continuous service, computing the leave as if the employe had served a full year of 12 months.

(*b*) For each full month on the hourly gold roll in 1910, count one and one-sixth days' leave.

For each full month on the hourly gold roll in 1911, and subsequently, count two and one-third days' leave.

For each full month on the monthly gold roll, count three and one-half days' leave.

(*c*) In these cases if the employe elects to accumulate any portion of his leave it must be two weeks, or a multiple of two weeks.

(*d*) It should be noted that only American citizens are entitled to leave for service on the hourly gold roll in 1910, but for service after 1910 citizenship is not considered.

5. No leave will be computed on a fraction of a month. When computation of leave results in a fraction of a day, a half day, or over, will count as one day. No credit will be given for less than a half day.

6. Two, four, or six weeks of any leave due may be left to accumulate, to be taken on termination of service, or to be added to the next leave due the employe, provided that not more than 56 days may be taken on termination of service, and not more than 42 days for the regular leave. Leave not taken in conformity with this rule will be forfeited.

7. Leave without pay may be taken in conjunction with leave with pay, provided the total does not exceed 42 days.

8. Leave is not a vested right; it must be taken at the convenience of the department or division when the employe can be spared with least prejudice to the work. Except in the case of employes who resign or are discharged, leave must be taken in a country affording the necessary change of climate, and compensation for the leave period will not be paid until the first pay period after the employe returns to the Isthmus and reports for duty. Employes not reporting for duty within 15 days after the expiration of their leave will forfeit the right to pay for the leave period and may be discharged.

9. Time lost by an hourly employe on account of leave without pay in excess of 30 days in one service year, suspensions for discipline, furloughs, absence from duty on account of illness, or injury in excess of a total of 60 days in one service year, will not be credited as service entitling an employe to leave with pay.

10. The new service year of an employe will date from the completion of 12 months' continuous service, exclusive of above deductions.

11. When leave is due an employe, and he has given notification of his intention to accumulate same, he shall not be deprived of such leave thereafter, regardless of the reason for termination of service.

GEO. W. GOETHALS,
Chairman, Isthmian Canal Commission.
President, Panama Railroad Company.

Labor and Material Surcharges.

CULEBRA, C. Z., January 18, 1911.

CIRCULAR No. 169-E (Superseding previous CIRCULARS):

Effective January 1, 1911, the following surcharges will be added in all cases when labor is furnished between departments and divisions, and where labor and material are furnished between the Isthmian Canal Commission, the Panama Railroad Company and the Government of the Canal Zone, and to individuals and companies:

BETWEEN DEPARTMENTS AND DIVISIONS OF THE ISTHMIAN CANAL COMMISSION, AND BETWEEN THE ISTHMIAN CANAL COMMISSION, THE PANAMA RAILROAD COMPANY, AND THE GOVERNMENT OF THE CANAL ZONE.

Shop work—The shop expense percentage fixed for the shop in which the work is performed will be added to the distributed labor. The percentage for each shop will be fixed from time to time by this office.

All other labor without machinery—Ten per cent on labor.

Material—No surcharge will be added to material, except that furnished to the Government of the Canal Zone, to which 15 per cent will be added, whether sold or used in repair work. No surcharge will be added to sand and stone produced by the Isthmian Canal Commission, and these two materials will be invoiced at storage pile prices.

FOR INDIVIDUALS AND COMPANIES.

Shop work—Seventy-five per cent on labor and 20 per cent on material used.

All other labor without machinery—Twenty per cent on labor.

Material with or without labor, including sand and stone—Twenty per cent on material.

GEO. W. GOETHALS,
Chairman, Isthmian Canal Commission.
President, Panama Railroad Company.

Working Hours in Wireless Stations.

CULEBRA, C. Z., January 17, 1911.

HEADS OF DEPARTMENTS AND DIVISIONS:

I am in receipt of the following communication, dated January 13, 1911, from Captain R. M. Gibson, U. S. M. C.:

"I have to inform you that the Secretary of the Navy has this day authorized the suspension of the present schedule of working hours for the wireless stations.

"In future messages may be sent at any time, all stations working for the common welfare and prevention of interference."

GEO. W. GOETHALS, *Chairman.*

Monthly Reports on Manufacturing.

CULEBRA, C. Z., January 19, 1911.

CIRCULAR No. 264-A:

1. Paragraphs 3 and 4 of report on manufacturing account, approved in Circular No. 264, are modified as follows, to take effect January 1, 1911:

Each manufacturing and repair shop will submit to this office on form 222 C. E. a report showing for each month the cost of the labor and material used in each job or in each class of work of which the cost is kept as a unit.

2. All material and labor will be divided into two classes, viz.: Distributed and undistributed.

DISTRIBUTED LABOR.

The time of each artisan and helper while actually employed directly on a job, or on a class of work the cost of which is kept as a unit, will be charged thereto. The time of a foreman will be distributed only when he supervises continuously the labor on one particular job, or on one class of work the cost of which is kept as a unit, such as the foreman of the foundry at Gorgona, a foreman engaged exclusively in making repairs to steam shovels outside of the shops, etc.

The time of yard gangs, crews of locomotives and locomotive cranes, crews of boats transporting material and men, crane operators, etc., will be distributed only when an accurate record is kept of the amount of time spent on each job, or on each class of work the cost of which is kept as a unit.

UNDISTRIBUTED LABOR.

All other labor will be charged to the proper subhead under shop expense.

DISTRIBUTED MATERIAL.

All material of which at least a portion thereof forms part of the completed job will be charged directly thereto.

The cost of tools, templets, dies, fixtures, jigs, etc., will be charged directly to a job only when of such special character that they cannot be used on any other work.

Patterns will be charged to the cost of castings.

UNDISTRIBUTED MATERIAL.

The cost of all other material will be charged to proper subhead under shop expense.

3. Shop expense will be divided into superintendence and other expenses.

The shop expense for each month will be summarized on form 222 C. E., under the following subheads, viz.:

SUPERINTENDENCE.

Supervision.
Clerks.
Office maintenance and supplies.

OTHER EXPENSES.

New machines, tools, buildings and yards.
Repairs to machines, tools, buildings and yards.
Gratuity time.
Vacation, sick, injury and transit time.
Power and light.
All other undistributed labor and material.

The cost of labor, material, and charges from other departments and divisions, and the total, will be given for each of the above items. The grand total of all items will constitute the shop expense.

The total distributed labor, the shop expense, and the percentum which the shop expense is of the distributed labor, will be shown below the summary.

4. The Examiner of Accounts will keep a debit and credit account of the shop expense of each shop, and will submit quarterly to this office a report showing the balance and character thereof.

The shop expense percentage which each shop will apply to all work done therein, whether manufacturing or repair, will be announced from time to time from this office, and will be changed as may be necessary to keep the balance of the shop expense account a minimum.

The last month during which a shop operates, the shop expense percentage will be fixed so as to reduce the balance to zero.

5. The estimated cost given on the work request (form 159 C. E.) will be entered on form 222 C. E. until the job is completed. When a job is finished the word "Completed" and the total cost, including shop expense, will be entered after the item in the column of "Remarks" on form 222 C. E. for that month.

The cost of overtime on all repairs, the cost of overtime on all manufactures, and the total for each shop, will be entered on the last sheet of form 222 C. E. for the month.

GEO. W. GOETHALS,
Chairman and Chief Engineer.

No Surcharge on P. R. R. Invoices.

CULEBRA, C. Z., January 20, 1911.

HEADS OF DEPARTMENTS AND DIVISIONS:

Effective January 1, an agreement was entered into with the Panama Railroad Company whereby the Commission will handle all material required by that company for a stated monthly consideration. Invoices rendered for material sold to, or used in repairs for the Panama Railroad Company after said date should carry no surcharge.

GEO. W. GOETHALS, *Chairman.*

BOYS' DEPARTMENT.

Number of members	81
Number of afternoons for boys	66
Average attendance per afternoon	56
Total attendance in systematic gymnasium work	730
Outings and other special features	2

CULEBRA.

The second handicap billiard tournament was finished last week with the following scores:

Name.	Handicap.	Won.	Lost.
Case	45	7	3
French	55	7	3
Conlan	100	6	4
Hepler	45	6	4
Bayne	100	5	5
Hall	45	5	5
Silver	81	5	5
Soderberg	45	5	5
Thompson	86	5	5
Clark	45	2	8
Dubois	100	2	8

In the play-off of the tie for first place, Mr. Case won. Mr. Conlan made the best single average, 2.27; also the best run, 33 points.

The regular monthly social at the clubhouse on Friday evening, January 20, attracted a large attendance.

Interest in the simultaneous chess tournament held on Tuesday evening was keen. Mr. C. M. Wilson met six opponents—Messrs. Stearns, Warner, Dubois, Bartlett, Goodenow, and Putnam—and broke even, winning three and losing three. Mr. Stearns will meet all comers in the next simultaneous match on Tuesday evening, January 30.

The first session of the topic club will be held on Wednesday evening, January 24. This session was postponed from January 17. H. F. French will lead the discussion.

The 200, or over, scores on the bowling alley for the week ending January 21 are, as follows: Case, 201, 201, 208; Huttlemeier, 209, 202.

There will be a motion picture entertainment at the clubhouse on Friday evening, January 27. Members, free; nonmembers, 25 cents; children, 15 cents. The entertainment will begin at 8.15 sharp.

EMPIRE.

On account of the large number of entries in the December pool tournament, the finals have just been played, H. M. Pearson winning first place, and R. A. Fullinwider, second.

A meeting of the camera club was held on January 23 for the purpose of reorganization. Plans were made for outings and other events, announcement of which will be given in the near future.

A "smoker" to which all the men of Empire are invited will be held on Wednesday evening, February 1.

The following high scores were made last week: Duckpins—Rhodghiero, 100; Parkis, 100; Fisher, 100; Reimann, 101. Bigpins—Danielson, 202; Gustavson, 208; Koperski, 216.

The glee club will resume rehearsals on Saturday evening.

The last game of the Isthmian Bowling League was played between Gatun and Empire on the Empire alleys, Saturday night, January 21. Gatun took two out of three games. This gives Empire the championship, with 19 games won and five lost, a percentage of 792, which is a new record. Following are the scores:

Gatun.				Empire.			
Severn	177	155	207	Gustavson	204	164	175
Wolf	172	155	131	Goolsby	168	144	140
DeMoll	175	166	175	Bardelson	154	126	198
Harrington	165	158	133	Pearson	187	180	157
Barte	212	181	153	Huson	183	179	137
Total	901	815	799	Total	896	793	807

GATUN.

Three new members were added to the gymnasium class during the week beginning January 16.

The glee club rehearsal was omitted on January 19, but from now on will be held every Thursday night. The club now numbers 20.

CRISTOBAL.

Last week the track and jumping pit were placed in good condition for those who wish to train for the track and field meet at Empire. The regular practice nights for coaching will be Mondays and Thursdays. Those wishing to may use the track at any time.

The closing games of the bowling league were bowled Saturday night between Culebra and Cristobal. The score was as follows:

Culebra.				Cristobal.			
Herrington	188	165	133	Barrett	167	161	152
Mengel	165	148	132	Weston	156	127	137
Hayes, G. C.	166	187	198	Rabbitt	186	180	138
Huttlemeier	116	127	137	Burns	119	133	185
Dougherty	167	211	149	Bullard	148	170	169
Total	802	838	749	Total	776	771	781

Friday night, January 27, a moving picture entertainment will be given.

On Wednesday night, the "Life Problem" Club will be started, and will take up the following topics: "Problems of a livelihood," "Problems of social and family relationships," "Problems of physical temptations," and "Problems of service." Each topic is subdivided into six heads, and two will be handled each evening. The first two for Wednesday night were "The value of work," and "The choice of a life work."

Regular indoor baseball practice will begin this week.

COROZAL.

The enlarged clubhouse was formally opened to the public on Tuesday evening, January 24. It will be operated under the management of the Y. M. C. A., like the other Commission clubhouses in the Zone. Colonel W. C. Gorgas presided at the opening exercises, which included vocal and instrumental music and addresses by Major H. A. Brown, Mr. Maurice H. Thatcher, and Mr. F. C. Freeman. The clubhouse contains privileges for members similar to those provided in the other clubhouses.

Geo. R. D. Kramer, Jr., formerly assistant secretary at Culebra, has been promoted to the position of sectary. All white gold employes of the I. C. C. and P. R. R. are eligible for membership.

PORTO BELLO.

A Spanish class has been organized with 20 members. Mr. Quail, the sanitary officer, is to act as instructor. The class will meet on Tuesday and Wednesday nights at 7.30.

Thursday night, the discussion club had its second meeting in the study of life problems. "Preparation for," and "Rewards of a life work" were the topics discussed.

Friday night, a large crowd enjoyed a moving picture show at the clubhouse. Five thousand feet of film were exhibited.

Stages of the Chagres.

Maximum heights of the Chagres River for the week ending midnight, Saturday, January 21, 1911. All heights are in feet above mean sea level.

COLON TO BARBADOS, CALLING AT TRINIDAD.

Magdalena	R. M	Tuesday	Jan. 31
Orotava	R. M	Tuesday	Feb, 14

The next sailing of the Leyland Line will be as follows: William Cliff on or about January 28, for New Orleans via Kingston, Ja.

Hamburg-American steamers leave for New York every Tuesday at 10 a. m.; for Jamaica every fortnight, connecting there with steamers for all points in Cuba; for Port Limon every Tuesday, direct, or by way of Bocas del Toro.

Royal Mail steamers leave for New York on alternate Mondays at 5 p. m.; for Southampton on alternate Tuesdays at 10 a. m.

United Fruit Company's ships for New Orleans direct leave on Thursday at 3 p. m.; for New Orleans via Port Limon and Puerto Barrios on Thursday at 6 p. m., and for New York on Thursday at 11 a. m.

Sailings of the French line (Cié Générale Transatlantique) for Venezuelan ports, Martinique and Guadeloupe on the 3d and 20th of each month

CANAL RECORD

Volume IV. ANCON, CANAL ZONE, WEDNESDAY, FEBRUARY 1, 1911. No. 23.

The Canal Record

Published weekly under the authority and supervision of the Isthmian Canal Commission.

The Canal Record is issued free of charge, one copy each, to all employes of the Commission and Panama Railroad Company whose names are on the gold roll. Extra copies and back numbers can be obtained from the news stands of the Panama Railroad Company for five cents each.

THE CANAL RECORD
Ancon, Canal Zone,
Isthmus of Panama.

No communication, either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.

NOTES OF PROGRESS.

Dismantling Berm Crane at Pedro Miguel.

Concrete operations at the Pedro Miguel Locks have reached the point where the output of only one of the two berm cranes can be used advantageously. The two auxiliary mixers, one each on the east and west storage trestles, are supplying concrete for the extension of the side walls of the locks north, and the output of one berm crane is sufficient for the operations at the south end of the locks, in addition to furnishing material for the extension of the center wall north, which was begun a few days ago. The work of dismantling berm crane "G" was begun by the contractors, the McClintic-Marshall Construction Company of Pittsburg, on Monday, January 30, and the removal of the electrical material, which is being done by the Pacific Division, on the previous day. The two 150-foot cantilever arms on the crane will be transferred at once to the two berm cranes in service at Miraflores, one to each crane, which, with the installation of the mixing machinery, will equip them for effective service.

Work on Gold Hill Section of P. R. R. Relocation.

A part of the excavation for the roadbed of the Panama railroad relocated line between Paraiso Junction and Gamboa, passing back of Gold Hill, will be done by contract. This comprises a section of the road opposite Las Cascadas, extending from station 1461 + 30 to station 1537, a distance of about one and one-half miles. The contract for the work, which will be performed on the task plan, has been awarded to J. B. Hull at 57 cents a cubic yard. There were six bidders in all, and the figures submitted by them ranged from 34 cents to 71 cents a cubic yard. Another section was also advertised to be let to private contractor, viz., that between stations Nos. 1580 and 1700, opposite the town of Empire, but it was subsequently determined, that a passing track and station grounds would be laid out at that point, and, therefore, the grading could be handled to better advantage by steam shovels.

The last section of the relocation, between Paraiso Junction and Gamboa, about 9¼ miles long, on which operations have been delayed pending a decision as to a departure from the original plan of constructing the roadbed through Culebra Cut along a berm on the east bank, has been surveyed and cleared. Work on the roadbed is in progress at both ends, and the construction of culverts has been begun. There are three large cuts to be made, and several heavy embankment fills, although none of the latter approximate in size some of the fills on the line between Gatun and Monte Lirio. A considerable part of the material in these cuts is rock, and its excavation will be accomplished by steam shovels. The road will cross the Obispo diversion, the only stream of size in this locality, by means of a triple 10 x 10 box culvert, made of reinforced concrete. It is expected that the Gold Hill section of the line will be ready for traffic in the early part of 1912.

Seismograph Station at Gatun.

A seismograph station will be established on the island of Guarapo in Gatun Lake for the purpose of obtaining more detailed information with reference to the directions and distances of seismic disturbances. With one station, only approximate directions and distances can be obtained, while with two, a much more correct determination of the probable foci of disturbances is possible. A station for seismological observations is now maintained at Ancon, where there are four instruments of the Bosch-Omori type; two 100 kg. machines and two 25 kg. machines. Two of these instruments will be used to equip the new station at Gatun, for which a suitable building and foundation will be provided.

Experimental Laboratory and Kitchen.

A chemical laboratory and experimental kitchen has been built for the Subsistence Department. It is situated directly back of buildings Nos. 1 and 2 on Cristobal Point, and is connected with the offices of the Subsistence Department in building No. 2 by a covered passageway.

The laboratory is equipped with the necessary apparatus for making tests of groceries, provisions, and other supplies sold at the commissaries, and a sample of every new shipment received will be analyzed, catalogued and placed away for future reference. The purpose of these tests is not only to guard against the acceptance of goods, which are inferior in quality to the samples submitted by the successful bidders, but also to secure an accurate and complete analysis record which will be of value in placing future orders.

An expert chemist is in charge of the laboratory. In addition to inspecting food supplies, pronouncing on the quality and texture of cloth goods, etc., he will guard against the inroads of boiler scale, and flue and ammonia gas troubles in the engine rooms at the manufacturing plants, which, it is expected, will result in a considerable yearly saving in the cost of maintenance. Another of his duties will be to look after and verify weights and measures.

New Fire Station at Mount Hope.

A fire station is being erected at Mount Hope, near the cemetery entrance. It will be of the same size as the stations at Bas Obispo and Balboa, with one room below for the hose reel and accessories, and living quarters above for the fireman in charge. At the present time, the quarters for the fireman stationed at Mount Hope are in the quartermaster's depot, but this arrangement has proved inadequate. The new building will make 17 fire stations within the jurisdiction of the Canal Zone Fire Department. There are paid departments at seven of these stations, and a paid fireman and volunteer companies at nine. There are also volunteer companies at Matachin, Miraflores, San Pablo, and Toro Point, but no regular buildings have been provided at those places.

Assistant Purchasing Agent, New Orleans.

Col. George B. Davis, assistant purchasing agent, has been relieved from duty at New Orleans, and the duties heretofore performed by him, pertaining to both the Isthmian Canal Commission and the Panama Railroad Company in that city, were taken over by Capt. Frank H. Lawton, Subsistence Department, U. S. A., effective January 18, 1911.

Telephone Improvements.

The old style magneto telephone switchboard at Mount Hope has been replaced by a new Western Electric common battery private branch exchange switchboard, known as type No. 101. The magneto, or bell-ringing instruments, formerly in use, have been removed, and telephones of the common battery type installed in their place. The new board is equipped for furnishing service to 30 subscribers, and is connected with the main exchange at Cristobal by trunk lines. Power for the batteries is also supplied from the Cristobal exchange, by means of a line recently strung to Mount Hope, consisting of an old No. 00 wire taken down in Colon.

Service tests, in connection with the operation of the railroad company's system, are now regularly conducted. These are made with a view of determining: (1) The time consumed by the operator in making a connection, and (2) The time elapsed before the subscriber answers. A recent test in Cristobal showed an elapsed time of three seconds in the first, and of 3.50 seconds, in the second instance. A traffic manager was appointed a short time ago, whose duties consist in looking after and remedying defects in service. Chief operators have been engaged for the exchanges at Cristobal and Empire, to supervise the serv-

NOTES OF PROGRESS.

(Continued.)

ice. and the work of the operators, at those points.

The construction force on the permanent telephone line along the Panama railroad relocation is now at work between Caimito and New Frijoles, and as soon as this section is completed, it will start the building of the line between Gatun and Monte Lirio. It is expected that by the time the latter section is finished, the railroad fills between Monte Lirio and New Frijoles will have been so far completed that the telephone line can be located and the work begun there. Old steel rails, 28 feet long, are used for poles. They are set in concrete bases, the amount of concrete in the bases varying according to the character of the ground, the swampy sections requiring heavier foundations than where the land is high and easily drained. The concrete base has been a valuable adjunct in iron pole construction on the Isthmus. It has served not only to prevent rusting, but the pole stands up under a greater strain, and, through wet, marshy places, it has obviated an expensive system of bracing.

Gatun Dam Spillway.

Concrete was placed in the spillway of Gatun Dam during the week ending January 28, as follows:

Date.	Concrete laid.	Hours worked.	No. Mixers.
	Cu. Yds.		
January 23	78	6:00	1
January 24	96	7:00	1
January 25	90	6:30	1
January 26	64	5:30	1
January 27	90	7:00	1
January 28	114	8:00	1
Total	532	40:00	1

Central Division Unloaders in December.

Location.	No. of unloaders.	No. of trains.	No. of cars.
Balboa	3	920	18,400
Miraflores	3	670	13,400
Gamboa	4	963	19,260
Total	10	2,553	51,060

Additional Police Station Facilities.

A subpolice station and jail will be established at Golden Green, the native settlement in the outskirts of Empire, and an unused building belonging to the police department, situated at Cerro near the Lirio planing mill, where a post was formerly maintained, will be moved to the site at Golden Green, which is on Panama railroad land.

A new substation will also be established at New Gatun, in the vicinity of the public market, and a building, 16 by 22 feet in size, similar to the police station at West Culebra, will be erected by the Constructing Quartermaster. The populous part of the village is over one-half mile distant from the Gatun police station, and a temporary place of detention has been regarded as necessary on account of the difficulty of marching prisoners over the path along the Panama railroad track, the only means of communication by pedestrians between the two sections of the town.

An additional cell will be provided at the Ancon jail by curtailing the dormitory space formerly allotted to the colored police officers on the first floor. It will be used for confining colored prisoners, and will be considerably larger than the other two cells in the building.

Postal Business and Canal Zone Revenues.

The report of the Director of Posts for the month of December shows that 21,748 money orders were issued, amounting to $473.032.41, an increase of $38,126.86 over November. Of the $473,032.41 issued in December, the sum of $372,049.57 was drawn payable in the United States, $100,512.34 in orders payable in the Canal Zone, and $470.50 in orders payable in Martinique. The fees collected amounted to $2,201.91, and the amount paid and repaid during the month was $128,256.31.

Postal sales during the month amounted to $8,956, and newspaper postage amounted to $2.67.

The revenue collections for the month were as follows:

Distillation licenses	$256.54
Motor vebicle licenses	215.00
Liquor licenses for remaining balf of fiscal year, 56 saloons	33,600.00
Taxes, licenses, etc	11,911.86
Total	$45,983.40

CONCRETE WORK IN THE LOCKS.

GATUN LOCKS.

About 52 per cent of the concrete for the system of three twin locks at Gatun has been laid, the exact amount in place at the close of work on January 28, being 1,069,795 cubic yards, out of a total of 2,085,000.

A statement of the amount of concrete placed in the locks each day for the week ending January 28, and of the total follows; and a similar statement for the work in the spillway of Gatun Dam is published elsewhere in this issue. The construction plant works 12 hours daily, and the auxiliary plant 9 hours.

Date.	Construction Plant. 2-cubic yard mixers.			Auxiliary Plant. 2-cubic yard mixers.			Large stone.	Total.
	Concrete placed.	Hours worked.	No. of mixers	Concrete placed.	Hours worked.	No. of mixers

Previously reported								1,051,723½
Grand total								1,069,795¾

*The 492½ yards shown for the portable mixers were placed on the following days: January 23d, 18 yards; January 24th, 71½ yards; January 25th, 83½ yards; January 26th, 99½ yards; January 27tb, 115½ yards; January 28th' 104½ yards. Of this amount, 173 yards were reinforced concrete.

PEDRO MIGUEL LOCKS.

Concrete work in the locks at Pedro Miguel is about 62 per cent completed, 518,512 cubic yards, out of a total of 837,400, having been placed at the close of work on January 28. The record for each of the six 8-hour working days of last week, follows:

Date.	Construction Plant. 2-cubic yard mixers.			Auxiliary Plant. 2-cubic yard mixers.				Total.
	Concrete placed.	Hours worked.	No. of mixers	Concrete placed.	Hours worked.	No. of mixers	Large stone.

STEAM SHOVEL RECORDS.

Work of Central Division in December.

During the month of December, the total amount of material excavated in the Central Division was 1,408,881 cubic yards, of which 399,883 cubic yards were classified as earth, and 1,008,998 cubic yards as rock. Of this quantity, 1,386,753 cubic yards were removed by steam shovels, and 8,296 cubic yards were blasted and washed away. Contractors removed 11,840 cubic yards by sluicing, 996 cubic yards by hand, and 996 cubic yards were blasted and washed away.

The high record of the month was made by shovel No. 205, working 26 days in the Culebra district, which excavated 51,001 cubic yards of rock. The second best record for the month was made by shovel No. 204, working 24 days in the Culebra district, which excavated 45,410 cubic yards of rock.

The best record for a shovel of the 70-ton class was made by shovel No. 111, working 26 days in the Chagres district, which excavated 27,807 cubic yards of earth.

Shovel No. 204, working in the Culebra district, made a high record for one day by excavating 3,249 cubic yards of rock and earth on December 24. Shovel No. 132, working in the Chagres district, excavated 2,100 cubic yards of earth on December 12, this being the high record for one day for shovels of the 70-ton class.

Except where noted, monthly reports are computed by place measurement, while daily reports are based on car measurement. The best records for the month and for one day are shown below:

*70-ton class.

The townsite of Spanishtown at Paraiso has been extended by the addition of block No. 6, of 13 lots, each 50 by 100 feet. This addition was made necessary in order to take care of the buildings transferred from other lots at Spanishtown, through which a cut is being made by the Panama Railroad Company.

Leave for Hourly Employes.

Circular No. 297-B, published in THE CANAL RECORD of January 25, covers rules only for hourly employes and is not intended to apply to monthly employes, except when part of the service of the employe is on the hourly roll and part on the monthly roll, as noted in paragraph 4. The balance of the Circular refers solely to hourly employes, and it should have appeared under the above caption.

Ancon Crusher.

A report of the rock crushed at Ancon quarry during the week ending January 21, follows:

Date.	Hours worked.	Cubic Yards.
January 16	10:15	3,226
January 17	9:45	2,601
January 18	5:40	1,854
January 19	10:35	3,459
January 20	10:20	3,131
January 21	8:25	2,880
Total	55:00	17,151

The Panama Government has advised the Sanitary Department of an outbreak of cattle plague in the Pacora valley, and at Chepo, Republic of Panama, requesting its aid in making an investigation of the disease.

Obituary.

L. H. Alleman, an American employed in the Central Division, died at Ancon Hospital on January 25, as the result of injuries received in falling down a 50-foot embankment at San Pablo on January 24. He was 48 years of age, married, and had been on the Isthmus two years.

A. C. Logan, employed by the Panama Railroad Company at Colon, died at Colon Hospital on January 28, after an illness of about two months. He was 50 years of age, married, and had been on the Isthmus four years. He is survived by his wife, who lives in Chicago, Ill.

Stages of the Chagres.

EXECUTIVE ORDERS.

Authority to Use French Dump Cars—Increased Panama Duties.

Under authority vested in me by law, it is ordered:

The Isthmian Canal Commission is hereby authorized to use six-meter French dump cars for the purpose of obtaining gravel from the bed of the Chagres River until July 1, 1911, without equipping such cars with the various safety appliances required by the provisions of Executive Order No. 1002, dated January 6, 1909. WM. H. TAFT.

THE WHITE HOUSE,
January 16, 1911.
[No. 1285.]

WASHINGTON, D. C., January 9, 1911.

CIRCULAR NO. 45:

The following order of the Secretary of War is published for the information of all concerned:

WAR DEPARTMENT,
WASHINGTON, January 5, 1911.

ORDERS:

1. By direction of the President, it is ordered that the first proviso of section 1 of the order issued by the Secretary of War, by direction of the President, on December 3, 1904, which was promulgated in Circular No. 4, Isthmian Canal Commission, December 30, 1904, be amended to read as follows:

"*Provided, however,* That this order shall cease to be operative—

"First. If the Republic of Panama should at any time increase the rate of duty on imported articles described in class 2 of the act of the National Convention of Panama passed July 5, 1904, and effective October 12, 1904, above 15 per centum ad valorem, provided for in said act; or if the said Republic should increase at any time the rates of duty on the imported articles described in the other schedules of said act, except on all forms of imported wines, liquors, alcohols, and opium, upon which the Republic may fix higher rates.

"Second. If Article Thirty-eight of the Constitution of the Republic of Panama, as modified by Article One hundred and forty-six thereof, is repealed or modified at any time insofar as the importation and sale of all kinds of merchandise are concerned.

"Third. If the consular fees and charges of the Republic of Panama, in respect to the entry of all vessels and importations into the said ports of Colon and Panama, are increased beyond the rates now in force, which rates are understood to be 60 per centum of the rates in force prior to the promulgation of said order of December 3, 1904; or

"Fourth. If goods imported into the ports of Colon and Panama, consigned to, or designated for any port in the Canal Zone, are at any time subjected in the Republic of Panama to any other direct or indirect impost or tax whatever."

2. Paragraph 3 of the order issued by the Secretary of War, by direction of the President, on January 7, 1905, which contemplates the exclusion from the benefits of the commissaries established and maintained by the Canal Commission of all employes and workmen who are natives of tropical countries is hereby revoked. J. M. DICKINSON,
Secretary of War.

F. C. BOGGS,
Captain, Corps of Engineers, U. S. Army,
Chief of Office.

SOCIAL LIFE OF THE ZONE.

Women's Clubs.

At the meeting of the Paraiso Woman's Club on Wednesday, January 25, two standing committees were created in order to facilitate the work of the organization; a committee on civics, with Mrs. W. E. Ellenwood as chairman, and a committee on entertainment, with Mrs. H. G. Bain, chairman. The duty of this latter committee will be to arrange dates and details for all entertainments given by the club. It is expected that the club will hold a dance early in February.

The social meeting of the Pedro Miguel Woman's Club was held at the home of Mrs. Ernest Bitely on Wednesday afternoon, January 25. Mrs. Mark White has issued invitations for the clubwomen, with their husbands, to meet at her home in Ancon, on Saturday evening, February 11. A special train will bring the guests to Ancon and return.

The Gatun Woman's Club held a social meeting at the clubhouse on Friday afternoon, January 27. A feature of the program was a charade contest, prizes being awarded. Refreshments were served. The club has resumed its weekly meetings, and these are well attended.

The Empire Woman's Club has changed its meeting day from the second and fourth Thursdays to the first and third Thursdays in each month. The next meeting will be held on Thursday, February 2, at the clubhouse; each member is entitled to bring one guest. The meeting will be social, and refreshments will be served. It is expected that hereafter the meetings of the club will be held at the homes of members by invitation. Any member can learn the place of meeting from the clubhouse secretary. Guests are always cordially welcomed.

Miscellaneous Events.

The Pacific Dancing Club held a dance at Paraiso hall on Saturday evening, January 28.

The board of governors of the University Club has decided that the first Saturday night of each month shall be observed in a special manner. On the night of February 4, Dr. John Stuart, an Oxford graduate, professor of English at the Panama National Institute, will speak on the "Physiograph of the Isthmus." There will also be music and refreshments. The dance planned for the night of February 21, has been indefinitely postponed.

Church Notes.

The Rt. Rev. Albion W. Knight, Bishop of Cuba, sailed for Cuba by the way of Jamaica on Tuesday, January 24, after a visit of 23 days. This is the third visit Bishop Knight has made to the Panama mission of the Protestant Episcopal Church, and the number of persons confirmed by him exceeded that of any previous visitation.

On Sunday, January 29, two bishops of the Anglican Church visited Colon, in transit for Kingston, the Rt. Rev. John Welch, Bishop of Trinidad, and the Rt. Rev. Edward Hutson, Bishop of Antigua. They were accompanied by Canon Tree of Trinidad. The Bishop of Antigua preached at Christ Church at the morning service, and the Bishop of Trinidad in the evening.

Delta Tau Delta.

Members of the Delta Tau Delta college fraternity, who are on the Isthmus, effected an organization at a dinner at the Gatun hotel on Wednesday evening, January 3. The object is to hold occasional dinners, and to welcome other members of the society who may come to the Isthmus. Seven members of the fraternity from five different schools were present at the Gatun dinner. Any other members on the Isthmus are requested to communicate with C. C. Carr, Gatun.

Gatun Playground Association.

A meeting of the residents of Gatun called by the Gatun Woman's Club, was held at the Commission clubhouse on Saturday evening, January 21, for the purpose of considering the advisability of establishing a public playground and athletic field in the village. Invitations had been sent to the local fraternal societies, the Kangaroos, Odd Fellows, and Knights of Pythias, all of which showed their interest by sending delegates. There were present besides, a number of representative townspeople. Mrs. V. V. Sessions, president of the woman's club presided, and outlined the plans as tentatively arranged by the woman's club, assisted by Mr. C. C. Carr, principal of the Gatun high school. It was decided to form an association to be known as the "Gatun Playground Association," and officers were elected as follows: President, C. C. Carr; vice-president, Mrs. E. S. Waid; secretary, R. M. Sands; treasurer, Mrs. V. V. Sessions. Four permanent committees were appointed, with the following chairmen: Finance, Frank Gardner Smith; grounds, W. C. Gayer; publicity, J. H. Stevenson; equipment, A. O. Ludwig.

At a second meeting of the association, held on Friday evening, January 27, it was decided to separate the project into two parts, as there is not a suitable site to combine the playground and athletic field within the town limits, and to direct first efforts toward establishing the playground. The site selected is next the schoolhouse. The work of grading and preparing the ground will be begun at once. The association will hold a meeting every Friday evening at the clubhouse.

Electrical Workers.

THE CANAL RECORD—

There has been a question raised as to the standing of Local Union 677, I. B. E. W., of Gatun. The letter below will remove all doubt: it is an answer to a letter of inquiry by Mr. Clarence King. N. L. LEVY.

Gatun, C. Z., January 6, 1911.

American Federation of Labor.
Washington, D. C., December 13, 1910.

Mr. Clarence L. King,
Cristobal, C. Z., Panama,
Electrical Department.

Dear Sir:

Replying to your favor of the 3d instant, I beg to advise that the International Brotherhood of Electrical Workers, chartered and recognized by the American Federation of Labor, is that of which Mr. F. J. McNulty is president, and Mr. Peter W. Collins is the secretary.

Yours very truly,
FRANK MORRISON,
Secretary, American Federation of Labor.

Local Union 677 meets twice a month, on the second Sunday at 2 p. m., and the fourth Wednesday at 8 p. m. On January 11, the following officers were installed: President, F. J. Sweek; vice-president, B. R. Grier; financial secretary, N. L. Levy; recording secretary, A. M. Horle; treasurer, A. W. Wollnaugh; foreman, F. C. Mezger; first inspector, A. Whiston; second inspector, R. R. Hale; trustees, J. A. Hess, J. I. Porter, R. R. Hale.

The next regular meeting of Local No. 214, O. B. E. W., will be held on Sunday, February 5, at 1.30 p. m., at Ancon hall. All members are requested to be present.

Hamburg-American Passenger Accommodations.

The agent at Colon of the Hamburg-American Line announces, that during the months of February and March, no second class passengers will be taken on the steamships *Prinz Joachim* and *Prinz August Wilhelm*, between Colon and New York. A limited number of second class passengers will, however, be be taken to Kingston. Second class passage to New York will be available by the steamships *Sarnia* and *Sibiria*, the whole of the cabin accommodations on these steamers being sold as second class.

Married.

FYFFE-FROST—At Trinity Church, Cincinnati, Ohio, on January 12, 1911, Nellie B. Frost to James P. Fyffe, Dr. S. A. Aultman officiating. Canal Zone residence, Ancon.

CANFIELD-SMART—At Ancon Hospital, at 6 p. m., Sunday, January 29, 1911, Ethelwyn M. Smart of Woking, England, to Herman Canfield, Judge H. A. Gudger officiating. Canal Zone residence, Ancon.

Band Concert.

A concert will be given by the Isthmian Canal Commission Band at Las Cascadas, C. Z., on Sunday, February 5, 1911 at 6 p. m. The program follows:

1 March—*National Emblem*................Bagley
2 Selection—*The Golden Girl*..............Howard
3 Caprice—*The Whistler and His Dog*........Pryor
4 Overture—*Semiramide*..................Rossini
5 Waltz—*Tres Jolie*...................Waldteufel
6 Medley Selection—*My Southern Rose*..Von Tilzer
7 Flower Song—*Hearts and Flowers*.........Tobani
8 Intermezzo—*Silver Bell*................Wenrich
9 March—*Hudson-Fulton Celebration*
..................Arranged by S Jorge A.

CHAS. E. JENNINGS, *Musical Director.*

The next concert will be given at Cristobal on Wednesday evening, February 8, at 8 o'clock.

Misdirected Letters.

ANCON, C. Z., January 30, 1911.

The following insufficiently addressed letters, originating in the United States and its possessions, have been received in the office of the Director of Posts and may be had upon request of the addressee:

LETTERS UNCALLED FOR JANUARY 21, 1911.

COCOLI LAKE PUMPING PLANT

Additional Facilities to be Installed to Increase Pressure in Ancon and Panama.

Additional equipment will be installed at the Cocoli Lake pumping plant to increase the water pressure in the 16-inch main which supplies Ancon and Panama. The situation will be temporarily relieved by the installation of a 12-inch pump, formerly in service at the sump in the Pedro Miguel Locks, but it will be substituted as soon as possible by a new 10-inch, 3-stage centrifugal pump of 250-horsepower, with a capacity of 2,000 gallons per minute operating against a 300-foot head. The present equipment consists of two 80-horsepower pumps, and these will either be held in reserve for an emergency, or used again in the rainy season, in order to operate the treating plant, as circumstances may require. The new 10-inch pump, when installed, will pump the water from the lake to the 16-inch Rio Grande main direct, without the use of the present settling tank arrangement. The chemical solution will be injected into the 10-inch discharge line and the water filtered before entering the 16-inch Rio Grande main, provided the two filters in the basement of the Miraflores power house prove satisfactory. Otherwise, they, together with the chemical solution, will be omitted, and the water treated and filtered at Ancon only, instead of being treated and filtered at Miraflores and again at Ancon, as at present. In this case, Balboa and Corozal would be served with the raw water from both Cocoli and Rio Grande, passing through the 16-inch main. In case it is found necessary, a special arrangement will be made for providing those places with filtered water for drinking purposes. A curtailment of the drain on the Rio Grande, main will be effected by the installation of a pump, with a minimum capacity of 650 gallons per minute operating against a 50-foot head, on one of the banks of the Pedro Miguel River, near the railroad culvert, to supply a water tank for locomotives, situated near the Pedro Miguel shops. Hitherto, the water for the tank has been drawn through a 4-inch branch line extending from the Rio Grande main, and the daily consumption has been about 600,000 gallons. The dry season flow in the Pedro Miguel River is equivalent to about 10,000,000 gallons per day, so an abundant supply for the tank is assured.

The water pressure in Ancon and Panama varies from six to 50 pounds per square inch. The low pressure occurs when the pumps at Cocoli Lake are closed down for any purpose, while the high pressure develops in the night time when there is a greatly decreased consumption. The average pressure in Panama is 20 pounds to the square inch when the Cocoli pumps are supplying 700 gallons per minute to the Rio Grande main under a pressure of 70 pounds per square inch, which represents about one-third of the water used, south of Miraflores. The installation of the new 10-inch pump will, it is believed, deliver 2,400,000 gallons of water daily to the Rio Grande main at a pressure of 100 pounds to the square inch, which will give an average pressure of 40 pounds to the square inch in Panama, providing the city water system is not extended beyond its present limits.

The water elevation in the Rio Grande reservoir is 238 feet, and the theoretical storage is 490,000,000 gallons, of which 377,000,000 gallons represents the so-called usable supply. The daily outflow at the intakes is now about 4,900,000 gallons per day, including 900,000 gallons drawn off by the Cucaracha pumping plant, and this would indicate a 77 days' supply. The dry season records at this reservoir during the past four years are shown in the following table:

Dry Season.					Theoretical capacity, gallons.	Actual consumption, gallons.	Daily consumption, gallons.	Excess.	
Date began.	Elev. feet.	Date closed.	Elev. feet.	No. of days.				Gallons.	Per cent.
Jan. 1, 1907.	232	June 10...	114	161	256,000,000	300,769,000	1,865,000	44,769,000	17
Dec. 15, 1907	238	May 1....	224	137	264,060,000	353,500,000	2,580,000	89,440,000	34
Jan. 2, 1909.	238	June 20...	218	169	333,560,000	548,680,000	3,250,000	215,120,000	65
Jan. 1, 1910.	239	May 6....	225	126	257,433,000	455,730,000	3,620,000	198,297,000	77
Average....	......	....	......	148	....	....	....	....	48

The rainfall between January 1 and June 10, 1907 at Rio Grande was 9.64 inches; between December 15, 1907, and May 1, 1908, 2.15 inches; between January 2 and June 20, 1909, 22.98 inches, and between January 1 and May 6, 1910, 10.14 inches. The above data shows that the actual consumption exceeds the theoretical capacity by an average of 48 per cent. On this basis, the present capacity of the reservoir is 557,960,000 gallons, an amount somewhat in excess of the quantity drawn off during the dry season of 1909, but the rainfall over the watershed was excessive that year. In addition, there is a third intake, 24 feet below the intermediate intake and above the bottom of the reservoir, giving a total available supply of 613,960,000 gallons, equivalent to 125 days' consumption at the present rate.

The storage in Cocoli Lake amounts to 327,000,000 gallons, and the consumption aggregates about 900,000 gallons per day. The pumping plant there was operated for six weeks of the last dry season, and there was no apparent decrease during that period. It is estimated, therefore, that the actual capacity will exceed the theoretical by about 50 per cent, indicating the dry season supply for 1910-11 to be about 490,500,000 gallons. The combined capacity of the two reservoirs on the above basis is 1,104,460,000 gallons, and, with a total draw-off daily of 5,800,000 gallons, should last until July 25, or ample to reach into the next rainy season.

PERSONAL.

Col. Geo. W. Goethals sailed for the States on the steamship *Colon* on Sunday, January 29.

Lieutenant-Colonel H. F. Hodges sailed from New York for the Isthmus on January 28 on the *Panama*, which is due to arrive at Cristobal on February 3.

Maj. Wendell L. Simpson, U. S. A., assistant purchasing officer for the Isthmian Canal Commission and Panama Railroad Company at New York City, accompanied by his wife and daughter, arrived at Cristobal on the *Advance*, Friday, January 28.

Capt. Horton W. Stickle, accompanied by his wife and three children, sailed for Jamaica on Thursday, January 26, on the *Almirante*, where he will spend his annual leave of absence.

Col. J. P. Fyffe, accompanied by Mrs. Fyffe, returned on the steamer *Abangarez* from New Orleans, on Thursday, January 26, from his annual leave of absence.

Porto Bello Crusher.

A statement of the work done at Porto Bello crusher, by days, for the week ending January 28, follows:

Date.	Hours worked.	Cubic Yards.
January 23	6:35	3,264
January 24	8:11	4,118
January 25	7:31	3,254
January 26	7:30	3,217
January 27	7:31	3,027
January 28	8:49	3,575
Total	46:07	20,455

Empire Athletic Meet.

An athletic meet will be held at Empire on Washington's Birthday, February 22, beginning at 9 a. m. There will be 16 events, as follows: One hundred-yard dash; shot put; 100-yard dash, finals; high jump; 220-yard dash; hammer throw; low hurdles; running broad jump; 220-yard dash, finals; 100-yard dash, boys'; 440-yard dash; pole vault; boys' relay race, four laps; mile run; two-mile walk; men's relay race, four laps, one-sixth mile to the lap.

Gold, silver, and bronze medals will be given in all the events, except the relay, in which four medals will be awarded the winning team. An entry of 50 cents for the first event, and 25 cents for each additional event will be charged, and must accompany the entry blank. Special prizes will be awarded in the boys' events, for which an entry fee of 25 cents is charged. All applications should be forwarded to William E. Burrell, clerk of course, Cristobal, C. Z.

Bound copies of volume I of The Canal Record can be obtained at the news stand in the Panama railroad station at Panama.

Rainfall from January 1 to 28, 1911, Inclusive.

COMMISSION CLUBHOUSES.

Activities of the Young Men's Christian Association.

CULEBRA.

The following bowling scores were made during the week ending January 27: Duckpins—Conlan, 103; Lindsay, 102; Case, 103, 105, 108. Bigpins—Herrington, 217.

The new assistant secretary, H. N. Sollenberger, is lining up the men for practice for the big meet to be held on February 22. Those who have not entered should do so at once, in order that a complete list can be published at an early date.

Considerable interest is being developed in checkers, several good players having been discovered. If there are any other checker players in Culebra who will leave their names at the office, a definite night will be set aside for this activity.

The motion picture entertainment given on Friday, January 27, was enjoyed by the largest audience of the year.

The topic club meets next Wednesday night, with H. F. French, as leader. The club is open to all members of the Y. M. C. A.

A gymnasium class for boys has been started with practically every member of the boys' department in attendance.

Gymnasium classes for men will be started in the near future.

EMPIRE.

The following officers were elected at the reorganization of the camera club on January 23: President, C. C. Davis; vice-president, J. L. Bewick; secretary-treasurer; H. E. King; librarian, Stanley Stearns. The first outing of the club was held on the 29th, when two parties were organized, one for local views, and the other going to Cruces for pictures.

The following high scores were made last week: Bigpins—McLeod, 203. Duckpins—Lippert, 103; Scull, 107, 102, 100; McLeod, 100; Rhodigiero, 102; Witmar, 102.

The executive council at a meeting on January 17, voted to enlarge the Empire clubhouse and install two new bowling alleys, the entire expense to be paid from the funds of the clubhouse. This action has been approved by the Chairman, and it is understood that work will be begun during the next few days. The alleys have already been ordered from the States.

The gymnasium class opened with a large attendance on Thursday evening, January 26. Men are urged to join this class, and by moderate exercise, guard themselves from sickness. The class will meet regularly on Mondays and Thursdays, and music will be provided for the drills.

The debate held by the literary society on Friday evening, January 27, was won by the affirmative side, which held that the United States should establish a permanent guardianship over the island of Cuba Other numbers on the program were a paper on William Cullen Bryant, and a quiz on parliamentary law.

At the rehearsal of Gaul's "Holy City," held on January 28, three new members were added to the chorus, which now numbers 25. If present plans are carried out the production will be given on February 26.

The Culebra Christian League bowling team defeated the Empire Christian League team on the clubhouse alleys last Saturday night two games out of three. Messrs. Nellis, Hall, Warner, Herrington, and Huttelmeier represented Culebra, and Messrs. Warwick, Dohrmann, Drake, Brown, and Gustavson represented Empire.

The Society of the Epicurean Antiquated Antediluvian Order of Turkey Buzzards has been formed and will meet every Saturday night. All those interested should apply to E. Robertson, secretary.

A joint reception will be tendered Chaplain and Mrs. Nellis, and Mr. and Mrs. Warr on Wednesday evening, February 8. The public, both men and women, are cordially invited to attend. There will be a short musical program, and refreshments will be served.

The literary society on Friday evening, February 3, will discuss "The effect of mind over matter." The discussion will be under the direction of F. P. Wagg.

GORGONA.

The following games were bowled on the Gorgona alleys on Saturday night, January 29:

Gorgona.				Cristobal.			
Roper......	184	157	187	Barrett....	162	191	153
Halderman..	160	188	200	Grover....	130	172	150
White......	174	171	196	Blackburn.	134	156	138
Otis........	150	166	151	Bullard...	171	184	214
Bordt......	119	152	144	Furlong...	122	140	150
Total.....	787	834	878	Total...	719	843	805

The indoor baseball game between Cristobal and Gorgona was won by Gorgona on Saturday night, January 29, by a score of 9 to 7.

The meeting of the discussion club held on Wednesday night, January 25, was led by A. Killough. The subject was "Should the color line be drawn at the ballot box?" All men are invited to attend these meetings. Admission free.

H. D. Meyers led the "Life problem" study club on Friday night, January 27, at 7.30 p. m. The topic was "The value of work and the choice of a life work." All men are invited to join this club. Admission free.

Jess T. Hopkins, assistant secretary, is due to arrive on the *Panama* on Friday, February 3, and will assist in the meet to be held on Washington's Birthday at Empire. A. A. Simka has been elected captain of the track team.

GATUN.

A motion picture entertainment will be given on Saturday evening, February 4, at 8 o'clock. The members, both men and boys, will be given complimentary tickets. Adult nonmembers will be charged 25 cents, and children 15 cents.

A large number of phonograph records recently purchased are being greatly appreciated by the members.

The membership committee met on Monday night, and Otho Heiskell was elected temporary secretary, upon the resignation of W. E. Wittrig.

The membership committee of the Red Cross met at the clubhouse on Tuesday evening, January 31.

The religious work committee met on Wednesday evening, February 1. F. C. Freeman, general secretary of the Y. M. C. A., was present, and addressed the committee on the religious work of the Y. M. C. A. on the Isthmus.

The "married men" bowled the "single men" on Monday night, January 30, the latter being victorious.

CRISTOBAL.

On Wednesday night, January 25, a "Life problem" club began a 12 weeks' study of four important topics. The subject was "Problems of a livelihood" and the phases of this subject discussed were "The value of work," and "Choice of a life work." The leader was H. L. Stuntz.

The glee club is practicing each Tuesday night with from 15 to 20 men present.

The dramatic club is working up a number, which will be part of a vaudeville show to be given on Friday, February 24. The glee club will also have three numbers on the same program.

Preparations are under way to organize two patrols of boy scouts.

The baseball game played between the Cristobal boys and the Ancon boys on Saturday, January 28, resulted in a tie, the score being 4 to 4.

A local scratch pool tournament was started on February 1.

The Gorgona indoor baseball team will play a return game at Cristobal on Saturday night, February 4.

Moving pictures will be given on Friday night, February 3, with vocal solos and music throughout the evening.

"A smoker" will be given to the championship basketball team on February 10.

The 200, or over, scores bowled during the week ending January 28 were, as follows: Jacques, 235; Howard, 210; M. Schwallenberg, 210; Barrett, 205, 208; Rosbeck, 200.

COROZAL.

Moving picture entertainments were given on Saturday evening, January 28, and Tuesday evening, January 31.

All men interested in the track meet to be held at Empire on Washington's Birthday, February 22, will please see the secretary.

Men wishing to join the Spanish class should hand their names to the secretary at once.

The pressing club was opened on February 1. Apply to the secretary for rates.

A pool tournament will be started in a few days.

The membership of the association on Saturday night, January 28, was 86.

Sale of Vehicles at Public Auction.

There will be sold at public auction by the district quartermaster at Cristobal, C. Z., at the I. C. C. corral, at 2 p. m., Saturday, February 4, 1911, to the highest bidder for cash the following Isthmian Canal Commission property:

One hearse, No. 64, and one lumber wagon, No. 46.

The Government reserves the right to accept or reject any or all bids. For further information apply to the district quartermaster, Cristobal, C. Z.

C. A. DEVOL, *Chief Quartermaster.*

The following vessels arrived at and departed from the port of Balboa during the week ending January 28, 1911:

Arrivals—January 22, *San Juan*, from San Francisco; January 23, *Stanley Dollar*, from San Francisco; January 24, *Chile*, from Valparaiso; January 27, *Arica*, from Guayaquil; January 28, *Aztec*, from San Francisco.

Departures—January 21, *G. W. Fenwick*, to San Francisco; January 22, *Pennsylvania*, to San Francisco; January 23, *Ecuador*, to Guayaquil; January 24, *Ucayali*, to Callao; January 25, *Aysen*, to Valparaiso.

BASEBALL.

PANAMA CANAL LEAGUE.

RESULTS OF GAMES, JANUARY 29.

At Ancon— Ancon, 6; Empire, 2.
At Empire—Atlantics, 6; Marines, 4.
At Colon— Gorgona, 1; Commissary-Subsistence, 4.

*Batted for Ridge in the ninth.

The Corozal baseball team defeated the Balboa nine on the latter's grounds, on Sunday, January 29, by the score of 21 to 9.

OFFICIAL CIRCULARS.

Acting Chairman and Chief Engineer.

CULEBRA, C. Z., January 28, 1911.

CIRCULAR No. 367:

Upon the return from leave on which he is now absent, Lieutenant-Colonel H. F. Hodges will, during my absence from the Isthmus, be in charge of the work as Acting Chairman and Chief Engineer.

In the interim between my departure and the return of Lieutenant-Colonel Hodges, Mr. H. H. Rousseau will act as Chairman and Chief Engineer, effective January 29, 1911.

GEO. W. GOETHALS,
Chairman and Chief Engineer.

Delivery of Gravel.

CULEBRA, C. Z., January 25, 1911.

HEADS OF DEPARTMENTS AND DIVISIONS:

The reclaiming of gravel from the Chagres River has been turned over to the Central Division for operations below Gamboa bridge, and to the Panama Railroad Company for operations above Gamboa bridge. All requests of other departments and divisions for Chagres River gravel will be forwarded to this office on form C. E. No. 159, stating the quantity, place and time of delivery, and purpose for which gravel is desired. Decision will be made by me in each case, whether gravel shall be furnished from the stock pile of the Central Division at Matachin, or from the stock pile of the Panama Railroad Company, opposite Gamboa. The price will be governed by the provisions of Circular No. 169-E, relating to sand and stone.

GEO. W. GOETHALS,
Chairman and Chief Engineer.

Rules Governing Shop Employes.

CULEBRA, C. Z., January 1, 1911.

CIRCULAR No. 262-D. (Superseding CIRCULAR Nos. 262-A-B-C:

The following rules governing shop employes of the Isthmian Canal Commission and Panama Railroad Company will become effective this date, and will supersede previous Circulars Nos. 262-A, 262-B, and 262-C on the same subject.

Copies of these rules, printed on cardboard, should be posted in conspicuous places in all shops of the Isthmian Canal Commission and the Panama Railroad Company, where all employes will have an opportunity to see them.

Additional copies, either pamphlet or placard form may be secured upon requisition placed with the Depot Quartermaster, Mount Hope, C. Z.

---

1. *Working hours*—Regular working hours for the day shift will be:—

7 a. m. to 11 a. m.
1 p. m. to 5 p. m.

The hours of work for a night shift will be fixed by the head of the division or department, and will consist of eight consecutive hours.

Regular working hours of hourly employes will not be changed unnecessarily from day to day, and in shops working more than one shift individual men will not be changed from shift to shift more frequently than the necessities of the work require. Existing rules limiting overtime must not be construed as authorizing or permitting men to be laid off during the hours of their regular shift solely to reduce the amount of overtime. when they are able to render efficient service during their regular shift and there is work for them to perform.

Employes will assemble at their various places of work and be ready to start work at the signal. All not otherwise assigned are expected to be on duty and work regularly the prescribed hours.

Eight hours will constitute a day's work for American shop employes, whether on day or on night duty.

Employes will not be permitted to smoke, to wash up, to change their clothes, to transact other than official business, or to leave the work assigned to them, except for necessary purposes, during working hours.

An employe will not be permitted to work when his physical condition will not enable him to prosecute it satisfactorily, both as to quality and quantity.

2. *Manner of checking in and out*—Upon reporting for duty before time for commencing work at 7 a. m., or 1 p. m., and at the hour fixed for night work to begin, each employe will regularly call for and obtain a work check from the timekeeper's check window.

Each employe will deposit his work check, where receipt is provided for, within 15 minutes after the completion of each work period.

An employe coming in after signal to commence work will not be permitted to begin until the next half-hour, or hour, after the signal is given, and not then until after reporting to the timekeeper in the master mechanic's office and obtaining with his work check a written notice, which he will present to his foreman, advising the latter of his having been checked in late.

An employe, who for any cause goes out prior to regular quitting time, must obtain from his foreman, in each case, a written notice, which he will present to the timekeeper in the master mechanic's office with work check before leaving the shop.

3. *Penalty for failure to properly check in and out*—The calling for or the depositing by one employe of the work check of another employe will be cause for dismissal.

An employe, who fails to draw or to deposit his work check as required by Rule 2, will be disciplined, as follows: If the employe can prove by his foreman, leading man, or by not less than two disinterested employes that he worked during the hours not accounted for by his failure to check in or out, he will be credited for the time actually worked by him; if the proof required cannot be furnished, he will be credited only for the time covered by the work check or timekeeper's record.

In either case the discipline will consist of a cautionary letter, which will show the number of previous offenses of the same character during one year.

For the ninth failure to check in or out within one year the discipline will consist of suspension without pay of from one to 10 days, or of dismissal, depending upon the circumstances of the case.

4. *Quality and quantity of work performed to be satisfactory to foreman and master mechanic*—Each employe will be required to turn out a full day's work each day. An employe, whose workmanship is not up to the standard, either in quality or quantity, or both, will be warned orally by his foreman. If the standard is not attained within 12 working days after the oral warning, the employe will be so notified by a warning letter from the master mechanic, after which, if there is still no improvement, the employe will be reduced to the grade and rate of pay called for by the quality and quantity of work he is turning out. A warning letter will give the employe at least 10 working days in which to attain the standard, except in case of gross incompetency.

Mistakes made in work will be considered as affecting the quality of work performed by an employe and will be acted on as prescribed above, except that a warning letter will not be written until the number, character, or frequency of mistakes made by an employe clearly show incompetency or carelessness. All mistakes that involve the loss of material, and all important mistakes not involving the loss of material, will be made a matter of record in the form of a cautionary letter.

5. *Absence without permission*—For absence without prior permission of less than two days in succession, that is not covered by a medical certificate of disability, or by satisfactory proof that the absence was caused by circumstances beyond the control of the employe, the discipline for the first offense will consist of a cautionary letter, and for the second and subsequent offenses of suspension without pay of from one to three days.

For absence without prior permission of two or more days in succession, that is not covered by a medical certificate of disability, or by satisfactory proof that the absence was caused by circumstances beyond the control of the employe, the discipline for the first offense will consist of a cautionary letter, and, in addition, suspension without pay for one day, and, for the second and subsequent offenses of suspension without pay of from two to 10 days, or of dismissal, depending upon the circumstances of the case and the previous record of the employe.

Two absences from work within one year on account of intemperance will be cause for dismissal.

6. *Employes responsible for tools and material in their possession*—All employes are responsible for tools or material issued to or used by them, and will be required to pay, by deductions which will be entered against their wages on pay rolls, for any loss or damage to same through neglect or carelessness.

If there are found in the locker or possession of an employe tools or other articles that are not his personal property, or that have not been issued to him in the prescribed manner for use in his work, the discipline will consist of an oral warning, or suspension without pay of not to exceed five days, or of dismissal, depending upon the circumstances of the case.

7. *Personal injuries to be reported promptly*—An employe injured in line of duty must report to his foreman before leaving the shop, unless too seriously injured to be able to do so, in order that report may be made of the case, as required by law governing pay for time lost on account of injury. The work check of an injured employe will be delivered to the foreman.

8. *Hotel and commissary coupon books*—Hotel and commissary coupon books will be issued in accordance with section 136 of the timekeeping rules.

Employes desiring coupon books will place their orders with the coupon book clerk, foreman, or assistant to foreman, as arranged locally in each shop.

Books ordered will be prepared and delivered as promptly as possible, usually within two days.

Special attention of all concerned is directed to the necessity for complying with the contract and instructions on inside of the covers of hotel and commissary coupon books, and also to the orders regarding the use of 24-trip books and half rates, for the reason that violation of these contracts or instructions will result in financial loss and dismissal from the service.

9. *Complaints and requests*—Complaints or requests should be taken up through the employe's immediate foremen for decision; appeal, if made, must be in regular order through the general foremen and master, mechanic before being carried to the head of division or department or higher authority.

10. *Insubordination*—Insubordination, loafing, or being under the influence of intoxicating liquors during working hours will be cause for dismissal.

11. *Administration of discipline*—The superintendent, master mechanic, or general foreman in charge of a shop, upon the recommendation of foreman or leading men and after personal investigation of the case, may issue cautionary and warning letters and make suspensions and dismissals, except that foremen or acting foremen in immediate charge of employes may discharge them for insubordination.

GEO. W. GOETHALS.
Chairman and Chief Engineer, I. C. C.
President, Panama Railroad Company.

Accumulative Leave.

CULEBRA, C. Z., January 25, 1911.

HEADS OF DEPARTMENTS AND DIVISIONS:

The following information has been deduced from the data submitted by the various divisions and departments regarding percentage of employes who will probably avail themselves of the cumulative feature of Circular No. 132-H:

DEPARTMENT OR DIVISION.	To accumulate.	Not to accumulate.	Percent to accumulate
Subsistence Department	84	105	44
Sanitary Department	115	293	28
Department of Civil Administration	114	203	36
Quartermaster's Dept.	148	105	55
Examiner of Accounts	62	47	57
Disbursing Office	2	26	7
Atlantic Division	385	587	39
Central Division	371	391	49
Pacific Division	186	334	36
Mechanical Division	34	120	22
Division of Clubhouses	0	14	0
Third Division, Chief Engineer's Office	15	19	44
Totals	1,516	2,244	43

Forty-three per cent of the employes of the Commission will probably avail themselves of cumulative leave.

P. R. R. Commissary	84	105	44
P. R. R. Relocation	35	75	32
P. R. R. Company	205	191	52
Totals	324	371	47

Forty-seven per cent of the employes of the Panama Railroad Company will probably avail themselves of cumulative leave.

Forty-five per cent of the employes of both the Commission and the Panama Railroad Company will probably avail themselves of the cumulative leave.

As it appears probable that nearly half of the employes of the Isthmian Canal Commission and Panama Railroad Company will not take their leave this year, care must be exercised with respect to taking on new men and using the force to the best advantage, so that the increased expenditure necessary when these men will be granted the leave accumulated may be counterbalanced by a saving this year.

GEO. W. GOETHALS,
Chairman and Chief Engineer.

Obstruction to Work Caused by Buildings.

CULEBRA C. Z., January 25, 1910.

HEADS OF DEPARTMENTS AND DIVISIONS:

In carrying out the provisions of Circular No. 293, dated November 23, 1909, the heads of the different construction divisions will be held responsible for giving due notice of obstruction to their work caused by buildings, or danger to buildings, which they consider should be removed.

In the case of I. C. C. buildings, this notice should be forwarded to me in duplicate, one copy for the Chief Quartermaster, and the other for the surveying officer, upon receipt of which the latter will assemble board appointed in Circular No. 293 to submit report and recommendations as provided therein.

In the case of P. R. R. buildings, notice should be forwarded to the General Superintendent of the Panama Railroad Company, and a copy sent to me. The General Superintendent of the Panama Railroad Company will initiate proper action upon receipt of such notice.

In the case of buildings of private ownership, the provisions of Circulars Nos. 193 and 301 should be strictly observed.

GEO. W. GOETHALS,
Chairman and Chief Engineer.
President, Panama Railroad Company.

COMMISSARY DEPARTMENT.

Acting Chief Clerk, Commissary and Subsistence Departments.

CRISTOBAL, C. Z., January 26, 1911.

CIRCULAR No. 265:

Effective January 26, 1911, and during the absence of Mr. W. F. Shipley on vacation, Mr. Wm. T. McCormack will act as chief clerk of the Commissary and Subsistence Departments.

EUGENE T. WILSON, *Subsistence Officer.*

The hours during which commissaries are open are as follows:

Cristobal and Culebra, 8 a. m. to 12.30 p. m.; 2 p. m. to 7 p. m.

All other commissaries, 8 a. m. to 1 p. m.; 3 p. m. to 7 p. m.

Retail prices of cold storage provisions for the week beginning February 1.

Supplies for Canal Work.

The following steamers with supplies for the Isthmian Canal Commission arrived at the ports of Cristobal and Colon for the two weeks ending January 28, 1911:

Oruba, January 15, from New York, with 350 kegs wire nails, 250 bundles galvanized steel, 71 bundles galvanized pipe for stock.

Allianca, January 16, from New York, with 73 packages wheelbarrow parts, 44 packages car parts, 7 reels cable for Atlantic Division; 6 packages steel castings for Central Division; 8 pieces 24-inch pipe for Pacific Division; 3 reels wire rope for Mechanical Division; 9 cases drugs and sundries for Sanitary Department; 10 barrels iron pipe-fitttings, 34 pieces iron pipe-fittings, 46 bundles iron, 619 kegs rivets, 7 cases bolts, 7 cases files, 13 cases trays, 7 cases air brake material, 20 cases incandescent lamps, 44 packages drill machinery, 13 casks chains for stock; and a miscellaneous cargo, the whole consisting of 1,265 packages, weighing 208 tons.

Ancon, January 19, from New York, with 24,692 barrels cement for Atlantic Division; 115,232 bags cement for Pacific Division.

Turrialba, January 19, from New Orleans, with 48,646 feet yellow pine lumber, 221 barrels fire clay, 13 packages range parts, 33 bales grass rugs, 164 bales cotton waste, 30 cases lantern globes for stock.

Almirante, January 19, from New York, with 6 bundles steel castings for Atlantic Division; 35 tons lock construction material for Pacific Division.

Birdoswald, January 21, from New York, with 14,307 barrels cement for Atlantic Division; 68,924 bags cement for Pacific Division.

Colon, January 22, from New York, with 21 pieces rough castings, 25 packages dump car parts for Atlantic Division; 48 car wheels, 8 spare propeller blades, 40 packages drill parts for Pacific Division; 42 cases drugs and sundries, 1 engine for motor boat for Sanitary Department; 36 cases water meters, 85 cases caustic soda, 324 pieces steel bars, 81 bundles corn brooms, 7 cases insulated wire, 169 packages thermit material, 48 crates stoves, 109 cases drill parts for stock; and a miscellaneous cargo, the whole consisting of 1,353 packages, weighing 147 tons.

Prinz August Wilhelm, January 23, from New York, with 5 reels wire rope , 43 pieces screw jacks for stock.

Santa Marta, January 26, from New York, with 43 packages drift bolts, 231 drums oil, 400 pails grease for stock.

Abangarez, January 26, from New Orleans, with 8 pieces chain for Central Division; 12 crates concrete machinery for Pacific Division; 189,343 feet yellow pine lumber, 40 cases yellow ochre, 2,411 bales prairie hay for stock.

Allianca, January 28, from New York, with 42 pieces machinery for Atlantic Division; 3 cable chains for Central Division; 4 barrels snatch blocks, 4 reels wire rope for Mechanical Division; 30 cases drugs and sundries for Sanitary Department; 9 cases electrical material, 40 crates stove pipe, 120 cases salt water soap, 8 reels wire rope, 82 kegs bolts, 57 cases bolts, 17 bundles corn mats, 106 ash cans, 376 kegs nuts, 15 crates iron valves for stock; and a miscellaneous cargo, the whole consisting of 1,680 packages, weighing 197 tons.

MOVEMENT OF OCEAN VESSELS.

The following is a list of the sailings of the Panama Railroad Steamship Company; of the Royal Mail Steam Packet Company; of the Hamburg-American Line, and of the United Fruit Company's Line, the Panama Railroad Company's dates being subject to change:

NEW YORK TO CRISTOBAL

Panama	P. R. R.	Saturday	Jan. 28
Allianca	P. R. R.	Saturday	Feb. 4
Colon	P. R. R.	Friday	Feb. 10
Advance	P. R. R.	Thursday	Feb. 16
Panama	P. R. R.	Thursday	Feb. 23
Allianca	P. R. R.	Wednesday	Mar. 1
Colon	P. R. R.	Tuesday	Mar. 7
Advance	P. R. R.	Monday	Mar. 13
Panama	P. R. R.	Saturday	Mar. 1[illegible]
Allianca	P. R. R.	Friday	Mar. 24

Abangarez	U. F. C.	Thursday	Feb. 23

COLON TO BARBADOS, CALLING AT TRINIDAD.

Orotava	R. M.	Tuesday	Feb. 11

The next sailing of the Leyland Line will be as follows: Memphian on or about February 18, for New Orleans via Kingston, Ja.

Hamburg-American steamers leave for New York every Tuesday at 10 a. m.; for Jamaica every fortnight, connecting there with steamers for all points in Cuba; for Port Limon every Tuesday, direct, or by way of Bocas del Toro.

Royal Mail steamers leave for New York on alternate Mondays at 5 p. m.; for Southampton on alternate Tuesdays at 10 a. m.

United Fruit Company's ships for New Orleans direct leave on Thursday at 3 p. m.; for New Orleans via Port Limon and Puerto Barrios on Thursday at 6 p. m., and for New York on Thursday at 11 a. m.

Sailings of the French line (Cié Générale Transatlantique) for Venezuelan ports, Martinique and Guadeloupe on the 3d and 20th of each month.

STATEMENT OF

CONSTRUCTION EXPENDITURES

TO JUNE 30, 1911

(Part II of The Canal Record, August 9, 1911.)

STATEMENT OF CONSTRUCTION EXPENDITURES TO JUNE 30, 1911.

Table No. 1.

Includes administrative and general expenses, but does not include general items or expenditures for sanitation, hospitals, or civil government.

Table 1—(*Continued.*)

Items.	Fourth Quarter, Fiscal Year, 1911.			To March 31, 1911.			Total to June 30, 1911.		
	Quantities.	Amount.	Unit Cost.	Quantities.	Amount.	Unit Cost.	Quantities.	Amount.	Unit Cost.
La Boca Locks and Dams (abandoned)—									
53 Dry excavation				78,233	$158,343.29	$2.0240	78,233	$158,343.29	2.0240
54 Construction ,dam					315,350.07			315,350.07	
55 Construction, locks					159,306.40			159,306.40	
Total					$632,999.76			$632,999.76	
56 Naos Island breakwater		$6,649.41			$51,456.65			$58,106.06	
Total construction cost, Pacific Division		$1,783,178.11			$17,038,668.61			$18,821,846.72	
57 Plant and equipment to be absorbed in construction costs after June 30, 1911								$2,765,795.11	
Total expenditures, Pacific Division								$21,587,641.83	
Total expenditures, constr. and engr'n'g								$123,386,129.78	

Item 24—*Colon Breakwater*. The low cost for the quarter is due to the return to the storehouse of piling and timber, which had been previously charged to the work, but not used.

Item 28—*Dredging Excavation, prism*. Preliminary surveys.

Item 32—*Dredging Excavation, prism*. With the accounts for the month of April, the total cost of the dredging plant had been absorbed into the work; hence no arbitrary for plant is charged in this quarter.

Item 42—*Miraflores Dams and Spillway*. Hydraulic filling. Expenditures represent cost of pipe lines, flumes, etc., 582,732 cubic yards have been deposited in Dam from dredging and hydraulic excavations in lock chamber and in prism below the locks, the total expenditures therefor being charged to "excavation."

Items 53, 54, and 55. These expenditures were incurred prior to the adoption of Miraflores as the site for the lower locks and dams, at the Pacific entrance of the Canal.

Items 25, 30, and 57—*Plant*. The expenditures for plant and equipment are absorbed into construction costs on the basis of estimated total cost of plant, and the estimated quantities of work to be done. The amount under these items represent the balances which are to be absorbed into construction costs after June 30, 1911.

General—When excavated material is used in filling, such as dams, back filling, etc., the cost of dumping only is charged to the items benefited, all other expenses being charged to "excavation."

DAM CONSTRUCTION.

*Dry excavation is credited with $515.25 in May on account of adjustment, but no yardage was accomplished. The total cost of production includes this amount and, for this reason, the cost of dredging, plus plant charge, does not equal total cost of production.

†NOTE.—Under "Total Quantities," 12,852 cubic yards have been added, to adjust the difference between cross section measurements of stock piles and book balances. This amount was not added to monthly quantities.

CANAL RECORD

Volume IV. ANCON, CANAL ZONE, WEDNESDAY, FEBRUARY 8, 1911. No. 24.

The Canal Record

Published weekly under the authority and supervision of the Isthmian Canal Commission.

The Canal Record is issued free of charge, one copy each, to all employes of the Commission and Panama Railroad Company whose names are on the gold roll. Extra copies and back numbers can be obtained from the news stands of the Panama Railroad Company for five cents each.

THE CANAL RECORD
Ancon, Canal Zone,
Isthmus of Panama.

No communication, either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.

NOTES OF PROGRESS.

Gates of Gatun Locks.

The erection of a construction bridge over Gatun Locks was begun on January 31 by the contractors who are furnishing and erecting the lock gates. The bridge will be built over the location of the upper guard gates, and is in two sections, one over each of the twin lock chambers, each section being a truss bridge 134 feet 6 inches long and 11 feet wide. Locomotive cranes will operate over this bridge carrying the steel for the gates from a storage yard on the east side of the locks.

Steam Shovel Work at Mindi.

. Steam shovel work was resumed in the Canal prism at Mindi on January 31. This is the excavation which was flooded in the freshet of November, 1909, when three steam shovels were inundated. On October 24, work was begun by suction dredges which removed 401,511 cubic yards of earth up to December 31. The dredge was removed and a dyke was built across the entrance from the French canal in the excavation pit, and two 12-inch vertical centrifugal pumps, mounted on barges, and one old French centrifugal pump, steam driven, began the work of unwatering the pit. On January 31, the water had been lowered to a point where the steam shovel which was working on the highest level could resume excavating. Notwithstanding the fact that the shovels had been immersed in salt water for more than a year, they were in such good condition that only slight repairs were necessary before they could resume work.

Canal Work in January.

The grand total of Canal excavation to February 1 was 129,138,400 cubic yards, leaving to be excavated 53,399,366 cubic yards.

The total for January was 2,772,170 cubic yards, as compared with 2,831,929 cubic yards in January, 1910, and 2,924,551 cubic yards in January, 1909. Of the total, 2,731,336 cubic yards were "work excavation," and 40,834 cubic yards were "plant excavation."

· The dry excavation amounted to 1,734,013 cubic yards and was principally by steam shovel. The dredges removed 1,027,485 cubic yards, and 10,672 cubic yards were sluiced, in addition to the amount pumped into Gatun Dam by suction dredges. The progress on the locks at Gatun, Pedro Miguel and Miraflores is referred to elsewhere in this issue.

In the Atlantic Division, the total excavation was 624,321 cubic yards. Of this total, 65,889 cubic yards were dry excavation, and the remainder was removed by the dredges in the Atlantic entrance.

The total excavation in the Central Division was 1,614,362 cubic yards, and further reference to this work is published elsewhere in this issue.

In the Pacific Division, the total excavation was 533,487 cubic yards, 379,810 cubic yards of which were taken out by the dredges at the Pacific entrance.

A detailed statement of the excavation and a summary of the work on the locks and dams, follow:

ATLANTIC DIVISION.

TOTAL CANAL EXCAVATION.

Dry excavation	1,731,430	2,583	1,734,013
Wet excavation	999,906	38,251	1,038,157
Total	2,731,336	40,834	2,772,170

Mean rainfall along Canal (eleven stations) 0.34 inches.

By "Work" Excavation is meant excavation actually made for one of the constituent parts of the Canal, such as Prism, Diversions, or Locks, etc.; that is, it represents material taken from the area to be occupied by the Canal, and constitutes excavation useful for the completed Canal.

By "Plant" Excavation is meant excavation outside of any of the constituent parts of the Canal, such as Prism, Diversions, or Locks, etc. It includes material necessary to be excavated for construction purposes only and is chargeable against the particular plant item for which it is performed, such as Prism, Diversions, Locks, etc.

DAM AND LOCK CONSTRUCTION.

MATERIAL.	Atlantic.	Pacific.	Total.

Concrete laid in dams and spillways	2,510	....	2,510
Fill placed in dams	430,682	113,928	544,610

Record of the Ladder Dredge "Marmot."

The ladder dredge *Marmot* broke its own record of a 25-day month, in January, the output being 186,136 cubic yards of earth, as compared with the December, 1910, record of 183,163 cubic yards, an average output per day, throughout the month, of 7,445.4 cubic yards, as compared with 7,326 cubic yards per day during the month of December. It was working in the channel to the new dock at Balboa.

Ladder dredge outputs are figured on a basis of a 24-hour day, as the watches are changed every 12 hours. Delays in changing watches, breakages, repairs, etc., reduce this to much less than 24 hours actual dredging time. A record of these delays has been kept for the last two months on the *Marmot*, and during the month of December, 1910, the actual dredging time was 21 hours per day, 630 hours in all, and the rate per hour was 349 cubic yards. During January, 1911, the actual dredging time was 22.2 hours per day, 555 hours in all, and the rate per hour was 335.4 cubic yards.

The average hourly outputs of the *Marmot*, actual dredging time, in December and January, were the highest of record in the Canal service.

The work done by the *Marmot* in January is not included in the statement of Canal excavation given above.

Lower Lock Excavation at Miraflores.

Hydraulic operations in the lower, or south lock, at Miraflores have been completed, with the exception of removing the dike of earth, which separates it from the upper lock, and two of the eight monitors are now engaged in washing down this barrier. In the meantime, preparations are under way for finishing the lower lock excavation by steam shovels; one shovel is at work making a cut down the east bank of the lockpit for an incline construction track and another is digging in the pit for a second construction track.

The hydraulic giants and dredge pumps have created an excavation approximating the length and breadth of the lock in size,

NOTES OF PROGRESS.

(*Continued.*)

with a depth of 15 feet below mean tide; all of the material so sluiced and removed having been forced into the hydraulic fill of the west dam. Rock was encountered at the present depth of the pit, and this, together with numerous beds of coarse gravel, mixed with blue clay, which had been heaped up during the progress of sluicing, will constitute the balance of the material to be excavated. Gravel was found in all parts of the lock and the greater part of the finer quantities was carried out by the dredge pumps. Its presence in such an unusual amount was apparently due to streams, which in former times, had their channels in this locality.

As soon as the necessary tracks can be laid, it is proposed to set steam shovels at work excavating for the lower lock side walls, and in carrying out the plans for the concrete work, it is probable that the method employed in building the locks at Pedro Miguel, and of the upper lock at Miraflores, viz., to lay the floor and culvert section before proceeding with the walls, will be reversed, as an expeditionary measure. There is 35 feet of excavation remaining to be removed to reach the floor of the lock, equivalent to a total of about 350,000 cubic yards, and the entire amount will be handled by steam shovels. It is expected that by the time excavation for the side walls is finished, the berm cranes will be ready to begin the concrete construction.

All of the hydraulic giants, with the exception of the two noted above, are now at work in the Canal prism, south of the lock; three of the dredge pumps are continuing the fill of the west dam, and the third is wasting its output in the swamp east of the Canal, principally pumping water to keep the pit free. It is believed that, in addition to the soft material, about 30 per cent of the rock in the prism, south of the lower lock, can be excavated hydraulically. The removal of the rock will be effected by first blasting it, and then sluicing the finer pieces to where the dredge pumps can handle it. The remaining large pieces will be removed either by steam shovel, or by ladder dredge. The new ladder dredge *Corozal* now building at Renfrew, Scotland, will be especially fitted for this work.

Gatun Dam Spillway.

Concrete was placed in the spillway of Gatun Dam, during the week ending February 4, as follows:

DATE.	Concrete Laid.	Hours worked.	No. Mixers.
January 30	162	8:00	2
January 31	254	8:00	1
February 1	216	8:00	1
February 2	212	8:00	1
February 3	78	9:30	2
February 4	222	9:00	2
Total	1,144	50:30	1.50
Previously reported	114,618		
Grand total	115,762		

Highest January Record in Central Division.

The excavation in the Central Division for the month of January, 1911, was 1,614,362 cubic yards, of which 1,603,299 cubic yards were in the Canal prism, 8,480 cubic yards on the Obispo Diversion, and 2,583 cubic yards outside of the Canal prism. This is much the largest January record for excavation within the limits of the Central Division since the beginning of work by the United States. This record was made notwithstanding the fact that there was delivered at Gatun from the Culebra Cut the greatest quantity of material for use on the Dam ever delivered in a single month—207,498 cubic yards—the effect of the Gatun haul being to reduce car capacity owing to the long distance (from 23 to 25 miles) which excavated material has to be carried before being dumped.

The next highest records for the month of January are as follows:

	Cubic Yards.
January, 1908	1,396,469
January, 1909	1,539,648
January, 1910	1,499,495

CONCRETE WORK IN THE LOCKS.

GATUN LOCKS.

Over 52 per cent of the concrete for the system of three twin locks at Gatun has been laid, the exact amount in place at the close of work on February 4, being 1,087,493¼ cubic yards, out of a total of 2,085,000.

A statement of the amount of concrete placed in the locks each day for the week ending February 4, and of the total follows; and a similar statement for the work in the spillway of Gatun Dam is published elsewhere in this issue. The construction plant works 12 hours daily, and the auxiliary plant 9 hours.

DATE.	CONSTRUCTION PLANT. 2-cubic yard mixers.			AUXILIARY PLANT. 2-cubic yard mixers.			Large stone.	Total.
	Concrete placed.	Hours worked.	No. of mixers	Concrete placed.	Hours worked.	No. of mixers

Grand total										3,023	124,778

*The amount of concrete laid by hand, which is included in the total for each day, was as follows: January 30th, 7 yards; January 31st, 9 yards; February 1st, 8 yards; February 2d, 9 yards; February 3d, 11 yards; February 4th, 9 yards; total, 53 yards.

EXECUTIVE ORDER.

To Create a Land Office for the Canal Zone and for Other Purposes.

By virtue of the authority vested in me, I hereby establish the following Order for the Canal Zone:

Section 1. A Land Office for the Canal Zone is hereby created under the jurisdiction of the Department of Law, and subject to the superior direction of the Chairman and Chief Engineer. The Land Office shall be in charge of an official to be known as Land Agent.

Section 2. The papers, maps, records, and other documents relating to the lands owned or controlled by the United States in the Canal Zone, and the lands auxiliary to the Canal in the Republic of Panama outside of the Canal Zone, when not otherwise provided by law, shall be kept in the Land Office in the care and custody of the Land Agent, under such rules and regulations as the Isthmian Canal Commission may establish from time to time.

Section 3. It shall be the duty of the Land Agent to render assistance to the Head of the Department of Law in all matters relating to the investigation of land claims and land titles; and, under the direction of that officer, he shall have the supervision of Government lands to prevent unauthorized intrusions thereon; and shall perform such other duties as may be assigned to him in accordance with law. He shall have such assistants and other help as may be authorized by the Chairman and Chief Engineer.

Section 4. The Isthmian Canal Commission may adopt rules and regulations for the government of the Land Office in conformity with this Order and not inconsistent with the Executive Order of October 7, 1910, entitled "Executive Order. To prescribe the manner of leasing public lands in the Canal Zone."

Section 5. The Isthmian Canal Commission is hereby authorized to enter into an arrangement with the Panama Railroad Company to consolidate the said company's Land Office with the Land Office hereby created, and by which the papers, maps, records, and other documents affecting the Panama Railroad Company's lands in the Canal Zone and the Republic of Panama may be transferred to the Land Office created by this Order, there to be kept in the custody of the Land Agent for the use and benefit of the railroad company; and the arrangement so made may provide that the work now done by the personnel in the Panama Railroad Company's Land Office, including land surveys and investigation of land claims, may be done by the Government Land Agent and other personnel of the Canal Commission.

The arrangement hereby authorized shall be effected upon such terms, in respect to reimbursement and other compensation from the Panama Railroad Company to the Commission, as may be agreed upon by the Isthmian Canal Commission, and the Panama Railroad Company.

Section 6. This Order shall take effect thirty days from and after this date.

Wm. H. Taft.

The White House,
January 19, 1911.
[No. 1286.]

Repairs to Steel Dump Cars.

Maj. T. C. Dickson, A. L. Robinson, Ad. Faure, and A. E. Bronk have been appointed a committee to consider and recommend the method to be followed by the Mechanical Division in charging the different divisions for repairs to steel dump cars, and, if it is deemed advisable, to include a recommendation in regard to charging for repairs to wooden flat cars.

Accident to Labor Train.

An accident occurred to the Pacific Division labor train about 6.30 a. m., Wednesday, February 1, resulting in fatal injuries to three employes, and more or less serious injuries to 14 others. The dead are: Jorge Ortega, Panamanian, check No. 114161, aged 21, single, who was fireman on the engine hauling the train; Marco Rodriguez, Panamanian, check No. 115259, aged 19, single, laborer: Fitz Phillips, Barbadian, check No. 113925, aged 32, married, laborer. Three American employes, A. Goulstone, conductor of the train, J. A. Burrows, and Eli Sims sustained minor injuries. The accident took place east of and near the south end of the lower lock at Miraflores, where a spur joins a track extending along the east bank of the locks. The switch was turned, so that the train took the spur, instead of continuing on the main track, and collided with a train of sand cars. A number of the employes were riding between the labor cars, and when the impact occurred, some of them fell and received injuries as above mentioned. The damage to rolling equipment was slight.

Pacific Division Sand Deliveries.

The reports of sand shipped from Balboa during the months of December, 1910, and January, 1911, show total deliveries of 42,420, and 41,130 cubic yards, respectively. The distribution in detail for each month is, as follows:

December, 1910.

Destination.	Number of Cars.	Cubic Yards.
Pacific Division	2,776	41,640
Central Division	23	345
Atlantic Division	4	95
Quartermaster's Department	6	150
Panama railroad	4	100
Miscellaneous	4	90
Total	2,817	42,420

January, 1911.

Destination.	No. of Cars.	Cubic Yards.
Pacific Division	2,674	40,110
Atlantic Division	3	75
Central Division	38	580
Quartermaster's Department	1	25
Mechanical Division	5	125
Panama Railroad Company	3	75
Miscellaneous (Private individuals)	6	140
Total	2,730	41,130

Fire at Paraiso Bridge.

The Panama railroad bridge at Paraiso caught fire about 1.30 o'clock on the afternoon of February 7, and several bents in the trestle were burned or damaged. Traffic over the bridge, which was temporarily interrupted, was resumed at noon on February 8.

Missing Men.

Any one having information regarding the whereabouts of John C. Sotherton, who is supposed to be on the Isthmus, will please communicate with the Director of Posts, Ancon, C. Z.

Any one having information regarding the whereabouts of William Patterson, who left the service of the Isthmian Canal Commission on August 10, 1910, is requested to communicate with the office of The Canal Record.

Any one having information regarding the whereabouts of Paul Hoefler, who is supposed to have come to the Isthmus of Panama in May of last year, is requested to communicate with J. H. Hoefler, LaGrange, Ky.

Sailings of Coastwise Ships to New Orleans.

Commencing with the *Cartago*, sailing from Colon on February 9, the United Fruit Company's coastwise steamers calling at Port Limon and Puerto Barrios, en route to New Orleans, will sail from Colon at 4 p. m., instead of 5 p. m., as heretofore.

Porto Bello Crusher.

A statement of the work done at Porto Bello crusher, by days, for the week ending February 4, follows:

Date.	Hours worked.	Cubic Yards.
January 30	8:31	3,531
January 31	7:37	2,837
February 1	6:39	2,674
February 2	7:30	3,012
February 3	6:44	3,012
February 4	7:15	3,514
Total	44:16	18,580

Ancon Crusher.

A statement of rock crushed at Ancon quarry for the week ending January 28, follows:

Date.	Hours worked.	Cubic Yards.
January 23	8:05	2,434
January 24	8:55	3,217
January 25	8:45	3,088
January 26	8:55	2,892
January 27	8:35	2,786
January 28	7:05	2,894
Total	50:20	17,311

Convicted of Embezzlement.

The trial of Bernard L. Kearney, on the charge of embezzling Canal Zone post-office funds, while postmaster at San Pablo, was held in the Circuit Court of the Second Judicial Circuit at Empire, on Tuesday, February 7. He was found guilty and will be sentenced on Tuesday, February 14.

Stages of the Chagres.

Maximum heights of the Chagres River for the week ending midnight, Saturday, February 4, 1911. All heights are in feet above mean sea level:

Day and Date	Station.				
	Vigia.	Alhajuala	Gamboa.	Bohio.	Gatun Lake.
Sun. Jan. 29	126.1	92.7	45.5	13.3	13.3
Mon. Jan. 30	126.0	92.6	45.5	13.2	13.2
Tues. Jan. 31	126.0	92.6	45.4	13.2	13.2

PERMANENT CANAL BRIDGE.

Board Recommends a Structure of the Arch Type Over the Cut at Empire.

The board consisting of Lieut.-Col. H. F. Hodges chairman; Lieut.-Col. D. D. Gaillard, Mr. H. H. Rousseau, Mr. J. A. Smith, and Lieut. Frederick Mears, members, appointed to consider and report on the matter of a permanent combined railway and highway bridge over the Canal, has made its report and recommendation. The board was unanimous in the opinion that a bridge, which shall not interfere with navigation, is necessary and desirable, and should be built, providing the cost does not exceed a reasonable amount; and that only the high, fixed type of bridge should be considered, with a clearance sufficient to accommodate the largest steam vessels in existence, and the largest sailing vessels with lowered top masts. While the board had no complete data before it regarding the height of vessels, it had, however, information that a height of 135 feet at high tide is considered sufficient for the bridges in New York Harbor, this height diminishing to about 118 feet at the shores of the river. The height of the largest steam vessels afloat, viz., the *Olympic* and *Titanic*, measured from the keel to the top of the smokestack is 175 feet. The least draft will be about 25 feet, so that the height of 150 feet would accommodate all the necessarily fixed parts of these vessels. For the purpose of estimate and recommendation, the board assumed as necessary, a clear height of 175 feet above a lake level of 87 feet.

The most suitable location for a bridge of the high, fixed type was regarded by the board to be in the neighborhood of the existing suspension bridge at Empire. Here, connection can be obtained with the relocated line of the Panama railroad; the old line of the Panama railroad on the west side of the Cut; and also, with the projected line to David, if the last named be built in the location that has been surveyed for it. A suitable foundation can be found, and, it is believed, owing to the character of the rock, which will stand at a steep slope, a minimum length of span can be secured. The location favored is a crossing either just north, or south, of the present temporary suspension bridge, and at right angles to the axis of the Canal.

To assist the board in its consideration of the type of bridge to be recommended, two designs were prepared, one for a cantilever truss, and the other for a plate girder arch structure, which should have sufficient length to span the entire width of the Canal with the desired clearance, and with sufficient margin on each side of the edge of the Cut to insure the safety of the abutments; the approaches to be on embankments, with one or more spans next to the abutment, in order to avoid bringing the fill too close to the edge of the Cut. The designs provided a superstructure which should carry a railroad about 16 feet wide, a roadway of about the same width, and one or more footwalks, each about six feet wide, the bridge to be constructed to carry standard railway and highway loads.

The members of the board recorded themselves in favor of the plate girder arch structure. It was believed that while this may be found more difficult to erect than the cantilever, there is less exposed metal requiring preservation, and it will be stiffer and more satisfactory after completion.

In conclusion, the report stated that final selection of design, or definite decision as to details should not be made until after careful estimates have been worked out along the different lines that have been proposed, or that may hereafter suggest themselves, but recommends that a bridge of the arch type be constructed.

Safety Measures for Labor Trains.

Owing to the practice of jumping on and off labor trains when they are in motion, and the menace to life and limb caused by employes riding on the roofs and platforms of cars, together with the fact that these trains have been used to a considerable extent by nonemployes, the transportation committee has recommended that sign boards be placed on all labor trains, with the following warning printed both in English and Spanish: "For employes only. Passengers must remain inside of cars and not get on or off train while it is in motion. Offenders will be prosecuted." The Counsel of the Commission has been requested to draft an executive order prohibiting unauthorized persons from jumping on and off moving trains, as the Canal Zone laws do not contain such a provision. In addition to these precautions, an extra car has been authorized placed on labor trains, where crowded conditions exist.

Additional School Facilities.

A building of American construction, near Rio Grande, formerly used by the Central Division as a timekeeping office, has been transferred to Pedro Miguel, and is being reerected there as a schoolhouse for colored children. No provision has hitherto been made toward educating colored children in that settlement, and it is estimated that there are now about 50 children of school age.

The erection of a schoolbuilding at Bas Obispo, and its transfer up the Chagres River, by raft, to Cruces, has been successfully accomplished, and the building is now occupied. It stands near the church, and both buildings will be above the high water level when Gatun Lake is filled, although a portion of the town will be inundated.

Civil Service Examinations.

Examinations will be held, probably on March 5, for the positions of stenographer and typewriter and of typewriter in the Isthmian Canal Service. Examination for clerk in the Isthmian Canal Service will be held probably on March 12. The next examinations to be held for stenographer and for typewriter will be about April 30, and for clerk in October next.

Request should be made at once for application form and a copy of the Manual of Examinations, stating in each case the examination it is desired to take. Applications for examination on March 5 will be received only up to March 1, and for the clerk examination only up to March 7.

The following named examinations may be held in the near future, and information in regard thereto may be obtained from the Manual of Examinations, a copy of which may be had on request; application therefor must be filed in this office not later than February 25: Assistant bookkeeper, civil engineer, and teacher (male), in the Philippine Service; civil engineer and superintendent of construction, in the Quartermaster's Department at large; engineer, and teacher, in the Indian Service; civil engineer and draftsman,

All instructions found in application form, and in the Manual of Examinations concerning an examination applied for, should be read very carefully, to avoid unnecessary returning of application for correction, which in some cases delays certification. In connection with information required to be furnished in applications in regard to legal residence of applicants, it is to be noted that legal residence does not require continuous bodily presence, but refers to the place at which the applicant, if a voter, is legally entitled to exercise the right of suffrage.

JOHN K. BAXTER,
Secretary, Isthmian Civil Service Board.
Culebra, C. Z., February 6, 1911.

The Fill of Gatun Dam.

Suction dredge *No. 83* has been towed around from the Mindi cut, up the Chagres River, to the west section of Gatun Dam, and is pumping into the dam from the north side. There are now three dredges on the fill of the west section, one on the north side and two on the south side, and in January, they pumped 211,992 cubic yards into the dam, making the total amount of the hydraulic fill in place at the end of the month 3,948,591 cubic yards. The east section of the dam is being allowed to drain out during the dry season.

District Nursing in Colon.

The Sanitary Department has detailed two nurses from the Colon Hospital staff to the duty of district nursing in the poor sections of the city of Colon. The attention of the department had been directed to the high rate of infant mortality in that city, and investigation showed that it was due mainly to ignorance on the part of the mothers in caring for them. For convenience of administration, the city has been divided into two districts, and each nurse makes daily visits to the homes in her district where there are mothers with infants and young children, giving instructions in feeding, and preparing food for the babies, bathing and dressing them, and in the care of the sick. The department has issued a little book in Spanish and English for distribution in the city, containing simple rules for the care of infants and children. The churches, church societies, and other organizations in Colon, are asked to cooperate in this work and, although it has been established only since January 15, good results have already been obtained. The work is under the direct supervision of the health department in Colon.

Tennis Tournament.

A tennis tournament will be held at the new Tivoli courts, the Panama club courts, and the concrete court at Ancon Hospital, five courts in all, on Sunday, February 19, and Wednesday, February 22 This tournament is open to all players on the Isthmus. Singles and doubles will be played. No admission fee will be charged, but each entrant is requested to bring two tennis balls. Those entering in singles cannot enter in doubles. All entries must be sent to B. C. Poole, Ancon, C. Z., not later than February 15. Play will begin at 9 a. m., and entrants will be notified to which courts they are assigned.

FEDERATED WOMEN'S CLUBS.

The Mid-Year Meeting at the Hotel Tivoli.

The January meeting of the Canal Zone Federation of Women's Clubs was held at the Hotel Tivoli on Tuesday, January 31. The morning session convened in the sun parlor at nine o'clock, there being about 50 representatives of the federated clubs in the Canal Zone present. Mrs. Thomas E. Brown, jr., presided, and the guest of honor was Miss Helen Varick Boswell of New York. The business meeting consisted of the quarterly reports of the officers and chairmen; of standing and special committees, and discussions of club work and progress.

The special activities of recent months have been along civic, educational, and philanthropic lines. In her report, the chairman of the health committee gave an outline of the general plan for a tuberculosis campaign that is being carried on in Cristobal and among the poorer districts of Colon. The education committee will work toward the establishing of vacation schools for American children; the art and literature committee outlined some practical programs and urged the clubs to make literary programs a feature of their regular meetings. The library committee reported the addition of books to local libraries and general progress in the library work of the clubs.

A resolution thanking the General Superintendent of the Panama railroad for granting transportation to the clubwomen, to the speakers and those who took part in the program, and to the entertaining and decorating clubs, was passed.

The afternoon meeting was held in the ball room of the hotel, when there were present 200 clubwomen and their guests. The address of welcome was delivered by Mr. Maurice H. Thatcher; Miss Boswell spoke on the social and political progress of women in the United States, and Mrs. John Morrow Adams, representing the Maryland State Federation, brought greetings from that organization to the Zone clubs. The musical program consisted of a piano solo by Mrs. Alfred G. Farmer, a group of songs by Mrs. A. O. Ludwig, accompanied by Mrs. Mary G. Shivers, and the singing of "America" by the audience.

The program was followed by an informal reception, after which tea was served in the dining room, the Paraiso Woman's Club entertaining. The Pedro Miguel Woman's Club was in charge of the decorations and house arrangements. One end of the ball room was hung with the American flags, the flags and pennants of the federated clubs, and the green and gold banner of the Canal Zone Federation. On the officers' table were cut flowers.

The cook book and the federation year book were on sale during the day, and literature, issued by the public health and hygiene committee of the American Medical Association, was distributed.

The annual meeting of the Federation will be held in October, probably at Gatun.

The Cristobal Woman's Club held a meeting in the clubhouse on Wednesday afternoon, February 1, to which the women of Cristobal and Colon were invited. Miss Boswell made an address on welfare work in the United States as it concerns the condition of women and children in industries.

On Thursday afternoon, February 2, the Gatun Woman's Club held a reception in honor of Miss Russell, who made an address, and the president of the Canal Zone Federation. Miss Maria Elise Johnson played a violin solo, and Miss Blanche Neville sang. Refreshments were served. There was an attendance of about 30.

Miscellaneous Social Events.

A valentine "social" will be held in Ancon Hall for the benefit of the Methodist Episcopal Church, Panama, on Monday evening, February 13. There will be music, and refreshments, consisting of home made pies, cakes and candies, will be on sale.

The Corozal Dancing Club will hold a dance at the Y. M. C. A. hall on Friday evening, February 10.

The Cristobal Dancing Club will hold their regular monthly dance on Saturday evening, February 11.

The Cristobal Catholic Club will hold a dancing party in the Cristobal clubhouse on the evening of Washington's Birthday, Wednesday, February 22.

Annual Red Cross Ball.

The Canal Zone Chapter of the American National Red Cross will give an annual ball at the Hotel Tivoli, Saturday evening, February 18. Tickets have been placed on sale and these include transportation and admittance to the hall. Tickets will be sold to those who have already remitted their Red Cross dues for this year at 50 cents each; to those who have not remitted their dues, at $1.50 each, which will include transportation, attendance at the ball, and membership for the coming year.

This ball will be given annually hereafter, for the purpose of affording an opportunity for a general reunion once a year of this organization; also, to afford a convenient opportunity for renewal of annual dues.

Red Cross Finances.

A statement of the financial condition of the Canal Zone Chapter, American National Red Cross, follows:

RECEIPTS.

January 1. Balance on hand	$1,698.32	
January 1. Refund of money advanced to exemploye of Panama railroad, May, 12, 1910	100.00	
January 1 to 31. Membership dues	67.00	
		$1,865.32

DISBURSEMENTS.

January 1. Coach hire to bank and return	.20	
January 11. Printing receipt cards	2.60	
January 12. Coach hire to bank and return	.20	
January 18. Relief of family at Cristobal, (deported)	50.00	
January 21. Printing envelopes	5.08	
January 16. Postage	3.00	
Total disbursements		$61.08
January 31. Balance on hand		$1,804.24

JOHN L. PHILLIPS, *Treasurer.*

Approved: C. A. DEVOL, *Chairman.*

Band Concert.

A concert will be given by the Isthmian Canal Commission Band at Hotel Tivoli, Ancon, C. Z., on Sunday, February 12, 1911, at 7.30 p. m. The program follows:

1	March—*I. C. C. Band*	Santos Jorge A.
2	Selection—*The Golden Girl*	Howard
3	Intermezzo—*Bridal Song from the Rural Wedding.*	Goldmark
4	Overture—*Semiramide*	Rossini
5	Waltz—*Idle Hours*	Wood
6	Serenade—*La Paloma*	Xradier
7	Medley Selection—*The Sunny South*	Lampe
8	Song—*The Rosary*	Nevin
9	March—*With Sword and Lance*	Starke

CHAS E. JENNINGS, *Musical Director.*

The Corozal baseball team defeated a team representing Paraiso, at Corozal, on February 5. Score 23 to 2.

The following vessels arrived at and departed from the port of Balboa during the week ending February 4, 1911:

Arrivals—January 29, *Barracouta*, from Central American ports; *Rupanco*, from intermediate ports; January 31, *Princeton*, from Amapala; *Oberon*, from Port Harford; February 2, *Loa*, from Valparaiso; February 3, *City of Panama*, from San Francisco.

Departures—January 30, *Riverside* and *San Juan*, to San Francisco; *Chile*, to Callao; February 2, *Stanley Dollar*, to San Francisco; *Arica*, to Guayquil; *Oberon*, to Port Harford; February 3, *Princeton*, to Salina Cruz.

OFFICIAL CIRCULARS.

Standardization of Stationery.

CULEBRA, C. Z., January 31, 1911.

CIRCULAR No. 366:

The stationery for use of the Isthmian Canal Commission and of the Panama Railroad Company shall be standardized as follows:

Sizes for general forms—The following shall be standard sizes for general forms, with special sizes permitted if necessity requires:

8 x 3½—One-third letter size.
8 x 5¼—One-half letter size.
8 x 7—Two-thirds letter size.
8 x 10½—Letter size.
8 x 14—One and one-third letter size.

The above sizes shall be strictly adhered to, except in such cases as come under "Special size forms."

Special size forms—Special size forms, which, for various reasons, cannot be made to conform to the standard, shall be arranged for between the requisitioning official and the Depot Quartermaster. However, this is not intended to mean sizes varying one-eighth, one-quarter, or one-half inch from standard, unless to be used in card cabinets.

Stock for general forms—The following weights in white paper shall be standard for general forms. For comparative purposes only the weight in each instance refers to a ream of 17 x 22 stock. The Quartermaster's Department will purchase stock in sizes which will cut and print to the best advantage the standard sizes given above, but same will equal the weight mentioned in 17 x 22:

32 lb—Extra heavy. Same as present "Daily leave order."
24 lb—Heavy. Will make about one good carbon copy.
20 lb—Same as that on which this circular was printed.
16 lb—For forms requiring three to four carbon copies.
13 lb—For forms requiring five to seven carbon copies.
7½ to 8 lb—Unglazed tissue.
7½ to 8 lb—Glazed tissue.

The Depot Quartermaster will keep in stock the best grade and a medium grade in all the above weights, except the first and last.

Colored papers—The standard colored papers to be kept in stock by the Depot Quartermaster shall be blue, pink and buff in the 20-pound and 16-pound weights. Other colors and weights will be considered special.

Stock forms—All stock forms (those used in common by two or more departments or divisions) shall be approved, ordered and given a C. E. number by this office, and before any such form is reprinted copy of same shall be submitted to this office for any necessary revision.

Forms in use by two or more departments or divisions carrying but slightly different matter shall be made into stock forms, if possible, the matter to be taken up by the Depot Quartermaster with the requisitioning officials with this end in view, whenever he finds such forms are being ordered.

Letter heads—A stock letter head (Form 292-a C. E. for ordinary weight, Form 292-b C. E. for medium weight, and Form 292-c C. E. for glazed tissue) printed on 8 x 10½ stock in black ink, shall be used by all departments and divisions of the Isthmian Canal Commission.

Those for the Panama Railroad Company shall be printed on 8 x 10½ stock in black ink.

Second sheets—The quality and weight of paper for second sheets (used for carbon copies, etc.) shall be left to the requisitioning official, to be chosen from the standard stock.

Reference slips—Reference slips, if used in lieu of letters of transmittal, shall conform to the standard sizes—half-letter size, two-thirds letter size, or, preferably, letter size.

Telegraph blanks—A stock telegraph blank (Form 202 C. E.) sball be used by all departments and divisions of the Isthmian Canal Commission.

Colored inks—Copying and colored inks shall be used only when absolutely necessary.

Information to be given on requisitions—Requisitioning officials should state whether a form is to be used with pencil, typewriter or pen, and the number of copies it is desired to make at one time, in order that suitable stock may be selected for same.

GEO. W. GOETHALS,
Chairman, Isthmian Canal Commission,
President, Panama Railroad Company.

Lights in Commission Quarters.

CULEBRA, C. Z., February 3, 1911.

HEADS OF DEPARTMENTS AND DIVISIONS:

My attention has been invited to a number of unauthorized installations, by employes, of electric lights and other electrical material. The lighting of quarters of the Commission by electricity is under the Quartermaster's Department, and no changes or alterations in, or additions to, electric lighting apparatus in Commission quarters are allowed, except such as are authorized by the Quartermaster's Department in accordance with existing regulations; and all such changes, alterations and additions, as well as original installations, shall be made by the Mechanical Division, upon proper authority, only. It is desired that the attention of employes in all departments and divisions be invited to the above, and also that my attention be called to any unauthorized installations of electrical apparatus in quarters of the Commission.

H. F. HODGES,
Acting Chairman and Chief Engineer.

Oil Allowance for Steam Shovels.

CULEBRA, C. Z., February 2, 1911.

CIRCULAR No. 314-E.

Circular No. 314 is hereby amended as follows: The present allowance of car oil for steam shovel lubrication, amounting to two and one-half gallons per day, is cancelled, and the following substituted therefor:

Car oil—Per working day of eight hours....3 quarts (To be used for lubrication of bearings)

Crude oil—Per working day of eight hours.....2 gallons (To be used for lubrication of steam shovel chains.)

H. H. ROUSSEAU,
Acting Chairman and Chief Engineer.

Cup Grease.

CULEBRA, C. Z., February 1, 1911.

CIRCULAR No. 290-B:

Paragraph 2 of Circular No. 290-a is hereby supplemented by the following:

Cup grease—Narrow gage engines......4 pounds per month.

H. H. ROUSSEAU,
Acting Chairman and Chief Engineer.

Rules for Central Division Lidgerwood Engineers;

EMPIRE C. Z., January 27, 1911.

CENTRAL DIVISION CIRCULAR No. 196.

All Lidgerwood engineers will be governed by the following instructions:

Engineers will report on machines at least 15 minutes before commencing operations in the morning and in the afternoon.

Will keep the machine clean with the help of the silver employes working on same.

Will make thorough daily inspections of machine and a daily report of its condition.

If work reported as necessary is not done, will report same to the Lidgerwood inspector or the traveling engineer.

Will make such repairs on machine as can be done without inconvenience to the work.

Keep oil holes clean and oil wells free from dirt.

Promptly remove all condensation from steam pipes and cylinders before operating the machine, and when not operating, keep drains and cylinder cocks open.

Remove oil taps located on each valve and insert small quantity of graphite and valve oil mixed, before commencing operations, both in the morning and afternoon. If lubricator fails to work at any time, oil taps should be removed and oil applied until such time as the lubricator can be worked effectively.

Oil taps to be removed and oil admitted at any time that valves are found to be operating dry, the lubricator to be thoroughly blown out before each filling.

In cases of doubt as to the proper manner of operation, care of machine, or special instruction, the presence of the Lidgerwood inspector or traveling engineer must be requested.

D. D. GAILLARD, *Division Engineer.*

Refunds at the Commissaries.

CRISTOBAL, C. Z., February 1, 1911.

CIRCULAR No. 266:

Purchasers from the Commissary Department frequently complain that they do not receive copies of refund notes covering such articles as are out of stock, etc.

The failure to receive refund notes is usually due to the failure of the purchaser to look inside the small tag envelope attached to each package. It is urged that these envelopes be always carefully examined on the inside for refund notes.

JOHN BURKE, *Manager*

Approved: EUGENE T. WILSON,
Subsistence Officer.

Rainfall from January 1 to 31, 1911, Inclusive.

COMMISSION CLUBHOUSES.

Activities of the Young Men's Christian Association.

CULEBRA.

Wm. Dubois met all comers in simultaneous chess on Tuesday evening, January 31, playing J. F. Warner, F. E. Sterns, E. A. Putnam, E. C. Bartlett, A. B. Goodenow. Mr. Dubois won three games and lost two.

High scores in bowling for the week ending February 4 were made, as follows: Bigpins—Mengle, 203; Case, 211; Huttlemeier, 217, 213; Hall, 211. Duckpins—Lindsay, 111; McIlvaine, 100; Palmer, 101. The two-man bowling tournament opened on Thursday evening, February 2. Nine teams have entered.

A "smoker" will be given for the men of Culebra on Friday evening, February 17. All the men of Culebra are cordially invited.

The monthly "social" will be omitted for February, because of the large number of other events scheduled. Arrangements are being made for a special program for the "social" on March 24.

EMPIRE.

On February 5, members of the camera club went to Pedro Miguel for the purpose of taking pictures. As soon as the exhibition board is completed, the pictures will be exhibited week by week.

On Tuesday evening, January 31, the Examination of Accounts team took three bowling games from the Central Division in the local league, and on Thursday, the machine shop took two out of three games from Civil Administration. The following scores were made:

Central Division.				Examination of Accounts			
Hobbs	126	170	145	Drake	178	156	168
Koperski	136	163	153	V-Brooklyn	127	188	155
Booth	170	146	172	Johnson	201	147	146

Giavelli	133	148	161	Snyder	171	152	143
Goolsby	182	163	155	Edwards	165	189	188
				Nelson			161
Total	784	730	725	Total	774	745	766

Outside of tournament games, the high score rolled during the week in bigpins, was 212, by Reiman. In duckpins, Henry made 104, Giavelli, 101, and Scull, 102, 104, and 103.

Five members were added to the gymnasium class last week. Members who join at this time get the benefit of a full term's work.

On account of the absence of Mr. Wagg, the literary society discussion on February 3, was led by Mr. Brown, who took "Character building" as his subject.

The ladies' club will give an entertainment in the hall on February 14.

There will be a moving picture entertainment on Saturday, February 11.

Two new members were added to the Sunday morning Bible class last week. The class is taught by Mr. Nellis.

The ladies of the Empire Christian League will hold a sale of home baked foods at the clubhouse on Saturday, February 11, from 2 to 5 p. m.

GORGONA.

The following scores were made in a match game of duckpins between the car department and the machinists on Friday night, February 3: Machinists—405, 384, 375. Car Department—439, 434, 390.

The following 100, or over, scores were rolled in duckpins during the week ending Saturday, February 4: Davis, 100; R. Varenkamp, 109; Montgomery, 107, 101, 107; Otis, 114. The following 200, or over, scores were rolled in bigpins: Stewart, 212; Tretter, 216; Gailliot, 221, 223; H. McConaughey, 214, 210, 206; Bordt, 205; M. Varenkamp, 223; Stoehr, 207.

The discussion club on Wednesday, February 1, was led by A. A. Nellis of Empire, topic, "Does the church keep pace with modern industrial progress?"

The "Life problem" study club was led by Melville Booz at the meeting on Friday night, Febraury 3. All men are invited to these meetings which are held every Friday night.

J. Selenkow will give an old-fashioned Punch and Judy show in the clubhouse on February 14.

GATUN.

The Gatun Carnival Association was organized on Thursday, February 2, with the following officers President, Frank Gardner Smith; vice-president, A. O. Ludwig; secretary-treasurer, F. J. Severy. The object of the association is to hold a carnival at the clubhouse in the first part of March. The various subcommittees will be announced at the next meeting.

C. O. Purdy was elected leader of the "Life problem" club which was organized on Wednesday evening, Febuary 1. General Secretary Freeman was present and addressed the meeting. The club decided to hold its discussions every Sunday in the game room at 6.15 p. m. The officers of the club are: President, H. T. Critchlow; vice-president, E. C. Ryle; secretary, Frank J. Severy. Sixteen men were present on February 5, when the "Value and choice of a life work" was discussed.

The indoor baseball season opened on Monday, February 6, when a large number of men appeared on the gymnasium floor for practice. A team will be selected in the near future for the coming interassociation tournament.

On Wednesday evening, February 8, a society for literary work will be organized at the clubhouse. The purpose of the society is to train men along the lines of public debate, recitation, quotation, and parliamentary rules. The various political and social questions of the day will be debated and discussed. These meetings will be held in the gymnasium.

A chess and checker club will be organized on Saturday evening, February 11. Members interested in these games are invited to be present.

For the benefit of those who desire to continue the study of Spanish, Mr. Kiernan will hold a Spanish "conversacion" in the game room every Thursday night. No charge will be made. The mechanical drawing class is still open for beginners.

Much interest was shown in the two-man ragtime bowling tournament which was held during January. Following are the winners: First prize, gold medals, W. L. Dalton and G. A. Barte, 570; second prize, silver medals, Louis DePoorter and G. A. Barte, 569; third prize, bronze medals, F. N. Bull and E. A. Wright, 569. Mr. DePoorter won the tie against Wright and Bull. Other scores of 550, or over, were as follows: Durand and DeMoll, 564; Kiernan and Wells, 562; Duryea and Barte 561; C. R. Harrington and DeMoll, 555; Dillon and, Barte, 555; Luckey and Barte, 551; Severn and Barte, 550.

CRISTOBAL.

Gorgona won the indoor baseball game played at Cristobal on Saturday night, February 4, the score being 12 to 11. The batteries were: Gorgona—Weiser and Ridge; Cristobal—Russell and McSparren.

A members' "smoker" will be held on Friday night, February 10, in honor of the basketball team which won the interassociation league championship for 1910. Statistics will be read showing the standing and final results. The Gatun team has been invited to attend.

Entries for the athletic meet to be held at Empire on Washington's Birthday will close on February 10. Cristobal expects to enter 15 men.

The pool and billiard match between Gatun and Cristobal played on Saturday night, February 4, resulted in Gatun winning three out of five games, and the match.

Owing to the band concert to be given on Wednesday night, February 1, the "Life problem" club meeting will be postponed until the next night, Thursday. The leader will be H. L. Stuntz. Hereafter, Wednesday night will be the regular meeting night of the club.

Two additional bowling alleys have been ordered for the Cristobal clubhouse and will probably be ready for use about March 1. Two alleys will be held for large pins and two for duckpins, so that special matches may be carried on simultaneously. Additional space for spectators will also be arranged for.

PORTO BELLO.

Fifteen men have entered the pool tournament. Each game consists of 100 points. All games must be played by February 25, and a prize of a bath robe will be awarded to the winner of the tournament. The following men are entered: Beardsley, Bradley, Carpenter; Elliott, Hays, Hill, Jackson, Millar, Ross, Thomson; Tuttle, Wallen, Morrison, Morgan, and Humburg.

The standing in the checker tournament up to February 4, is as follows:

Name.	Played.	Won.	Lost.
Mackintosh	7	7	0
Arden	7	6	1
Fleckstein	5	4	1
Taylor, T	4	3	1
McDevitt	5	3	2
King	4	2	2
Jackson	3	1	2
Beardsley	5	0	5
Colberg	4	0	4
Rogers	3	0	3
Taylor, J. B	2	0	2
Bradley	2	0	2
Gordon	2	0	2
Tuttle	1	1	0

COROZAL.

The pool tournament that was to start on the first of the month will begin on Saturday, February 11. The men that desire to join should hand their names to the secretary.

Gymnasium classes will be started soon. Shoes and suits can be secured at the clubhouse.

The pressing club opened February 2. Rates are: Four suits, $1.50; two suits, $1; nonmember, one suit, $1, in a period of 30 days.

The club has 104 members.

MOVEMENT OF OCEAN VESSELS.

No communication, either for publication or requesting information, will receive attention unless signed with the full name and address of the writer.

NOTES OF PROGRESS.

A Dry Season Freshet.

A freshet in the Chagres River on February 12 and 13 delayed work in the Chagres section of the Central Division. The rise in the river was quite unexpected, coming as it did in the middle of the dry season. The record of the freshet for the principal river stations, follows:

Station.	Rise began.		Crest of rise.		Range. Feet.
	Time.	Elevation.	Time.	Elevation.	
	Feb. 12.		Feb. 12.		
Vigia...	1.30 p. m.	126.2	10.00 p. m.	145.5	19.3
Alha'la.	3.00 p. m.	92.7	11.00 p. m.	105.5	12.8
			Feb. 13.		
Gamboa	5.00 p. m.	45.6	3.00 a. m.	58.3	12.7
Gatun..	10.00 p. m.	13.1	3.00 p. m.	15.7	2.6

The crest of the flood passed Bohio at 10 a. m., February 13, and the following maximum elevations are reported: Gorgona, 53.4; San Pablo, 41.0; Tabernilla, 35.1; and Bohio, 21.1; at Gatun Lake the rise was only 2.6 feet.

The discharge at Alhajuela previous to the beginning of the flood was 1,400 cubic feet per second; the maximum discharge eight hours later was 38,500 cubic feet per second. Only one freshet is recorded for the month of February reaching a greater height at Gamboa, that of February 1, 1909—elevation 64.8. Only three times during the whole of the year of 1910 was a greater elevation of the river recorded at this station—May, 61.90; August, 60.35; and December, 64.50.

The rainfall producing the freshet was nearly all in the headwaters of the Chagres River, and above Alhajuela. The storm passed southerly across the Isthmus, and was probably most severe in the extreme upper branches of the river. From 5 p. m., February 11, to 5 p. m., February 12, the following rates of rainfall are reported: Porto Bello, 3.67 inches; Alhajuela, 0.98 inches; El Vigia, 1.13 inches; Gamboa, 0.03 inches.

In the section of the Central Division between Gatun and Gamboa, work was suspended on February 13 and 14, except at Chagrecito, where the two steam shovels were not flooded. Eight steam shovels digging near Gorgona were inundated, as were three orange peel dredges. The trestle bridge at Gorgona was damaged. The shovels, forced to suspend until the water subsides, were excavating about 10,000 cubic yards a day. All the shovels will resume digging this week.

Swamp Land at Balboa to be Reclaimed.

The swamp lying between Ancon and Sosa Hills, and bounded on the north by the Panama railroad track, will be filled by the Central Division, which will use the area, about 68 acres, for a dump for material from Culebra Cut. The land will be brought up to the grade of the railroad tracks, which will require an average fill of between five and six feet. It is estimated that about 930,000 cubic yards of material will be required to make the fill. The land thus reclaimed will be freed immediately from the menace of mosquito breeding, and in the future will be valuable for building purposes. A channel will be dredged through the toes of the old Sosa-Corozal dam into the terminal basin proposed for the Pacific end of the Canal, so that the drainage may pass into the basin.

Slide on East Bank of Culebra Cut.

About 10 o'clock on the night of February 9, a section of the east bank of the Canal 1,100 feet in length. opposite the Y. M. C. A. clubhouse at Culebra, broke away and settled almost vertically for a distance of about 30 feet, carrying away the berm below it on the 135-foot level, and displacing laterally this berm and all material west of it up to the pioneer drainage cut, which was almost completely closed. The berm on the 135-foot level, below the break, varied in width from about 20 feet at the south end to 100 feet in the middle of the break, and 50 feet on the north limit of the break. All loose or broken material lying above this berm had been entirely cleared away by steam shovel only a few days previously.

The entire amount of material in motion aggregates about 550,000 cubic yards, of which about 375,000 cubic yards lay outside of the theoretical slope of the Canal and about 175,000 cubic yards within the theoretical limit of the Canal prism. In addition to the material now in motion, as stated above, from 50,000 to 75,000 cubic yards of moving clay will have to be removed from the upper level on the east bank, connecting the shovel cuts thus made with the old French 90-meter level.

The season since December 27 has been unusually dry, less than one-quarter of an inch of rain having fallen since that date, and the material in motion, as a consequence, was almost perfectly dry. There had not been any drill holes loaded with dynamite fired along the east bank in the vicinity of this break for about 10 months. the little blasting done in this vicinity being confined solely to "dobeying," or breaking up, of pieces of rock brought down in the preceding slides.

A steam shovel, a coal train with its locomotive, and two trains of Lidgerwood flats, without locomotives, were caught in the slide, but all have been extricated. All four of the tracks east of the center pioneer cut were carried away, but two of them were restored and ready for operation of trains Friday afternoon. The pioneer cut was filled up, but a pump was installed to the north, and, it is expected, no inconvenience from this source will be experienced.

The 550,000 cubic yards estimated for the slide of February 9, added to the yardage of the slides that have occurred since July, 1910, do not exceed the total of 6,104,000 cubic yards allowed for slides in the Central Division in the revised estimate of total excavation made at that time; nor will the added excavation increase the estimate of cost of excavation in the Central Division made in October, 1908.

Removal of Culebra Hotel.

On account of the breaks in the ground under the hotel at Culebra, indicating that the building is within the limits of the slide on the west side of Culebra Cut at that village, it has been decided to tear down the annex to the hotel, and from the material to build a mess hall on some site removed from the region of slides. This mess hall will be a one story structure large enough to accommodate the white bachelor employes now at Culebra. It will be ready for use, and will be moved into, as soon as the slide develops to an extent that will make further occupancy of the present hotel undesirable.

Consolidating Stores.

The storehouse near Las Cascadas, and the small supply house at Empire, formerly maintained by the Central Division, will be abandoned, and the stock therein transferred to the storehouses of the Quartermaster's Department at those points, from which the Central Division will draw its supplies for the work in the vicinity, in future. A list of supplies, including lubricants and spare parts, required to be carried in the storehouse at Las Cascadas, will be furnished the Quartermaster's Department. The storehouse car near Juan Grande, the storehouse at Bas Obispo. and the storehouse car in the Cut between Culebra and Cucaracha will be maintained by the Central Division until the steam shovel work in those neighborhoods has been completed.

Freight Transportation for Gatun River Natives.

It has been customary for the natives living along the upper Gatun River to bring bananas, and other fruits and produce, to Gatun by boat. The recent closing of the river, near Mitchellville on the Panama railroad relocation, has shut off this traffic, compelling the natives to follow the railroad

NOTES OF PROGRESS.

(*Continued.*)

right-of-way into Gatun, and to carry their produce on foot, or pack it on a pony. Inasmuch as only a few own ponies, and, in order to relieve the people of any hardship caused by the closing of the Gatun River to navigation, the railroad company has been authorized to transport their market produce to Gatun, and to carry back for them, free of cost, the ordinary purchases they may make there. An empty cold storage car will be provided for this service on Monday morning of each week.

Gatun Dam Spillway.

Concrete was placed in the spillway of Gatun Dam, during the week ending February 11, as follows:

DATE.	Concrete Laid.	Hours worked.	No. Mixers.
February 6	304	8:30	1
February 7	262	9:00	1
February 8	220	11:00	2
February 9	222	17:00	2
February 10	240	13:00	2
February 11	264	17:00	2
Total	1,512	75:30	1.67
Previously reported	115,762		
Grand total	117,274		

⅓-Yard Mixer Record.

The ⅓-yard concrete mixer in use at the Miraflores Locks established a new Isthmian weekly record for machines of this size during the week ending February 4. Its total output in 49.50 hours actual working time was 700 cubic yards, making an average output per hour of 14 cubic yards, equivalent to 42 mixings. Its best previous record was for the week ending November 15, 1910, when its output was 569 cubic yards.

Ancon Crusher.

The amount of rock crushed at Ancon quarry during the weeks ending February 4 and 11 is shown in the following statement.

DATE.	Hours worked.	Cubic Yards.
January 30	9:55	3,477
January 31	9:00	2,347
February 1	6:40	2,515
February 2	9:20	2,955
February 3	7:45	3,051
February 4	9:00	3,115
Total	51:40	17,460

DATE.	Hours worked.	Cubic Yards.
February 6	9:00	2,793
February 7	9:05	2,910
February 8	9:20	3,548
February 9	9:50	3,523
February 10	7:50	2,168
February 11	8:40	2,796
Total	53:45	17,738

Diamond drill explorations, to determine the character of the material that will be encountered in making the foundations for the permanent bridge over Culebra Cut at Empire, have been begun.

New Issue of Canal Zone Stamps.

In 1910, shortly before the increase in the postal registration fee from eight to 10 cents was made by the United States Postal Department, the Division of Posts of the Canal Zone Government had ordered from the Panama Government 500,000 postage stamps of the 13-cent denomination. These were to be used principally in the foreign registry business, and were intended to cover both the registration charge of eight cents, and the foreign postage charge of five cents for mailing ordinary letters. By the time the stamps were printed, the increase in the fee had been made effective in the Canal Zone, and, therefore, the stamps could not be used to advantage in their original denomination. An arrangement was recently entered into with the Panama Government by which the stamps were taken over, surcharged in the usual manner, and their denomination changed from 13 to 10 cents, thus making them usable in connection with the existing registration fee. They are now on sale at the various Canal Zone post-offices.

CONCRETE WORK IN THE LOCKS.

GATUN LOCKS.

Over 53 per cent of the concrete for the system of three twin locks at Gatun has been laid, the exact amount in place at the close of work on February 11, being 1,106,687 cubic yards, out of a total of 2,085,000.

A statement of the amount of concrete placed in the locks each day for the week ending February 11, and of the total, follows; and a similar statement for the work in the spillway of Gatun Dam is published elsewhere in this issue. The construction plant works 12 hours daily, and the auxiliary plant 9 hours.

DATE.	CONSTRUCTION PLANT. 2-cubic yard mixers.			AUXILIARY PLANT. 2-cubic yard mixers.			Large stone.	Total.
	Concrete placed.	Hours worked.	No. of mixers	Concrete placed.	Hours worked.	No. of mixers

Grand total								1,106,687

*The 643½ yards shown for the portable mixers were placed on the following days, and are included in the total shown for each day, and of this amount, 371 yards were reinforced concrete: February 6th, 18½ yards; February 7th, 161 yards; February 8th, 156 yards; February 9th, 125 yards; February 10th, 99 yards; February 11th, 84 yards.

PEDRO MIGUEL LOCKS.

Concrete work in the locks at Pedro Miguel is over 64 per cent completed, 537,946 cubic yards, out of a total of 837,400, having been placed at the close of work on February 11. The record for each of the six 8-hour working days of last week, follows:

DATE.	CONSTRUCTION PLANT. 2-cubic yard mixers.			AUXILIARY PLANT.						Large stone.	Total.
				2-cubic yard mixers.			⅓-cubic yard mixer.

STEAM SHOVEL RECORDS.

Work in Central Division in January.

During the month of January, the total amount of material excavated in the Central Division was 1,614,362 cubic yards, of which 456,002 cubic yards were classified as earth, and 1,158,360 cubic yards as rock.

Of this quantity, 1,585,406 cubic yards were removed by steam shovels, 2,680 cubic yards by scraper, and 9,452 cubic yards by bucket cranes. Contractors removed 10,672 cubic yards by sluicing, and 6,152 cubic yards by hand.

The high record for the month was made by shovel No. 204, working 25 days in the Culebra district, which excavated 60,591 cubic yards—36,355 cubic yards of rock, and 24,236 cubic yards of earth. The second best record for the month was made by shovel, No. 213, working 25 days in the Culebra district, which excavated 54,986 cubic yards of rock.

The best record for a shovel of the 70-ton class was made by shovel No. 114, working 25 days in the Chagres district, which excavated 35,426 cubic yards of earth.

Shovel No. 204, working in the Culebra district, made a high record for one day, by excavating 3,401 cubic yards of rock and earth on January 3. Shovel No. 115, working in the Chagres district, excavated 1,840 cubic yards of earth on January 10, this being the high record in January, for one day, for a shovel of the 70-ton class.

Except where noted, monthly reports are computed by place measurement, while the daily reports are based on car measurement. The best records for the month, and for one day, are shown below:

BEST RECORDS FOR THE MONTH.

CHAGRES DISTRICT.

Daily Record for Steam Shovels Broken.

On February 3, 1911, fifty steam shovels, working in the Central Division, excavated 74,210 cubic yards of material, or an average of 1,484.2 cubic yards per shovel for the 8-hour working day. This is the highest average per shovel, per day, for all shovels, ever made in the Central Division.

PERSONAL.

Brigadier-General R. M. O'Reilly, Medical Corps, U. S. A., retired, and Mrs. O'Reilly, arrived on the *Allianca* on February 10.

The Honorable Frank Buchanan, Member-elect of Congress from Illinois, is on the Isthmus inspecting the Canal work.

Mr. E. A. Drake, vice-president of the Panama Railroad and Steamship Company, accompanied by Mrs. Drake and a party of friends, arrived on the Isthmus on the *Cristobal*, on February 10, and will return on the same steamer on February 19. Mr. Drake has been officially connected with the Panama Railroad Company for 23 years, and this is his first visit to the Isthmus.

The Red Cross Ball.

Both the dining room and the sitting room of the Hotel Tivoli will be used for dancing at the annual ball of the Canal Zone Chapter, Red Cross, on Saturday night, February 18. The Commission band will play in one room, and the Marine band in the other. Dancing will be over at 12 o'clock, and a special train will leave for the north shortly after that hour. The sale of tickets indicates that the attendance will be large. In answer to an inquiry, it is stated that each ticket represents individual membership in the Chapter, and, therefore, will be accepted for the admission of only one person, and ladies, as well as men, will require tickets.

Spanish War Veterans.

The undersigned has been informed that the national officers, Spanish War Veterans, will arrive on the Isthmus on March 2, for the purpose of forming four camps, S. W. V. Those who have not done so, are directed to communicate with

Charles C. Cameron.

Culebra, C. Z., February 5, 1911.

Athletic Meet at Empire.

There are 185 entries, representing 73 different individuals, in the 14 contests for men scheduled for the athletic meet at the Empire baseball park on February 22. In addition, there are 38 entries, representing 21 different individuals, in the two events for boys. The entries, by towns, are as follows:

Place.	Men.	Boys.
Ancon	8	1
Camp Elliott	15	0
Cristobal	15	6
Culebra	3	4
Empire	6	4
Gatun	10	6
Gorgona	15	0
Porto Bello	1	0
Total	73	21

The following officials have been appointed for the meet: Referee, J. T. Hopkins; clerk of course, William E. Burrell; assistant clerks of course, E. M. Foster, G. C. McCullough, J. A. Jamieson, W. R. Hodgson; track judges, H. P. Sollenberger, chairman, C. N. Rogers, W. H. Brown, C. H. Ourand, E. O. Smith; scorers, William E. Burrell, chairman; W. H. Kromer, Sergt. A. A. A. Allen; inspectors, W. H. Geer, chairman; H. R. Seaton, S. Fill, Bert Shell; announcer, J. Mack Holt; marshals, Lieut. H. Kehm. L. A. Brynes, L. C. Calloway.

No special train will be run for the occasion, the contestants using the regular trains on that date, which will be operated in accordance with the Sunday schedule. The Isthmian Canal Commission Band will furnish music. The admission to the park will be: Adults, 50 cents; children, 25 cents.

Fire Department Tournament at Gatun.

A fire department tournament will be held by the three volunteer companies at Gatun on the morning of February 22. The company winning the tournament will be presented with an American flag, 5 x 8 feet, which will become the property of the company winning it three times consecutively. The company winning the tournament will be entertained by the two other companies at a banquet at the Gatun hotel on a date to be determined later, probably February 25. The events, and the point value of each, are as follows:

1. Wheels of cart to be on mark and start made from pistol shot, run 150 yards to standpipe, connect and lay 150 feet of hose, disconnect last section, put on nozzle. Time to be taken from pistol shot to first sight of water. Each company will be furnished with dry hose. Each company must reel its own hose, the same to be inspected by the other companies, if desired. Forty-five points.

2. Lay parallel four 50-foot lengths hose, all male couplings in line with standpipe. Make running connections, put on nozzle, turn on water, and straighten hose. Time taken from crack of pistol to appearance of water at the nozzle. Hands up at crack of pistol. Twenty-eight points.

3. With water flowing at full head through three (3) lengths 50-foot hose and nozzle on, replace middle length with one from the reel, which is to stand at least twenty-five (25) feet beyond nozzle. Time to be taken from crack of pistol until water appears at nozzle after new length has been inserted. All men in the company to be along with live line at crack of pistol. Hands up at crack of pistol, except pipemen. Fifteen points.

4. With one (1) length 50-foot hose coupled on itself at least two turns, run 50-feet, break coupling, and put on nozzle. Each company allowed two trials with same man, or different men, and best time to be taken. Time to be figured from crack of pistol to dropping of connected nozzle on the ground. Twelve points.

Postal Business and Canal Zone Revenues.

The report of the Director of Posts for the month of January shows that 16,751 money orders were issued, amounting to $413,964.14. Of this amount, $308,894.55 was payable in the United States, $104,601.09 in orders payable in the Canal Zone, and $468.50 in orders payable in Martinique. The fees collected amounted to $1,828.06, and the amount of orders paid and repaid during the month was $87,452.09.

Postal sales during the month amounted to $6,703.90, and newspaper postage amounted to $2.48.

The revenue collections for the month were, as follows:

Distillation licenses	$42.84
Motor vehicle licenses	558.00
Retail liquor license	600.00
Taxes, licenses, etc	9,874.02
Total	$11,074.86

CENTRAL DIVISION TRAINS.

Classes of Equipment Used for Transporting Material, and Method of Operation.

Since July 1, 1910, the amount of excavated material handled by the transportation equipment of the Central Division has been greater than for the corresponding period at any other time since the beginning of operations by the United States. A description of how this material is handled, follows:

The entire train service of the Central Division is operated and controlled solely by the officials of that division, although the tracks of the Panama railroad are used in reaching the Dam at Gatun and the dumps at Balboa. When on the Panama railroad tracks, the block offices of that railroad keep a record of the time of passing of all Central Division trains. In addition, the chief dispatcher of the Central Division also keeps a record of all Central Division trains while on the Panama railroad, with delays, etc.

The transportation officials of the Central Division consist of a superintendent of transportation, an assistant superintendent of transportation, a chief dispatcher, an assistant dispatcher, and the necessary yardmasters. The offices of the superintendent, and of the chief dispatcher, are located in the division office at Empire.

In handling excavated material, two general types of cars are used—Lidgerwood flats, from which the material is plowed off by a Lidgerwood unloader and plow, and Oliver and Western dump cars, from which the material is spilled by tipping the car. On some of these cars, this is done by pneumatic pressure, but on most of them by hand. The Lidgerwood flat car has a rated capacity of 19 cubic yards, place measurement; the larger size Oliver and Western dump cars, of 17 cubic yards capacity, and the smaller size, of 10 cubic yards capacity.

Trains running to Gatun; to the dumps on the Panama railroad relocation; to Miraflores and to Balboa, are made up, as follows: Lidgerwood trains for Miraflores and Balboa contain 20 cars of the capacity previously mentioned; Lidgerwood trains dumped on the relocation are made up of 21 cars each. Trains consisting of the larger sized Oliver and Western dump cars number 27 cars; those of the smaller size, 35 cars.

The trains in use on the Chagres section consist entirely of small Western and Oliver dump cars, and the length of the train varies from six to 15 cars, depending upon the grade and the distance to the dumps. Thirteen of these trains are drawn by old French locomotives.

The transportation equipment assigned to the Central Division at the present time is, as follows:

Locomotives (American)	130
Locomotives (French)	30
Lidgerwood flats	1,666
17-yd. Oliver and Western dump cars	352
10-yd. Oliver and Western dump cars	589
Ballast cars	24
Wreckers	4
Unloaders	25
Plows	36
Spreaders	13
Track shifters	5

As an example of the amount of work accomplished with the equipment above mentioned, the record for January 30, 1911 is given. On this date, 51 steam shovels and two orange peel cranes were working, and their aggregate output was 74,208 cubic yards, which gave a total of 284 trainloads of excavated material transported by the different types of trains mentioned, in the following proportions: 2,639 Lidgerwood flats; 300 large Western and Oliver dump cars; 1,809 small Oliver and Western dump cars.

There were in service on this date in the Central Division a total of 156 locomotives, of which 117 were serving shovels, seven were handling spreaders, ten were handling unloaders, four were handling track shifters, six were switching, four were handling labor trains, eight supply trains, and other miscellaneous work. The material excavated was disposed of at the following dumps:

	Cubic Yards.
Gatun Dam	9,417
Miraflores dumps	13,210
Balboa dumps	16,260
P. R. R. relocation dumps	21,241
East Mamei dump	1,070
West Mamei dump	840
Point 4 dump	4,120
Juan Grande dump	1,090
Culebra dump	2,570
Obispo Diversion	740
Total	70,558

The remainder was used in repairing roads, filling in for the Panama railroad, etc.

Work of Lidgerwood Unloaders.

A statement of Lidgerwood cars unloaded in the Central Division during the month of January, follows:

LOCATION.	No. of unloaders.	No. of trains.	No. of cars.
Balboa	3	1,046	20,920
Miraflores	3	847	16,940
Gamboa	4	1,084	21,737
Total	10	2,977	59,597

Missing Men.

Any one having information regarding the whereabouts of Percy M. Buchanan, who is thought to have come to the Isthmus two years ago, is requested to communicate with the American Legation in Panama.

Any one having information regarding the whereabouts of E. D. Ennis, who was last heard from at Cristobal, is requested to communicate with E. L. Ennis, Columbus, Texas.

Colon Club Dance Postponed.

The regular dance of the Colon Club, scheduled for the evening of February 18, will be postponed on account of the ball to be given under the auspices of the Red Cross Society at the Hotel Tivoli on that evening.

Boys' Organizations.

The boys of section No. 2 of the Anti-Cigarette League of Gorgona held an election of officers on Wednesday evening, February 8, the following being chosen: President, Julius Heinter; secretary, Albert LaRock; treasurer, Lee Ward; sergeant-at-arms, Earl Tate; librarian, Robert Burns; superintendent, Mrs. A. L. Hackenberg.

The Gatun Anti-Cigarette League, which was recently organized, with Mrs. George Whiston as superintendent, has a membership of 15 boys between 10 and 17 years of age. Meetings are held every Friday evening in the Commission chapel.

The "boy scouts" held a meeting on Saturday morning, February 11, and formed a preliminary organization. Seventeen boys were present. The boys will meet from 7 to 8 o'clock on Monday and Tuesday nights, and will receive instruction in the elements of the "boy scout" movement. Following this, and upon passing an examination, they will be allowed to become "tenderfeet." On Saturday evening, February 4, the members spent the day in the jungle. Dinner was cooked by the boys without cooking utensils. A. O. Ludwig is the scout master.

Steam Shovel and Dredgemen.

The I. B. of S. S. and D. M. will hold its regular meeting at the I. C. C. lodge hall, Empire, on Sunday, February 19. It is very important that all brotherhood men attend this meeting.

W. P. TUDOR,
Secretary and Treasurer.

Empire, C. Z., February 10, 1911.

Electrical Workers.

The next regular meeting of Local No. 214, I. B. E. W., will be held in Ancon lodge hall on Sunday, February 19, at 1.30 p. m. All members are requested to be present, in order that a photograph may be taken.

Panama Canal Service Medal Association.

A meeting of the Panama Canal Service Medal Association will be held in Kangaroo Hall, Empire, on Sunday, February 19, at 9 a. m. All members, together with persons qualified to join, are invited to be present.

E. F. J. GOLDSMITH, *Secretary.*
P. O. Box 41.

WATER PRESSURE AT LOCKS.

Relative Density of Fresh and Salt Water, and Size of Culvert Outlets, Considered.

Experiments are being conducted at Gatun to determine the proper size of the openings through which water from the lower locks at Gatun and Miraflores will be emptied into the Canal below the locks. On account of the difference in density between fresh and sea water, it is necessary to adjust with considerable nicety the size and the elevation of the outlets of the culvert systems, and the experiments are carried on with a model, the inside of which is a facsimile of the outlet as it will be built at the end of each culvert.

In emptying the lower lock there comes a time, theoretically, when the salt water at the outlet of the culverts exerts a unit pressure into the culvert equal to the unit pressure from the fresh water in the lock, and, therefore, the flow ceases. When this occurs the water in the locks may be at a higher elevation than the water below, the difference in elevation depending on the relative density of the water, and the location and size of the outlet. This possible difference in the elevation of the water surface may cause a pressure against the lock gates, which must be kept within the limits of the capacity of the gate operating machinery. The main discharge culverts are 18 feet in diameter, and, as it is desired to have the outlet consist of several smaller openings, it becomes necessary to find such a size for these small openings, as will not reduce the full discharge capacity of the main culvert, and will prevent the heavy salt water from getting into it. If the openings are too small, the discharge will be reduced, and if they are too large, there is a possibility that the salt water will get into the main culvert and stop the flow of water from the lock, before the levels equalize nearly enough to permit the gates to be opened.

The experiments are being conducted in accordance with the recommendation of a board consisting of Lieut.-Col. H. F. Hodges, Maj. Chester Harding, and Mr. John M. G. Watt, appointed for the purpose of determining what means should be taken to obviate dangers resulting from tidal action and from difference of density. The details of a method of overcoming the tidal pressure on the lower guard gates are now being studied. After discussing the effect of the difference of density, the board finds that it will be safe to omit all precautions in this respect, except at the lowest operating gates in each flight at Gatun and Miraflores. The report continues:

"It has been stated that, in theory, a level for the discharge culvert can be found at which the effect of the difference in salinity at the two sides of the gates may be reduced to a manageable amount, or even to zero, with unchanging conditions of density and lift. * * * * * With a range of tide such as is experienced at Gatun, a position for the culvert can be found at which the maximum resultant pressure on the gate will be less than one ton. At Miraflores, where the tidal range is much greater, a position for the surface of contact for the salt and fresh water, i. e., for the discharge opening of the culvert, can be found at which the maximum resultant pressure will be well within the strength of the operating mechanism.

"With the discharge opening in a vertical plane, it is obvious that different conditions as to density would exist at the top and bottom ends of the vertical diameter of the opening, and it might be possible for water of greater density to be flowing inward at the bottom of the culvert, and at the same time fresh water flowing out at the top. If, however, the openings are in a horizontal plane, it is believed that this contingency will be practically avoided.

"The board proposes, therefore, that below the lower valves the culvert be turned upward to discharge through openings in a horizontal plane, the position of this plane being fixed for the two lock flights at the positions established by the analysis, i. e., at elevation —21 at Gatun (21 feet below sea level), and at elevation —25 at Miraflores. The discharge of the culvert will then be at nearly the position of theoretical equilibrium of unit pressure, so that any resultant flow from one side to the other, due to difference in density of water, can be at first only slight. At the same time the resultant pressure on the gate will be within manageable limits. * * * * * *

"In order to avoid interfering with the efficiency of discharge, the openings in the horizontal plane, through which the water escapes from the culvert, should manifestly be larger in area than the minimum area of the culvert itself. The board is not prepared to state what proportion these areas should bear to each other, and suggests that this matter should be made the subject of experiment."

Civil Service Examinations.

Examinations will be held, probably on March 5, for the positions of stenographer and typewriter and of typewriter in the Isthmian Canal Service. Examination for clerk in the Isthmian Canal Service will be held probably on March 12. The next examinations to be held for stenographer and typewriter and for typewriter will be about April 30, and for clerk in October next.

Request should be made at once for application form and a copy of the Manual of Examinations, stating in each case the examination it is desired to take. Applications for examination on March 5 will be received only up to March 1, and for the clerk examination only up to March 7.

The following named examinations may be held in the near future, and information in regard thereto may be obtained from the Manual of Examinations, a copy of which may be had on request; application therefor must be filed in this office not later than February 25: Assistant, bookkeeper, civil engineer, and teacher (male), in the Philippine Service; civil engineer and superintendent of construction, in the Quartermaster's department at large; engineer, and teacher, in the Indian Service; civil engineer and draftsman.

All instructions found in application form, and in the Manual of Examinations concerning an examination applied for, should be read very carefully, to avoid unnecessary returning of application for correction, which in some cases delays certification. In connection with information required to be furnished in applications in regard to legal residence of applicants, it is to be noted that legal residence does not require continuous bodily presence, but refers to the place at which the applicant, if a voter, is legally entitled to exercise the right of suffrage.

JOHN K. BAXTER,
Secretary, Isthmian Civil Service Board.
Culebra, C. Z., February 6, 1911.

Fatal Accident at Pedro Miguel.

Alex. LaRue, an American, employed by the McClintic-Marshall Construction Company in the work of dismantling berm crane "G" at Pedro Miguel, was struck and fatally injured by a train on one of the storage trestles in the forebay of the locks on Wednesday, February 8. He was 27 years of age, unmarried, and had been on the Isthmus 17 days. His previous residence was at Norfolk, N. J.

Porto Bello Crusher.

A statement of the work done at Porto Bello crusher, by days, for the week ending February 11, follows:

DATE.	Hours worked.	Cubic Yards.
February 6	7:44	3,591
February 7	7:54	3,641
February 8	7:53	3,727
February 9	8:27	3,664
February 10	6:39	2,695
February 11	9:34	4,042
Total	48:11	21,360

Kearney Sentenced.

Bernard L. Kearney, convicted of the embezzlement of post-office funds at San Pablo, was sentenced to one year in the Culebra penitentiary by Judge H. A. Gudger, in the Circuit Court at Empire, on Tuesday, February 14.

Band Concert.

A concert will be given by the Isthmian Canal Commission Band at Culebra, C. Z., on Sunday, February 19, 1911, at 5.45 p. m. The program follows:

1 March—*With Sword and Lance*..........Starke
2 Selection—*Madame Sherry*............Hoschna
3 Intermezzo—*Bridal Song from the Rural Wedding*........................Goldmark
4 Overture—*Semiramide*....................Rossini
5 Waltz—*The Lion and the Mouse*..........Bendix
6 Medley Selection—*My Southern Rose*..Von Tilzer
7 March—*Tannhauser*......................Wagner
8 Selection—*Carmen*..........................Bizet
9 March—*I. C. C. Bond*....................Jorge A.

CHAS E. JENNINGS, *Musical Director.*

The next concert will be given at Bas Obispo on Sunday, February 26, at 6 p. m.

CLASSIFIED EXPENDITURES.

A statement of classified expenditures under the Isthmian Canal Commission to December 31, 1910, follows:

PERIOD.	Department of Civil Administration.	Department of Sanitation.	Department of Construction and Engineering.	General Items.	Total.
Total to June 30, 1909	$3,427,090.29	$9,673,539.28	$69,622,561.42	$78,022,606.10	$160,745,797.09
Total, fiscal year 1910	709,351.37	1,803,040.95	26,300,167.05	2,863,088.83	31,675,648.20

Total	$4,498,046.84	$12,379,495.86	$110,406,725.46	$82,447,015.42	$209,731,283.58

SOCIAL LIFE OF THE ZONE.

Women's Clubs, and other Events.

The meeting of the home department of the Cristobal Woman's Club was held in the clubhouse on Wednesday, February 8. Mrs. P. T. Murphy read a paper on tropical fruits and vegetables. There was a piano solo by Mrs. Humphreys and Mrs. J. Diers sang a group of Danish folk songs, accompanied by Mrs. Frank Ullrich. Refreshments were served.

The meeting of the Gatun club on Friday, February 10, was under the home department. The club is planning for an art afternoon, with papers, and the Federation traveling art gallery will be exhibited.

Work on the Gatun playground has already begun. The committee on equipment has succeeded in raising a bond, which insures the payment of all expenses connected with its work. The association is looking forward to the completion and opening of the playground before the end of the dry season.

Isthmian Lodge, No. 1, Daughters of Rebekah, Gorgona, held a ball at the clubhouse on Saturday evening, February 11, the object being to establish a hospital fund for the benefit of the women of the order.

The next meeting of the Paraiso Women's Club will be held on Thursday, February 23, instead of on Wednesday, February 22.

The Pedro Miguel Women's Club will hold a social meeting at the home of Mrs. Mark White, Ancon, on Saturday evening, February 18, members and their husbands being invited. There will be a special train from Pedro Miguel and return. The regular meeting of the club, scheduled for February 22, will be omitted, and the next business meeting will be held at the home of Mrs. Ed Brown, Pedro Miguel, on March 1.

The "Pedro" club of Pedro Miguel held a "poverty party" at the social hall on Saturday evening, February 11. There was informal dancing, a sale of fancy articles, and several card tables were provided. There was a large attendance.

At a recent meeting of the Empire Woman's Club, each member brought a guest, and the afternoon was spent informally, refreshments being served.

On Wednesday evening, February 8, the residents of Empire held a reception at the clubhouse in honor of Chaplain and Mrs. A. A. Nellis, and Mr. and Mrs. W. H. Warr. A musical program was given consisting of a duet for violins by Mrs. W. H. Decker and Miss Jessie Smith, a vocal duet by Mrs. Alfred Dickson and Mrs. Mary G. Shivers, and solos by Alfred Dickson and Frank Connors. Addresses were made by Mr. Nellis and Mr. Warr. Refreshments were served.

The Empire Masonic Club will hold a banquet in the Commission hotel on Tuesday evening, February 21. W. W. Warwick will be the toastmaster. The members of the club will be accompanied by their wives.

The Culebra Club held a concert at the clubhouse on Thursday evening, February 8, those taking part in the program being, as follows: Vocalists, Mrs. A. Faure, Mrs. D. F. Donahue, Messrs. Kramer, Kersey, Tupper, Freeman French, Purchase, Case, Hall, Crandall, Lee, and Tucker; pianist, H. E. Bronson; violinist, Mrs. Donahue; reader, F. A. Kearns, and the Culebra orchestra. The attendance was good.

Cristobal Lodge, No. 2 I. O O.F., will hold a picnic at Toro Point on Washington's Birthday, February 22. The use of one of the Atlantic Division tugs to convey the members, their families and friends to and from the Point has been authorized.

Church Notes.

A schedule of special Lenten services to be held in St. Luke's hospital chapel, Ancon, has been arranged, as follows: Ash Wednesday, March 1, Holy Communion at 7 a. m.; morning prayer and litany at 10 a. m.; evening prayer and address at 8 p. m. Every Wednesday, morning prayer and litany, 9 a. m.; every Friday, morning prayer and litany at 9 a. m., and evening prayer and address at 8 p. m. The services for Holy Week will be announced later.

A benefit dance and euchre party for St. Mary's Church, Star of the Sea, Roman Catholic, East Balboa, will be held in the social hall over the Commission hotel at Old Balboa on Saturday evening, February 18.

There will be a series of special services at St. James' Episcopal Church, Empire, on Thursday evenings during Lent. The preachers will be as follows: March 2, the Rev. Mr. Griffiths of Gatun; March 9, the Rev. J. B. Bicknell of Ancon; March 16, Chaplain H. A. Brown of Culebra; March 23, the Rev. Mr. Mulcare of Culebra; March 30, the Rev. E. J. Cooper of Colon; April 6, the Rev. A. C. Peck of Panama. A series of outdoor services will be conducted by the chapter of the Brotherhood of St. Andrew on Tuesday evenings during Lent at the following places: Golden Green, Lirio, Cunette, New Town, Empire, and Camacho.

The members of the Women's Altar Society of the church of St. Ferdinand, Roman Catholic, Empire, is raising funds for a new baptismal font for the church. The men's society will present a set of new pictures representing the Stations of the Cross. Several improvements have been made in the building. A garden has been laid out on the side fronting the railroad, and a statue of the Virgin Mary, made in France, has been placed in the center of it.

Gatun Lodge, Independent Order of Odd Fellows will attend the services at the Commission chapel on Sunday evening, February 19. The Rev. Mr. Purdy will preach on the principles of Odd Fellowship. The members of the organization will assemble in the lodge hall over the chapel at 7.30, and proceed to the chapel in a body.

On Sunday, February 12, the services at the Gatun chapel were commemorative of Lincoln. The Rev. Mr. Purdy preached on "Lincoln, the man."

Nobles of the Mystic Shrine.

A meeting of the Nobles of the Mystic Shrine, the first of the gatherings it is proposed to hold annually, has been arranged for Saturday evening, March 4, at Hotel Tivoli. There are about 56 members of this Masonic branch on the Isthmus, representing 38 temples in the United States. The committee in charge of the arrangements consists of Gerald D. Bliss, Pedro Miguel, chairman; Francis W. Walraven, Las Cascadas, secretary; Quincy A. Hall, Gorgona; Alonzo Hunter, C. R. Bryon, George W. Healey, Gatun; John Burke, Cristobal; C. P. Gibson, Empire; Henry M. Eagelston, Corozal. A special train will be provided for the occasion, leaving Colon at 6.30 p. m.

BASEBALL.

PANAMA CANAL LEAGUE.

RESULTS OF GAMES, FEBRUARY 12.

The figures in parentheses show the number of applicants already occupying regular or nonhousekeeping family quarters at stations, other than those at which applications are filed.

Lost—At Pedro Miguel, or Empire, or on the train between those places, a triangular pin bearing the Greek letters "OREAD," and the inscription "F. A. S." Return to Miss F. A. Scofield, Culebra, C. Z.

COMMISSION CLUBHOUSES.

Activities of the Young Men's Christian Association.

COROZAL.

A game of indoor baseball on Saturday evening between Cristobal and Corozal resulted in a score of 11 to 4 in favor of Cristobal.

A pool tournament will begin on February 15.

Gymnasium classes will be held on Monday and Wednesday evenings at 8 o'clock. All gymnasium work will be followed by basketball, baseball, or some other recreative game.

CULEBRA.

Three teams were entered in the "Rapid transit" chess contest on Tuesday evening, February 7. C. M. Wilson won the match.

The 200, or over, bowling scores for the week ending February 11 are, as follows: Hall, 230, 234, 225, 214; Warner, 213; Conlan, 202.

The next three sessions of the "Topic" club will be under the leadership of the Rev. A. A. Nellis, and the meetings will be held on Monday nights at 7.45 o'clock.

EMPIRE.

Work on the extension of the clubhouse for the new bowling alleys was begun on February 6.

On Tuesday evening, February 7, the machinists took two out of three games from the Central Division, and on Thursday, February 9, the Examination of Accounts team took three straight from the machine shops in the local bowling league series, by the following scores:

Machinists.

Beginning February 14, weekly group contests will be held in the gymnasium for which prizes will be given. In addition to the regular gymnasium work, one of these events will be run off each week. The attendance at the gymnasium on February 10, was 25.

The following high scores were bowled during the week, exclusive of tournament games: Pinney, 216; Edwards, 225, 200; Giavelli, 209; Goolsby, 209; Hobbs, 201. Duckpins—Rhodeghiero, 100, 130; Witmer, 100, 101; West, 100; McLeod, 100; Scull, 100.

At the discussion under the auspices of the literary society on February 17, the subject will be "The power of mind over matter," and the leader will be F. P. Wagg. The society is preparing a program for the evening of Washington's Birthday.

Gaul's "Holy City" will be sung by the musical section of the Empire Musical and Dramatic Society on Sunday evening, February 26.

GORGONA.

Bowling scores of 200, or over, for the past week are as follows: Halderman, 202; Gailliott, 207; Stewart, 200, 244; W. Miller, 200; Gaedke, 202; Bordt, 214; Canfield, 227; Stoehr, 204. Duckpins, 100, or over—Gailliott, 111; Otis, 102, 106; Davis, 102; Kaufman, 101.

The Gorgona Dramatic Club played "Esmeralda" on Friday, February 10. So many were unable to secure seats that the play will be repeated on Friday, February 24. Dates have been arranged for performances at the National Theatre in Panama, Cristobal, Corozal, Gatun, Empire, and Culebra.

The track men have been working under Captain Simka, and 15 men are entered in events for the athletic meet at Empire on Washington's Birthday.

A "gym" class is being organized for the benefit of the men who work nights. It will meet Tuesday and Thursday afternoons at 1 o'clock.

Candidates for the indoor baseball team are to report for practice on Monday and Thursday nights of each week at 8 o'clock. A few minutes of calisthenics will precede the regular practice.

GATUN.

Those interested in chess and checkers met in the game room on Saturday night, February 11, and formed a club, electing C. R. Harrington, president, and R. E. Chatfield, secretary. A tournament will be started just as soon as a schedule can be arranged. Any member may join. The following men have already entered: W. C. Gayer, F. J. Severy, R. E. Chatfield, W. H. Brown, C. R. Harrington, A. J. McLean, G. A. Barte, F. H. Wang, Chas. Berg, V. Kernnish L. Crowell, and E. Dolliver.

The executive committee of the Gatun Carnival Association met on Friday evening, February 10. The tentative dates for the carnival are March 15, 16 and 17. A meeting of the association will be held on Thursday night, February 16.

A departmental bowling league is being organized. It is probable that the teams will represent the civil engineers, timekeepers, transportation men, concrete foremen, wood form men, draughtsmen, district quartermaster, and cableway men.

W. H. Green won a Gatun pennant for the single high score for tenpins for the month of January, 1911.

Gatun won two out of three bowling games, and also the total pinfall in the match with Empire on Saturday night, February 11.

A handicap duckpin tournament will be started on February 20.

A large number of the members met on Wednesday, February 8, and formed a debating club. E. C. Soule was elected temporary chairman, and W. H. Brown temporary secretary. An executive committee was appointed to draw up a constitution and by-laws. Thomas Walsh, business agent for Glenn Curtiss, gave a talk on modern aviation. A number of photographs of recent flights were then exhibited. The club will meet on Wednesday evening of each week.

E. C. Howe of Washington, D. C., will give an illustrated lecture on "Florida and the Everglades" on Saturday night, February 18. No admission will be charged.

The Gorgona Dramatic Society will give a play at the Gatun clubhouse on Monday, February 27.

Twenty-one men listened to C. O. Purdy's address to the "Life Problem Club", on Sunday, February 12. A discussion on "Preparation of a life work" followed.
